TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit No.	Description	Vol. 6 Page
8	Coordinated Use of Hydro Resources on the Interconnected System	2455
9	Kilowatthour Sales to and Revenue Received from Pennsylvania Firm Customers	2457
10	Composite Form of Contract for the Supply of Electrical Service to The Pennsylvania Railroad	2459
11	Memorandum Re: Allocation of P. R. R. Load Between Maryland and Pennsylvania	2517
12	Services to Pennsylvania Railroad under Railroad Contract and Division Between Maryland and Pennsylvania	2521
13	Total Revenues Received from Pennsylvania Railroad for Joint Services in Pennsylvania and Maryland and Division of Revenues Received by Penn Water	2522
14	Specified Facilities and Other Special Facilities Provided under Terms of Railroad Contract	2523
15	Total Interchange Sales to and Interchange Purchases from Pennsylvania Customers	2524
16	Payments Made by Penn Water and Baltimore Co. to Safe Harbor Water Power Corp.	2525
17	Safe Harbor Company's Bill to Baltimore Company and Holtwood Company for Year 1944; 1945; 1946	2526
18	Holtwood Company's Bill for December 1944; 1945; 1946	2529
25	Consolidated Statement Showing Original Cost of Electric Plant as of December 31, 1945 of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland	2535
26	History of the Holtwood Development to the Beginning of Commercial Operation—October 1, 1911	2539

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit 27 Part	Description	Vol. 7 Page
1	Hutchinson's Affidavit	2683
2	Agreement Between Hutchinson Interests and Harlow-McGaw Providing for Elimination of Conflicting Interests	2692
3	Parsons' Engineering Report—January 13, 1905	2699
4	Johnson's Legal Opinion Re: Organization of Company	2703
5	Prospectus and Underwriting Agreement—March 1, 1905	2724
6	Susquehanna Securities Company—Draft of Certificate of Incorporation	2734
7	Letters by Lee, Higginson & Company Re: McCall Development	2742
8	Lee's Affidavit	2748
9	Fisk Affidavit and Correspondence	2752
10	Bond and Stock Purchase Agreement—March 25, 1905	2762
11	Correspondence Re: Lee, Higginson & Company's Compensation as Bankers	2767
12	Agreement for Acquisition of Pullen's Options by Susquehanna Contracting Company	2772
13	Memorandum on River Situation—April 1905	2795
14	Letter from Harlow-McGaw Proposing Consolidation With Harvey Fisk & Sons	2798
15	Agreement for Acquisition of Harlow-McGaw Properties by Susquehanna Contracting Company	2807
16	Arrangement by Harvey Fisk & Sons for Loans from Knickerbocker Trust Company	2832
17	Agreement Between Susquehanna Contracting Company and Knickerbocker Trust Company for Loans	2843
18	Agreement for Issuance of McCall Ferry Power Company Securities to Susquehanna Contracting Company for Property, Cash, etc.	2847
19	Agreement for Acquisition of Hutchinson Properties by Susquehanna Contracting Company	2852
20	Stock Deposit Agreement—McCall Ferry Power Company	2861
21	Harlow's Testimony Re: Value of Stock and Bonds	2864
22	Records of Bertron, Storrs & Griscom Re: Value of Stock and Bonds	2866

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit 27 Part	Description	Vol. 7 Page
23	Correspondence With Bertron, Griscom & Company Re: Value of Stock and Bonds	2875
24	Hopkins' Affidavit—Correspondence Re: Coudert Bros.' Fee for Legal Services	2882
25	Hutchinson & Parsons' Engineering Report—August 7, 1905	2887
26	Board of Advisory Engineers' Report—September 11, 1905	2895
27	Correspondence Re: Relocation of C. & P. D. R. R.	2901
28	Contract With Cooper for Hydraulic Construction	2905
29	Contract With Sanderson & Porter for Electrical Construction	2910
30	Hutchinson's & Parsons' Estimates of Costs—June 19, 1906	2913
31	Agreement With P. R. R. Co. for Relocation of C. & P. D. R. R.	2920
32	Contract With Kerbaugh for Relocation Work	2935
33	Contract With Kerbaugh for Cully's Cut	2946
34	Kirkland Estimate of Cost—November 30, 1906	2949
35	Court Order Authorizing Construction of Dam	2951
36	Power Contract With Consolidated Gas Electric Light and Power Company—June 4, 1907	2953
37	Power Contract With United Railways and Electric Company —June 28, 1907	2967
38	Hutchinson's Report on Condition of the Work—November 1, 1907	2983
39	Letter Agreement for Issuance of Additional McCall Ferry Power Company Bonds to Susquehanna Contracting Company for Additional Property, Cash, etc.	2988
40	Notes for $400,000 Loan	2994
41	Kelsch's Engineering Report—April 26, 1909	3003
42	Letter Re: Status of General Electric Company Work—August 11, 1909	3010
43	Request for Deposit of Bonds	3012
44	Preliminary Agreement for Deposit of Bonds	3014
45	Memorandum of an Understanding With Aldred	3018
46	Aldred's Affidavit	3021
47	Kitcat & Aitken Underwriting Agreement	3030
48	Montreal Trust Company Underwriting Agreement	3041
49	Final Plan and Agreement for Deposit of Bonds	3043
50	Protest of Sanderson & Porter Against Final Plan	3056

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit 27 Part	Description	Vol. 7 Page
51	Bondholders' Committee Reply to Protest of Sanderson & Porter	3058
52	Letter Re: Opposition to Final Plan	3060
53	Notice to Knickerbocker Trust Company of Default on Bond Interest	3061
54	Order Appointing Aldred Receiver	3064
55	Contract With Empire Engineering Corporation for Additional Construction	3068
56	Agreement for Deposit of Bonds With Trustee to Secure Loans to Bondholders Committee	3075
57	Minutes of Pennsylvania Water & Power Company—March 3, 1910	3084
58	Report of Foreclosure Sale	3096
59	Order of Court Confirming Foreclosure Sale	3100
60	Minutes of Organization of Pennsylvania Water & Power Company—January 13, 1910	3109
61	Voting Trust Agreement—Pennsylvania Water & Power Company	3131
62	Report of Receiver to Court	3139
63	Power Contract With Consolidated Gas Electric Light and Power Company—August 9, 1910	3143
64	Power Contract With United Railways and Electric Company—February 8, 1911	3156
65	Johnson's Legal Opinions Re: Eminent Domain	3163
66	Letter Re: Bertron, Storrs & Griscom Control of Susquehanna Electric Power Company	3176
67	Consolidation Agreements of 1908	3178
68	Agreement for Sale of Susquehanna Power Company Bonds, etc.	3200

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit No.	Description	Vol. 8 Page
29	Experienced Cost of Capital	3205
30	Replacement Cost of Capital	3239
31	Cost of Constructing the Entire Physical Properties of Penn Water as of December 31, 1945	3249
32	Cost of Substitute Plant for Penn Water as of December 31, 1945	3329
33	Testimony and Exhibits of Dr. H. B. Dorau Relating to the Supply of Money and the Value of the Dollar	3367
34	Chart of Facilities Used in Rendering Firm Power Services to Baltimore Company	3387
37	Map of Transmission Lines and Interconnections of Penn Water	3388
46	Rate of Return Study	3389

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit No.	Description	Vol. 9 Page
47	Report on Facilities, Operations and Contracts of Penn Water	3449
51	Corporate and Financial History, Early History, and Plant Investment of the Holtwood Project	3451
52	Condensed Consolidated Balance Sheets, Per Books, December 31, 1910 to December 31, 1945, Inclusive	3588
53	Analysis of Consolidated's Surplus Account, Per Books, for the Period from January 1, 1911 to December 31, 1945	3590
55	Condensed Consolidated Income Statement, Per Books, for the Years 1911 to 1945, Inclusive	3591
56	Calculation of Return to Common Stockholders on their Original Cash Investment for the Period from January 1, 1911 to December 31, 1945	3592
57	Calculation of Percentage Earned on Adjusted Net Plant Investment Plus Working Capital for the Period from January 1, 1911 to December 31, 1945	3593
58	Ratio of Net Income Available for Common Stock to Adjusted Common Stock Equity	3594
60	Consolidated Income Statement	3595
61	Annual and Accrued Depreciation	3599
64	Allocation	3621
65	Exhibit of Dr. H. B. Dorau Relating to the Supply of Money and the Value of the Dollar	3634

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit No.	Description	Vol. 10 Page
72	Metropolitan Edison Power Supply Contract of November 15, 1945	3639
73	Coatesville Power Supply Contract of August 1, 1933	3655
74	Supplemental Agreement of December 13, 1938 to Coatesville Power Supply Contract of August 1, 1933	3670
75	Letter Agreement of February 8, 1944; Supplement to Coatesville Power Supply Contract of August 1, 1933	3674
76	Lancaster Power Supply Contract of May 1, 1933	3678
77	Letter Agreement of April 28, 1939; Supplement to Lancaster Power Supply Contract of May 1, 1933	3693
87	Petition for Review in the United States Court of Appeals for the District of Columbia, Pennsylvania Water & Power Company vs. Federal Power Commission	3705
93	Safe Harbor Water Power Corporation Annual Report to SEC for Year ended December 31, 1935 (Excerpts)	3707
97	Safe Harbor Water Power Corporation Annual Report to SEC for Year ended December 31, 1939 (Excerpts)	3710
105	Safe Harbor Water Power Corporation Annual Report to SEC for Year ended December 31, 1945 (Excerpts)	3711
106	Pennsylvania Water & Power Company Annual Report to SEC for Year ended December 31, 1935 (Excerpts)	3715
116	Pennsylvania Water & Power Company Annual Report to SEC for Year ended December 31, 1945 (Excerpts)	3720
117	Registration Statement Filed May 28, 1935 with SEC by Pennsylvania Water & Power Company (Excerpts)	3723
120	Registration Statement Filed January 4, 1940 with SEC by Pennsylvania Water & Power Company (Excerpts)	3727
134	Agreement Between Philadelphia Electric Company and Pennsylvania Water & Power Company dated as of June 22, 1938	3742
135	Agreement Between the Pennsylvania Railroad Company, Philadelphia Electric Company, Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Water & Power Company, and Safe Harbor Water Power Corporation dated as of June 22, 1938	3748
136	Power Agreement Between Edison Electric Company of Lancaster, Pa. and Pennsylvania Water & Power Company, October 9, 1912 with Extension Agreement of October 19, 1923	3761

TABLE OF CONTENTS OF JOINT APPENDIX (Continued).

Exhibit No.	Description	Vol. 10 Page
140	Exhibit No. 10 in Safe Harbor Water Power Corporation, Docket IT-5914—Comparative Statement of Operating Revenues, Revenue from Energy Sales and Kwh. Sales, Calendar Years 1938-1943	3778
141	Excerpts from the Direct Testimony of George W. Spaulding in Safe Harbor Water Power Corporation, Docket IT-5914	3779
143	Energy Purchased by Baltimore and Holtwood Companies from Safe Harbor Company and Energy Purchased by Baltimore Company from Holtwood Company	3782
158	Letter dated January 20, 1906 from Philip G. Bartlett to Cary T. Hutchinson	3783
159	Letter dated July 17, 1907 from H. F. Dimock to Henry M. Higginson	3784
160	Letter dated December 1, 1945 from G. W. Spaulding to N. B. Higgins	3785
161	Letters dated December 12, 1946 from N. B. Higgins to G. W. Spaulding	3786
162	Answer of Consolidated Gas Electric Light and Power Company of Baltimore in Rate Proceeding before Maryland Public Service Commission	3788
163	Application of Safe Harbor Water Power Corporation to Pennsylvania Public Service Commission dated March 29, 1932 and Report and Order of the Commission	3790
164	Operating Committee Memorandum dated July 19, 1932	3818
165	Illustrations of Different Methods of Treating Depreciation within the Rate Making Formula	3819
166	Comparative Fluctuations of the Two Lowest and the Two Highest Earnings-Price Ratios Included in the Group of Eleven	3820
167	Changes in Earnings-Price Ratios for the Penn Water Common Stock and for the Medial Four of Six Common Stocks	3821

[1] BEFORE THE
FEDERAL POWER COMMISSION

In the Matter of:
PENNSYLVANIA WATER & POWER COMPANY } Docket No. IT-5915

Hearing Room
Federal Power Commission
Hurley-Wright Building
1800 Pennsylvania Avenue, N. W.
Washington, D. C.
Monday, April 15, 1946.

The above-entitled matter came on for hearing pursuant to notice at 10:00 o'clock A. M.

Before: EWING G. SIMPSON, Trial Examiner.

Appearances:

F. G. AWALT,
RAYMOND SPARKS,
DARYAL A. MYSE and
P. C. KING, JR., of Hewes and Awalt, 822 Connecticut Avenue, N. W., Washington, D. C.; and
GEORGE T. HAMBRIGHT, Lancaster, Pennsylvania; and
GEORGE ROSS HULL, Harrisburg, Pennsylvania; and
JOHN C. KELLEY, Harrisburg, Pennsylvania,
appearing for Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland.

E. M. STURTEVANT and
CLARENCE W. MILES, Baltimore, Md., appearing for Consolidated Gas, Electric Light and Power Company of Baltimore.
SAMUEL G. MILLER, Harrisburg, Pennsylvania, appearing for the Pennsylvania Public Utility Commission.

[2] ROBERT FRANCE, General Counsel, Public Utilities Commission of Maryland.
SIMON E. SOBELOFF, City Solicitor of Baltimore; and
THOMAS J. TINGLEY, Assistant City Solicitor of Baltimore.
HOWARD E. WAHRENBROCK, Assistant General Counsel; and
REUBEN GOLDBERG, appearing on behalf of the Staff of the Federal Power Commission.

---

[3] PROCEEDINGS.

TRIAL EXAMINER: The hearing will be in order.

The hearing in Docket IT-5915 in the matter of Pennsylvania Water & Power Company set for this hour and date in this hearing room is called to order.

This is a hearing upon an Order of the Commission dated September 1, 1944 entitled "Order Instituting Investigation", and upon an Order of the Commission dated October 3, 1944, entitled "Supplemental Order Enlarging Investigation".

* * *

[12] TRIAL EXAMINER: On November 9, 1945, the Commission entered an order in the matter of Pennsylvania Water & Power Company in Docket IT-5915 entitled "Order Fixing Date of Hearing", a copy of which I hand the Reporter at this point for inclusion in the record as if read.

* * *

[16] TRIAL EXAMINER: Likewise, the Commission entered an Order in this matter and Docket dated December 11, 1945, entitled "Order Postponing Hearing". A copy of this Order is now handed to the Reporter for inclusion in the record as if read.

• • •

[18] TRIAL EXAMINER: On January 24, 1946, the Commission issued an Order entitled "Order Further Postponing Hearing", a copy of which I hand the Reporter at this point for inclusion in the record as if read.

• • •

[20] TRIAL EXAMINER: On March 19, 1946, the Commission entered a further Order entitled "Order Further Postponing Hearing" in which it was provided that the hearing in the above-entitled matter now set for March 25, 1946, and the same is hereby postponed to April 15, 1946, at 10:00 o'clock A. M. in the hearing room of the Federal Power Commission, Hurley-Wright Building, 1800 Pennsylvania Avenue, Northwest, Washington, D. C.

A copy of this Order is handed to the Reporter for inclusion in the record at this point as if read.

• • •

[22] TRIAL EXAMINER: I also hand the Reporter for inclusion in the transcript at this point a copy of designation of Trial Examiner signed by the Honorable Leland Olds, Chairman, under date of April 3rd, 1946, which designation is to be incorporated in the record at this point.

• • •

[24] TRIAL EXAMINER: In connection with the designation, it should be said that by virtue of the Commission's standing order of September 30, 1941, the Commission's Chief Trial Examiner is authorized to join the presiding Trial Examiner on the bench and preside jointly with him or in his stead in this proceeding whenever it may seem necessary or desirable to do so.

By Order dated January 9, 1946, entitled "Order Permitting Intervention" the Commission ordered that the Pennsylvania Public Utility Commission be and it was thereby permitted to become an intervenor in this proceeding.

A copy of this Order is handed the reporter for inclusion in the record at this point.

• • •

[26] TRIAL EXAMINER: On February 6, 1945, the Commission entered an Order entitled "Order Permitting Intervention" which ordered that the Public Service Commission of Maryland be and was thereby permitted to become an intervener in this proceeding.

A copy of this Order is handed to the Reporter for inclusion in the record at this point.

• • •

[28] TRIAL EXAMINER: On March 27, 1945, the Commission entered an Order in this matter and Docket entitled "Order Permitting Intervention" whereby it permitted the Consolidated Gas Electric Light and Power Company of Baltimore to become an intervenor in this proceeding, subject to the rules and regulations of the Commission, provided, however, that the admission of such intervenor shall not be construed as recognition by the Commission that Petitioner might be aggrieved by any Order or Orders of the Commission entered in this proceeding.

A copy of this Order is handed to the Reporter for inclusion in the record at this point.

• • •

[30] TRIAL EXAMINER: I will ask counsel to state at this time what notice has been given of this proceeding.

MR. GOLDBERG: Mr. Examiner, I have examined the formal files of the Commission and I am able to state that all interested parties, including the Mayor and City Council of Baltimore, the County Commissioners of Baltimore County, the Bethlehem Fairfield Shipyard, Incorporated,

the Public Service Commission of Maryland, Rustless Iron & Steel Corporation, Susquehanna Tranmission Company of Maryland, Consolidated Gas Electric Light and Power Company of Baltimore, the Governors of the States of Maryland and Pennsylvania, the Pennsylvania Public Utility Commission and Safe Harbor Water Power Corporation, among others, have been served with copies of all of the Orders the Trial Examiner has had incorporated in the record as though read preceding my statement.

I ask at this time that those notices be incorporated in the record by reference. I believe all of them appear in Part I of the Commission's Formal Files of the Pennsylvania Water & Power Company, Docket IT-5915.

TRIAL EXAMINER: Without objection, that will be done.

* * *

[33] TRIAL EXAMINER: Pursuant to the letter addressed to the Pennsylvania Water & Power Company by the Acting Secretary of the Commission under date of November 16, 1945, the Order of Procedure at this hearing will be for the Pennsylvania Water & Power Company to proceed first with the presentation of its evidence; for the Susquehanna Transmission Company of Maryland, the Consolidated Gas Electric Light & Power Company of Baltimore, Pennsylvania Public Utility Commission, Public Service Commission of Maryland and the Staff of the Federal Power Commission to follow with the presentation of their evidence in the order named.

I will now call upon counsel for the Pennsylvania Water & Power Company to briefly state his position with reference to the issues involved in this proceeding, and the evidence which he proposes to present.

MR. SPARKS: May it please Your Honor, we first take an exception to Your Honor's ruling that we be required to proceed first, and will state, also, that in proceeding in accordance with Your Honor's ruling we do not waive the right to make any point, or to raise any question which we deem appropriate in the proceeding.

Furthermore, may I say that while we do have a conception of certain of the issues in this case, it must be recognized that we have not been advised of the positions or the contentions of any of the other parties.

[34] So, as a result, we are more or less stabbing in the dark on the issues. There are or may be issues of which we have no knowledge.

In accordance with Your Honor's ruling, however, we are prepared to state certain of the issues which we believe to be present in the case, and I shall proceed to do so.

First: This Commission has no jurisdiction over the rates, charges and classifications, of Pennsylvania Water & Power Company under Part II of the Act, for the reason that the Company is to be treated as a licensee and may be considered to be a purchaser of power from a licensee for use in public service, and is, therefore, subject to Part I of the Act only. Since the record does not show that the two states involved, namely, Maryland and Pennsylvania, are unable to agree, through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor by Pennsylvania Water & Power Company, the Commission has no jurisdiction under Part I.

Second: If the Commission has any jurisdiction over any of the rates, charges, and classifications of the Respondents for the transmission or sale of electric energy at wholesale, it has jurisdiction only over the rates, charges, or classifications for such transmissions or sales which are in interstate commerce.

Third: The Commission has no jurisdiction, under Part II, [35] over any of the rates, charges, or classifications for the services rendered by Pennsylvania Water & Power Company and Safe Harbor Water Power Company [Corporation] to Consolidated Gas Electric Light & Power Company of Baltimore, since none of such rates, charges, or classifications, are for transmission of electric energy, or for the sale of electric energy.

Fourth: The Commission has no jurisdiction, under Part II, over any rates, charges, or classifications for any services rendered to Pennsylvania Railroad Company, since such services do not involve a sale of electric energy at wholesale.

Fifth: The Commission has no jurisdiction to determine and fix by Order any division of rates or charges to be received by Pennsylvania Water & Power Company for services rendered jointly with others.

Sixth—and may I say, Your Honor, as to the last point to which I have adverted, except for point number 6, which goes to the question of the hearing relating to jurisdiction, so far as any other issues may be present on the merits of such issues. We do not know what the contentions are or may be, so that I would ask Your Honor to consider that in considering the last point which I make.

Sixth: The requirement that Respondents proceed first in the presentation of evidence without being informed of the issues and contentions of the other participants and of the Staff of the Commission representing the Government, [36] deprives the Respondents of the fair hearing required by the Federal Power Act and by the due process clause of the Fifth Amendment to the Constitution of the United States.

Seventh: And lastly, the rates, charges and classifications made, demanded, received, observed, charged, and collected by Pennsylvania Water & Power Company by itself and jointly with others, and the rules, regulations, practices, and contracts affecting such rates, charges, and classifications are now lawfully in force under the laws of the United States and of the State of Pennsylvania, are not unjust, unreasonable, unduly discriminatory or preferential, and are, therefore, not unlawful.

Therefore, until the other participants, including the Staff of the Commission, make their position and conten-

tions clear on the record, we are unable to determine what other issues are involved.

• • •

[37] TRIAL EXAMINER: Just one moment. Does counsel at this time have any statement as to the evidence that he proposes to submit?

MR. SPARKS: I want to comply with Your Honor's ruling, and state that we do have evidence pertaining to the history, and general evidence which will be presented by Mr. Walls, the president of the company. We shall present evidence pertaining to the ntracts for consideration of the Commission; and, such other evidence as we feel should meet the contentions which may be made, and which will be made, that we think are consistent with the issues as we now see them.

TRIAL EXAMINER: The Examiner is correct in his interpretation of your opening statement as having been made also on behalf of the Susquehana Transmission Company of Maryland?

MR. SPARKS: Yes, sir, that is correct.

• • •

MR. GOLDBERG: I have noted here that one of the reasons assigned for the challenging of the Commission's jurisdiction [38] is that the Commission has, in brief, no jurisdiction to determine the fixing of the division of rates which are the result of services rendered jointly; is that correct?

MR. SPARKS: That is correct.

MR. GOLDBERG: I do not know of any reason in connection with that challenge to the Commission's jurisdiction having been stated. I am wondering if I had missed it, or whether counsel had stated one.

MR. SPARKS: I stated, if Your Honor please, that the Commission has no jurisdiction to determine the division of joint rates. The reason, briefly, for that contention is that, unlike the Interstate Commerce Act, and perhaps some

other acts, the Federal Power Act contains no language which may be conceived to give to the Federal Power Commission power over the divisions of revenues as between persons who render services jointly.

• • •

[39] TRIAL EXAMINER: The Pennsylvania Public Utility Commission?

MR. MILLER: We have no statement to make.

TRIAL EXAMINER: Public Service Commission of Maryland?

MR. FRANCE: Mr. Examiner, the Public Service Commission of Maryland is primarily concerned with the allocation to Maryland of its proper share of any rate reduction. At the proper time we wish to put on the stand as our witness, Mr. Paul L. Holland, the Chief Engineer for the Commission, who will testify as to what we believe the percentage allocation to Maryland should be.

TRIAL EXAMINER: Staff counsel for the Federal Power Commission?

MR. GOLDBERG: Mr. Examiner, at the outset I would like to say that I think I have listened very carefully to the statement made by counsel for the Respondents. I think it fair to state that the Respondents are, of course, aware of their position, as to rate base, depreciation, both annual and accrued, and other elements of this rate case.

I have concluded, however, and I think fairly so, that for [40] some reason they have seen fit not to divulge their position as to those matters at this time.

However, the Staff of the Commission does not take a position such as that, and will at this time divulge its position on the various elements of the rate case.

It is the intention of the Commission's Staff in this proceeding to present evidence on the components of a rate case, including rate base, depreciation, working capital, and rate of return, and the like.

[41] Before outlining the staff's present contentions in regard to the various elements of this rate case, I think it might be well to describe in brief and general terms, Pennsylvania Water and Power Company and its operations.

This also includes, of course, the Susquehanna Transmission Company of Maryland.

For the sake of brevity, I will refer to the Pennsylvania Water and Power Company as "Holtwood".

Holtwood owns and operates a steam electric and a hydroelectric plant located on the Susquehanna River at Holtwood, Pennsylvania. To fix the location more graphically, it is about eight miles below the Safe Harbor Water Power Corporation's project, and about eight miles above the Conowingo project on the same river. Holtwood also owns and operates a transmission system, directly and indirectly. That part of the transmission system which is located in Pennsylvania, it owns and operates directly. That part lying within the boundaries of the State of Maryland, it owns and operates indirectly, for legal reasons, through a wholly owned corporation, Susquehanna Transmission Company of Maryland, the other Respondent in this case. Susquehanna's transmission system is administered by Holtwood through operating agreements, and is coordinated with the properties directly owned and operated by Holtwood, and is operated as a unit by a common organization. [42] Holtwood sells electric energy at wholesale, in bulk, to public utility companies, leaving to its customer companies, by deliberate choice, the distribution of that electric energy at retail. Holtwood and its customer-public utilities companies operate in a thickly-populated, rich agricultural and highly developed industrial area which is second to none in the United States.

Holtwood, Mr. Examiner, unlike the majority of electric companies in this company [country], by reason of its contractual arrangement with its principal customer, Consolidated Gas and Electric and Power Company of Baltimore, (sic) is very fortunately situated. That contract, in

effect, insures to Holtwood net operating revenues, independent of the amount of output, and increasing as additional plant investment is made. Under that contractual arrangement a relatively fixed amount representing the return to Holtwood is determined. That return is computed upon two principal factors, first, the amount of earnings during the year 1930, and, second, a fixed percentage on the net additions to plant since 1930, less an adjustment for increases in the depreciation reserves since 1930.

To this return Holtwood adds all operating expenses, power purchases, depreciation expenses and deducts the revenues collected from its customer companies other than the Baltimore Company—and by "Baltimore Company", I mean, of [43] course, the Consolidated Gas Electric [Light] and Power Company of Baltimore. In short, this contractual arrangement constitutes virtually a guarantee of earnings on Holtwood's capital stock. Based upon its present capital structure and present agreement with Consolidated, the rate is about 20 per cent.

Briefly, taking up the various elements upon which the Commission's staff will offer evidence,—I think at the outset I might state that the staff's plans at present do not include the presentation of evidence on the form of the contract. This, of course, does not mean that the Commission may not change, or is not at liberty to make such changes as it may see fit, based upon the evidence of record; nor, does it mean that those who are proposing to offer testimony on that aspect of the case should not do so.

On the matter of rate base, it is the staff's position that actual legitimate investment is the appropriate rate base in this case, and that reproduction cost testimony, trended original cost testimony, or any such testimony, usually presented to show the alleged fair value of the properties devoted to public service, should be rejected and not received in evidence if offered here.

Now, with respect to this investment rate base, it is the position of the staff that the gross investment for the

rate base is, in round figures, $32,920,738. This is, in round numbers, $5,663,494 less than Holtwood's book figures, which the staff [44] contends contain write-ups. The staff proposes the elimination of the $5,663,494 because the staff contends that such amount does not represent actual cost, and should be disallowed. The staff's evidence will, of course, develop the details of the eliminations and the reasons therefor.

With regard, now, to the matter of depreciation, the staff will also show an analysis of the Holtwood's depreciation practices and methods which it has recorded on its books, used in its power bills, and reported in its tax returns to the Bureau of Internal Revenue.

The staff does not propose to recommend to the Commission that Holtwood be required to change from the straight line method of depreciation it has always been using.

The staff has made service life and depreciation studies to test to the reasonableness of the annual depreciation charge and the accrued depreciation. The staff contends that the annual depreciation expense is $465,000, and that the reserve requirement is about $8,204,770. Although this reserve requirement is somewhat less than the reserve per books, it is the position of the staff, for reasons that will be developed, that the present book reserve is not excessive, and should be used in reaching a net rate base in this case.

The staff will, also, present evidence on the appropriate amount of working capital that should be allowed in this case, and that amount is in the neighborhood of $600,000. There [45] will also be presented analyses of the company's operating expenses, balance sheets, income statements, and other pertinent financial data. In that connection, the staff proposes to take exception to certain operating expenses, and will also present analyses of the company's past earnings, which will show that the company has earned at least ten per cent rate of return on its net investment, including working capital during its entire period of operations.

On the subject of rate of return the staff will present data which will enable the Commission to reach a proper determination as to the fair rate of return.

The staff has made a study to determine the reasonableness of the cost of service to the customers served under demand and energy contracts. This study involves allocations of cost to each customer, including the allowance for return. It is expected that this cost allocation to the individual customers will serve as a guide to the Commission in arriving at the reasonable rates to be charged to those customers. Testing the staff's conclusions, it appears that at a rate of return of five per cent the indicated rate reduction is $2,450,000.

I might state here that the figures I have spoken of on the record are as of December 31, 1945.

One more thing and I am through. It will be recalled that at the outset I stated that I would sketch the staff's "present [46] position," on the various aspects of the case. I use the adjective "present" deliberately. The staff has made a comprehensive investigation of all the elements of this case. We believe that, as a result of that investigation, it has gathered and considered all of the material and relevant facts which are necessary to reach a proper and just result.

If, perchance, though I think it unlikely, the staff has not considered all of the material and relevant evidence which the company may have in its possession, and expects to present in these proceedings, the consideration of which evidence would alter the conclusions reached by the staff, the staff would want the opportunity to revise its position in the light of that evidence, to the extent required.

More than that, it would insist upon that opportunity, because it is not the purpose of the staff to adhere to a position, come what may. The staff has approached this investigation in that spirit. It is in that spirit that it enters this hearing and intends to continue throughout the proceedings.

TRIAL EXAMINER: The Examiner has before him two other orders which will be entered into the record at this time. One is the order of April 5, 1946, denying further postponement of the hearing, which was entered upon consideration of the application of the Public Service Commission of Maryland, filed April 4, 1946 for the postponement of the hearing in [47] the above-entitled matter for a period of sixty days. The Examiner will direct the Reporter to spread that out on the Record at this point.

* * * *

[48] TRIAL EXAMINER: Also, an order of April 5, 1946, entitled "Order Denying Petition". This is an order "Upon consideration of the 'Petition for specification of Issues and Reconsideration of Direction Fixing Order of Procedure' filed April 3, 1946, by Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland."

The Examiner now directs the Reporter to incorporate this order in the Record at this point.

* * * *

---

[52] JOHN A. WALLS,

was called as a witness by and on behalf of the Respondents, and, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. HAMBRIGHT:

Q. Will you please state your full name and your business address? [53] A. John A. Walls, 1611 Lexington Building, Baltimore, Maryland.

Q. Mr. Walls, will you please state what official employment or other connection you have had with the Pennsylvania Water and Power Company and the Safe Harbor Water Power Corporation, and what other experience you have had with similar hydroelectric developments? A.

Following graduation from the Massachusetts Institute of Technology in 1899 with the degree of Bachelor of Science in Electrical Engineering—* * * I was employed by Wallace C. Johnson, Consulting Engineer, at Niagara Falls, for a period of about two years on the engineering phases of hydroelectric development in the United States and Canada. In 1901 I went with the Shawinigan Water and Power Company, which had been organized about 1898, and became its chief engineer in 1905, which position I retained until I was called to Holtwood in 1909, continuing for a period as consulting engineer to Shawinigan Water and Power Company.

[54] I maintained for years first-hand acquaintance with the affairs of Shawinigan Water and Power Company, and have been at one time or another a director in that company and in companies in the fields of industry, street railway operation and electricity and gas distribution.

I have been a director in a corporation doing large scale financing of electric and gas utilities in foreign countries, and was a partner for a number of years in the firm of Aldred & Company, which did investment banking. In recent years, my directorships with all business corporations, other than the Pennsylvania Water & Power Company and certain subsidiaries, have been terminated. The Shawinigan development was a pioneering undertaking in Canada which began about 1902 or 1903, the delivery of bulk power to Montreal over a 90-mile long high tension transmission line.

I believe that the general range of experience in large scale hydroelectric engineering on this continent from the beginning of the century will be found to be represented in the several plants of the Shawinigan Water & Power Company, which company has contributed much to the development of the hydroelectric art.

November 1st, 1909 I came down to the Susquehanna River in the employ of Mr. J. E. Aldred, who had been made receiver of the McCall Ferry Power Company. The

McCall Ferry Power Company was reorganized as the Pennsylvania Water & Power [55] Company in January 1910, and I served as its chief engineer until 1914. The dam and plant at Holtwood were completed and have since been operated under my personal supervision. From 1914 until December 1933, I was vice-president and chief engineer of the Pennsylvania Water & Power Company, and since that date its president. I have been a director of this company from the early days of its organization.

I was vice-president of the Safe Harbor Water Power Corporation from its organization until 1933 when I became its president, and was a director from the early days of its organization. I resigned as president and director October 23, 1940 and have now no official connection with it.

Pennsylvania Water & Power Company owns one-half of the voting common stock, Class "B", of Safe Harbor Water Power Corportaion, for which it paid $3,000,000.

I had served years on the Hydraulic Power Committee of the National Electric Light Association, am a Fellow of the American Institute of Electrical Engineers and am a Member of the American Society of Civil Engineers.

I have done consulting work on hydroelectric developments in Canada and in the United States. On a number of occasions I have had the opportunity to make detailed studies of the hydroelectric industry in certain foreign countries, have visited and made engineering reports on many hydroelectric plants in France, Italy and elsewhere and became acquainted [56] there with the outstanding personnel of the industry. In addition, Aldred & Company, of which I had been a partner for some years, had European correspondents which kept the firm continuously advised of the progress of hydroelectric engineering in Europe.

Q. Will you please outline briefly the preliminary work and events leading up to and including the construction of the Holtwood Dam, the organization of the Pennsylvania

Water & Power Company, the beginning of its business, and the first two decades of its history.

• • •

THE WITNESS: Investigation of the water power possibilities of the Susquehanna River in the reach of the lower 40 miles from tidewater to Columbia, began prior to 1905. Different promoters and engineers did a greater or less amount of preliminary work on projects along this reach. From the records in possession of the company, it was not until 1905 that major construction work on any of these schemes was actually initiated. In that year the McCall Ferry Power Company was [57] formed and work was started on the so-called McCall Ferry (now Holtwood) dam at Fry Island.

However, in 1907 following the failure of the Knickerbocker Trust Company of New York, the McCall Ferry Power Company found itself unable to procure the necessary funds for continuing construction as planned and had to curtail work with the dam and power house only partly finished.

The records of the company also disclose that efforts were made by interests representing the stocks and bonds to carry on the work thereafter. Little was accomplished, however, owing to the difficulty of raising money in this country for major construction projects during the months following the Knickerbocker Trust Company failure. That bank failure was followed by a so-called money panic, characterized by the partial suspension of specie payments by banks in this country and by the absence of a satisfactory market for new issues of securities. Funds became no longer available for interest on the outstanding bonds.

McCall Ferry Power Company had to struggle in this situation with a plant, interrupted in the construction stage, which had suffered a financial set-back, thereby being to a certain extent discredited for the future as respects ability to carry out power contract commitments. The unfinished plant represented a new departure in low head

hydroelectric plants because of its magnitude, its geographical setting close to the [58] coal fields and because of the then undeveloped state of the art of design and operation of low-head hydro plants for use on a river of highly fluctuating flow.

Certain interested security holders in 1908 approached Mr. J. E. Aldred, who had pioneered in the construction and operation, as well as in the financing and business conduct of a large hydroelectric development at Shawinigan Falls on the St. Maurice River in Canada, sending power over a long distance, high tension, transmission line to Montreal. After surmounting many difficulties, he had brought that undertaking to a position of technical and financial success and of promising growth. It is today a great and successful enterprise. He had learned first-hand of the many difficulties then surrounding the pioneering of a large scale hydroelectric development and had demonstrated ability to contend with those difficulties. He was invited to visit the site of the work and agreed to take charge of the project, to assume the burden of raising the money necessary to complete it, to head the company, to build up a company staff, to carry on the construction work, to make power contracts for its output, to get it into operation and to put it on its feet as a business enterprise. There followed a brief period of receivership under him, beginning in 1909 and terminating early in 1910.

At the end of 1909 the property of the McCall Ferry Power Company consisted of real estate and riparian rights, the [59] foundation and most of the superstructure of a dam, leaving to be built the abutments at each end of the dam and, to be filled in, the gaps in the dam superstructure through which the Susquehanna River was being diverted. The foundation and a portion of power house superstructure had been erected, and the tailrace was in usable condition. Engineering studies and plans, construction buildings and construction plant were also at hand. The status of the work at that time included the results

of expenditures made during the period of receivership. Some transmission line right-of-way had been acquired, but no transmission lines or substations had been built and practically no machinery had been installed.

* * *

[60] Q. The witness is shown photograph marked for identification as Exhibit 1 and I ask him to state what that exhibit shows. A. Exhibit 1 is a photograph of the exterior of the power house and dam showing the stage of construction at about the end of 1909.

Q. The witness is shown the photograph marked for identification as Exhibit 2 and asked to state what that exhibit shows. A. Exhibit 2 is a photograph of the exterior of the power house from upstream at about the same time.

Q. The witness is shown photograph marked for identification as Exhibit No. 3 and asked to state what that exhibit shows. [61] A. Exhibit 3 is a photograph of the inside of the power house also at about the same time.

[62] Q. Mr. Walls, will you continue with the discussion of the organization and early history of the Pennsylvania Water and Power Company? A. On January 13, 1910, the Pennsylvania Water and Power Company (hereafter called Penn Water), a Pennsylvania corporation, was formed as a reorganization of the McCall Ferry Power Company, succeeding to the property and rights of the former company. Somewhat prior to this time, the receiver of the McCall Ferry Power Company, Mr. J. E. Aldred, had engaged the services of the Empire Engineering Corporation to proceed with the construction work at Holtwood.

It was urgent to rush the work so that before the end of the year the project might be sufficiently near to a demonstration to potential power customers, of its technical and financial practicability. For negotiation of power contracts with the latter, this demonstration was considered highly desirable before they might make additions to their own

generating plants involving capital charges and stand-by operating costs which might make the value of hydro supply to them and the revenue therefor less than it would be otherwise. The work necessary included procurement of generating units and transformers, their installation and preliminary operation; sufficient additions to the power house structure and dam to permit this, together with the purchase and installation of auxiliary equipment. The [63] rights-of-way had to be acquired for a transmission line, a double circuit transmission line built thereon between Holtwood and Baltimore, and a terminal substation had to be built at Baltimore. All this was a major engineering task for that period.

The construction work was pushed ahead with speed and by the end of 1910 the reorganized Company had largely completed the 55 feet high, 2392 feet long, gravity concrete dam; the first of the generating units was tested out and trial operation was initiated; the balance for the forty-mile-long transmission line right-of-way from the power house to Baltimore had been obtained; and a substation had been partially finished in Baltimore.

* * *

[67] Because of doubt as to the right of Penn Water, as a Pennsylvania Corporation, to own and operate transmission lines and substations in Maryland, a Maryland Corporation, Susquehanna Transmission Company of Maryland, was organized for such purpose. It was formed in April, 1910, by the consolidation of Susquehanna Pole Line Company of Harford County and Susquehanna Pole Line Company of Baltimore County, both of which had been incorporated in 1907. All of its securities outstanding are owned by Penn Water. When Penn Water is referred to by me, it includes as part thereof the Susquehanna Transmission Company of Maryland.

While the construction work was being driven ahead, efforts were being made to find customers in Pennsylvania,

Maryland and Delaware, negotiations being had with power users in Philadelphia, York, Lancaster, Reading, Harrisburg, Wilmington and elsewhere. On August 29, 1910 a contract was entered into with the Consolidated Gas Electric Light and Power Company of Baltimore for a period of ten years. In February, 1911, a 15-year contract was obtained with the United Railways & Electric Company of Baltimore.

By 1914 eight units had been installed in the Holtwood hydroelectric plant and in 1924 the final two hydroelectric units had been put into service, occupying the last space available in the present power house and bringing the [68] effective capacity of the plant up to 104,000 kilowatts, approximately fifty per cent greater than previously contemplated, without any major additions to the hydraulic structures. A steam-electric generating plant was built at Holtwood in 1924 and 1925, to use river coal dredged from the pond above the dam. Transmission lines had been built from Holtwood to the cities of Baltimore, Lancaster, Coatesville and York, to deliver electric service to electric utilities distributing in the regions adjacent thereto.

Thus, prior to 1930 the Company found itself with a hydroelectric and a steam development, with transmission lines radiating to principal load centers and supplying power to other utilities whose requirements had been growing rapidly.

Q. Mr. Walls, will you please continue the discussion of the Penn Water's initial period and some of its then problems which gave rise to continuing policies of the company? A. Not only was speed of construction a requirement in the initial period of the reorganized Company, but there were two other important factors given attention, viz: that the construction work should be well done to assure permanency and that the work be carried out at the lowest possible cost consistent therewith, but avoiding frills and non-essentials. One of the settled policies of the Company

ever since has been [69] to endeavor to make major plant extensions at times of low construction cost indices and when labor is more efficient, for charges associated with plant cost, bulk large in hydro generating plants as compared with steam plants. Because of the early financial history of the project, it was desirable that operating and overhead costs be kept to the minimum to put Penn Water in financial position to obtain the additional amounts of money later to be required for extensions and to put it on a dividend paying basis with the least delay.

Hydro power had not at that time established itself in this territory as a desirable and dependable supply. The ability of the plant to withstand the floods and ice shoves of the river was questioned. The question of the reliability of long transmission lines and their terminal facilities, and the effect of low river flow added to the distrust of the undertaking.

The technical difficulties involved in the construction and operation in those early years of this large hydroelectric plant with its steel tower transmission lines, were great, and the service at the outset was not as good as desired. Such service if continued unduly would, it was felt, prejudice the marketing of the then novel hydroelectric supply. The problems which arose as a consequence of the lack of knowledge on the part of manufacturers as how to meet the growing and [70] stiffening requirements of Penn Water to secure the desired reliability of service and also the high quality of service as respects maintenance of system frequency, responsiveness of governing, etc., caused much worry to the technical force of Penn Water in the early days.

For a long period I was continually planning from year to year as to what possible improvements might subsequently be made in the service or value of the hydro supply to meet competition and to increase the earnings of the Company. It was essential that hydro service should gain a sufficiently high reputation for quality of service

promptly and maintain that reputation with the minimum of deviations therefrom.

* * *

[72] The type of power supply contract common with sustained high flow hydroelectric plants such as was used prior to 1910 in Canada and at Niagara Falls, where power was generally sold in blocks on practically a sustained horsepower-year basis, was totally unsuited to the Holtwood plant conditions, the latter involving the use of a river subject not only to seasonal but also to sudden and wide fluctuations in flow and lying in a territory adjacent to supplies of coal.

It came to be appreciated that base load energy of sustained or block form, obtainable by operating the most modern and efficient portion of a customer's steam generating equipment at high use factor, established a so-called "Operating Production Cost" per kilowatt-hour for such block which was exclusive of capital and other pertinent charges. This base load kilowatt-hour cost was quite different from and lower than the average cost of generating by steam the entire load of that customer which varies from hour to hour and from week to week. The average cost of the base load energy was in turn much lower than the cost of generating on the peaks of the load, the latter requiring the retention of and at times the use of relatively inefficient older steam [73] generating equipment of the customer.

The various power contracts of Penn Water show a development along the lines of coordinating the hydro supply with the steam generating potentialities of the Company's customers. This was accomplished by provisions for the inter-changing of steam and hydro energy and for increasing the carrying by hydro of the peak portions of the customers' loads which cost those customers most per kilowatt-hour to generate, as well as supplying base load energy during periods of ample flow.

It was also found that hydro supply gave opportunities for benefit to the customers by deferring their steam plant extensions, thus making a saving to the customers in capital and other pertinent charges and permitting the later purchases of more modern steam equipment.

To get adequate prices for its power, Penn Water must ever try to give service that is of the highest quality. The direct, as distinguished from the also important indirect, financial penalties for failure in supply were and still are important special elements of risk to Penn Water, as, for example, that risk appearing in Article VII, first paragraph of the Safe Harbor contract, whereby Penn Water is obligated to purchase and pay for Baltimore Company's entitlement of the Safe Harbor output in the event it should fail in its duty to transmit the same to the Baltimore Company. [74] There were several circumstances in 1910 which stood in the way of arranging power agreements with possible customers of Penn Water that would enable the best utilization of the hydro resources inherent in the Susquehanna River.

Chief of these was the lack of a fundamental understanding of the principles and methods of coordinating hydro power from a run of the river project with the steam resources of surrounding utilities, which utilities should form the logical outlet for the new development. Consideration of such problems by prospective customers was handicapped by the fact that the reliability of continuous operation of a large hydroelectric plant with a dam spanning a stream such as the Susquehanna, subject to floods and ice, had not yet been established. Neither had the reliability been proven in this locality of high-tension transmission of electricity by steel-tower lines over a distance of 40 miles, utilizing transformers at both ends of the line, and extending through a territory subject to frequent lightning storms during a part of the year and to sleet storms during another part of the year.

Up to 1910 few large hydroelectric developments existed in northeastern United States with long distance transmission of power in bulk. Though there were at Niagara Falls, large plants where the river flow was ample throughout the year, transmission was of limited scope, and the initial loads were largely furnished by nearby industrial plants. [75] Holtwood's supply was distant from its prospective markets, greatly fluctuating in amount, and requiring for full economic success of the enterprise, the eventual disposal of a greater amount of energy than could be then absorbed in any one practicable market. At that time, for electrochemical uses, a constant supply of very cheap hydro was a desideratum, not the varying supply available from Holtwood.

For industrial uses it had been the custom to look upon hydro as an individual or sole supply competitive with steam rather than to be coordinated with steam. Some hydro plants had been built adjacent to mill installations for the local sale or use of electrical or mechanical power in small quantities. It was against a background of such a limited conception of hydro service that Penn Water had to sell its particular character of bulk supply in the initial years of the reorganized company.

• • •

[77] The result was that the fullest coordination of the facilities of Penn Water and of its customers in the interest of the economical utilization of the power potentialities of the power pool to meet most adequately the integrated requirements of the pool for the final benefit of the ultimate consumer, was not effected until the present contractual arrangements were devised in 1931.

The first major step to that end was taken in 1921 when Penn Water and its two customers in Baltimore agreed to the coordinated use of hydro supply on the combined instead of the separate loads of the two Baltimore companies. The 1911 contract between Penn Water and the Railways Company was superseded by transferring to

the Consolidated Gas Electric Light and Power Company the responsibility for the furnishing of electric service to the Railways Company.

At that same time, Consolidated Gas was given a participating entitlement in the power and energy production of Penn Water. Hydro supply could, under that arrangement be used to better advantage than formerly, but subsequent experience [78] proved that there were still impediments to the most effective coordination for maximum system economy.

An effort was made in 1927 at the expiration of the 1921 agreement between Penn Water and Consolidated Gas to perfect the contractual arrangements for achieving the complete coordination of the hydro and steam resources of the two companies. The participating entitlement in the power and energy production of Penn Water which had been granted to the Consolidated Gas in the 1921 agreement, was readopted, and additional provisions were added for the purpose of facilitating the desired coordination of resources at that time and in future planning.

However, the practice of the classification of power and energy and the use of demand and energy charges with fixed unit rates, which had been earlier evolved in the utility field in connection with the sale of blocks of power, uncomplicated with the problem of coordination of resources of the buyer and seller of hydro-steam supply, was continued in the 1927 agreement and still militated against the correct principles of operating a combined hydro-steam generating and supply system.

It was not until further contractual arrangements had been made in 1931 by which Consolidated Gas' payments to Penn Water and Safe Harbor Company were placed on the basis of an annually computed lump sum, independent of the number of kilowatts and kilowatt hours, that the last contractual obstacle [79] disappeared and the most economical result obtainable from the combined power resources could be derived.

In 1913, the Edison Electric Company of Lancaster, Pennsylvania, which later on became the property of the Pennsylvania Power & Light Company, contracted for a supply from Holtwood, and in 1923 supply to the utilities in York and Coatesville, Pennsylvania, was initiated.

The latter are now parts of the systems of the Metropolitan Edison and the Philadelphia Electric Companies, respectively.

The size of the loads of these utilities was relatively small in comparison to that of the Baltimore utilities, but there were good reasons for thinking that their loads would develop in time. Such growth did occur with them as well as in the case of the Baltimore utilities, so that by 1929 it was realized that the potentialities of the Holtwood plants were almost fully realized.

* * *

[82] MR. GOLDBERG: In that connection, I would like to inquire of Respondents' counsel what is claimed with respect to the date of commercial operation of Holtwood project?

MR. SPARKS: I do not see that it is particularly relevant at this stage of the proceedings, Mr. Examiner. We will at the proper time put on evidence with respect to that matter.

* * *

[91] [THE WITNESS]: Another contribution of Penn Water is found in the intrinsic design of the Safe Harbor plant which permits its output to be integrated with that of Penn Water for overall benefit, and the hydro resources of the two companies to be combined using the transmission and interconnection facilities into which they flow, to best advantage of the region served by the companies.

* * *

[93] MR. GOLDBERG: Mr. Examiner, I hesitate to interrupt, but I just wonder if we are trying the Safe Harbor case all over again. I cannot fathom the material-

ity or relevancy of these contributions of Penn Water that it is alleged to have made to the Safe Harbor project.

* * *

[94] THE WITNESS: Coincident with the arrangements for the ownership of the Safe Harbor plant, Penn Water and Consolidated Gas supplemented and coordinated their existing power supply agreement with provisions that would permit the output of the Safe Harbor plant to be brought into the regional electric supply system in a way that would facilitate pooling it with the product of the hydro and steam plants at Holtwood, and with the output of other steam plants in the system, with the aim of producing the maximum overall economy of operation and reliability of service.

---

[108] GEORGE WHITTIER SPAULDING,
a witness called on behalf of the Respondents, being first duly sworn, testified as follows:

[109] DIRECT EXAMINATION.

By MR. MYSE:

Q. Will you please state your full name? A. George Whittier Spaulding.

Q. You are a vice-president of the Pennsylvania Water & Power Company, are you not? A. Yes, sir.

Q. Do you hold a position with the Safe Harbor Water Power Corporation? A. Yes, as Advisory Engineer.

Q. Are you an officer of the Susquehanna Transmission Company of Maryland? A. No, I am not, but as vice-president of Pennsylvania Water and Power Company I also act as Advisory Engineer of the Susquehanna Transmission Company of Maryland, a wholly owned subsidiary of Pennsylvania Water & Power Company.

Q. What has been your professional training and experience? A. I graduated from the Massachusetts Institute of Technology with a degree of Bachelor of Science in Electrical Engineering in 1921.

Following short periods of employment with the Westinghouse Company of Boston, the Plymouth Electric Light and Power Company of Plymouth, Massachusetts, and the Century Electric Company in St. Louis and Boston, I returned to the Massachusetts [110] Institute of Technology as instructor and laboratory assistant, pursuing at the same time several graduate courses in hydroelectric developments and power transmission.

In June 1923 I was employed by the Union Electric Light and Power Company in St. Louis, Missouri, as engineer in its transmission and distribution department, and in 1924 I entered the employ of the Pennsylvania Water and Power Company and have been with that company continuously to date, being employed successively as test engineer, assistant chief of tests, and assistant to the general superintendent, to January, 1938, when I became assistant chief engineer of both the Pennsylvania Water and Power Company and the Safe Harbor Water Power Corporation.

In August 1942 I was made superintendent of power of the Pennsylvania Water & Power Company, and advisory superintendent of power of the Safe Harbor Water Power Corporation, and in 1943 was promoted to vice-president of the Pennsylvania Water & Power Company.

I am a member of the American Institute of Electrical Engineers, the American Society of Civil Engineers, and a registered professional engineer in the State of Pennsylvania and Maryland.

Q. What have been your general duties and responsibilities with the company in recent years? A. Between 1931 and 1938 I was engaged in power market [111] studies and contract negotiations, under the direct supervision of the general superintendent and vice-president of Pennsylvania Water & Power Company.

Let me say that I shall hereafter refer to Pennsylvania Water & Power Company as Penn Water, and shall refer to the Susquehanna Transmission Company of Maryland as Stco [STCo], shall refer to the Safe Harbor Water

Power Corporation as Safe Harbor and shall refer to the Consolidated Gas Electric Light and Power Company of Baltimore as the Baltimore Company.

During this period from 1931 to 1938 I was actively working on power contracts which were negotiated with the Pennsylvania Railroad Company for the supply of power to the railroad's proposed electrification in Maryland, and in that portion of southeastern Pennsylvania in the general vicinity of Penn Water power development at Holtwood and the hydroelectric development of Safe Harbor at Safe Harbor, Pennsylvania.

Although Baltimore Company also became a party to this railroad contract, the principal negotiations and power supply arrangements were made by the two hydro companies, Penn Water and Safe Harbor.

Following the initial contract with the Pennsylvania Railroad Company in 1931, negotiations were opened with the Potomac Electric Power Company in Washington, D. C., in collaboration with the Baltimore Company, for the supply of [112] hydro peak service, the necessary transmission services being provided by Penn Water and its Maryland subsidiary, Stco [STCo].

Although the final contract was made between the Potomac Electric Power Company and the Baltimore Company, the latter Mr. F. A. Allner, then vice-president of Penn Water, initiated the negotiations and completed them as a special representative of the Baltimore Company.

I was closely associated with Mr. Allner in all of these negotiations.

Shortly after the service under this power supply contract with Potomac Electric Power Company had been inaugurated, a supplemental contract was negotiated with the Pennsylvania Railroad Company by Penn Water and Safe Harbor, providing among other things to supply power to the Maryland Division of the railroad at Washington, through facilities which were to be provided by the Potomac Electric Power Company.

With the extension of the transmission facilities of Penn Water and those of its Pennsylvania customers in the middle 30's, negotiations were carried out by Penn Water leading to closer coordination of the power resources of itself and these northern companies, resulting in a continued parallel operation and in interchange of power and energy.

In the system planning power market studies, Penn Water initiated and took the leading part in bringing together the [113] several independent interests as parties to resulting interconnection contracts.

Beginning about 1938, I took a more leading part in such negotiations, and since 1942 all power market studies and arrangements for the coordination of the operations of Penn Water with its customer companies have been made under my direction.

Through the recent war period, close coordination of operations and system planning were most essential in the war effort, both to obtain the fullest use of installed capacity capabilities of the interconnected system and to arrange for the interchange and diversion of hydro and steam energy on the interconnected systems to accomplish the conservation of oil in the early years of the war and of coal in the latter years as critical fuel shortages arose.

Q. Was it necessary for Penn Water to make new contracts to carry out such coordination and diversion of energy during the war years? A. No. The existing contracts of Penn Water had, through the years, been developed to recognize the advantages to be gained through such coordinated operations, and they contained sufficiently flexible provisions to permit the accomplishment of such coordination even under load conditions that could hardly have been foreseen at the time the contracts were entered into.

[114] It has been the continuing practice of the companies' management in contract negotiations to endeavor to provide through its power contract terms: first, for the proper

incentive to accomplish maximum over-all economies for all parties;

Second: To provide for an equitable division of the savings resulting from such an operation; and

Third: To interpose a minimum of artificial barriers to the most economical method of operation.

Q. Mr. Spaulding, does Penn Water dispose of all of its electric power and energy in bulk as distinguished from local distribution? A. Yes, ever since the incorporation of Penn Water in 1910 it has disposed of its power and energy in bulk to other utilities, and except for a limited amount sold to its wholly owned subsidiary during World War I. It has never attempted to develop local distribution systems nor to enter upon a retail distribution business, nor has it attempted to compete with its other utility customers for bulk power industrial customers.
[115] It has never sought nor does it have any substantial monopolized distribution territory.

Q. What has been the basis of its power contracts with its present customers? A. Penn Water, as a wholesaling company, has always had to compete with other sources of supply available to its customers, all of whom have had their own power generating resources or were able to obtain such supply from other adjacent utilities.

Its power contract charges have therefore been determined on a competitive basis, and it has had to meet existing or potential competition which has changed from time to time with new developments and improved methods of power generation.

The guiding principle of Penn Water's management has been to fully develop the natural resources of the Susquehanna River in its reaches occupied by the Holtwood and Safe Harbor power developments, to integrate its potentialities of hydro and steam electric power and energy, of equipment and of such special facilities and operations as Penn Water and later Safe Harbor could offer, so as to promote the most efficient and effective use

of their own facilities and operations with those of their respective customers, to mutual advantage.

Their customer requirements have not been uniform, either as between such customers, or from decade to decade, [116] and the contractual terms which have resulted are, therefore, found to differ widely.

However, they all reflect in one way or another the services which are inherent in the hydro resources of the Susquehanna River, the interconnection facilities which have been extended, and the results of coordinated operation which the company has fostered and developed.

Q. Mr. Spaulding, will you explain more fully how the hydro resources of the Susquehanna River have been developed by Penn Water? A. Penn Water is in the unique position of being the only non-captive wholesaling utility company in the United States.

Its power resources are largely hydro. The services which it was able to render to its utility customers in the first decade of its incorporation were not completely understood by, or acceptable to, these customers, in part because of the skepticism as to reliability of service from its run-of-river plant with the widely fluctuating flows experienced on the Susquehanna River, delivered over what was then considered to be a long distance transmission line, and in part because the advantages of coordinating hydro and steam resources were not fully appreciated.

Hydro power to that time had almost always been sold on the basis of a horsepower year, with industries purchasing [117] a specified amount of power—measured in terms of horsepower—to be used for as many hours a year as needed.

As a result, there was little, if any, opportunity or incentive to realize the full potentialities of a fluctuating stream flow at a run-of-river plant under such arrangements.

Where additional hydro capacity was installed, the additional energy available with higher flows had to be sold

on a "when, as and if" basis. The terms "primary" or "firm power" and "secondary" or "interruptible power" were evolved during these early stages of hydro development.

These terms have since largely lost their significance through the increased recognition of the advantages of coordinating "hydro" and "steam" resources of two or more independent companies through the vehicle of power contracts.

Penn Water's early experience indicated that the load requirements of two or more customers could and should be combined in operating practice for the purpose of utilizing the available hydro supply to the best advantage and later this principle was extended to include the utilization of the steam resources of several of its customers to the mutual advantage of the contracting parties.

Q. Mr. Spaulding, have you prepared an exhibit to indicate in a graphical manner the advantages of operating the hydro resources of the Susquehanna River on the interconnected system with which these hydro plants are presently operated? [118] A. Yes, I have.

MR. MYSE: Mr. Examiner, I ask to have identified as Exhibit No. 8, a document entitled "Coordinated Use of Hydro Resources on the Interconnected System."

TRIAL EXAMINER: The document may be marked for Identification as Exhibit No. 8.

(The document referred to was marked Exhibit No. 8 for Identification.)

By MR. MYSE:

Q. Will you please describe and explain this exhibit? A. This exhibit consists of three parts—two charts for each of three calendar days.

The horizontal scale on each of the six charts represents the time of the day, starting in each instance at midnight.

The vertical dimension on the three upper charts indicates the magnitude of the total interconnected system load at any time, or the amounts of generation by various component parts of the system, while the vertical dimension on the lower three charts indicates the amounts of installed hydro capacity or amounts of hydro capacity operating at various times of the day.

Referring first, to the three upper charts, the heavy black curve shows graphically the sum of the interconnected system load requirements of Baltimore Company, including the total load of the Bethlehem Steel Company, one of its major [119] industrial customers, the load requirements of Penn Water's other firm power customers, together with the load requirements of the Pennsylvania Railroad, supplied by the several sources in a manner to be described later.

The specific calendar days chosen for this Exhibit, and then shown thereon, are typical of current experience and are here used for illustrative purposes.

The two charts shown on the left of the exhibit, are for a March day in the current year; the two in the middle of the exhibit are for a heavy load day in December of last year; and the two charts on the right are for the peak load day of 1945.

Three days were selected for materially different amounts of usable stream flow in the Susquehanna River available to both the Holtwood and Safe Harbor plants.

The stream flow for the March day, shown at the left, was actually 125,000 cubic feet per second which was greater than the powerhouse draft of either the Safe Harbor or Holtwood hydroelectric plants.

The stream flow for the day shown in the middle of the exhibit was actually 19,200 cubic feet per second, approximating the average usable flow at these plants for all months of November and December, in which months the maximum system load requirements have occurred.

It was desired to illustrate the type of operation [120] required with very low stream flow by the two charts at the

right, but, because of high flow through 1945, no recent low flow experience was available under present load conditions.

Consequently, such operation has been illustrated by an estimated division of the generation for the actual peak load day of 1945, by using as the weekly average flow 5,800 c. f. s., which flow will be exceeded about 95 per cent of the time in the months of December.

Q. Will you explain generally how the operations of the individual hydro and steam plants are scheduled for these different river flow conditions? A. The objective of the Power Production Departments of the Hydro Companies may be said to be the generation of the power and energy necessary to supply the requirements of the combined system load in the most efficient and effective manner.

This end can only be accomplished through the collaboration of the system dispatchers of the several independent power system involved.

Careful advance estimating is required on an annual, weekly and daily basis, of the expected river flows, of the expected system load requirements and the need for capacity.

Estimates must also be made of the desired operating reserve capacity or spinning reserve which must be available [121] as protection against unpredictable load increases, including the short-time swings in such loads that develop suddenly, together with the availability of replacement capacity should any of the load carrying capacity fail.

From their knowledge of operating economies of the individual plants connected to this system, the system dispatchers schedule the amount of capacity that must be available and the energy to be generated at each of the respective plants. to the end that optimum utilization and greatest economy can be obtained.

It will be noted from this exhibit, that on the high flow day, shown by the left-hand charts, the Holtwood and Safe

Harbor hydro plants were operating in the base of the load curve with the various steam plants operating above the hydro, the more efficient plants being nearer the bottom and the less efficient plants at the top of the load curve where they are used to produce the minimum amount of energy in relation to the amount of capacity operated.

The other two daily charts show the hydro energy being used in the top of the load curve.

On the average flow day, shown by the two center charts, the flow of the river is sufficiently high so that there is some hydro generation during each of the twenty-four hours, but most of the hydro energy was generated during the peak load hours where it can be most effectively used to reduce [122] the use of steam capacity.

On the low flow day, shown by the two charts on the right of this exhibit, all of the hydro energy is in the top of the load curve, that is, the hydro generation is used during the hours of peak load requirements.

The three lower charts, one for each flow condition, show the amount of hydro capacity operated and the use of hydro generation on each day.

It will be noted that the hydro capacity has been effectively used on each of the three days, either for energy generation, as operating reserve capacity or spinning reserve; while at other times, such capacity is largely available as standby which will be referred to a little later.

Even with wide variations in river flow, the hydro capacity installed is fully utilized during the peak load hours of the system.

Q. What are the advantages to the customers of Penn Water and Safe Harbor of such coordinated use of the Hydro Companies resources? A. The advantages to Penn Water's customers are derived from (a) the installed capacity of the hydro plants; (b) the generation of hydro energy from the available river flow; and (c) the coordinated or joint use of the special facilities provided by these Hydro Companies.

With the maximum coordination of the hydro resources [123] with the steam resources of its customers, these customers derive several advantages.

First, such coordinated use reduces the amount of steam generating capacity required to be made available by the customers; who, thereby, have available for other uses, the money that would be required for such investment to carry their peak load requirements, including the necessary reserves.

Second, the transmission facilities of Penn Water and its Maryland subsidiary, S. T. Co. of Maryland, have reduced the investment requirements for transmission and distribution plant on the part of these customers.

Third, there is a resultant saving in the cost of fuel and other associated operating expenses.

Fourth, they obtain in general more economical operation of their own steam generating plant resources through the maximum use of their most economical plants and the minimum use of their less efficient generating equipment.

Fifth, a portion of the hydro capacity during low flow is available as reserve capacity to the customers' systems, without the latter having to incur the cost of keeping their boiler equipment banked and ready for service and the additional cost of running unneeded steam generating equipment.

Sixth, the ability of starting up hydro units from standstill to full load operation in a fraction of a minute [124] assures additional reserve capacity which, in connection with the use of the water stored behind the dam in the Safe Harbor pond for ready use, has been referred to as "A. C. storage battery service", and there are other advantages not specifically mentioned.

Q. Will you please describe more specifically the capacity service of these two hydro plants to the system? A. Considering the hydro plants themselves, the capacity

that can be effectively used on the system load is determined by the effectiveness with which such capacity is used as limited by the available river flow.

The flow of the Susquehanna River has varied from a minimum seven-day average flow of 2,100 c. f. s. to a maximum flow of about 860,000 c. f. s.

The minimum flow of the river, together with the desired use of the water withdrawn from the storage above the two dams, generally determines, as a lower limit, the amount of energy which can be generated in a given period.

By using the two ponds as equalizing reservoirs, this generation can be distributed as desired and used only to supply the peak portion of the system requirements.

As can be seen by the right-hand charts on Exhibit 8, the sharper the peak portion of the daily load curve, the greater will be the hydro peak service capacity which can be supplied with a given amount of energy.

[125] The capacity value of the Holtwood and Safe Harbor plants to the combined system can be determined by considering the amount of steam capacity which would have to be installed to provide the same capacity service in the absence of the hydro plants.

In evaluating hydro capacity, recognition must be given to the load shape, to the probability of river flows, to maintenance schedules of the system capacity, and to the capacity reductions experienced in the different seasons of the year.

While such a capacity determination cannot be readily made from a single daily load diagram, it can be approximated by fitting the hydro energy into the peak load hours of the system load requirements for a group of consecutive days or weeks.

Q. Mr. Spaulding, in describing the use of hydro resources on the Susquehanna River, are you making a distinction between the capacity and the energy resources of these hydro plants? A. Yes, I am.

Q. Will you now describe the method of using the hydro energy in the most economical manner by coordinat-

ing the hydro with the steam resources of Penn Water's and Safe Harbor's customers? A. The energy available from the Holtwood and Safe [126] Harbor plants will vary with the available river flow supplemented on a daily or weekly basis by the use of pondage; that is, by the withdrawal of water from above the dams at the Holtwood and Safe Harbor Plants.

The economic value of such energy is measured in part by the amount of fuel and other operating expenses which can be saved at the steam plants of the hydro customers.

It is the responsibility of the Hydro Load Dispatchers, in cooperation with the system dispatchers of its customer companies, to schedule the use of hydro energy at times when it will replace the highest cost energy which would otherwise be required on the interconnected system.

The maximum overall system economy and reliability is always the objective.

There is greater possibility of operating savings when the hydro capacity is coordinated with the effective use of the steam capacity of a group of generating stations, or when the load requirements of several utility systems are combined.

Such coordination permits a wide selection of equipment and generating efficiencies with the result that the most efficient equipment can be operated to the best advantage and the operation of the least efficient can be minimized.

This, in a general way, is shown on Exhibit 8 where three component sources of steam generation have been fitted [127] into the system load requirements as would be done in day to day or weekly scheduling of loads and capacity, to obtain the maximum overall economies.

Q. In scheduling the operating of the various generating plants of the system, are you referring only to the generating plants of the Baltimore Company, of Potomac Electric Power Company and of Penn Water and Safe Harbor? A. No. There has been for fifteen years an appreciable

amount of interchange energy bought and sold by Penn Water over its northern interconnections in Pennsylvania on an economy basis, that is, energy is bought when the cost of such generation on another system is less than the cost of generation on our own system, and, similarly, our own energy is sold as interchange when there is an economic justification for so doing.

The contractual arrangements for such interchange provide for an equitable division of the savings in operation expense between the buying and selling companies in such transactions.

The effect of such interchange transactions is shown on the diagrams of Exhibit 8.

As stated previously, the heavy curved line graphically shows the system load requirements.

The dotted curve, which on certain occasions is above and sometimes below the solid line, graphically shows the actual system generation.

[128] Where the dotted curve of system generation is above the load requirements our system was generating power in excess of system requirements and was selling such energy as interchange to others.

The area shown below the solid line of system load requirements and above the dotted line of system generation represents energy purchased as interchange by Penn Water over its northern interconnections.

Q. In referring to available hydro energy for the combined system, you spoke of the use of pondage.

Will you explain this use further? A. The hydro peak service to this system, as illustrated on the right-hand diagram of Exhibit 8, depends on the use by these hydro plants of a quantity of water in excess of the actual flow of the river at the particular time the hydro energy is used in the system load.

Such operation is possible because the ponds above the Holtwood and Safe Harbor dams can be used as storage reservoirs to regulate the actual river flow over a

period of a week or even longer, although the weekly use of pondage is the more general practice.

Such use of pondage results in a greater hydro capacity to this system than could be obtained from the river flow alone.

Furthermore, the capacity requirements of the system [129] vary from day to day and are usually greatly reduced on Saturdays and Sundays so that the river flow for a seven-day period of low flow can all be used in a period of sixty or seventy hours during the week when the system loads are heaviest.

There is a further use of pondage which has a very real capacity value to the coordinated system in those low flow periods of the year, when all the hydro capacity is not required for hydro generation.

During such low flow periods, a portion of the reserve hydro capacity is always available to carry system load swings which require very little energy; while the idle hydro capacity can be started up from standstill, and fully loaded within a fraction of a minute, well before the steam plants in operation would get into trouble in the event of a major emergency, and long before it would be possible to steam up idle boilers or to load up steam turbines.

To provide such reserve capacity service by steam capacity would involve expensive standby losses and the operation of turbo-generators below their most efficient loadings.

Referring further to the use of pondage. The scheduling of water to be withdrawn can be done on a daily or weekly or longer cycle.

The amount of usable energy stored in the ponds over such cycle of use is actually greater than the total energy [130] available from the minimum experienced flow itself during a seven-day period.

This pondage can be used in emergencies to replace energy that had been counted on from steam capacity that may fail.

Experience has shown that the forced outage of several large steam units on a system of our size is an infrequent occurrence and of short duration.

Consequently, the pondage of the Holtwood and Safe Harbor plants can be relied upon for a large portion of the required system reserves.

Q. Mr. Spaulding, you have emphasized both the capacity and the energy values obtainable from resources of the Susquehanna River. Are there any other general services that have entered into your contractual relations? A. Yes, there are. Penn Water and Safe Harbor have in several instances provided certain special facilities; in part for joint use with our customers and in part for the specific use of these customers.

Q. Do your contracts provide for specified payments in connection with such special facilities? A. Not always. However, within the last decade, there has been more general recognition in our own contracts, and in the contracts of utilities generally, of specified charges which are related to the special facilities provided.

[131] This is because it has been generally recognized that it is more equitable to consider the availability of these special facilities as a separate component of any contractual arrangement of rates or payments rather than to include the costs of special facilities as a part of one or more of the variable component rates or charges for capacity or for energy.

I should like to mention a few examples of special facilities provided by Penn Water and Safe Harbor for its customers.

The Pennsylvania Railroad desired to receive its power supply in the form of 25 cycle single phase power.

To provide this service required special facilities not readily usable for others. Consequently, the contract with the Pennsylvania Railroad provides for special charges which are based on the cost to the company making such

facilities available. Another example is the local facilities which are part of the S. T. Co. of Maryland's Highlandtown Terminal Substation in Baltimore.

Local distribution facilities were also provided until recently at Penn Water's Violet Hill Terminal Substation in York, Pennsylvania.

It was more practicable in these latter two instances for Penn Water to provide a portion of the local distribution facilities in its terminal substations than for the receiving companies to provide the equivalent facilities. [132] Such arrangements simplified the installation as well as their operation and maintenance.

In the case of Highlandtown distribution facilities, there was, prior to 1931, a specified charge as a component part of the bill rendered, covering the annual costs, including operation and the maintenance of these facilities.

In the case of York terminal facilities, the annual charge for the local distribution facilities provided, was not separately billed, but the costs were incorporated in the component charges for demand and energy.

Q. Mr. Spaulding, do all of your present power contracts now have separate charges or rates for capacity, energy and special facilities? A. No; not in all of them, but each of these three separate services—capacity, energy and special facilities, was separately recognized when the contracts were negotiated and the rates or payments were established.

Q. Are there any other comments you would like to make regarding the segregation of these three services under your various power contracts? A. Yes; I should like to point out an economic fact in connection with these three services which is very often misunderstood.

Financial and statistical services, and many others, attempt to express the value or cost of a service in terms of [133] a simple rate, as so many mills per kilowatt hour of energy supplied. This is not a correct measure of the cost or value of electric service for most practicable pur-

poses, and certainly not for comparative purposes, unless the services rendered and the conditions of supply which are to be compared are very much the same in all their characteristics.

Such a method of comparison is most misleading when comparing our hydro contracts and the services rendered thereunder, inasmuch as these services to the several customers are quite dissimilar.

In fact, the attempt to compare even the trend of cost of service to the same customer over a period of years by the use of a simple rate, such as mills per kilowatt hour, may be equally misleading if there were changes in the conditions of supply, the load shape, the amount of service rendered, or the amount of special facilities used.

This conclusion, I believe, can be shown by referring again to Exhibit 8. The lower three charts on this diagram indicate the hydro capacity operated on each of the three days shown, such capacity being necessary or desirable for system purposes.

With reference to the middle and right-hand lower charts, the hydro capacity operated could have been reduced, had it not been needed, approximately to the line enclosing the green area representing actual hydro generation capacity.

[134] The energy actually generated by hydro in these three days varied greatly; the hydro energy available to the system for a low flow day, shown in the right-hand diagram, was only 25 per cent of the energy available on the high flow day, shown at the left.

On Saturdays and Sundays in low flow, it frequently happens that no hydro energy is used on the system although hydro spinning reserve may be furnished continually.

The hydro plant would be used to render a capacity service which would otherwise have to be supplied by a steam plant with appreciable standby losses.

Obviously, a mill rate based upon this capacity service in relation to zero generation would produce a rate of infinity mills per kilowatt hour.

The fallacy of the evaluation of hydro service in terms of a rate per kilowatt hour can also be explained in another way.

It frequently happens that during median or low flows, hydro energy is generated during the daylight hours, in part by use of pondage, and delivered to a customer at the time of its peak requirements, thereby replacing on that company's system the maximum amount of high cost steam energy.

Yet, during the balance of the same day, that same customer may return to Penn Water the same quantity of energy measured in kilowatt hours, for use by Penn Water in [135] supplying its other firm power obligations.

Such backfeed energy would come from relatively efficient steam equipment at low cost to the customer.

In this situation the customer benefits directly by the difference between the cost of generating at the time of system peak with inefficient equipment, and the cost of generation off-peak on his most efficient equipment, yet without receiving from the hydro companies any net energy for that day. Any rate charged to that customer for this service would again be infinite if based upon mills per kilowatt hour of net delivery and would not be a satisfactory or proper approach to this.

* * *

[142] By Mr. Myse:

Q. Mr. Spaulding, with reference to the special facilities provided by Safe Harbor and Penn Water for their customers, you stated that certain of these facilities were owned by Stco [STCo.] of Maryland, did you not? A. Yes, all such transmission facilities in the State of Maryland are owned by Stco [STCo.] of Maryland, which is a wholly owned subsidiary of Penn Water.

Q. Will you please explain the contractual relations between Penn Water and Stco [STCo.] of Maryland? A. Stco [STCo.] of Maryland was organized in 1910 as a wholly owned subsidiary of Penn Water, because of doubt as to the right of Penn Water as a Pennsylvania Corporation to own and operate transmission lines and substations in the State of Maryland. There are four separate agreements between Stco [STCo.] of Maryland and Penn Water.

* * *

[144] Q. Mr. Spaulding, will you state generally what these four agreements provide? A. The first, designated Item A is an agreement dated April 12, 1910, between Penn Water and Stco [STCo.] wherein Penn Water agreed to furnish the necessary funds for the work to be [145] undertaken by Stco [STCo.], including the construction of that portion of the transmission line between Holtwood, Pennsylvania, and Baltimore, Maryland, to be built in the State of Maryland, together with the Highlandtown Terminal Substation in Baltimore.

Stco [STCo.] of Maryland agreed to mortgage its property and to deliver to Penn Water its bonds to be taken at 90 per cent of their face value in an amount equal to the funds to be advanced by Penn Water.

The second contract identified as Item B is an agreement dated April 3rd, 1911, between Penn Water and Stco of Maryland, under which the latter agreed to transmit and deliver power and energy of Penn Water and to operate and maintain its own transmission lines and substations, Penn Water agreeing to pay all expenses of Stco of Maryland and to waive the payment of interest by Stco of Maryland on its bonds.

Q. Have these two contracts been filed with the Federal Power Commission? A. Yes. The contract identified as Item B dated April 3rd, 1911, was filed with the Federal Power Commission on January 13, 1936 and designated as Stco rate schedule No. 1.

MR. GOLDBERG: Mr. Spaulding, if I may interject at this point? Who filed it?

THE WITNESS: Stco of Maryland.

[146] By MR. MYSE:

Q. Now, will you continue? A. The contract identified as Item A dated April 12, 1910 was similarly filed with the Commission and designated as Exhibit No. 1 to Rate Schedule No. 1.

Q. Will you please describe the other two agreements?

TRIAL EXAMINER: Before proceeding to do that,—who filed Item A? Stco?

THE WITNESS: Yes, sir.

MR. GOLDBERG: When you say "Exhibit 1 to Rate Schedule No. 1", do you mean Rate Schedule No. 1 in this proceeding as Item B?

THE WITNESS: Yes, sir.

By MR. MYSE:

Q. Now, will you continue to describe the other two agreements? A. The agreement dated March 19, 1931 identified as Item C is a contract between Penn Water, Stco and Baltimore Company.

Under this contract Penn Water agreed to advance to Stco of Maryland the money required to construct those sections in Maryland of the two transmission lines between Safe Harbor, Pennsylvania, and Baltimore, Maryland, and received therefor the stock of the transmission company. Stco of Maryland further agreed to operate and maintain these lines [147] and to transmit and deliver power and electric energy of Penn Water.

The agreement dated August 1st, 1932, identified as Item D, is a contract between Penn Water, Stco and Baltimore Company.

Stco of Maryland agreed to construct, operate and maintain a switching station at Ellicott City, together with

extensions to its transmission lines from Ellicott City, Maryland, to Takoma Park, Maryland, and to transmit such power and energy as may be delivered to it. Penn Water agreed under both contracts to pay all expenses of Stco of Maryland.

Q. Have these latter two agreements been filed with the Federal Power Commission? A. Yes, the agreement dated March 19, 1931, was filed with the Commission on January 13, 1936, and designated as Stco of Maryland Rate Schedule No. 2, while the agreement dated August 1, 1932, was likewise filed and designated Supplement No. 1 to Rate Schedule No. 2.

Q. Are these two latter contracts, identified as Items C and D filed with the Federal Power Commission? A. Yes. The agreement dated March 19, 1931 identified as Item C was filed with the Federal Power Commission by Stco on January 13, 1936 and designated by the Commission as Stco Rate [148] Schedule No. 2, while the agreement dated August 1, 1932 and identified as Item D was likewise filed by Stco and designated by the Commission as Supplement No. 1 to Rate Schedule No. 2.

Q. Are all the present securities and open accounts of Stco of Maryland owned or held by Penn Water? A. Yes. However, Penn Water has waived all bond interest, dividends and other interests by the terms of the agreements above mentioned.

TRIAL EXAMINER: At this point, we had better clear the record on your motion and incorporate by reference, and let the Examiner state at this point in the record that the Susquehanna Transmission Company's rate schedule designated FPC No. 1 is incorporated in evidence as Item B by reference; Susquehanna Transmission Company Rate Schedule FPC No. 2 is incorporated as Item C by reference, and Exhibit 1 to Susquehanna Transmission Company's rate schedule FPC No. 1 is incorporated as Item A by reference, and Sup-

plemental No. 1 to Susquehanna Transmission Company's Rate Schedule FPC No. 2 as Item B by reference.

By Mr. Myse:

Q. Are all of the expenses of Stco of Maryland paid by Penn Water? A. Yes, they are.

Q. Does Stco have any power contracts other than those [149] just described and put in the record by reference? A. No. Stco of Maryland has no other power contracts, nor does it at present deliver any energy directly to the public. It only transmits power and energy delivered to it by Penn Water or by Penn Water's customers under arrangements made by Penn Water to which Stco of Maryland is not a party.

Q. You have referred to the construction of Stco of Maryland of the lines between Holtwood and Safe Harbor on the one hand, and Baltimore and Washington on the other. Does Stco of Maryland own any other transmission facilities? A. Yes. Stco of Maryland constructed at the request of Penn Water the Maryland portion of a transmission line, extending from Safe Harbor, Pennsylvania, to Perryville, Maryland, for the supply of power to The Pennsylvania Railroad at Perryville and Conowingo, Maryland.

Stco of Maryland also has constructed at the request of Penn Water, a steel tower transmission line from Baltimore Company's Philadelphia Road Substation in Baltimore to the Gunpowder Switching Station in Baltimore County, and operates and maintains this line. This line is used exclusively by Baltimore Company and is a part of that Company's local transmission system. Penn Water is reimbursed for its cost and expenses for this line under its contract with Baltimore Company to be referred to later.

Q. Mr. Spaulding, you have referred to interchange sales [150] by Penn Water. Are such sales distinguishable from firm power sales? A. Yes, they are.

Q. With whom does Penn Water now have power contracts for firm power sales in Pennsylvania? A. Penn Water, jointly with Safe Harbor, has firm power contracts (1) with the Pennsylvania Power & Light Company for the supply of firm power to its Lancaster Division; (2) with the Philadelphia Electric Company for the supply of firm power to its Coatesville Division.

Penn Water, alone, has a contract with Metropolitan Edison Company for the supply of firm power at York. This latter contract with Metropolitan Edison Company superseded, as of January 1, 1946, a joint service contract under which Penn Water, Safe Harbor and Metropolitan Edison Company supplied firm power to the Edison Light and Power Company of York.

Q. Are the three existing contracts just referred to of the same general type? A. No, they are not. The first is a contract with a single component rate in which the charges for capacity, energy and special facilities are all lumped into a two step energy rate. The second contract has a three component rate with separate rates or charges for capacity, energy and special facilities, while the third contract is of a new type, particularly applicable to the type of service that can be [151] rendered advantageously by a hydro company such as Penn Water.

Under this latter contract, Penn Water obligates itself to provide a specified amount of peak service capacity and with energy commitments generally related to the actual stream flow. The special facilities component of this contract is included at present in part as a component of the capacity charges and in part as a special facilities charge.

Q. Why are these three contracts of such different types? A. These contracts were originally designed over a period of years, to meet the special requirements of the respective customers, and, as is frequently found in wholesale bulk power contracts, the purchasing companies desired forms of contracts with varying provisions as to fuel rate adjustment, the inclusion and determination of

billing demands, et cetera, that more nearly conformed to the practices and rate structures within the territories being served by the purchasing utility. Such different requirements are one element of the competitive situation that Penn Water had and must face in negotiating future contracts with its customers.

Q. Mr. Spaulding, have you prepared a tabulation showing the kilowatthour sales to these Pennsylvania customers under your firm power contracts with them, together with the revenues received by Penn Water for all firm power services [152] rendered to each of such customers? A. Yes, I have.

MR. MYSE: I would like to have marked for identification as Exhibit 9 a document entitled "Pennsylvania Water & Power Company Kilowatthour Sales to and Revenue Received from Pennsylvania Firm Customers".

TRIAL EXAMINER: That document may be marked as Exhibit 9 for identification.

(The document above referred to was marked Exhibit No. 9 for identification.)

By MR. MYSE:

Q. Mr. Spaulding, will you please describe this exhibit which has just been marked for identification as Exhibit 9? A. Exhibit 9 shows the total firm power sales in kilowatthours and the total revenues received for all firm power services rendered to these Pennsylvania customers for the years 1944 and 1945, together with the estimated kilowatthours sales and estimated revenues from our firm power customers for the year 1946.

To the extent that such sales in 1946 would vary with fluctuations in river flow, it has been assumed that average river flow would be experienced for each of the twelve calendar months.

Q. Mr. Spaulding, when you have referred to your firm power customers in Pennsylvania, have you included any portion [153] of the supply by Penn Water or Safe Harbor to the Pennsylvania Railroad for the latter's use either in Pennsylvania or Maryland? A. No, I have not.

Q. Do you consider the power supplied by Penn Water and Safe Harbor to The Pennsylvania Railroad in the State of Pennsylvania as a firm power commitment of the Penn Water and Safe Harbor Companies? A. Yes, I do. The contract obligation for the total supply of capacity, energy and special facilities to The Pennsylvania Railroad is a joint obligation of Penn Water, Safe Harbor and Baltimore Company.

For the purposes of inter-company accounting and for reports to regulatory authorities, the supply of capacity and energy to the railroad in the State of Pennsylvania is considered as being supplied by Penn Water, while the supply of capacity and energy in the State of Maryland is considered as being supplied by Baltimore Company, but such intercompany accounting and reporting does not affect the joint nature of the obligations under the terms of the contract. The Potomac Electric [Power] Company is also a party to this contract but by specific provision of the contract is not obligated to provide generating capacity on its own system for such purpose.

MR. MYSE: I ask to have identified for the record as [154] Exhibit No. 10 a composite form of contract between Pennsylvania Railroad Company and the Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Water & Power Company, Safe Harbor Water Power Commission [Corporation] and Potomac Electric Power Company.

TRIAL EXAMINER: The document may be marked Exhibit 10 for identification.

(The document referred to was marked Exhibit No. 10 for identification.)

By Mr. Myse:

Q. Mr. Spaulding, do you have before you a copy of the composite form of Pennsylvania Railroad contract just identified as Exhibit 10? A. Yes, sir.

Q. I ask you if this is the power contract that you just referred to? A. Yes, it is.

Q. Will you please state the date of the original contract and the dates of the supplemental agreements incorporated in this composite form? A. This composite form of the Pennsylvania Railroad contract has been prepared for general corporate and operating use, and includes all of the present terms of the original contract of September 2nd, 1931, between the Pennsylvania Railroad Company, Penn Water Company, Safe Harbor and Baltimore [155] Company, together with all of the terms and conditions of the supplemental agreement thereto of August 15, 1934 by which Potomac Electric Power Company was added as a party, and also includes all of the terms and conditions of the second supplement to this contract dated June 22nd, 1938.

[156] Q. Will you please describe the operations under this contract? A. By reason of the provisions of this agreement, the services to the Railroad are rendered jointly by Penn Water and others.

The contracts provide for supply of power and energy to The Pennsylvania Railroad electrification, including the main line of its Philadelphia, Baltimore and Washington Railroad from Perryville, Maryland, to Washington, D. C., on the passenger and freight lines of the present Philadelphia Division between Thorndale, Pennsylvania, and Harrisburg and Enola, Pennsylvania, on the Columbia and Port Deposit Railroad from Columbia, Pennsylvania, to Perryville, Maryland, and yards adjacent thereto and supporting these services.

Power is supplied to the Railroad at Benning, D. C., adjacent to a power plant of Potomac Electric Power Company, at the end of a transmission line and taps therefrom

owned and operated by Penn Water and S. T. Company of Maryland, at Perryville and Conowingo, Maryland, and at Fishing Creek, Pennsylvania; and at Safe Harbor, Pennsylvania, at a substation of Penn Water located adjacent to the Safe Harbor hydroelectric development.

Power supply to the Railroad is in the form of 25 cycle, single phase, power at these several points.

To supply such special services, Safe Harbor obligated [157] itself to provide special generating and frequency changer facilities, Penn Water obligated itself to provide substation and transmission facilities and Potomac Electric Power Company obligated itself to provide frequency changer facilities.

The contract provisions include as separate components of the payments to be made for services thereunder (1) a fixed demand charge, (2) a two step energy rate and (3) specified payments for special facilities, generally based on the cost to the Company providing such facilities.

Q. Mr. Spaulding, what is the character of the rates charged for services rendered under this contract? A. The demand charge component is a single rate applying to the total demands of the Railroad supply at the several supply points refered to above, including those in the States of Pennsylvania, Maryland and the District of Columbia.

The energy charge component is a two step energy rate applying to the total energy delivered to the Railroad under this contract, and for such purpose the total energy is computed as though it were all delivered at a single supply point.

Q. Mr. Spaulding, how are the revenues divided between the several parties serving the Railroad under this contract? A. The Railroad contract itself makes no provision for any such division. On the contrary, it provides that a [158] single bill shall be rendered by and payments made to Baltimore Company, acting for itself and the other supplying companies to this contract.

Q. Mr. Spaulding, are any of the Pennsylvania Railroad revenues received by Baltimore Company divided with Penn Water? A. Yes; they are divided in accord with intercompany contracts.

MR. MYSE: I would like to have identified as Exhibit No. 11, a document entitled "Memorandum to Mr. H. A. Wagner, Mr. J. A. Walls—re: Allocation of PRR load between Maryland and Pennsylvania:" together with two letters dated September 9, 1937 and between the two gentlemen just mentioned. So the Record will be clear, both letters are dated the same date.

TRIAL EXAMINER: All these documents are stapled together?

MR. MYSE: They are.

TRIAL EXAMINER: The documents, so stapled, will be marked Exhibit No. 11 for Identification.

(The documents referred to were marked Exhibit No. 11 for Identification.)

By MR. MYSE:

Q. Mr. Spaulding, you have before you the document which has been identified in the Record as Exhibit No. 11? [159] A. Yes.

Q. And that is the intercompany arrangement, or the memorandum to which you have just referred? A. It is.

Q. Will you please explain how this arrangement is carried out? A. An Operating Committee made up of a representative each from Penn Water and Baltimore Company, recommended in this memorandum a method of division of the Pennsylvania Railroad revenues as between Baltimore Company and Penn Water.

The accompanying letters which have been identified as a portion of the Exhibit approved this recommendation of the Operating Committee.

The memorandum recommends that the total revenues from the Pennsylvania Railroad, including charges for

special facilities, be divided between Baltimore Company and Penn Water in proportion to the kilowatt-hours delivered to the Railroad in Maryland (including the District of Columbia) and Pennsylvania, respectively.

This memorandum has been the basis of division of Railroad revenues between Penn Water and Baltimore Company to date. The division so recommended was proposed because the records required were readily available, the method a simple one, and because any inaccuracy in the division so made would [160] affect only the gross revenues and not the operating income of the companies.

The division of revenues is not in proportion to the specific services rendered by each of the parties, nor to the cost or value of such services.

Q. How does Safe Harbor share in the division of such revenues? A. Safe Harbor does not share in the above-mentioned division of Railroad revenues directly, but through other contracts is assured the earnings on its investment made for services under the Railroad contract.

MR. MYSE: Mr. Examiner, I have a copy of an agreement dated June 1, 1931, between Safe Harbor Water Power Corporation, Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water and Power Company, together with supplemental agreements dated August 1, 1932 and November 22, 1939. I understand that all these agreements are likewise on file with the Commission, the designations of which will be identified by the witness in the Record.

I would ask that these agreements be incorporated into the Record by reference as Item No. E.

TRIAL EXAMINER: It is going to be necessary to give a separate letter item designation to each one of these as long as they stand in the file of the Commission as separate filings.

MR. MYSE: Then may we separate them, Mr. Examiner, as [161] E, F and G?

TRIAL EXAMINER: The witness is prepared to give the corresponding Federal Power Commission rate schedule file numbers, is he?

MR. MYSE: He is.

TRIAL EXAMINER: He can do that at the beginning of his testimony to avoid the handling which we had with the other items?

MR. MYSE: Yes, sir.

TRIAL EXAMINER: Very well, Item E, the agreement of June 1, 1931.

Item F is the supplemental agreement of August 1, 1932.

Item G will be the supplementary agreement of November 22, 1939. All of this is conditioned upon the numbers being given when ruled upon.

Proceed.

By MR. MYSE:

Q. Mr. Spaulding, you have before you the agreement dated June 1, 1931, between Safe Harbor Water Power Corporation, Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water and Power Company? A. Yes, sir.

Q. That being the agreement to which you have just referred? A. Yes, sir.

[162] Q. Have those agreements and the two supplements been filed with the Federal Power Commission by Penn Water? A. Yes, they have. The original contract of June 1, 1931, identified as Item E, providing for the sale of power and energy, transmission service and payments therefor, was filed with the Federal Power Commission by Penn Water on January 13, 1936, and designated as Federal Power Commission Rate Schedule No. 8.

The supplement to this agreement, dated August 1, 1932, and designated Item F, covering an agreement by Penn Water to directly or indirectly through S. T. Company extend its transmission system to interconnect with Potomac Electric Power Company was similarly filed with the Federal Power Commission as supplement No. 1 to Rate Schedule No. 8.

The second supplement to the agreement, dated November 22, 1939, identified as Item G, covering authorization for installation of Unit No. 1 in the Safe Harbor project, was filed with the Federal Power Commission on December 7, 1939, designated Exhibit A to Federal Power Commission Rate Schedule No. 8.

MR. MYSE: I ask that the contracts just identified be incorporated into the Record by reference.

TRIAL EXAMINER: Any objection?

MR. GOLDBERG: No objection.

TRIAL EXAMINER: Items designated E, F and G are [163] incorporated in the Record by reference.

(Items designated E, F and G were thereupon incorporated in the Record by reference.)

By MR. MYSE:

Q. Mr. Spaulding, have you prepared a tabulation showing the volume of services to The Pennsylvania Railroad under the Railroad contract, heretofore identified as Exhibit 10, indicating thereon the division of these services to the Railroad in the States of Pennsylvania and Maryland, including the District of Columbia, for the years 1944 and 1945? A. Yes, I have.

MR. MYSE: I ask that the document entitled "Services to Pennsylvania Railroad, Under Railroad Contract, and Division Between Maryland and Pennsylvania" be marked for Identification as Exhibit No. 12.

TRIAL EXAMINER: The document you want will be marked as Exhibit No. 12 for Identification.

(The document referred to was marked Exhibit No. 12 for Identification.)

[164] By MR. MYSE:

Q. Mr. Spaulding, you have before you the document which has been identified as Exhibit No. 12. A. Yes.

Q. Will you please state what this exhibit shows? A. This exhibit, No. 12, shows the total kilowatt-hours of energy delivered to The Pennsylvania Railroad in the States of Pennsylvania and Maryland (including the District of Columbia), respectively, for the years 1944 and 1945, based on the operating and billing records of the Company, and for the year 1946 based on the present estimates of load requirements of the railroad.

There is also shown on this exhibit, the installed single phase capacity, as water-wheel generators or frequency changers and their location. Such special facilities in Pennsylvania are owned and operated by the Safe Harbor Company, while the special facilities in the District of Columbia are owned and operated by the Potomac Electric Power Company.

In addition to the single phase generating equipment shown, Penn Water has installed as special facilities for service to the Railroad, (1) a transformer substation adjacent to the Safe Harbor hydroelectric development with transformer capacities totalling 80,000 kva., (2) a 13 kv. single phase bus with transformer and machine oil circuit breakers, including [165] provisions for additional transformer capacity in this substation, owned and operated by The Pennsylvania Railroad, and (3) a 32 mile steel tower line with four 132 kv. single phase circuits, owned and operated by Penn Water and its subsidiary, Stco of Maryland, extending from Safe Harbor, Pennsylvania, to Perryville, Maryland, with short connecting lines to substations

of the Railroad at Fishing Creek, Pennsylvania, and Conowingo, Maryland.

Q. Mr. Spaulding, have you prepared a tabulation showing the total revenues received from The Pennsylvania Railroad for services under the Pennsylvania Railroad contract, for the joint services in the States of Pennsylvania and Maryland? A. I have.

By Mr. Myse:

Q. Mr. Spaulding, have you also shown on this tabulation the division of the total net revenues received by Penn Water from Baltimore Company for services rendered by the Railroad Company in the State of Pennsylvania? A. I have.

Mr. Myse: I ask to have identified as Exhibit No. 13 [166] the document entitled "Total Revenues Received from Pennsylvania Railroad for Joint Services in Pennsylvania and Maryland and Division of Revenues Received by Penn Water."

Trial Examiner: The tabulation will be marked Exhibit No. 13 for Identification.

(The document above referred to was marked Exhibit No. 13 for Identification.)

* * *

[170] Q. Mr. Spaulding, looking over the record of yesterday, I find that you used the term "Penn Water was the only non-captive wholesale utility company in the United States," will you define with a little more particularity the use of that term? A. As I have used the term "non-captive company", I have referred to a company whose stock is owned by the public and whose stock is neither controlled by nor owned by another public utility company.

Q. Do you have a copy of Exhibit 13 for Identification before you? A. Yes, sir.

Q. Will you please state the source shown on Exhibit 13 for Identification? A. The total revenues for joint

services to The Pennsylvania Railroad for the years 1944 and 1945 are from [171] the actual billing records prepared by Penn Water and submitted to the Railroad by Baltimore Company.

The revenues for 1946 are based on the estimated requirements of the Railroad for the current year. The division of the total revenues paid by Baltimore Company to Penn Water is taken from the intercompany billing records prepared in accord with the Operating Committee memorandum offered for identification as Exhibit 11.

Q. Mr. Spaulding, have you prepared a tabulation showing the special facilities provided for the supply of power to the Railroad under the Railroad Contract offered as and identified as Exhibit 10 indicating the specific payments made by the Railroad under the terms of that agreement for such facilities? A. I have.

MR. MYSE: I ask to have marked for Identification a document entitled "Specified Facilities and other special Facilities provided under terms of Railroad Contract" as Exhibit 14.

TRIAL EXAMINER: It may be marked for Identification as Exhibit 14.

(The document above referred to was marked Exhibit No. 14 for Identification.)

TRIAL EXAMINER: You may proceed.

[172] By MR. MYSE:

Q. Mr. Spaulding, you have before you the document which has been marked as Exhibit 14 for Identification. I ask you to please state what this Exhibit shows? A. There is shown on this exhibit each of the specified facilities provided under the Railroad contract, the payments made by the Railroad under the terms of the Contract, together with the ownership and location of such facility.

Q. Mr. Spauling (sic), you have stated, have you not, that all revenues paid by the Railroad are paid to Baltimore Company? A. Yes, I have.

Q. Are any of the contract charges for special facilities paid directly to the owning companies? A. No, they are not.

Q. With reference to Exhibit 14 for Identification, will you please indicate how the owning companies are compensated for their investment and operation of these special facilities? A. The investments made by Safe Harbor for the facilities owned by it, and the operating expenses in connection therewith, are included together with all of its other facilities as the basis for the bills rendered by Safe Harbor to Baltimore Company and Penn Water Company under the Safe Harbor Contract, identified in this record as Item E.

[173] MR. GOLDBERG: That is E, F and G, isn't it?

MR. MYSE: I think that is correct.

THE WITNESS: That is correct; E, F, and G.

By MR. MYSE:

Q. Will you continue, please? A. In connection with such billing, Baltimore then pays Safe Harbor two-thirds of the cost of such special facilities provided by Safe Harbor for the Railroad, and Penn Water one-third.

Penn Water's one-third must in turn come in part from the allocated division of Railroad's revenues, as shown in Exhibit 13, and any remainder must come from Baltimore Company through the power agreement between Baltimore and Penn Water.

The investment made by Potomac Electric Power Company for special Railroad facilities and their operating costs are paid by Baltimore Company to Potomac Electric Power Company under the terms of the power contract between those parties.

Q. Are any of these special facilities for the Railroad owned or operated directly by Baltimore Company? A. No, they are not.

Q. Referring to Exhibit 14 for Identification, there appears near the bottom, a credit to the revenues received for special facilities for the rental and maintenance of the [174] 110 Kv. circuit between Patapsco Crossing and Benning, D. C.

Will you please explain this item? A. The Railroad Contract, Exhibit 10 in this proceeding, provides that the Railroad will make available to the supplying parties the transmission line built by the Railroad on its electrification structures between the Patapsco Crossing, a point on the outskirts of Baltimore, and the Benning plant of the Potomac Electric Power Company in Washington, for the use of the supplying companies in assuring ample transmission capacity between Baltimore Company and the Hydro Companies, on the one hand, and the Railroad frequency changer installed by Potomac Electric Power Company in its Benning plant, on the other hand.

The use of this latter facility was in recognition of the fact that Potomac Electric Power Company provided the Railroad frequency changer; but did not obligate itself to otherwise install generating capacity for the supply of power to the Railroad.

The negative payment of $6,000 shown at the bottom of Exhibit 14, is a credit allowed under the terms of the Railroad contract for the use of this circuit.

Q. Mr. Spaulding, you have previously referred to interchange agreements, or arrangements, with your Pennsylvania customers, and you stated, did you not, that these interchange agreements are separable from the contractual arrangements for [175] the supply of firm power. A. That is correct.

Q. Are the contractual provisions for interchange and for firm power services incorporated in the same contracts?

[176] A. Not in every case, but as previously stated, the billing for interchange sales and purchases is separate and distinct from the billing for firm power and other services.

Q. What is the usual basis for accounting and billing for interchange transactions? A. Interchange sales and purchases are usually accounted for and billed on the basis of a division of the savings resulting from such transactions when the generation of energy at a lower cost plant on one system can be used to replace generation at a higher cost plant on another system.

The difference in cost of the actual generation and what it would have cost for the replaced generation, which is the resulting savings, is divided between the parties.

When energy is generated at a steam plant, the resultant savings on such transactions are usually divided between the generating and receiving companies on a 50-50 basis.

When energy is generated at a hydro plant that would not be needed by the hydro company in the supply of its firm power customers, it is the general practice for the hydro company to sell such energy at 70 per cent of the cost which the receiving company would have incurred in generating such energy itself.

Q. Now, are all interchange transactions made on such a replacement basis? [177] A. No, Penn Water's interchange contracts, in addition to providing for economy interchange transactions, also provide that the two parties shall assist each other under emergency conditions, to the extent possible without affecting other services or obligations of the assisting parties. Such provisions were particularly valuable during the recent war period when assistance was rendered on a daily and, frequently, on a weekly basis, by making energy and capacity available to a company that needed to maintain its limited generating resources, or by providing through such arrangements the necessary reserve capacity.

The interconnected companies very generally assisted each other in such a cooperative manner during the past five years.

The charges made for such services were as provided for under the interconnection agreements, and are usually based on the generating company's cost plus ten per cent.

Q. Mr. Spaulding, have you prepared a tabulation showing the volume of interchange transactions in 1944 and 1945? A. Yes, I have.

MR. MYSE: I ask to have identified as Exhibit No. 15 a document entitled "Pennsylvania Water & Power Company—Total Interchange Sales to and Interchange Purchases from Pennsylvania customers."

TRIAL EXAMINER: The document may be marked for [178] identification as Exhibit No. 15.

(The document above referred to was marked Exhibit No. 15 for Identification.)

By MR. MYSE:

Q. Mr. Spaulding, do you have before you the document which has been marked for identification as Exhibit No. 15? A. Yes.

Q. Will you please state what this exhibit shows? A. Exhibit No. 15 shows the total volume of interchange transactions with other Pennsylvania Utilities for the years 1944 and 1945, and as estimated for the year 1946, on the assumption that the river flow of the Susquehanna River would be normal for the year.

The kilowatt hour transactions are shown, together with the revenues received therefrom, and Penn Water's share of the savings on such transactions which were accounted for as described above.

MR. GOLDBERG: Are you about to pass Exhibit 15 for identification?

MR. MYSE: Yes.

MR. GOLDBERG: I wonder if I might inquire of the witness something about this exhibit so we will know how to read the exhibit correctly?

TRIAL EXAMINER: You may.

[179] MR. GOLDBERG: Mr. Spaulding, under the third column for the year 1944 you show that Penn Water's share of savings was $150,164, whereas under the interchange sales you show $21,162 with reference to the purchases.

Do we add those two figures together in reading the exhibit to give us a total saving of $171,000, in round figures?

THE WITNESS: That is correct.

MR. GOLDBERG: Thank you very much.

[180] MR. MYSE: Mr. Examiner, I ask that the agreement between Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company dated December 31, 1927, together with supplemental agreement dated December 27, 1928, and June 1, 1931, be designated as Item H, to be incorporated by reference.

That another supplemental agreement between the same parties, namely, Consolidated Gas Electric Light and Power Company of Baltimore and Pennsylvania Water & Power Company, dated September 29, 1939, be designated as Item I, to be incorporated in the record by reference.

I propose to identify the filing numbers under which they were filed with the Federal Power Commission.

TRIAL EXAMINER: You will incorporate these by reference to the documents in the official files of the Commission?

MR. MYSE: That is correct.

MR. GOLDBERG: That is by reference, Mr. Examiner, not to the formal files of the Commission, because it is my impression that the rate contract filings are not a part of the formal files of the Commission.

TRIAL EXAMINER: No, as I indicated, this is by reference to the official files of the Commission.

MR. MYSE: I might say that in the printed copy of the agreement we have handed to the Examiner, the supplemental agreement of September 29, 1939, which I have asked to be [181] incorporated by reference as Item I, appears beginning at page 41.

TRIAL EXAMINER: Of this document you have handed the Examiner for his convenience?

MR. MYSE: That is right.

By MR. MYSE:

Q. Mr. Spaulding, will you please indicate for the record the power agreements between Penn Water and Baltimore Company, and state whether these contracts are on file with the Federal Power Commission? A. The agreement of December 31, 1927, between Baltimore Company and Penn Water, and the two supplements thereto of December 27, 1928, and June 1, 1931, identified as Item H, were filed by Penn Water with Federal Power Commission January 13, 1936, and designated by the Commission as Federal Power Commission Rate Schedule No. 1.

The supplement to these exhibits dated September 29, 1939——

Q. (Interposing) You mean the agreements? A. Yes. The supplement to these agreements dated September 29, 1939, and identified as Item I were filed by Penn Water with the Federal Power Commission on October 2nd, 1939, and designated by the Commission as Supplement No. 1 to Rate Schedule No. 1.

Baltimore Company and Penn Water are the only parties to [182] these agreements.

Q. Are there any other agreements of Penn Water involving services to Baltimore Company? A. Yes. There are two main agreements now in effect which are interdependent and which set forth the contractual relations of Penn Water and Safe Harbor with Baltimore Company.

Both were the outgrowth of twenty years of experience by the two company in determining the best methods of promoting the coordination of the hydro and transmission facilities of Penn Water with the steam generating plants of Baltimore Company, to the end of maximum utilization of natural resources, minimumization of investment and the utmost in service availability to the ultimate customer.

Q. You have referred to two agreements with Baltimore Company? A. Yes.

Q. Are you referring to the three-party contract between Penn Water, Safe Harbor, and Baltimore, identified as Items E, F and G, as one of them? A. Yes. Under this agreement Penn Water and Baltimore Company became entitled to the entire output of the Safe Harbor plant and undertook to provide to Safe Harbor Company contractual return in addition to all of the expenses, the agreement identified as Item E and supplement thereto, identified [183] as Items F and G, also provided for the construction of transmission lines by Penn Water, in part for the delivery of Baltimore Company's share of the output of the Safe Harbor plant.

Q. What other agreement did you refer to? A. The other agreement, identified as Item H, and the supplement included as Item I, is the controlling instrument between Penn Water and Baltimore Company, expresses the basic policy governing the rendering of services by Penn Water and the payment of compensation therefor by Baltimore Company.

Q. What services are furnished under this agreement? A. This agreement as presently amended does not provide for the furnishing or delivery of any specified amount of capacity and energy. This agreement does provide on the

one hand that the Baltimore Company is entitled to all of the power and energy available to Penn Water from its own plants and from Safe Harbor and not disposed of to other customers of Penn Water, together with all savings that can be secured through coordinated system planning and through interchange transactions with adjoining systems by means of the transmission facilities of Penn Water.

On the other hand, it provides that Penn Water in return for allowing such participation by Baltimore Company in the most effective utilization of the power and transmission resources of Penn Water and Safe Harbor, is to receive compensation [184] from Baltimore Company predicated on the earnings theretofore established competitively by Penn Water in the field of wholesale power supply both to Baltimore Company and to the other customers of Penn Water.

[185] Q. How is the compensation under this contract related to the services furnished? A. The agreement with Baltimore Company established an initial level of compensation to Penn Water based on the revenues then being received by Penn Water from all of its customers, including Baltimore Company and related to the amount of energy available in an average river flow year, to be adjusted with variations in investment devoted by Penn Water for power production and transmission services.

This method of compensation to Penn Water provided for payments by Baltimore Company to be in the form of an annually determined payment independent of the number of kilowatts and kilowatt hours actually furnished in any particular year.

A similar plan of compensation was also adopted in the case of the payments which Penn Water and Baltimore Company make to Safe Harbor under the contract designated as Items E, F and G, each paying to Safe Harbor its contract proportion of its total specified amount consisting of the contract return plus expenses, such payments being in the same proportion as the contract entitlement of each

company and without regard to the actual amount or division of any capacity and energy actually furnished to each in any year.

The greatest advantage derived from this arrangement was the removal of all artificial barriers which would interfere with the hour-to-hour, day-to-day, and the long range [186] coordination of the power resources of the companies involved.

Such a goal had not been as fully achieved by Penn Water and the Baltimore Company in two decades of preceding power relations.

Q. Why was it not possible to obtain the full advantages of coordinated operation under the early contracts with Baltimore? A. The evolution of Penn Water's power agreements with its customers in Baltimore included the early extreme of a stipulated capacity service always available and price on a kilowatt-year basis, combined with additional energy sales at a stated mill rate during specified hours of the day.

Another form of sale was a stipulated capacity service combined with a limited amount of yearly energy at a stated mill rate to be taken at the customer's desires.

Neither form of contractual arrangement recognized the possibility of energy purchases in large volume during the periods of ample flow, nor the coordinated scheduling of the available steam resources in the interest of operating economy.

The first development in the improvement of hydro utilization was an arrangement whereby the customers began to purchase supplementary energy to replace their normal steam generation. This involved the demonstration that the customers could reduce their steam generation without impairment of the [187] reliability of their distribution service.

Because such hydro energy was viewed at first only as a substitute for steam energy, customers were not disposed to pay more for it than the mere incremental cost of

steam generation. Within a few years, however, the volume of supplementary energy being absorbed was greater than the amount of the so-called firm energy for which the customers had contracted, and the recognition began to develop that customers were able to derive a capacity value from such hydro supply in addition to its value as replacement energy.

Q. When did Penn Water's contracts first provide the necessary contractual incentive for coordinated operation? A. Penn Water's power agreements with its customers in Baltimore and Pennsylvania, in the years up to 1931, had not yet developed a contractual incentive which would encourage the fullest coordinated utilization of the facilities and power resources of the several customers.

[188] Penn Water was always under the difficulty of establishing a contractual operating procedure with its customers which would permits its hydro resources to be used to the best advantage of the customers, and the steam plants of the customers to be used in the most economical fashion with regard to their own loads and the loads of other customers.

Necessarily, Penn Water had to deal individually with its separate customers, all of whom were inclined to view their own power requirements as matters distinct from the requirements of other customers.

Q. What recognition was given to the opportunities for coordinated operation under the 1927 contract identified as part of Item H? A. By 1927, the contractual and operating arrangement with Baltimore Company had demonstrated the desirability of coordinated operation of the facilities of the two companies and the 1927 agreement, recognized and expressed this intent, but the past practice of stipulating capacity and energy services and the conditions under which they were to be available, was continued.

Detailed contractual provisions were utilized regarding hydro pondage regulation and the amount of permissible

steam generation by Baltimore Company in relation to load changes, capacity margins and minimum loads.

There were arrangements for the purchase by Penn Water [189] of steam energy from Baltimore Company and a credit by Baltimore Company to Penn Water in case of hydro losses occasioned by unnecessary steam generation.

Such provisions were intended to assure to Baltimore Company that the expected services would be received, and to assure to Penn Water that the maximum use would be made of its facilities and that the expected revenues would materialize.

Q. What were the character of the rates and charges under this 1927 agreement that you have referred to? A. Specified payments for special facilities were provided for in connection with certain distribution facilities installed by Penn Water at its Highlandtown terminal substation, and a transmission line built by S. T. Co. of Maryland on its right-of-way, for the exclusive use of Baltimore Company.

The rate provisions included an adjustable specific capacity charge per kilowatt of one hour integrated peak service and a similar charge per kilowatt of swing and reserve capacity service in excess of the integrated peak supply.

These peak services were to be redetermined from time to time giving consideration to the actual and predictable changes in the amount and character of the loads of Baltimore Company and of Penn Water's other customers, installed generating capacities and availability, and in methods of operation.

[190] The separate energy rate was graded in three volume steps on an annual basis.

Q. Did this 1927 agreement accomplish the desired degree of coordination? A. No, it did not. Although this contractual arrangement, made for a long term undertook to broaden the scope of the cooperative utilization of the power resources of the two companies, and to avoid all unnecessary duplication of investment and operating cost,

it nevertheless still failed to promote the maximum coordinated use of the power resources of the respective parties.

Even before the problem of bringing the Safe Harbor project into the picture as a new generating source on the basis of cooperative ownership had been comprehended, the intricacies of the arrangements and the operating impediments arising from the accounting for energy of different classifications and rates and with varying capacity possibilities, had been recognized.

Q. Could Safe Harbor have been developed and operated under the 1927 form of contract? A. No, it could not. When an attempt was made to work out a contractual arrangement concerning the Safe Harbor project, it was believed that the previous thinking regarding appropriate mechanisms of power contracts would have to be materially modified if any workable procedure was to be [191] accomplished. The services rendered by Penn Water's and Safe Harbor's generating plants would in certain respects be similar although differing in volume; yet, for the reasons stated by Mr. Walls in his testimony, Penn Water had prior claim on the market, with the right to have its own plant loaded and its capacity service recognized, before Safe Harbor was entitled to derive revenue from the same market sources.

If the two hydro plants were to be considered as separate identities, each should want to operate its own pondage to its own advantage, and these interests could not be expected to harmonize.

It would not be good operating practice to segregate the loads which the two hydro developments would serve, as they necessarily had to serve the same load markets and utilize the same primary transmission system.

It became obvious that if the payments for the outputs of the two plants were to be made in accordance with past practice on the basis of separate unit rates for capacity and energy, all of the disadvantages of the existing two-

party contractual arrangement between Penn Water and Baltimore would be greatly aggravated.

Not only would the problem of segregation and classification of capacity and energy services be difficult, if not impossible, on the basis of metered quantities, but arbitrary [192] assumptions in that respect would not always conform either with facts or the equities of the situation.

But the greatest harm in such a course would be caused by the artificial barriers that would be created to the proper dispatching of the available water power at the two plants and the coordination of their operation with the steam plants of the customers that ultimately receive the outputs of the plants.

Q. Has the change in contract form accomplished by the 1931 amendment removed these artificial barriers to coordinated operation? A. Yes. Almost 15 years of experience have now been had with the contractual arrangements that were developed and initiated in 1931.

All of the objectives desired in 1931 have been attained. The Safe Harbor project was successfully constructed, financed and brought to a proper earning level. The most effective utilization of the system steam capacity and energy and that of our hydro plants has been fully achieved, with the resulting conservation of fuel, particularly during the critical days of fuel shortage in the recent national emergency, of benefit to the public.

The ability to supply the Pennsylvania Railroad Company at several widely separated points, to the convenience and advantage of the customer, would not have been possible [193] had it been sought separately by Penn Water or by Baltimore Company, operating under a contractual arrangement that was complicated with artificial barriers.

And finally, Baltimore Company has the assurance for a long period, extending to 1980, of the advantages and certainty of a large source of hydro service which is closely coordinated with its own steam resources, and offering the opportunity to achieve the maximum economy of system operation.

Q. Could the benefits of coordinated operation to the interconnected system be accomplished through any other contractual arrangement than that resulting from the two contracts negotiated in 1931, identified in this record as Items E, F and G and Items H and I, respectively? A. It might be possible to negotiate with Safe Harbor's and Penn Water's existing customers, power contracts that would accomplish this end, but such contracts would have to be predicated on; first, that the Holtwood hydroelectric development and the Safe Harbor hydroelectric development, together with the transmission system of Penn Water be completely under one ownership to eliminate possible adverse interest in earnings; and, second, that such contracts would provide for the proper incentive to the several customers of the hydro companies to assure the accomplishment of maximum overall economies, to provide for an equitable division with its customers of the savings resulting from such operations, [194] and would not introduce any artificial barriers to hinder the most economical method of operation.

[195] Q. Are the present services rendered by Penn Water and Safe Harbor to Baltimore Company independent of one another? A. No, they are not.

Q. Will you please explain in what respect they are joint services? A. The agreements between Penn Water and Safe Harbor and Baltimore Company, identified as Item E, f [F] and G and H and I are premised on the recognition that the services derived from hydro generation and rendered to Baltimore Company by the two hydro companies are physically inseparable.

Baltimore Company is entitled to its share of the Safe Harbor output, and to all of the power and energy of Penn Water from its own plants, and from [Penn] Water's share of the Safe Harbor output which is not used by other customers of Penn Water. A kilowatt hour of energy and a kilowatt of available capacity of Safe Harbor

has the same potentialities as a kilowatt hour and kilowatt from the Holtwood plants.

The Safe Harbor and Holtwood plants are operated as a unit with respect to their use of the available water, and the important aspect of this joint service by the hydro companies lies in the utilization made of the total hydro capacity and energy on the system load.

I have shown by reference to the load charts in Exhibit 8 that in periods when the river flow is less than full draft, the available hydro energy is operated in the peak portion of [196] the load requirements for the purpose of reducing the steam generating capacity that has to be operated by its customers.

A point to be noted is that no distinction is made in this regard between the hydro energy generated at Holtwood and that at Safe Harbor. Both contribute jointly to the capacity savings of steam generation and to the fuel replacement benefit, as well. The values that would attach on a competitive basis as to the outputs of the two plants would be different if this were not so, because a greater value would be assigned to the energy allocated to or operated in the top of the system load requirements.

The joint nature of the services of the two hydro companies is seen also in the co-mingling of the outputs of their plants in the dispatching of economy flow hydro energy in interchange transactions with adjacent utility systems. In fact, all of such business is transacted by Penn Water regardless of whether the energy concerned is derived from the Holtwood or Safe Harbor plants. This is immaterial under the existing contractual arrangements, since Baltimore Company is entitled to receive the benefits of reductions in the expenses of both Penn Water and Safe Harbor that are made possible by disposing of hydro energy where it can be absorbed most economically.

Another phase of the joint services of Penn Water and Safe Harbor is found in the utilization which both make of the transmission system of Penn Water. Penn

Water developed [197] its transmission lines and those of its wholly owned subsidiary, the Stco [STCo.] of Maryland, for the purpose of rendering services to and delivering and interchanging energy to and with its customers in Pennsylvania, Baltimore and in Washington.

When the Safe Harbor project was brought into operation, it was necessary to increase the transmission capacity to Baltimore, and, at the same time, this new plant was electrically connected to the plants at Holtwood. Both plants deliver their outputs jointly in the Penn Water transmission network. Energy from both Penn Water and Safe Harbor is free to flow to all customers of Penn Water, and this is as it should be.

Q. Do the contractual relations with Baltimore Company recognize the joint nature of these services? A. Yes. The contractual arrangements with the Baltimore Bompany [sic] were purposely designed in 1931 to permit the joint services of Penn Water and Safe Harbor to be utilized in a natural physical manner with a minimum of inter-company accounting and nonproductive effort that would only impede the economical operation of the power system. This could not be done were artificial barriers in effect, or the true natures of the joint services of Penn Water and Safe Harbor not fully understood.

* * *

[198] Q. Mr. Spaulding, have you prepared a tabulation showing the payments by Penn Water to Safe Harbor for the years 1944 and 1945 for actual conditions and as estimated for the year 1946? A. Yes, I have.

MR. MYSE: I ask to have identified as Exhibit 16 the document entitled "Payments made by Penn Water and Baltimore Company to Safe Harbor Water Power Corporation".

TRIAL EXAMINER: The tabulation will be marked Exhibit 16 for Identification.

[199] (The document above referred to was marked Exhibit No. 16 for Identification.)

By Mr. Myse:

Q. Mr. Spaulding, will you please state what Exhibit 16 for Identification shows? A. This exhibit shows the actual payments by Penn Water to Safe Harbor for the years 1944 and 1945, and the estimated payments for the year 1946. It also shows the actual payments by Baltimore Company to Safe Harbor for the years 1944 and 1945 and is estimated for the year 1946.

Mr. Myse: I ask to have identified as Exhibit 17 a document dated January 8, 1945 and entitled "Safe Harbor Company's bill to Baltimore Company and Holtwood Company for the year 1944", and attached thereto are similar bills for the year 1945 and as estimated for the year 1946.

Trial Examiner: The document referred to will be marked Exhibit 17 for Identification.

(The document above referred to was marked Exhibit No. 17 for Identification.)

Mr. Myse: I also ask to have identified as Exhibit 18 the document entitled "Holtwood Company's bill to Baltimore Company for December, 1944", and attached thereto like bills for December 1945 and as estimated for the year 1946.

Trial Examiner: The document will be marked Exhibit 18 for Identification.

[200] (The document above referred to was marked Exhibit No. 18 for Identification.)

By Mr. Myse:

Q. Mr. Spaulding, will you please identify and state what is shown on Exhibits 17 and 18 for Identification? A. Exhibit 17 are Safe Harbor's actual bills to Penn Water and Baltimore Company as prepared and agreed upon by

the Operating Committee for the companies for the years 1944 and 1945, dated January 8, 1945, and January 8, 1946, respectively, together with Safe Harbor's estimated bill to Penn Water and Baltimore Company for the year 1946, dated April 11, 1946.

[201] Although these bills are headed "Bills for December, 1945 and December, 1944", they are the final adjusted bills as computed by the Operating Committee at the close of the year.

Q. Will you state what is shown on Exhibit 18 for Identification? A. Exhibit 18 for Identification is Penn Water's actual bills to Baltimore Company as prepared and agreed upon by their Operating Committee for 1944, 1945, dated January 8, 1945 and January 8, 1946, respectively, together with Penn Water's estimated bill to Baltimore Company for the year 1946, dated April 11, 1946.

Q. Likewise, the bills shown on Exhibit 18 state that it is for December, 1944. Will you explain the meaning of that designation? A. The bills between Safe Harbor on the one hand, and Penn Water and Baltimore on the other, as well as the bills rendered by Penn Water to Baltimore Company are redetermined quarterly, until the last quarter, when a final adjustment is made at the end of November and at the end of the year respectively. These bills are the final bills prepared after the close of the year, but are further subject to adjustment later in the year, if final adjustments are found necessary.

Q. Do you know whether or not there were any adjustments to the bills for the year 1944? [202] A. There were no adjustments after the close of the year 1944 and 1945, for either companies.

Q. Mr. Spaulding, you stated previously, in your testimony with respect to your Pennsylvania customers, that these customers are billed separately for firm power services and for interchange transactions, did you not? A. Yes, I did.

Q. Do you show on such interchange bills to Pennsylvania customers the sales to and purchases from each

customer as separate items? A. Yes; they are shown as separate items.

Q. Referring to Exhibit 18 for Identification, will you indicate how these several separate items are shown thereon for at least one of your Pennsylvania customers? A. Referring to Penn Water's bill to Baltimore for the year 1944, being a part of Exhibit 18, Item (e) 1, shows the revenues received by Penn Water from Pennsylvania Power & Light Company for firm power services as $2,166,823.11. The amount received as revenue from that company for interchange which it purchased from Penn Water is shown in Item (e) 7, as $290,314.56, while the amount paid to the Pennsylvania Power & Light Company by Penn Water for interchange purchased is shown in Item (d) 3 as $50,179.73.

Q. Does this same annual bill of Penn Water to Baltimore Company for the year 1944 show similar segregated items [203] with respect to Baltimore Company for firm power services and for interchange services? A. No; it does not.

Q. Will you please explain? A. Referring to the annual bills for 1944 and 1945 included as parts of Exhibit 18 for Identification, it will be noted on each bill that Item (i) on the annual bills for 1944 and 1945 is termed "net bill". All firm power services and interchange services have been netted in this one item. As explained previously, the payments made by Baltimore Company to Penn Water on the basis of this bill are independent of the amount of firm power services or the amounts of interchange.

It is unnecessary, therefore, in the preparation of the annual bill to state the actual amount of energy delivered to, or the amount of backfeed energy received from, Baltimore Company.

Q. Is it possible for you to restate Penn Water's bill to Baltimore Company so that it would show the payment by Baltimore Company to Penn Water for firm power services, exclusive of interchange transactions? A. Yes; it is. The operating records of the company permit the de-

termination of the amount of interchange services to Baltimore Company and the amount of backfeed purchased from Baltimore Company and the amount of energy diverted from [204] Baltimore Company to which the latter is entitled.

Q. Have you made such a determination? A. Yes; I have.

* * *

Q. Mr. Spaulding, I will ask you to state what Exhibit 19 for Identification shows. A. This Exhibit is a restatement of Penn Water's annual bills to Baltimore Company, identified as Exhibit 18. This restatement segregates the effect of interchange transactions between Penn Water and Baltimore Company and shows the gross amount of the charges for firm power services, for the years 1944 and 1945, and as currently estimated for the year 1946.

* * *

[205] This Item (d) 5 is made up of two components of energy purchased from Baltimore Company and used in connection with sales by Penn Water in Pennsylvania.

The first, shown as Item (d) 5a, is the backfeed used in connection with sales by Penn Water to its firm power customers in Pennsylvania, and, second, Item (d) 5b, is the sum of the backfeed energy and of diverted energy used in connection with sales as interchange by Penn Water in Pennsylvania.

It should be noted in connection with this latter Item (d) 5b, that the revenues received for such interchange sales, together with the revenues received on sales of Safe Harbor's and Penn Water's excess hydro and Penn Water's own economy [206] steam, are the same revenues shown by the sum of Items (e) 5, 6 and 7 taken together.

Q. Will you please explain what you mean by the term "diverted energy used in connection with sales as interchange"? A. Energy and capacity provided by Penn Water and Safe Harbor, to which Baltimore Company is entitled and which it could utilize, are at times diverted and

sold to others as interchange energy and capacity, with Baltimore Company's cooperation.

This diversion of energy and capacity, so necessary to the coordinated operation of the interconnected system, is made when it is more economical for the Baltimore or Washington Company to increase its own steam generation, thereby permitting Penn Water to sell its own energy or capacity as interchange to its Pennsylvania customers at a price greater than the cost of such generation in Baltimore or Washington.

Q. Referring now to Item (e) on the adjusted bill to Baltimore Company for 1944, Exhibit 19, please explain Item (e) 11. A. Item (e) 11 "Baltimore Company Interchange" is Penn Water's compensation from Baltimore Company for interchange purchased by Penn Water from its Pennsylvania customers and used in connection with the services by Penn Water to Baltimore Company. Such transactions take place when it is [207] more economical for the Baltimore and Washington Companies to decrease their own generation and increase their receipts of energy from Penn Water, with a resultant saving in Baltimore Company's operating expenses.

The amount shown in (e) 11 compensates Penn Water for the latter's expense incurred in purchasing interchange from its Pennsylvania customers to replace generation in Baltimore and Washington.

[208] Q. What is the relation between the interchange purchases for the Pennsylvania customers shown in Item (d) 1, 2, 3, of the interchange services to Baltimore Company as shown in Item (e) 11? A. Penn Water's purchase of interchange from its Pennsylvania customers are greater than the amount of such interchange services to Baltimore Company, as Penn Water frequently purchased a considerable amount of energy in Pennsylvania for use of supply of its firm power customer's requirements in Pennsylvania, when it is economical to do so to the end of the maximum system coordination.

These purchases from the Pennsylvania customers for firm supply in Pennsylvania are similar in nature to the backfeed purchased from Baltimore for use in connection with Penn Water's firm supply in Pennsylvania, which is shown in Item (d) 5a. Under several of its contracts Penn Water may obtain such energy from the most economical source of supply.

Q. Can you indicate from Exhibit 19 what would be Penn Water's revenues from and payment to Baltimore Company with respect to interchange transactions between them? A. Yes, I can. Item (d) 5 would be Penn Water's payments to Baltimore Company for interchange purchases by Penn Water from Baltimore Company and Item (e) 11 would be Penn Water's revenue from Baltimore Company for interchange services rendered by Penn Water to Baltimore Company.

[209] It should also be stated that through these transactions all of Penn Water's share of the savings on its interchange with Pennsylvania customers is credited to the Baltimore Company.

* * *

---

[221] GEORGE WHITTIER SPAULDING,

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[233] Q. My question is: Does Safe Harbor sell interchange energy under the contracts identified as H and I?

* * *

MR. MYSE: Just a moment. I would like to interject and point out that Items H and I are contracts to which Safe Harbor is not even a party.

MR. GOLDBERG: I am perfectly aware of that.

* * *

[235] Q. Does Safe Harbor sell interchange energy at all? First, let me ask you that. Without reference to any con-

tract, does it sell interchange energy? A. Yes, jointly with Penn Water.

Q. Does it sell that interchange energy which you say it sells jointly with Penn Water, under the contracts identified as Items H, and I, or under the contracts identified as Items E, F and G, or both? A. You have to take them together.

Q. The sales of interchange energy does not take place under one group or the other, but takes place under both? A. Correct. But the accounting for it is in accord with the accounting and billing carried out in connection with the contracts submitted and identified as Items H and I.

Q. Is it not a fact, Mr. Spaulding, that under the contracts identified as E, F and G, which is the contract between Safe Harbor, Consolidated of Baltimore, and Penn Water, that Safe Harbor under that contract sells all of its capacity and energy to Consolidated and Penn Water?

MR. SPARKS: That is subject to the same objection that was made a while ago that that involves a consideration of the contract by Mr. Spaulding.

TRIAL EXAMINER: If the Witness can answer that question, [236] on the basis of what the practice and understanding of the Company is, then that is another matter.

THE WITNESS: Yes.

TRIAL EXAMINER: The Witness is not being asked to construe a contract.

THE WITNESS: Yes. All of Safe Harbor's capacity and energy are under the contracts offered as Items E, F and G and the entitlements of Baltimore and Penn Water.

Q. And those entitlements take care of all of Safe Harbor's capacity and energy, isn't that so? A. It takes care of the entitlements, but not what happens to it.

By Mr. Goldberg:

Q. You mean by that, that although the contract provisions are to the effect that two-thirds of the capacity and energy is provided for as going to Baltimore and one-third to Holtwood, that as a matter of fact all of the capacity and energy may go to Baltimore at given times? A. Or it may all go to Penn Water's customers in Pennsylvania at given times.

Q. But the fact of the matter is that wherever it may go,—Baltimore, Washington or Pennsylvania—the contracts identified as E, F and G provides for the sale of all of Safe Harbor's energy and capacity, isn't that so? A. That is correct.

[237] Q. Now, can you tell my why if Safe Harbor is a participating party in the contracts identified as Items H and I, it is not a party to that contract? A. It is not necessary to be. The contracts identified as H and I, and the contracts identified as Items E, F and G have to be taken together in considering the services to the Baltimore Company.

Q. Well, now, let us refer to Items E, F and G, and taking your premise that Items E, F and G and H and I must be taken together, and that is why it is not necessary to include Safe Harbor in the contracts as identified as H and I, why were all three parties included in Items E, F and G? It was not any more necessary there, was it, according to you. A. May I answer your first question?

Q. Yes, go ahead. A. Because Penn Water and Baltimore Company jointly owned Safe Harbor and wished to be assured of the total capacity and energy of Safe Harbor in connection with its respective uses and sales.

Q. Isn't it a fact that Consolidated of Baltimore and Pennsylvania Water and Power are parties to the agreement identified as Items E, F and G because sales of capacity and energy are being made to them under that contract by Safe Harbor? A. Only the entitlements.

[238] Q. Well, we have been over that. Isn't that so? Let us go back to my question before Mr. Spaulding interposed as to the entitlements.

* * *

THE WITNESS: The answer is, yes.

By MR. GOLDBERG:

Q. I think you testified that Safe Harbor was a party to the original agreement between Pennsylvania Water and Power Company and Metropolitan Edison Company, is that correct? A. That is correct.

Q. And recently, you testified, that that agreement was cancelled, and a new one consummated, is that correct? A. Correct.

Q. And in the new contract, Safe Harbor is not a party; is that right? A. That is right.

[239] Q. Only Pennsylvania Water and Power Company and Metropolitan Edison Company? A. That is right.

Q. Why was Safe Harbor omitted? A. The original reason for Safe Harbor being made a party to the Edison Light and Power contract of York was to provide that the capacity and energy of Safe Harbor to which the Holtwood Company was entitled on the one hand, and received and used on the other hand, would be available in that contract to York.

There were also two other reasons for Safe Harbor being made a party. One was a legal reason having to do with the right of Safe Harbor to sell and distribute energy at wholesale in York County; and the second was to protect against double taxation on the sales made to Edison Light and Power.

When the new contract was made between Penn Water and Metropolitan Edison Company effective January 1, 1946 to supersede the old contract, it was the opinion of counsel that it was no longer necessary to make Safe Harbor a party to protect its position in the first two instances, and the third reason no longer appeared to exist.

Q. And for the same reasons you have outlined for the inclusion of Safe Harbor in the original Metropolitan Edison contract now superseded Safe Harbor was included as a party in the agreements whereby service is [240] provided to the Philadelphia Electric and Pennsylvania Power and Light Company? A. The same reasons existed at the times those early contracts were made.

• • •

[242] Q. Without asking you to give any legal opinion, but based entirely on the reasons you have outlined why they were included in the first instance, and not included in the second instance, is it reasonable to conclude that since Safe Harbor was included in the present contract between Pennsylvania Water and Philadelphia Electric and Pennsylvania Power and Light Company, for the same reasons then Safe Harbor could be excluded from those contracts?

• • •

THE WITNESS: From a practical point of view of operation and irrespective of the terms of the contracts or the legal interpretations, thereupon, it could be.

• • •

[251] Q. Do you recall, Mr. Spaulding, that in your testimony yesterday you spoke about capacity available from drawdown of the pond? A. I do.

Q. At that time were you referring to the Safe Harbor pond, or to the Holtwood pond, or both? A. I think I stated in the record that both ponds were usable as draw-down, although the major amount of the storage water is behind the Safe Harbor Dam.

Q. Is the capacity available from draw-down of the pond as valuable as the dependable capacity of the stream? A. It is.

Q. To the purchaser? A. Yes, to the purchaser.

Q. With respect to this new contract just between Penn [252] Water and Metropolitan Edison, does the Safe Har-

bor render any service under this contract? A. Not directly.

Q. Will you please explain your answer—"not directly"? A. The contract is drawn between Metropolitan Edison Company and Penn Water.

Penn Water assumes all the obligations thereunder.

However, Penn Water makes the fullest use of its own resources and those of Safe Harbor in so doing.

Q. And this was true even before the new contract was entered into? A. That is correct.

Q. But under the new contract Safe Harbor is not a party? A. That is right.

Q. Of the revenue Penn Water receives under the new contract with the Metropolitan Edison does Safe Harbor receive any portion of those revenues from Penn Water? A. Not directly.

Q. When you say "not directly" what do you mean? A. All of the payments made by Metropolitan Edison under that contract with Penn Water goes directly to Penn Water.

Those revenues are available, in part, for the payments on which Penn Water is obligated to Safe Harbor for the [253] services obtained from Safe Harbor by Penn Water.

Q. That is what you meant when you said "not directly"? A. That is correct.

Q. In other words, by reason of Penn Water's arrangement with Metropolitan Edison whereby it receives for sale of power and energy to Metropolitan Edison revenues, it has income available to it to enable it to meet its obligations in part or in whole to Safe Harbor for the energy it receives from Safe Harbor under the agreement identified in this proceeding as Items E, F and G for the energy, capacity, and the services? A. Yes.

* * *

[258] THE WITNESS: Safe Harbor receives no revenues from the Metropolitan Edison Company.

By Mr. Goldberg:

Q. Directly or indirectly? A. Directly or indirectly.

Q. Prior to the consummation of the new agreement between Penn Water and Metropolitan Edison, did Safe Harbor receive any revenues directly or indirectly from Metropolitan Edison? A. You mean Edison Light and Power Company, do you not?

Q. All right. I will accept that amendment. There is some relationship there that enables you to refer to it as Edison Light and Power, as I understand it? A. Edison Light and Power made payments to Metropolitan Edison and Penn Water.

Q. All right, let us talk in terms of Edison Light and Power when we talk about the old contract? A. All revenues for services under the prior contracts by Edison Light and Power were made directly to Penn Water.

Mr. Goldberg: I won't move to strike that answer because it is not responsive, Mr. Examiner, but I think I am entitled to a direct answer to the question. May I have the question read?

Trial Examiner: Read the question.

* * *

[259] The Witness: No; Safe Harbor did not receive any revenues from Edison Light and Power Company directly, but it received reveneues [sic] indirectly through Penn Water.

By Mr. Goldberg:

Q. How did it receive revenues indirectly through Penn Water? A. Penn Water used Safe Harbor's services to which it was entitled, together with its own resources in supplying this power and other services to Edison Light and Power of York.

Q. And Penn Water used the revenues it received from Edison Light and Power to pay Safe Harbor for the serv-

ices of Safe Harbor that Penn Water used to serve Edison Light and Power? A. I think that is correct.

Q. Were the revenues received from the Edison Light and Power Company contracts segregated so that you were able [260] to trace those revenues to Safe Harbor? A. No.

Q. You reached the conclusion that Safe Harbor received revenues indirectly from Penn Water as a result of Penn Water's services to Edison this way,—now, let me state it and you tell me whether I am right or wrong:

Penn Water received income from its contract with Edison Light and Power as well as income from its contracts with other customers and it used that income received from Edison Light and Power and its other customers to meet its obligations to Safe Harbor under Items E, F and G in this proceeding, is that right? A. That is correct. May I qualify that answer?

Q. Yes. A. The distinctions that I do not find in your question, which I have tried to explain, is that both Penn Water and Safe Harbor obligated themselves for services under the contract with Edison, and it thereby was a joint service, although the revenues were actually paid by Edison to Penn Water.

* * *

[261] Q. You have told us that under the old agreement between Penn Water and Edison Light and Power, Safe Harbor received revenues indirectly from Penn Water. Is it your testimony that under the agreements between Safe Harbor, Penn Water and Philadelphia Electric and Safe Harbor, Penn Water and Pennsylvania Power and Light Company, Safe Harbor also receives revenues from Penn Water indirectly?

MR. SPARKS: Excuse me, you did not mean Penn Water [262] indirectly, did you, Mr. Goldberg?

MR. GOLDBERG: Yes, I did.

THE WITNESS: Will you please read the last part of that question?

(The preceding question is read.)

MR. GOLDBERG: In both instances it should be through Penn Water indirectly. Mr. Sparks is right.

THE WITNESS: From whom? From the customer?

By MR. GOLDBERG:

Q. From the customer companies? A. Yes. In both of these instances, the P. P. and L. contract with Penn Water and Safe Harbor, and the contracts between Penn Water, Safe Harbor and the Philadelphia Electric Company for services at Coatesville, Penn Water and Safe Harbor undertook to provide firm power services jointly, but in each instance the revenues were all received from the purchasing company by Penn Water, who, in turn, reimbursed Safe Harbor for the use of the facilities and services rendered by Safe Harbor with Penn Water.

• • •

Q. Do you say that, even though it is a fact, that all [263] of the services rendered by Safe Harbor to Penn Water and Baltimore Company are rendered under the agreements identified as Items E, F and G in this proceeding, is that right? A. May I have that question read?

TRIAL EXAMINER: Yes, read the question.

(The preceding question was read.)

THE WITNESS: No, all the services rendered by Safe Harbor are not rendered under the contracts offered as Items E, F and G.

• • •

Q. And the two customer companies may use those services in any way they see fit to meet the requirements on their own systems, isn't that so?

• • •

Q. By "they see fit", I mean in accordance with the [264] requirements on their system; in other words, there are no strings attached by Safe Harbor to their use of the

services sold under Items E, F and G to Consolidated and Penn Water.

* * *

[265] THE WITNESS: Safe Harbor entered into other contracts other than those offered as E, F and G for the supply of services, with the knowledge and consent of Baltimore and Penn Water, which is required under the terms of the three-party contract offered and identified as E, F and G.

* * *

[269] Q. You told us, now, that under the agreements that Penn Water has with Pennsylvania Power and Light Company and Philadelphia Electric Company, Safe Harbor receives revenues indirectly through Penn Water; right? A. I did.

Q. I show you Exhibit 18 in this proceeding? A. Yes.

(Witness examines Exhibit 18.)

By MR. GOLDBERG:

Q. Does it not appear from Item (e) of this power bill that the revenues received by Holtwood from this agreement, rather than going to Safe Harbor, are credited to the Baltimore Company? [270] A. No, it does not.

* * *

[276] Q. Relating ourselves to the contracts which produce the revenues shown as (e) 1 to (e) 3, and let us say which are shown on Exhibit 18, it is a fact, is it not, that the power bill marked as Exhibit No. 18 shows revenues received by the Holtwood Company from its customer companies; from those customer companies, that is? A. Yes, under contracts to which Safe Harbor was a party.

Q. And under those contracts, you stated Safe Harbor indirectly received revenues through Penn Water; right? A. That is correct.

Q. And the revenues received under those contracts are shown in (e) 1, (e) 2 and (e) 3 of Exhibit No. 18, page 1, right? A. They are.

Q. They are a part of the make-up of the total figure of $5,930,957.24, right? [277] A. Sure, they are.

Q. Each figure contributes—or at least this figure contributes to the Baltimore net bill—— A. (Interposing) I do not hear you.

Q. Which figure, of which I have spoken, contributes to the ultimate net bill of $2,027,848.76 to the Baltimore Company; right?

* * *

THE WITNESS: It does not contribute to it, it is used here in this Exhibit as a means of arriving at a contract figure.

By MR. GOLDBERG:

Q. In Exhibit 18, in arriving at the amount Baltimore Company owes Holtwood, all of the revenues received from the contracts we have just discussed were credited to Baltimore Company, right? A. No.

Q. No? A. No, they were not credited to the Baltimore Company,—as I understand your question—but they were merely used as an amount to determine the revenues that the Baltimore Company owed Penn Water.

[278] Q. As a result of which computations the amount of money owed by Baltimore Company to Holtwood was correspondingly reduced; right?

THE WITNESS: May I have the question read?

TRIAL EXAMINER: Read the question.

(The preceding question was read.)

THE WITNESS: No. That is not correct.

By MR. GOLDBERG:

Q. Did not the Baltimore Company receive the benefit of all of those revenues? A. They did not.

Q. If you eliminate (e) 1 on Exhibit 18, what would the situation be? A. If you eliminate (e) 1 from Exhibit 18, and you eliminate the services rendered thereunder, then Baltimore Company would have paid more money and got greater services.

Q. Suppose we reduce the amount of revenue received from Pennsylvania Power and Light Company for firm power to $1,000,000, in round figures, instead of $2,166,823.11, shown on Exhibit 18, what would the power bill have been, Mr. Spaulding? A. I will have to have more information, because I could not answer the question otherwise.

Q. There is no change in the services. A. That bill to the Baltimore Company would have [279] increased.

Q. And solely, as a result of the difference in the amount of revenues received from Pennsylvania Power and Light Company, right? A. That is correct.

* * *

---

[281] DONALD GUNN,
a witness on behalf of the Respondent, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. HULL:

Q. Your name is Donald Gunn? A. It is.

Q. What is your present position with the Respondent company and your occupation? A. I am an engineer, and I am Chief Engineer of Pennsylvania Water & Power Company and Assistant Advisory Engineer of the Safe Harbor Water Power Corporation. I am also a Director of Susquehanna Transmission Company of Maryland.

Q. How much experience have you had in the electric light and power industry? A. Approximately twenty years, altogether, principally with the Duquesne Light Company of Pittsburgh, the Georgia Power Company, and the Holtwood and Safe Harbor companies.

[282] Of these companies, the Georgia Power Company and the Holtwood and Safe Harbor companies operate extensive hydroelectric plants.

I graduated from the Darlington Military Academy in 1919, after completing the scientific course, and from the

Georgia School of Technology in 1925, receiving the degree of Bachelor of Science in Electrical Engineering.

In 1926, while taking a course of apprentice engineering training offered by the Duquesne Light Company of Pittsburgh, I did post-graduate work on high-voltage transformers at the Carnegie Institute of Technology.

Prior to graduation from the Georgia School of Technology, I had about two-and-a-half years' experience successively as an electrician for the Walker Electric Company on cotton mill electrification, as apprentice lineman for Georgia Power Company on 4,000-volt line construction and repair, as station operator for Georgia Power Company, and as draftsman for the same company.

During that period, I was also employed for about seven months by the Glover Machine Works on the design of industrial locomotives and locomotive cranes.

After graduation from the Georgia School of Technology, I took a course of apprentice engineer's training offered by the Duquesne Light Company of Pittsburgh. This course of training was for one year and included proportionate [283] experience in each functional department of that company's business. The Duquesne Light Company serves electricity and commercial heat in the City of Pittsburgh and the surrounding industrial area.

Upon completion of the apprentice engineer's training course, and for a period of about one year, I was employed as junior engineer in the system's development department. I prepared economic and special engineering studies of the Duquesne Light Company system; made studies to determine system additions; made analytical studies of operation; and assisted in development testing on power system equipment.

On April 1, 1927, I became field supervisor in the system operating department of Duquesne Light Company. My responsibilities in this position included studies to determine the proper operating voltage schedule for electric generating stations, supervision over and placing in serv-

ice of all additions to the company's system, supervision over general changes in system voltage, together with special investigation of power interchange capacity between interconnected operating companies in Western Pennsylvania and Ohio.

From April 23, 1928, until February 1, 1929, I was connected with the American Rolling Mill Company. During this period I became familiar with all phases of steel manufacture, particularly in promotion of the use of that [284] company's products by electric utility companies.

On February 1, 1929, I accepted a position with the Pittsburgh branch of the Byllesby Engineering and Management Corporation as Assistant to the General Superintendent of Construction. During the course of about one-and-a-half years' employment by this company, my duties were of a general nature on a construction program which employed in excess of 5,000 men.

Special investigation undertaken by the construction department of this company during that period was under my supervision.

From October 1930 until August 1942, I was employed by Penn Water and Safe Harbor Company, and my duties were those of Assistant to the Chief Engineer.

I should like to say here that throughout my testimony in referring to Pennsylvania Water and Power Company and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland jointly, I will refer to the combination as Penn Water. When referring to those companies separately, I will use their full corporate names.

I was employed by these companies for work on the Safe Harbor project shortly after the Safe Harbor Company undertook development of that project. In addition to my general duties in connection with the development of the Safe Harbor project, I was delegated responsibility for estimating and [285] cost studies and the preparation of labor wage schedules for both Penn Water and Safe Harbor.

After the first four units were installed at Safe Harbor, I undertook a detailed study of depreciation of important medium and low-head hydroelectric developments of early origin in the eastern part of the United States and Canada.

This study covered developments representing more than 2,000,000 installed horsepower and included detailed physical examinations, specific determination of physical property history, a study of the history of the development of the various elements of property, past maintenance experience, operating conditions and other factors necessary to a determination of actual depreciation.

Q. You spoke of 2,000,000 installed capacity. Do you mean 2,000,000 horsepower or 2,000,000 kilowatts? A. 2,000,000 installed horsepower capacity.

Q. Will you proceed. A. My duties have been such that I have been intimately familiar with the design and construction features of Penn Water's and Safe Harbor's property and its operation and maintenance during the past 15 years.

Since my employment with these companies, I have been familiar with material and supplies purchases of the companies for both operation and construction. In my present [286] position, I am responsible for major maintenance and construction projects for both Penn Water and Safe Harbor Water Power Corporation.

Since my employment by these companies, I have been responsible for the classification of all construction costs as well as the division of costs between construction and operation and maintenance. During the years 1936 to 1940, the preparation of original cost studies of Penn Water, pursuant to orders of the Federal Power Commission was made under my supervision.

In 1942 I became Chief Engineer of Pennsylvania Water and Power Company; Assistant Advisory Engineer of Safe Harbor Water Power Corporation; and Director of Susquehanna Transmission Company of Maryland.

In 1939 and again in 1944, I made studies of actual existing depreciation in the property of Safe Harbor Water Power Corporation and testified to the results of those studies in two rate proceedings before the Federal Power Commission, which proceedings are designated IT-5494 and IT-5914.

I am a professional engineer, registered in the States of Maryland and Pennsylvania, and I am a member of the American Institute of Electrical Engineers and the American Society of Civil Engineers.

I am also a member of the Special Depreciation Committee [287] of the Pennsylvania Electric Association, and have been an alternate member of the American Society of Civil Engineers' Subcommittee on Depreciation.

[402] DONALD GUNN,

DIRECT EXAMINATION (Resumed).

By MR. STARKS:

Q. Your name is Donald Gunn? A. Yes.

Q. And you have previously testified as to your qualifications and experiences? A. I have.

Q. Has there been prepared under your supervision a consolidated statement showing Original Cost of Electric Plant of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as of December 31, 1945? A. There has been.

* * *

Q. Mr. Gunn, I hand you a copy of a document which has [403] been marked for identification as Exhibit No. 25 and ask you if this document, consisting of three sheets, is a copy of the statement to which you have referred? A. It is.

Q. Will you describe this exhibit and state how it was prepared? A. Pursuant to Instruction 2-D, Electric Plant Accounts of the Uniform System of Accounts Pre-

scribed for Public Utilities and Licensees by the Federal Power Commission, which became effective January 1, 1937, and an order of that Commission adopted May 11, 1937, Pennsylvania Water & Power Company and its wholly owned subsidiaries, Susquehanna Transmission Company of Maryland, Susquehanna Transmission Company of Pennsylvania and Pennsylvania Transmission Company proceeded to make original cost studies covering the period from the formation of the Companies to December 31, 1936.

These were filed with this Commission on May 15, 1940.

* * *

[404] TRIAL EXAMINER: The various documents described by counsel which bear the designations Items K to N, inclusive, are received in evidence by incorporation and reference to the official files of the Commission.

* * *

[406] Q. You may proceed. A. It should be noted that in December, 1939, the Susquehanna Transmission Company of Pennsylvania, and the Pennsylvania Transmission Company were merged with the Pennsylvania Water & Power Company.

Consequently, the original cost studies of these three companies have been combined into one, and are shown as one figure designated as "Pennsylvania Water & Power Company," on the statement marked for identification as Exhibit 25.

The Susquehanna Transmission Company of Maryland is shown separately.

One of the first steps in the original cost determination was the taking of an inventory of all plant and equipment in service on December 31, 1936.

Concurrently with the taking of the inventory, analyses were made of all of the cost records of the Pennsylvania Water & Power Company, McCall Ferry Power Company—including Susquehanna Contracting Company—the committee acting for the bondholders of McCall Ferry Power

Company, and the receiver for McCall Ferry Power Company.

Similar inventories and cost studies were made for the three subsidiary transmission companies. Then followed the process of matching the inventories against the cost analyses.

Responsibility for the original cost study of Pennsylvania [407] Water & Power Company and all of its subsidiary companies was assigned to me. I received my general instructions from Mr. Walls, President of Pennsylvania Water & Power Company. On accounting matters, my instruction and guidance came from Mr. J. E. O'Connor, who was vice-president and secretary of that company.

Mr. W. H. Eichhorn, Jr., who is secretary and assistant treasurer of Pennsylvania Water & Power Company, assisted me with the accounting problems involved in the study.

Mr. R. L. Bortner, who is right-of-way engineer and assistant secretary of Pennsylvania Water & Power Company, assisted me on matters relating to real property.

Mr. R. W. Chase, who is civil engineer assigned to special studies, assisted in the determination of the date of the beginning of commercial operation and on other problems involving engineering and technical decisions.

Mr. D. L. Wetzel, who is budget engineer, was responsible for inventorying the property, compiling analyses of costs, reconciling the cost analyses with the inventory, and similar matters.

The statement marked for identification as Exhibit 25 shows in column (b) the amount of the original cost as of December 31, 1936.

To the original cost as of December 31, 1936, there has been added the net additions to the property of the company [408] and its wholly owned subsidiary, Susquehanna Transmission Company of Maryland, for the period January 1, 1937 to December 31, 1945.

By adding these two amounts together, we have arrived at the total original cost of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as of December 31, 1945.

The statement shows combined electric plants in service as of December 31, 1945 amounting to $36,389,381.93.

In addition to electric plant in service, the following items are included:

Account 103, construction work in progress.

Account 104, electric plant held for future use.

Q. Mr. Gunn, will you read those account numbers again, please? A. I beg your pardon. They should read as follow:

Account 100.3—construction work in progress.

Account 100.4—electric plant held for future use.

Q. Proceed. A. Construction work in progress represents the cost of property additions which are not yet completed, but which, when completed, will be charged to appropriate plant accounts.

Electric plant held for future use represents property which is neither construction work in progress or plant in service, but the need for which in the future can be foreseen.

[409] Q. Is the amount, which was recommended in the original cost filing, to be held in Account 107, included in this exhibit? A. No. For the purpose of this proceeding, we are not claiming the amount recommended to be held in Account 107 as part of original cost.

Q. What does the exhibit show to be the total original cost as of December 31, 1945? A. The total original cost, as of December 31, 1945, is $36,704,706.47.

Q. $36,704,706.47. Has there been prepared under your supervision the "History of the Holtwood Development to the Beginning of Commercial Operation—October 1, 1911"? A. Yes.

Q. Is this document, containing some 120 pages, the history to which you refer? A. It is.

• • •

[410] Q. Mr. Gunn, I hand you a document which has been marked Exhibit No. 26 for identification. I ask you if this is a document containing about 126 pages which is the history to which you refer? A. It is.

Q. Is there accompanying this history supporting documentary proof? A. There is.

* * *

[412] Q. Mr. Gunn, I hand you a document consisting of 68 parts, which has been marked for identification as Exhibit 27, and ask you if this is the bound volume to which you have referred? A. Yes.

Q. That is the volume you have made reference to heretofore? A. It is.

MR. SPARKS: If Your Honor please, in order that we may facilitate reference to the exhibit, I want to ask Mr. Gunn this question.

By MR. SPARKS:

Q. Mr. Gunn, are there references in Exhibit 26 to certain exhibit numbers, references which refer to Parts 1 to 68 in Exhibit marked for identification No. 27? A. That is correct.

[413] Q. Mr. Gunn, what was the occasion for the preparation of these historical data? A. In connection with the companies' compliance with the Commission's 1937 system of accounts and in anticipation of the possibility of a proceeding to determine the net investment in the project after a license would be issued by the Commission, we proceeded to gather all of the information that we could concerning the early history of the development.

Exhibit No. 27 for identification contains the significant documentary evidence concerning the early history of the development. These documents were procured from the files of the companies, and from offices of other concerns which were interested in and connected with this development.

Exhibit 26 is a chronological summation of the documents, showing their interrelation in connection with each other.

Copies of these exhibits, No. 26 for Identification and No. 27 for Identification, were furnished to the Commission's Staff during the latter part of 1940.

Q. 1940? A. 1944.

Q. 1944? A. 1944.

Q. These two exhibits here? A. Yes.

* * * *

[414] TRIAL EXAMINER: Exhibit 25 for Identification is received in evidence.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

[417] Q. Mr. Gunn, I direct your attention to Exhibit 27 Part 1, that appears to be the affidavit of a Dr. Franz Hahr Stewart, Mr. Hollis Rinehart, Jr., and Cary T. Hutchinson.

Is Mr. Hutchinson alive today? A. No, he is dead.

Q. When did he die? A. A few days after this affidavit was obtained.

Q. Is Dr. Stewart alive? A. So far as I know. I am not personally acquainted [418] with Dr. Stewart.

Q. How about Mr. Rinehart? A. So far as I know he is also alive.

Q. And as far as you know are both Dr. Stewart and Mr. Rinehart still living in Florida? A. So far as I know, yes.

Q. I notice in the paragraph numbered 1 of Mr. Hutchinson's affidavit that he states that he held numerous conferences in Miami, New York and Baltimore with representatives of Pennsylvania Water & Power Company.

When were those conferences held? A. Those conferences were held over a period of about six or eight months preceding January, 1939.

Q. Were they all in 1938, all of the conferences? A. Yes, they were all in 1938. There may have been one in 1937, but the principal of them were in 1938.

Q. Did you keep any notes on those conferences? A. Well, I would't say——

Q. (Interrupting) I have assumed in my question that you were present. A. I was present.

Q. At all the conferences? A. Yes.

Q. And you don't recall whether you kept notes on the conferences? [419] A. I may have made some notes of some sort. I did not make any particular report on the conferences.

Q. Do you have any material prepared by you that would enable you to refresh your recollection about when those conferences took place and what transpired? A. I think I could refer to my file and find letters written to Dr. Hutchinson making arrangements for the conferences, and I think in other letters I might find references to the discussions I had with Hutchinson. Just how much of the substance of the conferences that I had with Hutchinson would be revealed by that, I don't know.

Q. Were you the only representative of the Pennsylvania Water & Power Company present at those conferences with Mr. Hutchinson? A. I was the only one that was present at all of them, but at various times various other people were present.

Q. Who were the others? A. Mr. Chase, I believe, and Mr. Eichhorn. I believe at one of the conferences Mr. Higgins was present.

Q. Was Mr. Hutchinson ill at the time you conferred with him in 1938? A. No, not at all.

Q. How old was Mr. Hutchinson when he died, do you know? A. He was in his 70's and I believe he was near 75. I am not certain of that.

[420] Q. Your conferences with Mr. Hutchinson were in connection with preparing the original cost studies which have been introduced into this case, is that right? A. That is correct. The conferences were part of my efforts

to find out what had happened in the creation of the enterprise, and I also sought to obtain records that Hutchinson had, if any.

Q. Was it your expectation that the information you would secure would be used in supporting the company's original cost claims before the Federal Power Commission? A. Yes, that was the reason.

Q. When you undertook to confer with Mr. Hutchinson, were you instructed to seek him out and confer with him? A. Well, no, I cannot say that I was instructed to. I had worked for some time studying the documents that were in the company's files and had quite a number of documents, but up to that time and until after that time I had been unable to fit the documents together so as to make a complete story, so as a recall I requested permission to go to see all of the principals then living with respect to the McCall Ferry development and to find out from them what they knew about what transpired in the formation and development of the company, and as I recall Hutchinson was was the first one that I went to see because he was one of the men closest to the project.

Q. Of whom did you request this permission? [421] A. Mr. Walls. Perhaps it may have been Mr. O'Connor. I don't recall which.

Q. Were counsel for the company consulted at the time you undertook these investigations? A. No, I don't believe they were. Well, they knew we were going ahead with that—just a moment. Do you mean were counsel consulted when I undertook these conferences or when I undertook the preparation of the data?

Q. When you undertook to seek out and interview these persons who were at one time connected with the McCall Ferry project. A. No, they were not consulted.

Q. Then as far as you know, no one considered the question of taking the depositions of the persons you were going to seek out and to preserve their testimony for the purpose of any proceeding you might have before the Fed-

eral Power Commission, is that right? A. I don't recall that that was discussed.

Q. Were you scheduled to see Mr. Hutchinson at the time you went down to Florida? I assume you did go down to Florida because your name appears as having been in Florida. A. That is correct. It had been two or three months since I had seen Mr. Hutchinson and I had expected about a month before the time I went to see him that he would be in New York, and we had definite plans made to meet at that time [422] for further discussion of the development of McCall Ferry. However, he did not show up, and early in January, 1939, Mr. Rinehart, who was his personal lawyer, got in touch with me and told me of Hutchinson's serious condition and that if we wanted any further help from Dr. Hutchinson, that we should come to Florida. [423] Q. At the time Mr. Rinehart contacted you, did he advise you that Mr. Hutchinson's illness was of such a nature that Mr. Hutchinson might not survive it? A. I don't think he just put it that way. I think he told me he was in very bad health, with some sort of an illness, and I don't recall that he said what.

Q. And, fearing that he might die before you secured the information, you went down to Florida to get a statement from him? A. That is correct.

Q. And, at that time, as far as you know, the question of securing Dr. Hutchinson's testimony by deposition to preserve it for the proceedings that might take place before the Federal Power Commission in connection with the company's original cost studies was not taken up? A. Was not taken up, at that time it would have been quite impossible to have done it.

Q. It was not impossible for you to get the affidavit, was it? A. No, the affidavit was drawn by Hutchinson's lawyer.

Q. It might have been possible to have gotten a deposition as well, isn't that so? A. If you had gotten it soon enough, yes.

Q. Tell me a little bit about how this statement, [424] signed by Mr. Hutchinson, was prepared. Did you prepare it? A. No, I did not.

Q. Did Mr. Rinehart prepare it? A. Mr. Rinehart prepared it.

Q. After consultation with you? A. After consultation with me and after I submitted to Mr. Rinehart a compilation of all of the facts that we had in our records, and those things which I had discussed with Hutchinson in previous conferences. All of those facts were submitted to Rinehart and I told Rinehart what the nature of the affidavit was we wanted, what we wanted it for, and the scope that I should like for him to cover in it.

Q. By "scope", you mean what you would have liked to have incorporated in the statement by Dr. Hutchinson from this memorandum you had, is that right? A. That is right.

Q. Did you leave the memorandum with Mr. Rinehart? A. I don't recall whether I did or not. It is not quite proper to call it a memorandum. What it in fact was——

Q. (Interrupting) Do you have it here? A. Not in Washington.

Q. Do you have it in Baltimore? A. Yes, I think I have it in Baltimore.

It was a description similar to parts of Exhibit 26, to [425] which was attached documentary evidence from our files, similar to the documents in Exhibit 27. It was a running description of what Hutchinson's connection with the project has been as revealed by our files, supported by such documents as were in our files, to establish what was the fact. It was in the nature of a factual statement.

Q. Did Mr. Rinehart show it to you before it was signed? A. I believe so; I believe I saw it.

Q. And were you satisfied with it or did you make any further suggestions? A. It seems to me that I made several suggestions as to the scope of it. He had not

covered enough points in it, or all the points, that I thought were necessary.

Q. Part 8 of Exhibit 27 is a statement of George C. Lee, a partner of Lee, Higginson and Company. Is Mr. Lee alive? A. Yes.

Q. Where does he live? A. In Boston, or rather in a suburb of Boston. He usually goes out of Boston for the summer. I don't know whether he has left yet, or not.

[426] Q. Part No. 9 contains a question and answer statement interposed by Mr. Fiske [Fisk]. Is Mr. Fiske alive? A. No, Mr. Fiske is dead.

Q. I notice the statement was taken in the Memorial Hospital in New York. A. Yes.

Q. Did he die soon after the affidavit was prepared? A. I believe it was a matter of months, something less than a year, but still a matter of months.

Q. What was the nature of his illness, if you know? A. I believe he died of a throat infection, however, I am—if I am not mistaken—although I am not sure of that. I think it was a throat infection.

Q. Were you there at the time this statement was taken before the notary public, Wilton D. Cole? A. Wilton D. Cole was counsel. I was not present when his statement was taken. He was his counsel.

Q. Had you seen Mr. Fiske at any time or times before December 29, 1938? A. Yes.

Q. When? A. I discussed the early history of McCalls Ferry with him two or three times, I believe.

Q. That was two or three times in 1938? A. I believe they were.

[427] Q. Was Mr. Fiske well up in years when you first saw him? A. Yes. He was near 80, I would say.

* * *

Q. Were any discussions had looking toward the preservation of Mr. Fiske's testimony by way of deposition? [428] A. I do not recall that there was, although at the time the statement was taken from Mr. Fiske we

did not expect that he would die immediately, as was the case of Mr. Hutchinson.

* * *

TRIAL EXAMINER: Of that answer I will strike all of the answer except the first part of the statement reading "I do not recall that there was."

* * *

[429] Q. Will you tell me how the arrangements were made to take Mr. Fiske's testimony in the Memorial Hospital on December 29, 1938? A. I simply told Mr. Fiske's counsel, Mr. Cole, that we would like to have such a statement, and he made the arrangements. I do not know what arrangements were made.

Q. Let me see if I can follow through with the sequence of events. A. Yes.

[430] Q. Some time in 1938, prior to December 29, you saw Mr. Fiske two or three times to discuss the early history of McCalls Ferry Power Company.

Is that right? A. That is correct.

Q. After that conference, or at that last conference with him, did you secure a statement from him? A. From Mr. Fiske?

Q. Yes. A. Did I secure the statement?

Q. Yes. A. I did not.

Q. Were you scheduled to see Mr. Fiske prior to December 29, and subsequent to the last conference you had with him in 1938? A. No, I did not, because Mr. Fiske suggested at the last time I discussed the McCalls Ferry matter with him that I should in the future, take that matter up with his counsel, and he gave me the name of Mr. Cole.

Q. Subsequently, you did take it up with his counsel? A. Yes, sir.

Q. Do you recall when you took it up with Mr. Fiske's counsel? A. Oh, I would say it was within a few days, or perhaps a week or two within the last time that I talked to Mr. Fiske.

[431] Q. How long was that before December 29, can you tell me that? A. Several months.

Q. Is it your understanding that though you made a request of Mr. Fiske's counsel, Mr. Cole, for the statement several months before December 29, 1938, Mr. Cole waited until Mr. Fiske was in Memorial Hospital, to take a statement? A. No. I do not understand that to be the manner in which it took place. I did not understand your question. I understood you to ask me when did I take up the subject of McCalls Ferry with Mr. Cole in response to Mr. Fiske's request. I said a few weeks afterwards. I think it was several months before that, I had spoken to Mr. Fiske. When I spoke to Mr. Cole, and when Mr. Cole was requested to obtain this statement, some two or three months had elapsed, I believe after I had first taken up the Fiske matter with him, and he promptly secured the information.

Q. Did he tell you at that time that Mr. Fiske was ill? A. Yes.

[432] Q. You told him to go ahead and get the statement, anyway? A. Yes. I told him to go ahead and get the statement anyway.

Q. Did you go to New York, on that date, December 29, 1938? A. I do not recall. I doubt whether I did or not. If I did, it was not on Mr. Fiske's business, but some other matter.

Q. Did you prepare the questions which appear in Exhibit 27, Part 9? A. No, I did not.

Q. Did you prepare the compilation or memorandum for Mr. Cole's use in securing the answers which appear in Part 9 of Exhibit 27 for Identification? A. Yes, I did. I prepared a description of Mr. Fiske's connection with the enterprise, and supplied Mr. Cole with the documents from our records, supporting it.

Q. I think you did not see the document until it was signed, or rather until after it was signed and sworn to by Mr. Fiske? A. Yes.

Q. Mr. Cole mailed it to you? A. I believe it was mailed to me, as I recall.

Q. No. 21 of Exhibit 27 for Identification; that is, [433] that would be Part 21 of Exhibit 27 for Identification, appears to be the testimony of James H. Harlow regarding the value of McCall Ferry stocks and bonds.

Am I to understand that that testimony was given in 1907 in the Circuit Court of Cecil County, Maryland in a case entitled, "Susquehanna Power versus the Proprietors of Susquehanna Canal"? A. That is correct.

Q. Is this all of Mr. Harlow's testimony in that case? A. No. He gave a very great volume of that testimony, but that is all of the testimony relating to the value of those securities.

Q. Who made the selection from his testimony? A. I made it.

Q. Did you read all of his testimony in that case? A. I did not personally read it all. I instructed another person to read it and mark the references in the testimony to the McCall Ferry Power Company stocks and bonds, and the value thereof.

Q. I am advised that Cecil County, is Cecil County, Maryland? A. Yes, that is in the northern part of it, I do not think I identified this.

Q. Well,—I think the record is a little unclear [434] now, because you are pointing to something, and it will not show in the record. Do you mean that you examined only those parts of this witness's testimony which someone else in your Company has interpreted as relating to the cash value of the common stock at the time of its issuance; is that right? A. That is substantially correct; of course, I did read a certain portion of it.

Q. But you read, presumably, all of the testimony that was marked? A. I believe I did.

Q. Who read, presumably, all of the testimony that was marked for you to note? A. I do not recall. I think it was either Mr. Chase, or Mr. Bortner.

Q. I presume Mr. Harlow is dead? A. Yes, I believe he is dead.

Q. When did he die? A. Oh, he died several years ago. I never knew him.

Q. He was alive at the time you made your investigation? A. No. I do not think that he was. I think he died considerably before that.

Q. Just when did he die, before 1938? A. Yes, I think he probably died; well, I just do not know, but before 1938, yes.

[435] Q. Did you make any investigation to ascertain whether he was living at the time you were collecting all of these statements from those who had been associated with him during the early history of the Penn Water and Power Company? A. Yes, I ascertained that he was then dead.

Q. Turning to Part 24 of Exhibit 27 for Identification, that appears to be an affidavit of Mr. James G. Hopkins? A. Yes.

Q. Is Mr. Hopkins alive? A. I do not know. I have not inquired since this affidavit was taken.

Q. Who was he? A. Mr. Hopkins was a lawyer and a member of the firm of Coudert Brothers. At the time the affidavit was taken in December, 1939, he was quite an old man, and he would only come to his office on more or less of a part-time basis.

Q. Mr. Aldred, whose statement is Part 46 of Exhibit 27 for Identification, died in 1946? A. No, I think it was 1945.

Q. 1945? A. 1945, if I recall correctly.

Q. Was it a year ago? [436] A. No, the latter part of last year.

Q. Again, in connection with Mr. Aldred's knowledge of the early history of the McCall Ferry Power Company, in [sic] [and] Penn Water Power Company, no effort was made, and no discussions were had, looking towards the

preservation of his testimony by way of deposition; is that right? A. I do not recall any.

* * *

MR. GOLDBERG: * * * I have scanned very casually these documents and apparently they are all intended to support the cash value of common stock issued by McCall Ferry Power Company.

Let me ask the Witness if I am right about that.

* * *

A. Yes. They are not all limited to that, but that is one of the purposes of it.

* * *

[440] Q. Am I to understand that the amounts included in Accounts 100.3 and 100.4 in Exhibit 25 means that the company is claiming their inclusion in the rate base? A. Yes.

Q. Will you describe this electric plant for future use? A. The greater portion of this amount shown in this account consists of transmission line rights-of-way between Safe Harbor Electric Plant station and Lancaster, Pennsylvania, the remainder consisting of other sections of Rights-of-way to parallel the present existing Penn Water & Power transmission lines.

Q. When were these rights-of-way purchased? A. At various times.

Q. When was the first purchase made? A. Purchase of rights-of-way for the line between Safe Harbor and Lancaster, Pennsylvania, I believe was first begun about 1924, as I recall it.

[441] The other portions of the rights-of-way, that parallel the present lines, so shown by the map, were bought at the same time the original transmission line was put up.

Q. That was 1909? A. No, there are not very many of them on the Baltimore line. A considerable part of these extra rights-of-way are on the 230,000 volt transmission line from Ellicott City to Takoma Park substation, Washington.

Similarly, some more parts of the transmission line rights-of-way parallel the Safe Harbor-Perryville 132,000 volt single phase railroad circuits.

Q. Do you have the details of Account 100.4 here with you? A. 100.4. I do not believe I have it here with me.

(The witness examines his papers.)

A. I do not find it.

Q. You say you do not have it here with you? A. I do not find it.

Q. I think you told me that the earlier purchases that you recall of rights-of-way between Safe Harbor and Lancaster, Pennsylvania were made in 1924? A. Yes.

Q. When were the last purchases made? A. We are still making them.

[442] Q. When was the most recent one? A. Within the last few months.

Q. A very large purchase? A. I do not recall the size of it, Mr. Goldberg.

Q. Does the Company have any plans for the utilization of that right-of-way between Safe Harbor and Lancaster, Pennsylvania? A. Yes.

Q. What do those plans contemplate in the way of putting the line into operation? A. They contemplate building the line out of Safe Harbor to the north and northeast as the development may proceed.

Q. When? A. You mean what date?

Q. Yes. A. They do not contemplate the precise and specific date.

Q. It may be ten years hence or longer? A. I do not think it will be quite that long. However, I do not have any definite date in mind, and we do not have any definite date in mind.

Q. How about these rights-of-way paralleling existing lines of the Penn Water & Power Company? Are there any definite plans for the utilization of these rights-of-way? A. There are plans for the utilization of them, but [443] definite is quite a quantitative term.

Q. Is there any definite date set for the construction to begin? A. No.

Q. No cost estimates have been made for constructing such a line? A. I think there may have been, although I am not sure.

Q. As a rule you would probably begin making estimates when it was anticipated construction was imminent? Is that not so, in view of the rapidly changing prices? A. You might make them much before that, even.

Q. Does the Account 100.4 include property owned by Pennsylvania Water & Power Company above the Safe Harbor project? A. No.

Q. Does Account 100.3 include any property owned by Pennsylvania Water & Power Company above Safe Harbor? A. No, not that I know of. The property owned by Pennsylvania Water & Power Company being constructed from Safe Harbor, as I recall it, is in Account 110.

* * *

[448] Q. Does the Company make it a practice to capitalize interest during construction on construction work in progress? [449] A. Yes, the Company does.

* * *

[450] Q. On those items that you are charging interest during construction, do I still understand it is your intention to include the item itself in the rate base? A. Certainly. It will be in the rate base when we put it in 100.1, won't it?

Q. That will be Electric Plant in Service? A. Yes, sir.

Q. What does interest during construction represent? A. Income foregone.

Q. During the time it is not earning revenue, is that [451] right? A. Yes, and prior to the time it goes into commercial operation.

Q. So that you want to charge interest during construction during the time that it is not in service, and at the same time secure a rate of return or additional income by

reason of its inclusion in the rate base, is that right? A. Certainly.

Q. Even though interest during construction is to compensate the company for revenue foregone during the time that it is not electric plant in service, is that right? A. Yes, quite so.

* * *

---

[471] WILLIAM F. UHL,

was called as a witness by and on behalf of the Respondents, being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION.

By MR. HOLL:

Q. Your name is William F. Uhl? A. Yes, sir.

Q. Where do you reside? A. Wellesley Hills, Massachusetts.

Q. And what is your profession? A. I am an engineer.

Q. Will you please state your educational qualifications and the experience you have had in your profession since graduation? A. I am a graduate of the Michigan State College, [472] 1902, with the degrees of Bachelor of Science and (sic) [in] Mechanical Engineer, and a degree of Civil Engineering. I am president of the firm of Charles T. Main, Inc., architects-engineers, at 201 Devonshire Street, Boston, Massachusetts.

Charles T. Main, Inc., carries on a general architectural and engineering business, consisting of consultation, investigations, reports, appraisals, designs, specifications for equipment and construction, and supervision of construction for industries, public utilities, municipalities and for state and federal government divisions.

I, personally, have specialized in hydraulic engineering and probably 50 per cent of my work in the past 43 years has been along lines of work where hydraulic engineering predominated.

I have been associated with Chas. T. Main and Chas. T. Main, Inc., for 36 years. Before joining Chas. T. Main I was connected with several machinery manufacturing concerns.

From June, 1902, to October, 1904, with the Stillwell-Bierce and Smith-Vaile Company of Dayton, Ohio, and their successor, the Platt Iron Works Company, as designer of steam and hydraulic machinery.

From October, 1904, to September, 1909, with the Allis-Chalmers Manufacturing Company of Milwaukee, Wisconsin, as designing and estimating engineer in the power department, engineer in charge, and acting manager of the hydraulic [473] department.

Since 1935, I have been a member of the TVA consulting board and have acted as a member of a number of special consulting boards studying and reporting to the TVA on special problems. I was also retained as consultant on the 240,000 kw. Watts Bar steam plant constructed by the TVA and acted as expert on water rights values for the TVA in several cases.

I am personally under contract with the U. S. Army Engineers as consultant in connection with the development of hydroelectric and flood control projects.

For a number of years I have acted as consulting engineer for the Flood Commission of the City of Hartford, Connecticut.

During the past four years my firm designed four large hydroelectric plants for the U. S. Engineers in Kentucky, Tennessee and Missouri. On this work I acted in an advisory capacity. At the present time my firm is designing two large hydroelectric and flood control projects for the same client on the Savannah River in Georgia and the Roanoke River in Virginia. I am acting as consulting engineer to the U. S. Engineers on these projects and in an advisory capacity to my associates who are preparing the plans and specifications.

From 1909 to 1930 I was connected with the design and construction of six hydroelectric plants for the Montana

Power Company, aggregating about 300,000 horsepower.

Since 1912 I have acted in a consulting or advisory [474] capacity for the Georgia Railway and Power Company on five hydroelectric plants, aggregating 180,000 horsepower.

I have also acted as consulting engineer on large hydroelectric developments in Maryland, Georgia, Alabama, Missouri, Washington and California.

During the past 36 years my firm has designed over 50 hydroelectric plants ranging from small plants of a few hundred horsepower to large plants up to 375,000 horsepower capacity. I have personally been connected with every one of these plants, either as consultant to one of my associates or in direct charge.

I have made valuations and appraisals for a variety of purposes, such as financing, accounting, condemnation, damages, taxation and rate cases, purchase and sale of properties. Example of such work carried out by me or under my direct supervision are:

Southern Kraft Corporation—valuation for financing of paper mills in Florida, Alabama, Mississippi, Louisiana, and Arkansas.

Commonwealth of Massachusetts—valuation for condemnation of portions of all industries located on the Ware, Swift and Chicopee Rivers in connection with the diversion of water for water supply purposes.

Tennessee Valley Authority—valuation for condemnation of water rights on the Hiwassee River in North Carolina and [475] Tennessee.

Parsons Paper Company—valuation for taxation of paper mill property in Holyoke, Massachusetts.

Tennessee Eastern Electric Company—valuation for rate base on public utility property in Johnson City and other points in northeastern Tennessee.

Union Water Power Company—valuation for purchase of water rights on Androscoggin River, Maine; again for taxation on the same property; and again at a later date for sale of the same property.

Public Electric Light Company—valuation for purchase of water rights on the Lamoille River in Vermont.

American Woolen Company—valuation for sale of water rights on the Winoski River in Vermont.

Amoskeag Manufacturing Company—valuation for sale of developed water power property on the Merrimack River, Manchester, New Hampshire.

International Hydro-Electric Company—valuation for purchase of 33 water power properties in New York, New Hampshire and Maine.

City of Providence, Rhode Island—valuation for purchase of seven water power plants and privileges in connection with the development of the Scituate Reservoir on the Pawtuxet River, Rhode Island, for water supply purposes.

[476] Q. Mr. Uhl, you spoke of your being president of Chas. T. Main, Inc., and, therefore, will you give us some idea of the size of that organization? A. At the present time it is about 300 people we have on the payroll.

Q. 300? A. Yes. At the present time we have about 300 people on the payroll.

Q. Is your work principally design and construction supervision? A. Our work is principally making working plans and specifications for construction of industries and power plants.

Q. Can you give us some idea of the volume of business now under construction? A. Yes. We have about $75,000,000 worth of business on our books and in our office at the present time.

Q. During the war what was your organization? A. At one time we had 1,250 on our payroll, mostly on war work.

* * *

[484] CROSS-EXAMINATION.

By MR. GOLDBERG:

Q. In testifying as to your qualifications, Mr. Uhl, you mentioned a number of companies. You stated that you

made valuation studies with reference to the property of those companies? A. Yes.

Q. Did you also make depreciation studies in connection with the valuation studies? A. In all cases that was done.

Q. And you also stated that Charles T. Main is engaged in construction work primarily; is that right? A. No, sir. I said design work primarily, and supervision of construction.

Q. I see. A. Yes.

Q. I assume that you have working papers that support [485] your Exhibit 28? A. I have a great many of them.

Q. Are they available, or will they be available to staff for the Commission? A. I will be very glad to give you copies if my client says it is the proper thing to do.

Q. Are they in Baltimore? A. No, sir.

Q. Are they in Boston? A. They are in Boston, principally; some of them are here.

* * *

---

[486] J. RHOADS FOSTER,

a witness called on behalf of the Respondents, and having been first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. SPARKS:

Q. Please give your name and residence. A. My name is J. Rhoads Foster. My place of residence is East Allendale Avenue, Allendale, New Jersey.

Q. What is your occupation? A. I teach public utility economics and regulation in the Graduate School of Business Administration of New York University, and do consultative work for public utilities and government agencies.

Q. What has been your academic training, Dr. Foster? A. One year in James Millikin University, located in De-

catur, Illinois, and a total of six years at the University of Missouri—from 1925 to 1929, inclusive, and again from 1931 to 1933. I studied also at Columbia University and at New York University.

My courses of specialization at the universities were public administration, government, public utility regulation and economics. Public administration was my major field of interest.

At the University of Missouri I was graduate assistant [487] in Public Utility Law for a period of two years; graduate assistant in economics for one year, and Gregory Scholar in Political Science for one year.

At that institution I received the degrees of Bachelor of Arts, Master of Science and Doctor of Philosophy, the latter in 1933.

Q. What has been your teaching experience? A. I taught Government and Economics for two years at Wentworth Military Academy, a junior college in Lexington, Missouri. I was instructor in economics at the University of Missouri for one summer session in 1933. I was instructor in economics at New York University, School of Commerce, Accounts and Finance, for a period of three years—1935 to 1938—on a part-time basis.

Since 1938, I have been a lecturer in the Department of Public Utilities, School of Commerce, and the Graduate School of Business Administration of New York University.

The courses which I have taught in New York University include Public Utility Economics, Commission Policy and Administrative Procedure, Public Utility Law, Public Utility Price Policies and Practices, and Sales Policies and Practices.

Q. What has been your employment? A. During the period from 1929 to 1931, I spent considerable time in the preparation of text-book material [488] in the social sciences, being employed by Stephens College in Columbia, Missouri, for that purpose.

For a very brief time, I was associate director of employment for the State of Missouri.

Thereafter, beginning in October of 1933, I was supervisor of a research bureau in the rate engineer's department, New York Edison Company.

I later was made assistant to the rate engineer and continued in that employment until May of 1937. My work in that connection was rate studies, rate schedule design and studies of special pricing problems.

On May 1st, 1937, I resigned to become Economist to the New Jersey Board of Public Utility Commissioners. I also served as Director of Special Investigations, for that Commission, and continued in the employment of the New Jersey Commission until my resignation in July, 1942.

Q. Dr. Foster, what were your duties as a member of the Staff of the New Jersey Commission? A. My duties were generally in connection with rate, accounting and financial proceedings in which unusual or significant issues were presented for the Board's consideration. Upon request I advised the Board with respect to other questions of regulatory policy or practice.

The largest proportion of my time was spent in consideration of problems of rate regulation.

[489] I mean by "rate regulation" questions concerning reasonableness of the returns to particular utilities as well as questions involving discrimination and form of rate schedules.

I was concerned, generally, with accounting regulation, and was at time in close touch with the work of the accounting division of the Board's staff.

Q. Did you prepare studies of the fair rate of return to public utilities in New Jersey? A. I prepared such studies for nearly all the electric utilities in New Jersey, for several gas, telephone, and water utilities, and for one sewerage company. I prepared such studies periodically for the larger public utilities.

Q. Did you serve as consultant to the Federal Communications Commission in 1938? A. Yes, in 1938 I was, for some months, on leave of absence from the Board as

consultant with the Federal Communications Commission in connection with rate of return studies.

I prepared a draft of the 1938 report of the telephone rate and research department of that Commission which report is entitled, "The Problem of the Rate of Return in Public Utility Regulation with Special Reference to the Long-Lines Department of the American Telephone and Telegraph Company."

I was primarily concerned in this connection with standards of fair return determination and with methods of estimating the replacement cost of capital to public utilities.

[490] Q. Have you been a member of the committee on Corporate Finance of the National Association of Railroad and Utility Commissioners? A. While a member of the staff of the New Jersey Board, I was for several years a member of the Committee on Corporate Finance of the National Association of Railroad and Utility Commissioners. I was chairman of that committee during 1941, and during 1942 prior to my registration from the Board's staff.

In 1940, in connection with that activity, I prepared a study of the relationship between security structure and cost of utility capital.

In 1941 I prepared, with the assistance of others, a general review of regulatory standards for security regulation. Those studies are published in the NARUC proceedings.

Q. As a consultant to the New Jersey Commission, after your resignation as economist, did you develop the provisions with respect to basic rate of return which are a part of the rate adjustment plan applied to New Jersey Power & Light Company by that commission? A. I did. So far as I know this is the only sliding scale agreement in which the basic rate of return is adjusted annually by a formula devised to reflect changes in capitalization rates.

Q. Were you retained during 1944 by the New Jersey

[491] Commission to supervise the preparation of evidence and as its principal witness in a proceeding as to the reasonableness of return to the Electric Department of Jersey Central Power & Light Company? A. I was.

Q. Before what state regulatory commissions have you testified in proceedings with respect to security structures, capitalization rates or the fair return to public utilities? A. The commissions of Arkansas, New York, and Ohio, and the Securities and Exchange Commission.

Q. Please identify the proceedings in which you were a witness before these regulatory agencies. A. Before the Arkansas Commission the testimony was on behalf of the Arkansas Power & Light Company in 1944. During 1945 I testified on behalf of the Chillicothe Telephone Company before the Ohio Commission, and on behalf of Kings County Lighting Company before the New York Commission. * * * A. My appearances before the Securities and Exchange [492] Commission were for Utah Power and Light Company in 1943 and the Long Island and Kings County Lighting Companies in 1945.

Q. What studies or articles have you published? A. The first was a study of public utility franchises in Missouri and the relationship of the short-term franchise to the question of centralization in regulation. That was a study of regulatory method and administrative organization.

I published a pamphlet entitled "The Federal Power Commission and State Jurisdiction," which was an analysis of the appropriate limits of the regulatory jurisdictions of the Federal Power Commission and state commissions.

In 1940 I wrote two articles which were published in a special supplement to the Journal of Commerce, which supplement was concerned with public utility integration under the Holding Company Act.

Also for the Journal of Commerce, I prepared a study of public utility taxation during the war period and a study of public utility valuation and state regulatory policies with respect to fair value determination.

In July, 1944, I wrote an explanation of the New Jersey Rate Adjustment Plan which was published in Public Utilities Fortnightly.

Since 1942 I have written the chapter on public utility law in the Annual Survey of American Law, published by the New York University School of Law.

[493] Q. Of what professional societies are you a member? A. I am a member of the American Political Science Association, the American Economic Association, the Technical Valuation Society, and the New York Society of Security Analysts.

Q. Are you familiar, generally, with the organization, operations and financial structure of the Pennsylvania Water & Power Company? A. I am.

Q. Have you made a study to determine what in your opinion is the fair rate of return to Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland? A. I have.

Q. What is the meaning of the term "return"? A. The return of a public utility consists of the net operating revenue, or utility operating income, remaining after payment or deduction of reasonable operating expenses, depreciation and taxes, and before deductions which reflect the periodic return on capital. It is the amount available to meet contractual and other costs of capital.

The "actual return" is the return experienced during an accounting period, as recorded on the basis of acceptable standards of income determination.

The "fair return" is the return established as fair and [494] reasonable by the process of rate regulations; it may be the same as, or either more or less than the actual return which the enterprise has earned.

The fair return to a public utility is a legal or regulatory concept but the establishment of the annual amount which is fair and reasonable in a particular situation depends upon application of economic criteria.

Q. What is the meaning of the term "rate of return"? A. The rate of return is the percentage ratio of the return, a number of dollars, to some base or principal amount. Under the formula of rate regulation this base is the rate base. The rate of return, therefore, may be understood either as the actual rate of return experienced during an accounting period or as the rate of return allowed or allowable as fair and reasonable.

Q. What is the economic criterion of the fair return to investors? A. The economic criterion is the price of capital or the prospective return which will induce an adequate supply of capital to enter the business upon the most advantageous cost basis.

The price of capital in the case of a given utility is a return adequate to maintain and support its credit and enable it to raise the capital funds necessary for the proper discharge of its public duties.

[495] Investors in a public utility enterprise are entitled to a rate of return equal to that generally being received at the same time on investments in other business undertakings which are attended by corresponding risks and uncertainties.

Q. Do competitive forces determine the price of capital to public utilities? A. Yes, like every other type of business enterprise, public utilities must secure their capital in an intensely competitive capital market. It is for this reason that regulation must provide a return comparable with that being realized generally from investments in other business undertakings attended by corresponding risks and uncertainties.

The measure of the fair return to a regulated utility is the return available to investors from alternative, comparable opportunities for investment.

The price of capital is the result of the choices of investors among all the alternative opportunities for the investment of available capital funds.

Q. Is the return expected by investors a cost of utility capital? A. The prospective return which will induce

investors to make available an adequate supply of capital is an economic cost. Like every other business the public utilities must secure their capital funds in a competitive capital market.

It is proper, therefore, to identify the aims of [496] regulation with the conditions of free workable competition. It is obvious that under regulation a return should be provided comparable with that realized generally in unregulated businesses of similar risk characteristics and that unless such return is made available, capital funds will not be forthcoming.

Therefore, the measure of the fair rate of return to a regulated utility is the return available to investors from alternative opportunities for investment. The cost of capital is the result of the choices of investors among all the alternative opportunities for the commitment of available funds.

* * *

[497] Q. How is the price determined? A. The price of capital to a given utility enterprise can only be imputed, on the basis of the best available evidence of invester appraisals. It must be established by a valuation process.

Q. What are the components of the price? A. In an economic sense the components of the price of capital are pure interest, compensation for risk, and compensation for investment management.

Q. What do you mean by pure interest? A. Pure interest is the hypothetical return which would be expected by lenders if the use of capital funds were free of risk. The hypothetical risk-free rate of interest is never separately expressed by marked or contractual rates [498] of interest. Long term investments in United States Government bonds may be as nearly risk free as any available investment, but the yield on government bonds undoubtedly includes some element of compensation for risk, such as the changing purchasing power of the dollar.

Q. What is meant by "compensation for risk"?

A. The second, and commonly the largest, component of the price of capital is compensation for risk.

Risk is a general term used to mean any conditions beyond control of the investor which may tend to reduce the annual compensation to be received by the investor for the use of his funds or may interfere with eventual recovery in a liquid or alternatively useful form.

It is apparent that there are three general classes of risk. Some hazards, such as the probability of loss by fire, may be foreseen; their distribution may be estimated and they may be provided for by insurance.

The probability of other losses, although not insurable, is estimated on the basis of past experience and informed judgment, and are provided for by charges to operating expenses.

The risks which are recurrent, subject to estimate and provided for in operating expenses, need not be provided for in the fair return to the extent that the investor believes that they are fully provided for in expense.

[499] The third class of risk arises from events which are only possible or which may occur at an unpredictable time, with unpredictable effects, or which may never occur. This third type of risk includes those which arise from all the unpredictable improvements in the arts or the technology of providing service.

Examples of the loss of part or all of the invested capital because of changes in the market served, with disappearance of the opportunity to earn a return, are easily found among public utilities.

The risk of loss from possible competition is not appropriately provided for by charges to depreciation expense or insurance.

The supply price includes a premium for the assumption of risk and uncertainty, not to compensate for future losses, which are unknown and unpredictable, but to compensate investors for taking the chances of such loss.

Q. What is the third component of price to which you referred? A. A third component of the price of capital is the compensation required by investors, first, for appraisal of the factors which furnish the basis for choosing between one investment opportunity and another, and second, for the continuing attention and management activity required of owners and investors.

[500] No economic burden is willingly borne without compensation. The burden of making investment choices is substantial; once investments are made there remains the burden of continuing analysis and comparison between the securities held and other investments which might be substituted.

The cost of investment management is least for the relatively risk-free investments and increases with the degree of risk in the investment.

Q. Do all investors in a given company assume the same risks and expect the same rate of return on their invested capital? A. No. The risk present in investment in a particular business enterprise commonly is distributed among the different classes of investors by means of the security structure, in accordance with the varying preferences of investors for security and for income.

The bond holder sacrifices a larger return in exchange for the greater security of his investment provided by the mortgage, and the assurance of income provided by the mortgage and the prior claim on the income which may be available from the business.

The common stockholder is in a residual position with respect to income and the distribution of assets in the event of liquidation. Therefore, he assumes a larger share of the risks inherent in the operation of the business and expects [501] a larger return per dollar of investment as compensation for the chance of loss.

Some investors are precluded by inclination, duty or statute from investing their funds in a risky situation;

others are willing to take the chance of loss for the sake of the chance of a larger gain.

Q. Are market appraisals made by investors in terms of three economic components of the supply price? A. No. Market appraisals of investments are not commonly made separately for riskless interest, compensation for risk and compensation for investment management; instead, they are made primarily by reference to factors which as a matter of business judgment determine the risk present in the investment.

Q. What are the bases of business judgment as to the value of alternative investment opportunities? A. The value of an investment is necessarily the value of the prospective returns, income and principal. All knowledge of a particular investment situation must be derived from past experience, and investment analysis is a process of using past experience as a basis for forecasting the future.

The prime basis of business judgment as to annual income expected from a commitment of capital is the prospective stability or certainty of the income and the security of the principal. The characteristics of the utility and of the [502] market which it serves are pertinent to the question of comparative income stability and security of principal.

Various tests and criteria are applied as an aid to the exercise of business judgment.

Times interest earned and times preferred stock requirements earned are the convenient and most widely used measures of protection of the return on bond and preferred stock investments. It is generally recognized that the stability of return to common stock investments varies, among others, with the proportion of gross income normally available for common dividends, since the impact of fluctuations in gross income is diffused as the proportion normally available for dividends increases.

It is obvious that these measures are not independent of the capital structure. Neither are they independent of

the market characteristics and other characteristics of the enterprise which determine its income producing capacity.

Q. Are there other factors which influence investor appraisals? A. Yes. For instance, dividend policy and practice also influences the rate at which income available for common stocks is capitalized in the market.

A company policy of maintaining, or ability to maintain, a regular dividend rate influences directly investor appraisal of prospective stability of annual income from the investment. [503] Company policy with respect to the division of available income between income paid out as dividends and income retained in the business also is an important factor.

Income prospectively to be received as dividends is capitalized by investors at a lower rate than the same amount of income expected to be retained in the business for the purpose of increasing its productive capacity.

It is obvious that this factor is not wholly independent of the ratio of equity income to gross income.

Q. What is the significance of this factor in relation to the fair return determination? A. There is need for allowance, in the fair return, of a margain to be retained in earned surplus. As a matter of business management and policy a practice of paying out as common dividends all available earnings is imprudent.

Financial stability, the ability to avoid wide fluctuations of dividend rates as a result of changing business conditions, the ability to finance improvements without resorting to the capital markets under unfavorable conditions, all suggest the desirability of a reasonably conservative dividend policy.

Q. Are there still other factors which influence judgment as to the value of investment opportunities? A. Yes, there may be many such factors. The general reputation and investor appeal of the class of industry to [504] which the enterprise belongs is an important consideration. The distinction between businesses with prospects of

growth and expansion and businesses with restricted growth prospects is significant.

The margin of revenue available for return to investors is a factor. The return from investments in enterprises with relatively high operating ratios is relatively vulnerable to the effect of cyclical fluctuations of demands.

Since income and excess profits taxes are based upon income, excess profits and income taxes payable at high rates provide a cushion which is a favorable factor.

Size of the enterprise is another factor, not so much for its own sake, but because of the relationship between size and such characteristics as diversity of demand for service, the prospective stability of income, the marketability of outstanding securities and their legality as investments for fiduciaries and institutions.

The valuation of marketability is in large part independent of the valuation of risk inherent in the enterprise. The existence of an organized market, in which the investment is continually traded and subjected to appraisal provides an advantage which is independent of relative freedom from risk.

Q. How are investors' appraisals expressed or measured? A. The appraisals of opportunites for investment are expressed in the market place by the prices of securities. [505] The market price, however, is determined by both the amount of yield or return expected from the investment and the capitalization rate. The capitalization rate is the ratio of prospective income to the investment upon the basis of which investors are willing to purchase the prospect of income.

Thus, where the prospective income is relatively assured, investors may be willing to purchase a bond at a market price of $100 in order to be entitled to receive $2.50 per year.

The capitalization rate of 2.5 per cent exists in view of the security market conditions and the risk present in the particular and alternative investments. Where the em-

ployment of the capital is relatively risky, the return which must be in prospect per dollar of investment is much higher.

Therefore, the measure of investor appraisals is the capitalization rate, or the rate at which investors capitalize the prospective income.

Q. What are the evidences of the capitalization rates existing at any one time in the case of a particular company? A. Yield to maturity at the price at which new or refunding bonds are sold to the public by underwriters is evidence of the capitalization rate which exists in the case of debt capital.

Similarly, the yields to maturity at the prices at which the bonds of an outstanding issue are currently traded in the market are evidence of the capitalization rate.

[506] In the case of preferred stock capital, yield at market price, either the issue price or a subsequent market price, is evidence of the rate at which income prospectively available upon the basis of the particular contract is capitalized. Yield at bid or asked quotation similarly may be evidence of the capitalization rate.

Q. What is the evidence of the equity capitalization rate? A. The percentage ratio of earnings per share to market price per share of common stock, known as the earnings price ratio, is evidence of the rate at which prospective income from a given equity investment is capitalized. The reciprocal price earnings ratio is commonly used by security analysts. It has the disadvantage of a form which does not correspond to the capitalization rate.

Although the earnings price ratio is evidence of the capitalization rate or price of equity capital, its significance and meaning as evidence must be considered in the light of the circumstances.

Q. Why do you say that the earnings price ratio may not be accepted as either the same as, or as a reliable measure of, the equity capitalization rate?

A. Because either the price or the earnings used to establish the earnings price relationship may not be representative of typical investor expectations.

[507] Q. Why do you say that the price component may not be representative? A. When an earnings price ratio is stated as of any given time, it is necessary to use such price as may have been reported for the particular common stock in the recent past. The particular security may be widely distributed, actively traded and exposed to continuous investor appraisal, or it may be closely held, seldom traded and only occasionally a subject of active interest on the part of security analysts. A large block of shares may not be marketable at the price at which small lots are traded. If no sales are reported the earnings price ratio may be stated by bid or asked quotations. If so, the bid or asked quotations may not represent the price at which either a small or a large number of shares could actually be sold.

The market price of a common stock may not be significant for another general reason. The capitalization rate is the ratio of prospective income to the investment which investors are willing to make in order to be entitled to receive the prospective income.

Common stock, however, is continually bought and sold for speculative as well as investment purposes. The prices of securities purchased in anticipation of a short run profit from price appreciation may not reflect in significant degree appraisals of prospective income. It is the essential [508] character of the speculator that he buys because he thinks stocks are going up, not because he thinks they are cheap. Conversely, he sells when he thinks the tide will turn.

When the speculative motive is dominant, either in the market for a particular stock or in the stock market generally, the prices may be unrepresentative of investor appraisals of prospective income.

Q. Why do you say that the earnings component of the earnings price ratio may not be representative? A. The earnings component is commonly stated as the earnings per share during a past accounting period. Income to be received by an investor, and upon the basis of which the opportunity is purchased, is always future income. Past

income per share is no more than an indication of the income which may be expected in the future.

Therefore, it necessarily follows that the income reported for a past accounting period may be either more or less than the income which in the opinion of investors is to be expected in the future. Reported earnings per share may not represent normal operating and other conditions even for the given past accounting period.

Investors give consideration to the changing conditions which determine the prospects of future income.

Q. Why do you say that reported earnings per share may not represent normal operating and other conditions for the [509] given past accounting period? A. Results of operations are reported to stockholders on the basis of diverse standards of reporting. Significant non-recurring items of revenue, of expense or of charges against income may affect the actual earnings for the year.

For instance, assume that a company refinances its outstanding debt in the amount of $10,000,000, effective as of July first, substituting 3 per cent for 5 per cent bonds. Unamortized debt discount and expense is applied as a reduction of net taxable income. Interest charges in the amount of $100,000 during the first half of the year would be a non-recurring burden on income. On the other hand, assuming an income tax rate of 40 per cent, the income tax reduction of $40,000 also would be non-recurring.

The income statement may or may not include an item in lieu of the tax reduction. Adjustment for non-recurring items is required if the statement of past earnings is to be a significant guide to future prospects and such adjustments are made by security analysts as a matter of course.

Q. When adjustments have been made for non-recurring items, do the earnings experienced during a past accounting period then become a measure of prospective earnings? A. No. They become merely a more useful guide. An informed forecast of future earnings is made with consideration of all the known factors which influence

the trends of [510] revenues and expenses. Market demands may be either expanding or contracting.

General business trends are considered in relation to the prospective cost levels. As an obvious illustration, substantially higher federal income tax rates were expected during 1941. The prospective income upon the basis of which utility common stocks were bought during 1941 did not correspond to the income reported for earlier accounting periods.

Similarly, substantially lower federal income taxes were reasonably expected during the latter part of 1945. The additional earnings afforded by this prospective tax relief tended to be capitalized at that time.

Q. Does this discussion of the earnings price ratio mean that in your opinion the ratio should not be used in connection with fair rate of return determination? A. By no means. I have recognized earnings price ratios as evidence of market appraisals of prospective income. No other type of evidence is available. When used for this purpose earnings price ratios should be expressed in the most significant manner possible; they should be treated as evidence and not as measures of capitalization rates; their meaning and limitations should be understood.

[511] Q. What is the distinction between the capitalization rate and the cost rate to the public utility? A. The price is only a part, although the largest component, of the total cost of capital to the business. The price of capital is established by the general market price of capital and investors' appraisal of the comparative quality and desirability of the alternative investment opportunities.

It is really expressed as the capitalization rate, or the prospective yield rate upon the basis of which the required capital is obtainable in the market.

A margin of cost exists between the yield at the price to the investor and the actual cost rate to the utility. This cost margin consists of the underwriting and selling commissions and the incidental expenses of flotation; it in-

cludes costs necessarily incurred by the utility in placing itself in a position of ability to enter into an advantageous arrangement for capital supply.

Q. Is there a cost of equity capital? A. The assertion is sometimes made that there is no cost of equity capital, but that assertion rests upon a confusion between "cost" and cash disbursement. The contracts with bondholders and with preferred stockholders provide specific yield rates and determine the cost of debt and preferred stock capital. A purpose of these security [512] contracts, the preferences and the protective features which are provided, is to distribute a relatively large share of the risks to the equity investors. The lack of a contractual yield rate does not serve to provide capital at no cost; the residual right to income is accompanied by greater risks and a higher cost rate to the enterprise. If it were otherwise the economic cost of capital could be avoided by the simple expedient of not paying dividends.

All capital could be obtained from equity investors; in the absence of cash disbursements there would be no "cost" and no return allowance would be required.

• • •

Q. Is the cost of capital to a utility enterprise evidence of the fair rate of return, Dr. Foster? A. It is.

Q. What kind of capital cost rate do you include, current or experienced? [513] A. Different kinds of capital cost rates may be recognized as evidence of the rate of return, including original cost, historical cost, experienced cost, and replacement cost.

These different kinds of costs are each evidence of the fair rate of return, although the significance and value of each different kind of evidence depends upon all the facts and circumstances, including the method of rate regulation being followed and the kind of rate base which is fixed for the purpose of the proceeding.

Q. What do you mean by original cost of capital? A. One kind of capital cost is expressed by the cost rates

experienced by the enterprise at the time when commitments of capital were made by the original investors.

In the case of utilities which have grown in size over a long period of years, the existing supply of capital typically was obtained at different times and at different cost levels, as needed to finance new construction. The cost of capital represented by debt obligations is expressed by the ratio of annual interest and amortization requirements —to maturity—to the net proceeds realized by the utility.

The original cost of preferred stock capital also is calculable from accounting records and is the ratio of annual dividends to the net proceeds from original issues of preferred stock capital.

[514] With respect to common stock capital the original cost rate is not calculable from accounting records and may be established only with reference to the income prospects and the alternative investment opportunities existing—and the financing costs experienced—at the time the capital was committed to the business..

Q. What do you mean by historical cost of capital? A. A second kind of capital cost is expressed by the cost rates actually experienced as at the present date under the contracts for supply of debt and preferred stock capital and the cost determined by the income prospects and the alternative opportunities available to equity investors at the time of the commitment of equity capital.

The historical cost of debt and preferred stock capital is determined from accounting records. Expressed as a rate the historical cost of debt or preferred stock capital is the ratio between the annual requirements and the net proceeds to the enterprise from the issuance of such securities.

The annual requirements are defined to include all the costs of redeeming outstanding securities or eliminating, revising, or consolidating existing contracts in order to give the company access to lower capital costs or more favorable terms.

Therefore, although the historical cost of debt and preferred stock capital is determined from accounting records, [515] the treatment and disposition given to such costs for accounting purposes does not affect their nature or propriety of their recognition and treatment in determining the cost of capital.

Q. What do you mean by experienced cost of capital? A. This third kind of capital cost is the same as the historical cost of capital with respect to the cost of debt and preferred stock capital, but includes the cost of equity capital at the rate determined by the income prospects and the alternative opportunities currently available to equity investors.

Q. What do you mean by replacement cost of capital? A. The replacement cost of capital is expressed by the cost rate which would be experienced under current market conditions, reflecting the advantages and disadvantages available to a utility free to replace its capital on the basis of a hypothetical capitalization and financing, without the inclusion of any cost of retiring outstanding securities or eliminating the existing capitalization.

It is obvious that the replacement cost of capital must be imputed or estimated and that the accounting records of the company are not the source of information with respect to this kind of capital cost.

For instance, a continuing provision for amortization of unamortized debt discount and expense experienced in connection [516] with previous financing is not a part of the hypothetical replacement cost of capital.

Q. Do any of these concepts which you have just defined imply the existence of a going concern? A. They all do with a qualification as to original and historical costs of capital.

It is obvious that it is one thing to begin a new enterprise; another to recapitalize an existing one. The new enterprise must organize as a corporation; it must assemble the nucleus of a working organization; provide itself with

production and distribution facilities; design business routines and by degrees train a staff of employees to carry them out.

All of these activities involve costs which do not necessarily reflect themselves in the appraisals of investors.

These different kinds of evidence of the fair rate of return do not include any allowance to cover the costs of establishing a going concern beyond those which are reflected in investor appraisals.

The replacement cost concept is defined here to include the assumption that the enterprise is a going concern but necessary and unavoidable costs are associated with achieving the status of a going concern in a position to obtain capital on the basis of a hypothetical capitalization.

Q. How may going-concern costs become reflected in [517] investors' appraisals? A. Investors will characteristically accept a lower prospective return upon the securities of a going business having a record of successful operation behind it, than upon those of a new establishment which has yet to prove its ability to provide the promised or hoped for compensation for the use of capital supplied to it.

Since original and historical costs of capital reflect investor appraisals at the time of original commitment of capital to the enterprise, they tend to reflect the higher risks of the new enterprise and may, therefore, include some allowance for costs associated with the establishment of the enterprise as a going concern.

Q. You testified that the significance and value of each different kind of evidence depends upon the circumstances, including the method of rate regulation being followed and the kind of rate which is fixed for the purpose of the proceeding.

Why are you of this opinion? A. The amount allowed as a reasonable annual return is the product of both the rate base and the rate of return which is applied to the rate base. Therefore, the reasonable rate of return

cannot be determined independently of the rate-making method and the rate base determination.

If, as a matter of administrative policy, original cost or prudent investment is adopted as the rate base, the rate of [518] return becomes the means by which the desirable flexibility can be maintained and reasonable end results reached.

Regardless of the method of rate regulation adopted by the commission or required by the statute from which its authority is derived, the objective is the determination of a fair rate of return as the number of dollars.

It is the impact of a rate order, the fair return allowance, which is subject to the most searching tests of reasonableness.

Q. As I understand it, you are saying that if a rate of return of, say, six per cent applied to a rate base of $100 million yields a fair return, the same rate of return applied to a rate base of $60 million, established by a different method of rate regulation would not yield a reasonable result? A. That is correct. If a return allowance of $6 million is reasonable, adequate, and not excessive, a return allowance of $3.6 million cannot be reasonable.

Similarly, if the rate base were fixed at $150 million by the application of some other regulatory formula, a return allowance of $9 million would not be reasonable.

The credit position of a company and its ability to attract additional capital depends primarily upon the return allowed, rather than upon either the rate base or the rate of return viewed independently of each other, although the regulatory process may have its own influence upon the cost [519] of capital to the regulated enterprise.

Although the process of rate regulation may not be bound by formulae, the fair return, as the end result, should be reached by a rational process and the result should be subjected to criteria of reasonableness which are based upon a recognition of the purposes of regulation.

Q. In general, what do you believe to be the applicable criteria? A. In my opinion, the general criteria are:

First, upon what basis does the rate making process undertake to encourage and induce the investment of capital in the regulated enterprise, and second, how significantly do the results of the rate making process depart from the alternative opportunities available to investors.

Q. What are the bases upon which the rate making process may seek to induce the investment of capital? A. One such basis is the allowance of a return equivalent to the hypothetical replacement cost of capital. It may be called the competitive replacement basis.

It would seek to provide the return which is available to invested capital from alternative opportunities having comparable qualities of risk and uncertainty and responsibility for the management of investment.

Prudent investment is the second basis upon which the regulatory process may undertake to induce the investment of [520] capital in public utility enterprises. The theory of this basis is that investors contribute a specific amount of capital—dollars—not any specific property, and that additional capital will be forthcoming if they are permitted to earn a return, on the amount actually contributed, at the rate of return expected when the funds were commited to the enterprise, and that on this social contract additional capital will always be available at currently compensatory rates of return expectation.

Q. Please define the competitive basis more fully. A. The competitive standard involves the proposition that capital committed to a public utility enterprise is subject to the impact of all the changes which may take place in a dynamic and competitive economic society.

Among these changes are fluctuations in the general level of prices and in the cost of constructing particular production facilities, inflationary or deflationary movement of prices, improvements in technology and changes in the demands for utility service.

Therefore, the competitive return to investors is the product of the rate of return currently expected by in-

vestors, applied to the current costs of replacing the plant facilities.

The rate of return currently expected per dollar of investment is measured by the returns currently available from alternative investments of corresponding risk.

[521] The required capital is the amount necessary to construct a utility plant of "up to date" technological design, capable of supplying the service which is being supplied by the existing plant.

According to the competitive standard, the consumers should pay a return of no more than the cost of replacing the plant with one capable of supplying the same service.

The rate of return which corresponds to the competitive standard is the cost rate which would be experienced if the enterprise were free to replace its capital, on the basis of a new capitalization, without incurring costs to retire outstanding securities or eliminate an existing capitalization.

Past costs associated with a capitalization are "sunk" for the same reason that the past costs of existing plant do not determine prices in a fully competitive society.

A new enterprise would incur the cost of capital which would be determined by the returns expected by investors and the kind of capitalization which prudent management would be free to establish.

Q. Does the competitive basis require consistent determination of the rate base and rate of return? A. Yes, if the return is to correspond to the alternatives currently available to investors, both the capital replacement cost rate and the amount of investment required [522] at current prices to provide the same service must be recognized.

Except by accident, the competitive return would not be fixed by applying a replacement cost rate of return to a prudent investment rate base.

Similarly, a competitive return would not be found by applying a historical cost rate of return to a replacement cost rate base, except by accident.

• • •

Q. Dr. Foster, does the investment basis require a consistent determination of the rate base and rate of return? A. Yes, if the return is to correspond to the returns expected at the time of the commitment of capital and upon the basis of which the investment was made, it must reflect [523] both the historical cost of capital rate and the amount of the historical investment prudently made.

If the return to investors is to be upon the basis of their past sacrifices, it must be fixed at the rate which corresponds to their expectations when the sacrifice was made.

Therefore, unless by accident, a return fixed by applying a replacement cost rate of return to a prudent investment rate base would not be consistent with the investment cost method of rate making.

Similarly, a return fixed by applying a historical cost rate of return to a replacement cost rate base would not be consistent with the investment cost method.

Q. In your opinion, does the investment cost method of rate regulation have administrative advantages? A. Yes, I believe that the prudent investment method of rate regulation has some administrative advantages.

The needs for information can be supplied in large part by accounting records, assuming they accurately reflect economic facts; an attempt to conform to the competitive standard requires that both the rate base and the rate of return be imputed.

Also, adoption of the investment basis tends to relieve investors of certain risks associated with the capitalization if it is consistently employed as explained above; if not, the [524] administrative advantages may be unfairly gained at the expense of the investor.

Q. You testified that the return allowance is an end result of regulation and that this end result should be subjected to applicable criteria of reasonableness.

You have discussed one such criterion—the basis upon which the rate making process undertakes to induce the investment of capital.

What do you mean by the second criterion, which was "How significantly do the results depart from the alternative opportunities available to investors"? A. Consistent recognition of either the competitive or the investment basis does not necessarily mean that the regulatory purpose of inducing the continued investment of utility capital will be accomplished.

Either method must be adapted to particular circumstances if unreasonable end results are to be avoided.

Either the competitive or the investment standard, however, provides a "conscious design for decision" instead of resting the end result upon "intuition".

A consistent recognition of the investment cost basis might in some circumstances yield results wholly inadequate to attract new capital.

If the cost of constructing capital goods and the price of capital were each to trend sharply upward the return [525] provided by the investment cost method of rate regulation might vary widely from the returns alternatively available to investors.

If construction costs increase at the same time that the price of capital declines, it is obvious that the effect of these movements is counteracting.

Therefore, the result of applying the prudent investment method should be tested against the competitive standard.

Q. Might a consistent recognition of the competitive basis yield unreasonable results in some circumstances? A. Yes. The competitive standard rigidly applied may yield unreasonable results.

For instance, the most economical capital structure at a given time may conflict with a standard of "conservatism" in security regulation; it may include a proportion of debt in excess of what would be approved either by regulatory authority or by prudent management.

The question may be presented in some instances as to whether or not in view of existing contractual obligations

a return based on the competitive standard will maintain solvency. The regulatory authority cannot lose sight of the public need for continued service but must determine whether solvency is worth maintaining.

The practical necessity of giving consideration to contractual costs, in order to maintain ability to attract [526] required capital, may be even more urgent where a competitive return would not result in bankruptcy but might prevent the payment of preferred dividends.

Q. May the end result of the rate making process be subjected to these criteria regardless of the method employed? A. Yes. Assuming that the process of rate regulation is pragmatic, in the sense that it does not proceed consistently by any method, its results may and should be subjected to the tests presented by the competitive and investment standards.

[527] Q. Have you made a study and reached a conclusion as to the experienced cost of capital to Pennsylvania Water & Power Company as at the present date? A. I have.

Q. In general, how have you proceeded? A. I have made a study of the capitalization rate upon the basis of which Pennsylvania Water might obtain equity capital as at the present time. In doing so I have given primary consideration to the evidence of investors' appraisals of the prospective income from their investments in the Pennsylvania Water common stock. In this connection I have given consideration to the significance and meaning of the earnings price ratios. I have added to the imputed equity capitalization rate a margin for cost of financing in order to state the cost of equity capital to Pennsylvania Water.

I have determined the experienced cost of debt and preferred stock capital by use of data supplied to me by the company from their accounting records. Experienced cost of debt capital is defined for this purpose as the percentage ratio on a sinking fund basis between the annual requirements and the net proceeds to the enterprise.

The annual requirements include all the costs of redeeming outstanding securities or eliminating revising or consolidating existing contracts in order to give the company access to lower capital costs or more favorable terms. Similarly, [528] the experienced cost of preferred stock capital is defined as the ratio between the annual requirements and the net proceeds to the company.

Finally, I have combined these cost rates in order to state the total or overall experienced cost of capital.

Q. In determining the equity capitalization rate, why have you given primary consideration to the evidence of investor's appraisals of the prospective income from their investments in the Pennsylvania Water common stock? A. Because in my opinion these data provide the most significant evidence. The market prices of the Pennsylvania Water common stock express the composite market judgment of what is necessary and adequate compensation for the risks inherent in this investment.

I believe that, properly interpreted, the results of the collective appraisals are a better guide to administrative action than the opinion or appraisal of any one individual. If an individual should reach a different conclusion, the composite market appraisals would, nevertheless, remain the best evidence of the price at which the particular enterprise could obtain additional supplies of equity capital.

Earnings price ratios are available for other utility common stocks and for industrial and railroad stocks. Some of these may be enterprises of corresponding risks and uncertainties. Some may not. Identification of those which are [529] comparable is necessarily dependent upon analyses and subjective judgment. Therefore, the relationships between the earnings and the prices of other common stocks are considered only for the purpose of aiding in the interpretation of the Pennsylvania Water earnings price ratios.

Mr. Sparks: Mr. Examiner, I have at this time a document entitled "Pennsylvania Water & Power

Company, Experienced Cost of Capital", containing a chart and six schedules. May this document be marked Exhibit 29 for Identification?

TRIAL EXAMINER: The document may be so marked.

(The document referred to was marked Exhibit No. 29 for Identification.)

By MR. SPARKS:

Q. Doctor, you have before you a folder containing a chart and six schedules, together with notes, which has the general title "Pennsylvania Water & Power Company, Experienced Cost of Capital", and which has been marked for identification as Exhibit 29. I ask you whether this was prepared by you or under your direction? A. It was.

Q. Will you please describe generally the chart with the title "Electric and Electric Combination Utility Earnings-Price Ratios, Mean of Medial Four of Six Ratios and Pennsylvania Water & Power Company"? A. The chart shows two lines which I will call curves. [530] One represents the Pennsylvania Water earnings price ratios monthly from January, 1912, to December, 1945.

The second curve represents a monthly average of the earnings price ratios of six electric and electric combination companies. These six companies are Boston Edison, Commonwealth Edison, Consolidated Edison of New York, Consolidated of Baltimore, Detroit Edison and Pacific Gas and Electric Company. The purpose of the second curve is to provide a standard or background which will aid in analysis of the Pennsylvania Water earnings price ratios.

The panel in the upper half of the chart contains a series of notes with respect to events and circumstances of general and particular interest in connection with the consideration of the earnings price ratio curves.

Q. What are the data shown by the schedule bearing the title "Schedule 1, Pennsylvania Water & Power Company, Monthly Earnings-Price Ratios, January, 1912, to De-

cember, 1945"? A. Schedule 1 is a tabulation of the earnings price ratios which are shown graphically by the solid line on the chart.

Q. Please describe the schedule with the title "Schedule 2, Pennsylvania Water & Power Company, Gross Income, Its Disposition and Income per Share of Common Stock, 1911-1945"? A. Schedule 2 consists of a sheet with 13 columns of [531] data and 13 attached pages of notes. I believe that the titles of the various columns on the tabular sheet are reasonably descriptive.

The principal purpose of the schedule is to show the adjustments made to eliminate from income the effect of non-recurring items and to state, in Column 10, the earnings per share of common stock outstanding at the end of each year. Reported income is adjusted for the effect of non-recurring or extraordinary items of revenue or expense. Adjusted earnings per share, Column 10, are calculated by dividing the equity income, Column 8, by the number of common shares outstanding at the end of each year. Column 9, per cent of gross income available for the common stock, and Column 13, the percentage ratio between common dividends and equity income, are statistical expressions of the comparative position of the Pennsylvania Water common stock.

Q. What was the number of common shares outstanding at the end of each year? A. From 1911 to 1922 inclusive, 84,950 $100 par common shares were outstanding at the end of each year. At December 31, 1923, the number had been increased to 97,693 and at the end of 1924 to 107,462. This number remained unchanged until 1927 when the $100 par shares were exchanged for no par shares on the basis of four no par shares for each outstanding $100 par share. Therefore, 429,848 shares were outstanding at [532] December 31, 1927, and the number has remained unchanged to the present time.

Q. What is the purpose of the adjustments of reported income shown by Schedule 2? A. In buying common

stocks as investments, prospective income and not past income is being purchased. Reported income is useful to the security analyst as an indication of what may be expected in the future. Prospective annual income is not measured by the earnings reported for the latest 12-month period. Prospective income obviously does not include extraordinary items of revenue, expenses or taxes which are not expected to recur or which are expected to recur only during a short future period.

In recent years, reductions of Federal income taxes because of deduction from net taxable income available in connection with refinancing of securities and sales of property have been among the most frequently non-recurring items. The unusual circumstances which bring about a significant reduction of taxes in the particular year are, in general, based upon differences in the accounting treatment of certain items for income tax purposes and for general financial purposes. The adjustments are limited to those typically made by security analysts to state the year's earnings on a so-called normal basis. The work was done by progressing from earlier to later years, on the basis of information currently available [533] from the annual reports of the company to its stockholders and care was taken to avoid the use of information available only at a later date. The adjustments are not forecasts; no attempt is made to anticipate the trend of demand, of prices or other factors from conditions which existed during the year for which income is reported.

The earnings price ratio is the ratio between the current earnings and the current market price of the stock. The capitalization rate represents the relationship between the current market price of the stock and the earnings which investors believe to be in prospect and upon the basis of which they are willing to pay the given price for the opportunity of receiving the hoped for income.

Therefore, the earnings price ratio is evidence of the capitalization rate but may not coincide with the latter.

The adjustment of reported earnings for the effect of nonrecurring items, which serves to normalize the earnings for the accounting period, is a step toward improvement in the quality of the earnings price ratios as evidence of the capitalization rate.

Q. Why do you show earnings available per share, as reported, Column 11, for only the years 1931 to 1945, inclusive? A. Beginning with the year 1931, the income statement in the annual report to stockholders included a net income item which, after deduction of preferred dividend requirements, [534] may be considered as reported equity income. Prior to that year, the income statement does not attach a positive label to the amount of net income.

Q. How have you derived Column 13? A. Column 13 is the dividend earnings ratio or the percentage ratio of annual dividends to the earnings available during the year for dividends. For the period from 1914 to 1930 the ratio is derived by dividing Column 10, the adjusted earnings per share, into Column 12, the annual dividend rate as at the end of the year. For the period from 1931 to 1945, inclusive, it is derived by dividing Column 11, the reported earnings per share, into Column 12, the annual dividend rate.

Q. Why do you use reported earnings for this purpose to the extent available? A. Because the reported or actual equity earnings are more pertinent with respect to the ability of the company to pay dividends; an extraordinary operating loss or windfall in a given year affects earned surplus available for dividends.

Q. With earnings per share, shown by Column 10 of Schedule 2, available, what are the further steps which you have taken in calculating the earnings price ratios shown by Schedule 1? A. I recorded the monthly market prices of Pennsylvania Water common stock for the period from August, 1911, to December, 1945, and determined the monthly averages of these [535] prices. Then I stated the earnings per share on a monthly basis by a method which

gives a smooth or gradual transition from the earnings of one year to those of the next. Finally, I divided the earnings per share for each month by the average market price for that month in order to obtain the earnings price ratio for the month.

Q. From what sources did you obtain the market prices of the Pennsylvania Water common stock? A. From the Bank and Quotation Record section of the Commercial and Financial Chronicle for the entire period from 1911 to 1945 and from 1913 to 1927, inclusive, from The Annalist, published by the New York Times. Bid and asked quotations were available from the General Quotation Section of the Bank and Quotations Record from 1911 to and including January, 1928. Thereafter, monthly high and low price and volume of sales on the New York Curb Exchange are reported by the Chronicle. In order to supplement the bid and asked quotations, I recorded the prices on the Baltimore Exchange as reported weekly by The Annalist from 1913 to 1927 inclusive and the prices on the New York Curb Exchange as reported weekly by The Annalist from 1924 to 1927, inclusive.

Q. What prices did you use in computing the earnings price ratios? A. I used sale prices in preference to bid or asked quotations, and where prices were available from more than [536] one securities exchange I used the price from the exchange on which there was currently the larger volume of trading in the particular stock. Prices are not available for the period from August to December, 1914, inclusive, when the stock exchanges were closed. I filled in this gap by interpolating from the July, 1914, and January, 1915, prices. Otherwise the prices used are the average of monthly high and low or bid and asked quotations.

Q. By what method do you state the earnings per share on a monthly basis? A. I assigned the earnings per share for each calendar year to the month of September within that year, thus recognizing the availability of information during the year with respect to the trend of

earnings and investors' anticipation of the results for the year. Then I stated the earnings per share for the intervening eleven months in such manner as to provide a regular progression from September of one year to September of the next year. That is, in stating the earning per share for the month of October, I gave a weight of 11/12th to the current year's earnings per share and a weight of 1/12th to the earnings of the following year. The weights for November were 10/12th and 2/12th, and so on until the earnings per share for August were stated by giving a weight of 11/12th to the earnings of the current year and 1/12th to the earnings of the past year.

[537] Q. You then divided the earnings per share as stated for each month by the average of the market prices for the given month to obtain the earnings price ratios which are shown by Schedule 1 and which are represented by one of the two curves on the chart? A. That is correct.

Q. Referring now to the broken curve shown by the chart in Exhibit marked for identification 29, how did you select the six common stocks represented in this average? A. It is not a selected group. I desired to use a group of dividend paying common stocks for which monthly sale prices are available and the composition of which did not change during the long period from 1910 to date. The six are substantially all which are available. Addition of the common stock of Southern California Edison was considered, but the outstanding preferred stock with participating rights makes computation of the equity income relatively difficult and the stock was excluded for that reason. A larger group might have been obtained by making substitutions from time to time or varying the number of stocks in the group but chaining of the earnings price ratio averages probably would have been necessary. The six are the most homogeneous group which could have been used for the purpose subject to the conditions stated.

Q. Are the earnings price ratios tabulated on Schedule [538] 3 the values which are represented by the broken curve on the chart? A. That is correct.

Q. Please describe the method by which you arrived at monthly earnings price ratios for the six common stocks shown on Schedule 3. A. I used the same method and followed the same steps as in connection with the Pennsylvania Water earnings price ratios. I read the annual reports of these six companies for nearly the entire term of years. In the case of certain years, particularly prior to 1911, I did not have the annual reports available and obtained the information from Moody's Manual. In instances where information, such as the dividend rate, was not given in the annual report, it was obtained from Moody's. I worked forward from earlier to later years. I prepared for each company an annual statement of gross income, fixed requirements, equity income and earnings per share, which reflected adjustments made for significant non-recurring items of revenue, expense and taxes. I then stated monthly earnings per share by weighting in the same manner as I did for the purpose of stating monthly the Pennsylvania Water earnings price ratios. The monthly prices of the common stock were obtained from the same sources and treated in the same manner as in the case of the Pennsylvania Water common stock.

Q. Why have you used the mean of a medial group instead [539] of some other kind of average? A. Exclusion of the extremes in computing the average tends to eliminate the effect of extraordinary factors which have an impact on a particular company and which otherwise would distort the average. The average is more nearly representative of the typical level and trend than it would be if the extremes were included.

Q. Have you made any check as to the stability of the companies represented in the average earnings price ratios, and their comparability with Pennsylvania Water, with respect to the proportion of gross income becoming available to the common stock? A. Yes, I have determined the proportion of gross income available as equity income for the four companies represented directly in the average

either during all or during the greater part of each of the five years ended with 1922, and similarly, with respect to the five-year period ended in 1940. During the earlier period of five years, the average proportion of gross income available to the equity was 54.6 per cent for the four companies and 54.7 per cent for Pennsylvania Water.

During the five years ended with 1940, the average for the four companies was 58.3 per cent and the average for Pennsylvania Water was 67.8 per cent.

Thus, there is reason to believe that the level of the [540] average is not affected by any long-run change in capital structures or proportion of total income typically available for the equity. The distribution of the Pennsylvania Water gross income did change, with a smaller proportion being required in the later years to meet prior charges so that, in this respect, the Pennsylvania Water stock is less comparable during the later period with the stocks represented in the average than it is during the earlier years.

Q. Does the increase in the proportion of gross income available for the equity mean that the earnings price ratio is higher or lower than would otherwise be the case? A. So far as the influence of this factor is concerned, the earnings price ratio is lower than would otherwise be the case.

Q. What do you conclude from the fact that Pennsylvania Water common stock has sold during recent years on a higher earnings price ratio basis than the average of the other four? A. It does so for reasons other than the broader participation in income.

Q. Why did you make the comparison for the five years ended with 1922 and the five years ended with 1940? A. A comparison of income distribution, between Pennsylvania Water and the other companies, would be meaningless for almost any year prior to 1918. The proportion of gross income available to the Pennsylvania Water stockholders increased from [541] 8.7 per cent in 1911 to 51.4 per cent

in 1917. It required several years for Pennsylvania Water to reach full utilization of the capacity initially planned. As for the five years ended with 1940, I merely took a period prior to the war.

Q. Have you made any check as to the stability of the companies represented in the average earnings price ratios, and their comparability with Pennsylvania Water, with respect to the proportion of equity income paid out as dividends? A. Yes, I have made a determination of the proportion of equity income paid out as dividends by Pennsylvania Water and by the four companies represented in the average, either during all or during the greater part of each of the five years ended with 1922; and similarly with respect to the five-year period ended with 1940.

During the earlier period of five years, the average proportion of equity income paid out as common dividends was 86.6 per cent for the four companies and 85.1 per cent for Pennsylvania Water. During the five years ended with 1940, the average for the four companies was 81.8 per cent and the average for Pennsylvania Water was 84.6 per cent.

Thus, there is reason to believe that the average is not affected by any long run change in the dividend policy or practice of the companies represented in the average. Also, in this respect, Pennsylvania Water is generally comparable with the companies represented in the average.

• • •

[543] Q. Dr. Foster, where you have used the term "Penn Water" throughout your testimony does that term include the Susquehanna Transmission Company of Maryland? A. It does.

Q. Have you given consideration to factors which, in your opinion, influence or determine the fluctuations and movements of the earnings-price ratios shown by the chart in the exhibit? A. I have.

Q. What are some of those factors? A. For the purpose of analysis, they may be classified generally as:

(1) Those which are related to experienced secular growth or expansion in scale of operations.

(2) Those which are related to the cycle of business [544] prosperity and depression.

(3) Those which arise out of speculative trading in the securities markets.

(4) Those which are related to other events which have a general impact on all enterprises or on all of a class of enterprises.

(5) Those which are related to events which have a special impact on the particular utility.

I attach no significance to the sequence in which these categories have been stated.

Q. What do you mean by the factors which are related to expected secular growth or expansion in scale of operations? A. Commitments of capital are made in the expectation and hope of realization of income and the amount of capital committed by investors represents a capitalization of the income which they estimate to be in prospect. It is generally understood that either a sustained secular growth or a planned major expansion in scale of operations typically results in fuller utilization of the existing productive capacity of electric utilities. As the result of such growth, the returns on the previously existing investment tend to be higher than the past returns.

Q. What do you believe to be the effect of these factors on the behavior of the earnings price ratio curves? A. It is rational to conclude that when such growth or [545] expansion is in prospect, the earnings price ratios, either for a particular common stock or for a class of common stocks, will be at a lower level than otherwise would be the case. The true capitalization rate is the ratio between the prospective income, which may or may not be estimated by investors with precision, and the price which the investors are paying in the market for that prospective income. The earnings price ratio, as commonly stated and as stated for

the purpose of the chart, is the ratio between the past, lower earnings per share and the market price established in anticipation of higher earnings.

Q. Have there been times within the total period shown by the chart when there was the prospect of significant growth or expansion in the operations of the companies represented on this chart? A. Undoubtedly. The businesses of producing and distributing electric power were businesses of almost continuous and of rapid growth, at least prior to 1930. A note on the chart within the space representing the year 1912 indicates that the gross revenue of the six companies represented in the average, but omitting Consolidated Gas of New York because its gross revenue figures are not available for this period, doubled in the five-year interval from 1907 to 1912. Somewhat similar rates of growth were sustained for the five-year period ended with 1917, 1922 and 1927. The rate of [546] increase during the later years is indicated by the fact that the gross revenues of the six companies for 1937 was 29 per cent in excess of their gross revenues for 1932.

In the case of Penn Water, the eighth generating unit was not installed and in operation until late in 1914. The earnings per share were only $0.43 in 1911, $2.19 in 1912, and increased both steadily and rapidly to $5.53 for 1916 and $6.45 for 1917. The earnings price ratio of 1.61 per cent shown by Schedule 1 for January, 1912, is obviously meaningless as a measure of the ratio at which Penn Water equity investors, as at that date, were capitalizing the income which was in prospect. The average market price of the common stock in January, 1912, was $63.25. If, for the purpose of illustration, an earnings price ratio is expressed by relating the 1916 earnings per share to the January, 1912, market price of the common stock, the arithmetic result is an earnings price ratio of slightly more than 10 per cent. Of course, as evidence of the capitalization rate, an earnings price ratio derived in this manner should be discounted for the cost of waiting.

Q. What are the characteristics of the factors which you have described as being related to the general business cycle? A. The general business cycle involves a significant, relatively short run change in the volume of industrial [547] production and in the degree of business and financial confidence as to the future. During periods of declining business activity, and of uncertain business confidence, the forecasts of future income are relatively unfavorable. During the opposite stage of the business cycle, when confidence has revived and the volume of production has begun to increase, the forecasts of corporate income tend to become relatively more favorable.

Q. What is the effect of these factors on the behavior of the earnings price ratios? A. It is rational to conclude that in so far as the influence of these factors is concerned, the earnings price ratios will tend to be higher than the true capitalization rate during periods of declining business activity and a low level of productivity. Correspondingly, the earnings price ratios will tend to be below the true capitalization rate during periods of expanding business activity.

At the time when business activity loses momentum and a loss of business confidence is experienced, estimates of future earnings are revised downward. As this phase of the business cycle progresses, the prospect of recession or depression becomes more definite. The prices of common stocks tend to decline in adjustment to the loss of confidence and the prospective lower income, but only the results of past operations are reflected in the available annual income statements. [548] The earnings price ratio expresses the relationship between the past per share earnings and the market prices which reflect investors' pessimistic appraisals of future income.

[549] When the business cycle progresses to the stage of revival and renewed business confidence, the contrary set of relationships is presented. The market prices of common stocks respond to the more optimistic forecasts of business activity and income. The earnings-price ratios,

as commonly expressed and as expressed on the chart, are the ratios between past earnings and the current market prices.

Therefore, the earnings-price ratios tend to be depressed temporarily to a level below the rate at which prospective income is, in fact, being capitalized in the market.

Q. Have there been times within the total period shown by the Chart when a coincidence existed between business cycle changes and the earnings-price ratio behavior which you have described? A. Yes. For instance, the volume of industrial production increased throughout the year 1936. Earnings forecast undoubtedly were more optimistic than the actual experience for the year 1935.

The earnings-price ratios shown for the various months of 1936 expressed the relationships between past earnings and current market prices, but these market prices were the result of investors' appraisals of prospective income which differed from those reported for prior accounting periods.

Q. Please discuss the significance of the third class of factors which you mentioned as influencing the behavior [550] of earnings-price ratios, that is, speculative trading in the securities markets? A. For the purpose of analysis of capitalization rates, I defined investment as the purchase of an asset on the basis of an appraisal of the value of the hoped-for income from the asset.

Securities are also traded on the basis of expected short run profit from appreciation or decline of market value.

For the purpose of the analysis I have characterized this market motivation as speculative. It is present in its fullest manifestation in the so-called bull markets.

In 1929 when so many persons attempted to take advantage of the opportunities for quick profits, the market prices were quite unrelated to valuations of prospective annual income from the investment.

The call money rate of 15 per cent and outstanding eight billion dollars in brokerage loans, noted by the chart, are indications of the speculative fervor. This 1929 behavior of stock market prices was without inspiration from a rise in industrial production or commodity prices.

With reference to the more recent period, a significant element of speculative motivation has been present in the stock market during the past year. The price increases have been general, in some part without concern for prospective [551] income, and without a high degree of selectivity among opportunities.

Q. To the extent that speculative trading provides opportunity for an enterprise to obtain equity capital at lower cost rates than would otherwise be possible during the bull market, are these lower cost rates an appropriate basis for fixing the fair rate of return to a public utility?

A. I believe not. It undoubtedly is true that during the existence of a bull market, as in 1929 and to some extent today, equity capital is temporarily available at a lower price because of the extreme optimism of investors and the trading without regard to valuation of prospective income.

However, periods of undue optimism and periods of undue pessimism are each relatively short-lived. If service changes were established on the basis of bull market prices, they would be inadequate when market prices of securities are again based primarily upon appraisals of their intrinsic value.

Similarly, if charges for service were established on the basis of bear market prices, they would be excessive, so far as this factor is concerned, when the period of undue pessimism has passed.

Determination of the fair rate of return on the basis of earnings-price ratios, reflecting either extremely pessimistic [552] or extremely optimistic reactions of investors, would introduce an undesirable element of instability into the process of rate regulation. Rates would tend to be reduced because of the temporary availability of capital at

speculative prices in periods of general business prosperity. It would follow, as a matter of consistency, that in the contrary situation, as in 1932 or 1933, charges for service would be increased.

Periods of deep gloom in the stock market do not coincide with periods of productivity and high national income. Therefore, if for the purpose of rate of return determination, the cost of capital is established on the basis of short run evidence, service charges will tend to be high at the very time when the effect on demand and consumer interests would be most unfavorable, and low when national income and consumer demands would support relatively higher charges.

Q. Please illustrate the fourth class of factors described as related to other events which have a general impact on all enterprises or on all of a class of enterprises. A. Perhaps the most significant such event is a change or prospective change in corporate income tax rates.

Corporate income tax rates have been at a high level and these rates are especially significant for electric utilities because of the proportionally large capital investments required. Any substantial change in the tax rate [553] has a substantial effect on equity income.

Q. What, in your opinion, is the effect of this factor on the behavior of earnings-price ratios? A. Again attention must be recalled to the fact that the market prices of common stocks reflect investors' appraisals of prospective income. If, because of events which necessitate increased public revenues, it is generally believed that corporate income tax rates will be raised or if a new tax measure has been enacted by Congress, consideration is given by security analysts to the effect on corporate earnings.

As a consequence of these appraisals, the market prices of stocks will tend to be adjusted to the changed prospects of income. The earnings-price ratios, however, expressed as the relationship between past earnings and the market

prices, do not reflect the reappraisals of anticipated income and tend to deviate from the rate at which that income actually is being capitalized.

Q. Within the period shown by the chart, has a coincidence existed between anticipated tax changes and the earnings-price ratio behavior which you would expect in view of the circumstances? A. Yes. For instance, the notes in the space representing the year 1941 indicate that higher income taxes were urged early in 1941 and that the Revenue Act of 1941 was [554] enacted in October of that year.

The chart also shows that the Penn Water earnings-price ratio moved from about 9 per cent for January to about 12.5 per cent for December, and the average of earnings-price ratios of the six companies moved upward during 1941 from 7.7 per cent to 10.6 per cent.

It would be irrational to assert on the basis of this evidence that there was a corresponding movement in the rate at which prospective income was being capitalized by investors.

So far as the evidence demonstrates to the contrary, the income which was considered to be in prospect after the higher taxes may have been capitalized at the same rate as had been applied in valuing earlier estimates of equity income.

The average market price of the six common stocks fell from 141 in January to 97 in December, but the anticipated effect of the higher taxes was not yet reflected in reported earnings.

[555] It is true, of course, that the contract of Penn Water with Consolidated of Baltimore provides, in conjunction with the company's other operating revenues, for payments to Penn Water which produce a fixed return after taxes.

It appears, however, either (1) that this contractual provision has not been fully understood by investors, (2) that its significance has been discounted, or (3) that its influence on investors' appraisals of prospective stability

and assurance of return has been fully offset by other factors.

Q. Is there reason to believe that behavior of the earnings-price ratios is affected in a contrary manner when there is a general expectation of tax reductions? A. Yes. An anticipated tax reduction of importance, such as removal of the war-time excess profit taxes, results in reappraisals of the values of the shares being traded. Market prices tend to increase because of the anticipated increased earnings per share. The earnings-price ratios, expressed as the relationship between past earnings and the current market prices, tend to decline to a level below the rate at which prospective income actually is being capitalized in the market. The chart calls attention to the fact that the favorable progress of the war provided reason for the hope and expectation that the burden of the war-time taxes would be lifted in whole or in part. During the last half of 1945, attention was turned to specific proposals for tax [556] revision. The general rise in the market prices of common stocks, which carried the average for the group of six from 113 in January, 1943, to 179 in December, 1945, undoubtedly was related in a special and significant manner to the anticipated effects of tax changes thought to be in prospect. Earnings-price ratios shown by the chart are expressed as the relationship between the market prices and past earnings. Without adjustment, earnings-price ratios for recent months are misleading and invalid as evidence of the equity capitalization rate.

Q. The fifth and last category of factors which you identified included those related to events which have a special impact on the particular company. Please define this category more explicitly. A. I referred to events which influence the behavior of the earnings-price ratios as distinguished from the capitalization rates. I did not refer to events or changes which influence investors' appraisals of the risk present in a particular investment, such as changes in markets, competition, or other characteristics

which determine the return hoped for to compensate for the risk of loss. A considerable number of the unique events, which affect the validity of the earnings-price ratios as a measure of the capitalization rate, may be adjusted for in stating the earnings per share and have been adjusted for in the preparation of these data. The nonrecurring transactions within the past accounting period may [557] be given either exact or approximate quantitative expression. Adjustments are not readily made for other events which have a special impact on the earnings of a company. They result in deviations of the earnings price ratios from the true capitalization rate.

Q. Can you illustrate by reference to the Penn Water curve on the chart? A. An obvious illustration is found in the upward bulge of the Penn Water earnings-price ratios, beginning with September, 1944, the date of the initiation of the rate proceeding by the Federal Power Commission. That is, the decline in the price of the Penn Water common stock and the corresponding rise in the earnings-price ratios coincides with the initiation of the rate proceeding.

Schedule 1 shows that the earnings-price ratio moved from 7.71 per cent in June to 9.28 per cent in October, 1944, a difference of 1.57 per cent. The market price reflected the valuation of future income, whatever the assumption as to the amount of that income.

To the extent of the revision of investors' expectations, the earnings-price ratios immediately following the date of initiation of a rate proceeding are invalid as measures of the capitalization rate.

Earnings-price ratios, established in contemplation of a possible rate schedule revision, are not proper measures of [558] the appropriate changes in the price of service.

Q. Do the several factors, which influence the behavior of earnings-price ratios and cause deviations from the true capitalization rates, each exert their influence in the same direction in any one time? A. No. They may exert their

influence in opposite directions. The earnings-price ratio behavior is the product of a complex composite of influences, although a particular factor or event may exert a dominating influence within some time intervals.

Q. Have you, as the result of your analysis, reached a conclusion with respect to the equity capitalization rate which, as a component of the equity cost rate, is a component of the experienced cost of capital to Pennsylvania Water & Power Company? A. I have.

Q. What, in your opinion, is this equity capitalization rate? A. 8.5 per cent.

Q. In addition to the general considerations to which you have testified, are there more specific tests which you have applied in reaching this conclusion? A. I have given consideration to the average level of the Penn Water earnings-price ratios and those representing the six other common stocks during the period since August, 1939. [559] I also gave consideration to evidence of the extent to which the adjustment of 1945 reported earnings on the basis of the 1946 tax rates would affect the evidence of capitalization rates.

Q. Why did you determine the average for the period from August, 1939, to the end of 1945? A. Within the general cyclical movement of the earnings-price ratios, August, 1939, was the last preceding low for the average of six.

Q. How did you determine the average of the Penn Water monthly earnings-price ratios over this period? A. I first determined the average deviation of the Penn Water earnings-price ratios from the average of the six for the period August, 1939, to August, 1944, inclusive. I then assumed that in September, 1944, and subsequently, the Penn Water earnings-price ratios maintained the same position in relation to the average for the group of six, as had been typical of the preceding 61 months. After this adjustment to eliminate the effect of the upward bulge of the Penn Water earnings-price ratios subsequent to Au-

gust, 1944, the average for the entire period from August, 1939, to December, 1945, inclusive, was 8.51 per cent.

Q. What was the proportion of gross income available to the Penn Water equity during recent years? A. Schedule 2 shows that the percentage of gross [560] income available to the common stock for the period from 1939 to 1945, inclusive, varied from 70.7 per cent to 72.8 per cent.

Q. Among the electric utilities generally, what is the typical relationship between equity capitalization rates and proportions of gross income available to the common stock? A. The rate at which prospective income is capitalized tends to be lower when the common equity in gross income is large and tends to be higher when the common equity in gross income is relatively small. Expressed by reference to the coverage of preferred stock and senior requirements, the equity capitalization rates vary little through the range where prior requirements are earned more than three or four times, and tend to increase sharply as the coverage of prior requirements declines to the point where the prior requirements are just earned.

Q. Do investors' appraisals, which are the available evidence of capitalization rates, reflect the experienced division of gross income between prior requirements and income available for the common stock? A. Yes.

Q. What would be the effect on the capitalization rate if the gross income of the company were to be reduced? A. The effect would depend, of course, upon the amount of reduction in proportion of gross income available as equity [561] income. According to the typical relationship, the capitalization rates would tend to increase with a decline in the equity income.

Q. Did you give consideration to this factor in arriving at the capitalization rate of 8.5 per cent? A. I recognized the existence of the factor but did not attempt to give it quantitative expression and have not adjusted the 8.5 per cent because of this factor.

Q. What has been the proportion of reported available earnings paid out as common dividends during recent years? A. Schedule 2 shows that the dividends earnings ratios for the period from 1939 to 1945, inclusive, varied from 78.9 per cent to 85.8 per cent. The average during this period of seven years was 83.4 per cent.

Q. What is the typical relationship between equity capitalization rate and the proportion of available income paid out as dividends? A. The typical relationship among electric utilities is that the capitalization rates are relatively lower where a large proportion of available income is paid as dividends and are relatively higher where a smaller proportion of available income is paid out. In general, income received as dividends is capitalized by investors at one rate and income withheld from distribution is capitalized at a different and much higher rate.

[562] Q. Do investors' appraisals of the Penn Water common stock, which are the available evidence of the capitalization rate, reflect the experienced practice with respect to proportion of equity income retained in the business? A. Yes.

Q. Should the fair rate of return allowance be sufficient to permit some part of income to be passed to the surplus account? A. I believe so.

Q. Is there a typical relationship between the pay-out ratio and the per cent of gross income available for the common stock? A. Yes. Among public utilities the proportion of equity income retained tends to increase as the proportion of gross income available for the equity narrows. That is, as a matter of managerial judgment, or regulatory requirement, the proportion of available income passed to the surplus account and retained in the business tends to increase as the common stock participation in gross income narrows.

Q. Have you given consideration to this factor in arriving at the 8.5 per cent? A. I recognized the existence of the factor but did not attempt to give it quantitative

expression and have not adjusted the 8.5 per cent accordingly.

Q. Have you given consideration to the cost of equity [563] financing? A. Yes. I have prepared analyses of the financing cost experienced by public utilities and by other types of enterprises over a substantial period of time.

Q. What margin have you added to the capitalization rate of 8.5 per cent to represent cost of financing? A. .75 percent. This margin is equivalent to a little less than 9 per cent of the net proceeds of the equity financing. It is equivalent to a discount of 8.1 per cent from the market price to cover underwriters' discounts and commissions, expenses and a small cost margin between the price at which a small number of shares is sold in the market and the price at which a large amount of stock could be sold.

Q. What is your conclusion as to the equity capital cost rate for the purpose of a determination of the experienced cost of capital to Penn Water? A. 9.25 per cent.

Q. Have you made a calculation to establish the experienced cost of debt capital to Penn Water? A. I have.

Q. Does Schedule 4 show this calculation? A. Yes. It shows computations establishing the annual cost of the capital obtained by Penn Water from sale of the mortgage bonds now outstanding. The annual costs are expressed as percentages of the net amount of capital so [564] obtained.

Q. What is the effective average cost rate? A. The effective average cost rate to maturity on the debt capital as at December 31, 1945, is 3.505 per cent.

Q. From what source did you obtain the information with respect to debt discount and expense, premiums received and the other information required for the purpose of this computation? A. It was supplied by Pennsyl-

vania Water & Power Company and, I understand, was obtained from the accounting records of the company.

Q. What is the identity of the bonds whose costs are reflected in the cost rate of about 3.5 per cent? A. The bonds outstanding at December 31, 1945, are the 3¼ per cent series, due 1964, and the 3¼ per cent series, due 1970.

The 3¼ per cent series, due 1964, was issued in 1939 to provide for redemption at maturity of the 5 per cent series due 1940. No costs related to the 5 per cent series of 1940 are included for the purpose of determining the annual cost of debt capital as at December 31, 1945.

The 3¼ per cent series, due 1970, was issued in 1940 for the purpose of refunding 4½ per cent series, due 1968, which had been issued in March, 1928, March, 1930 and March, 1931. The issue of March, 1928, in the principal amount of [565] $6,000,000 was for the purpose of refunding the Holtwood Power Company Series A 6 per cent bonds which had been issued in October, 1924, and the 5½ per cent series A bonds which had been issued in November, 1923, and July, 1924.

Therefore, the costs related to the bonds of the 5½ per cent series A, due 1953, and the Holtwood Power Company series A 6 per cent bonds, due 1954, are stated in the first part of Schedule 4.

This computation is followed by a statement of the costs related to the 4½ per cent series, due 1968, with totals provided in the final column for the three issues of this series. The costs related to the 5½ per cent series A bonds and the Holtwood Power Company series A 6 per cent bonds, which were unamortized at the time of refunding, are shown as Item 19, and included as Item 24 in the computation of the net proceeds from the March, 1928, issue of the refunding 4½ per cent series.

Finally, Item 50 of the computation shows the net proceeds from the 3¼ per cent series, due 1964, and the 3¼ per cent series, due 1970. Item 49 is the unamortized costs in the amount of $1,375,600, which is carried forward in

the computation of the net proceeds from the refunding issue.

Q. What method of computation did you use in arriving at the effective cost rate of approximately 3.5 per cent? A. I computed the cost rate to maturity by using a [566] standard bond table. The borrower has at the maturity of the debt liability equal to its principal amount. It must provide out of income any deficiency of the capital supplied, as measured by the net proceeds, from the liability at maturity. A bond table is designed so that the amortization of any difference between principal amount and price, or, as used here, net proceeds, takes place according to a mathematical relationship which makes the yield, or cost rate, constant throughout the life of the bonds.

Q. Has this computation been consistent with your definition of experienced cost of debt capital as including all the costs of redeeming outstanding securities or eliminating excess contracts, in order to give the company access to lower capital costs or more favorable terms? A. I believe so. In order to determine the effective cost rate of the capital obtained by means of refunding bonds, it is necessary to take into account the costs of getting rid of the less favorable issues previously outstanding, and also that portion of the discounts and other costs of the issue of the outstanding bonds which, at the date of issue of the refunding bonds, would not have been recovered from income.

Q. Have all the costs of calling old bonds and all the unamortized debt discount and expense related to the refunded bonds been included among the costs of debt capital as at December, 31, 1945? [567] A. No. Since the refunding 4½ per cent bonds, issued in March 1928, provided funds equivalent to only 94.3 per cent of the cash costs of the redemption of the old bonds, other sources of cash were utilized, presumably general treasury cash. Therefore, I assigned to the cost of the debt capital repre-

sented by the 4½ per cent series, due in 1968, 94.3 per cent of the costs of calling the refunded bonds and a like proportion of the unamortized debt discount and expense at the time of the sale of the refunding bonds. On this basis $638,800 of the amortizable burden was transferred to the refunding issue and the balance of the cash requirements of refunding $345,800, is assumed to have been met by equity funds.

Q. Have you made a calculation to establish the experienced cost of preferred stock capital to Penn Water? A. I have.

Q. Does Schedule 5 show this calculation? A. It does. It shows the percentage relationship between the annual dividend requirements of the outstanding preferred stock and the net proceeds to the company.

Q. What is the effective cost rate? A. 5.21 per cent.

Q. From what source did you obtain the information with respect to experienced cost of financing and net proceeds? A. It was supplied by Penn Water and, I understand, was obtained from the accounting records of the company.

[568] Q. Have you combined the experienced cost rates for the debt and preferred stock capital and the equity capital cost rate to determine the overall experienced cost of capital to Penn Water? A. I have.

Q. Is this computation shown by Schedule 6? A. It is.

Q. What is the overall experienced cost rate as thus determined? A. The computation shows 6.04 per cent or about 6 per cent.

Q. How have you stated the amount of debt capital for the purpose of this computation? A. The amount of debt capital, as at December 31, 1945, is the net proceeds as at that date from issuance of the original principal amount of the bonds now outstanding, as shown by Schedule 4, less the proportional part related to bonds redeemed by operation of the sinking funds.

Q. You have stated the amount of preferred stock capital for this purpose as the net proceeds shown by Schedule 5? A. That is correct.

Q. How have you stated the amount of equity capital for the purpose of this computation of the overall experienced cost rate? [569] A. I have eliminated from the book statement of total capital the consolidated net amount proposed to be transferred to surplus and to be retained in Account 107 as at January 1, 1937 by the companies' original cost reports to the Federal Power Commission, filed in accordance with Instruction 2-D of the Uniform System of Accounts.

The net proceeds from debt and preferred stock capital as at December 31, 1945 is then deducted from this adjusted total capital to obtain the statement of equity capital in the amount of $16,349,900.

Q. How then have you combined the cost rates applicable to debt preferred stock and common stock capital? A. I have combined these rates in proportion to the amounts of capital supplied by investors of the three classes.

Q. In your opinion is the experienced cost of capital, the rate of about 6 per cent, a measure of the rate of return which is fair and reasonable for Penn Water?

A. Not necessarily. I can have an opinion as to whether or not it is a reasonable rate of return only as the result of considering the return which would be provided by its application to a rate base and by considering the annual return which would be provided by application of the investment cost and competitive cost bases of rate regulation.

Q. Have you made a study of the replacement cost of [570] capital rate and of the return which would be available on the replacement or competitive cost bases? A. Yes. I have made a study of the replacement cost of capital to Penn Water, and, assuming an original cost rate base, have used the replacement cost rate in relation to an estimate of the cost of constructing a plant of up-to-date tech-

nological design capable of supplying the service which is being supplied by the existing plant, and other evidence of the effect of price level changes, as tests of the reasonableness and adequacy of the return allowance.

Q. In preparing this estimate of the replacement cost rate, have you assumed for the purpose the existence of a going concern? A. I have. The hypothetical costs are assumed to be those which would be incurred by a going enterprise with established credit, which has access to supplies of equity capital and which, therefore, is able to obtain debt capital in the proportions assumed.

The estimate of replacement cost, made here only for the purpose of providing criteria of the range within which the reasonable return is to be found, gives no consideration to the cost of achieving the status of a going concern.

It neglects the advantages available in the competitive economic system to the established enterprise as against the [571] new competitor, who, having the advantage of freedom from past contractual arrangements for capital, must assume the developmental and related costs of becoming a going concern.

MR. SPARKS: Mr. Examiner, I have a document entitled "Pennsylvania Water and Power Company, Replacement Cost of Capital, Evidence of the Fair Rate of Return in Relation to an Original Cost Rate Base", and ask that this document be marked for identification as Exhibit 30.

TRIAL EXAMINER: The document may be so marked.

(The document above referred to was marked Exhibit 30 for Identification.)

By MR. SPARKS:

Q. Dr. Foster, you have before you a document which has been marked for identification as Exhibit 30, and entitled "Pennsylvania Water and Power Company, Replacement Cost of Capital, Evidence of the Fair Rate of Return

in Relation to an Original Cost Rate Base", and I ask you whether this document was prepared by you or under your direction? A. It was.

* * * *

[574] Q. Dr. Foster, what is the purpose of the first schedule which is called "Schedule 7, Yields on Pennsylvania Water and Power Company 3¼ per cent Bonds and Moody's Index of Yields on 'AA' Public Utility Bonds"? A. The purpose of Schedule 7 is to provide a basis for estimating the rate at which the interest return on the Penn Water bonds is capitalized.

Q. What have been the yields on the Penn Water bonds? A. The Penn Water 3¼ per cent bonds, Series of 1964 and 1970, are widely distributed in ownership and are admitted to unlisted trading on the New York Curb Exchange.

The Series of 1964 was offered at about December 22, 1939, on a yield basis of 3.02 per cent and on the basis of a cost rate to the company of 3.20 per cent.

The Series of 1970 was offered at about January 24, 1940, on a yield basis of 3.00 per cent and on the basis of a cost rate to the company of 3.14 per cent. The cost of financing margins thus were .18 and .14 per cent.

These bonds were rated "A" by Moody's, but for a period of several years subsequent to their issue the yields of these bonds at their market prices fluctuated closer to Moody's index of yields on "AA" bonds.

The Penn Water Series of 1964 is now callable at 105.5 per cent of its principal amount and the Series of 1970 is [575] now callable at 106.5 per cent of its principal amount.

The yields on bonds comparable in quality have declined appreciably below the yields at prices equivalent to these call prices.

Although there are few, if any, instances of 3¼ per cent bonds of electric utilities having been refinanced, it is, nevertheless, reasonable to assume that the possibility of redemption is a reason why the yields on the Penn Water

bonds have not followed the downward movement of yields on other public utility bonds of high quality.

It is possible that other factors have had an influence, but I have neglected them.

Q. What do you conclude from this analysis? A. I conclude that the average yield on Moody's "AA" bonds during the year 1945, or 2.67 per cent is better evidence of the capitalization rate than the yields on the Penn Water bonds.

As shown by Schedule 7, the average yields on the "AA" bonds for the years 1940, 1941, and 1942 were between the yields on the Penn Water Series of 1964 and Series of 1970.

The average for 1945 was .07 per cent below the average for the Series of 1964 and .13 per cent below the average for the Series of 1970.

Q. Have you neglected the yields which have been experienced in the market during the first three months of [576] 1946? A. Yes. After remaining relatively stable for a period of about five years, interest rates declined sharply during the first months of 1946. Several electric and gas utilities have refinanced at these lower rates.

It is too early, however, to know whether or not the lower rates are more than temporary. The prices experienced during so short a period, whether at low or high levels, are objectionable for the purpose of utility rate regulation unless they clearly represent a trend which may be expected to continue during a significant future period.

Q. What is the purpose of Schedule 8? A. Schedule 8 provides a list of what I believe to be all bond issues by electric and electric combination utilities which were offered publicly during the year ended March 31, 1946. It shows the yields at the offering prices of these bonds and shows the cost rates experienced on the basis of net proceeds to the company.

These and the related data are identified by the titles of the numbered columns 1 to 12, inclusive. The purpose

of the compilation is to provide information which is significant in relation to an estimate of the cost of replacing the debt capital of Penn Water.

Q. What are the sources of these data? A. The bond issues were identified by review of the periodic [577] reports by Moody's. Excepting a few instances, which are identified by the footnote "g", the information with respect to proceeds and prospectively available income was obtained from the offering prospectuses.

In the several instances for which the prospectus was not readily available, these data were obtained from Moody's Public Utility supplements.

The income statements provided by Moody's reports at about the time of an issue of securities, are obtained generally by that organization from the registration statement or from the prospectus.

Q. What is the purpose of the tax adjustment described by the footnote which is related to Column 10? A. The significant coverage of interest requirements is that provided by prospective income and not the coverage actually experienced during a past accounting period. The income statements prepared at the time of a security offering for the use of prospective investors recognizes this consideration by pro forma adjustments for the effect of the change in coupon rate or in principal amount of bonds.

In view of the significant effect of repeal of the excess profits tax law on the prospective coverage of interest requirements, I have adjusted the reported gross income for the approximate effect of assuming that the 1946 income tax rates were effective during the twelve-months' period [578] for which income was reported in the prospectus.

Q. Have you analyzed the data for the purpose of arriving at an estimate of the yield rate upon the basis of which Penn Water might obtain an amount of debt capital generally equivalent to the amount provided by the existing capitalization? A. I have.

Q. What is your conclusion? A. 2.72 per cent.

Q. What are the characteristics of the data shown by Schedule 8 which you have considered in reaching this conclusion? A. I have considered primarily the yield rates shown by Column 8 and the relationship between these experienced yield rates and the prospective coverage of the interest rquirements.

The analysis shows that for bonds of different quality, some relationship with times requirements earned is evident, although the protective margins are generally so large that the effect of the variation in proportion of gross income required for bond interest is not as significant as would otherwise be the case.

Column 11 shows that only one among the thirty-one issues was offered during 1946.

This is the Madison Gas and Electric Company, 2½ per [57⁄] cent bond, which sold in February on a yield basis of 2.39 per cent.

In reaching the conclusion that 2.72 per cent is the reasonable capitalization rate for the purpose of rate of return determination, I have not, for the reasons which I have stated, given consideration to this recent issue by the Madison Gas and Electric Company.

I have, instead, given particular recognition to the yield rates experienced during August, September, and October of 1945.

Q. Have you given consideration to the provisional ratings assigned by Moody's and shown by Column 12 of Schedule 8? A. The ratings provide a guide which is of some significance, particularly in view of the relationships shown by Schedule 7.

Again omitting the Madison Gas and Electric bonds for the reasons previously stated, Schedule 8 lists eleven bonds which were rated "A" and eleven which were rated "AA". The average yield to maturity at the market price was 2.84 per cent for the "A" bonds and 2.70 per cent for the "AA" bonds.

Therefore, an imputed rate of 2.72 per cent is consistent with the behavior as shown by Schedule 7.

Q. Does Schedule 8 also provide information with respect to cost of debt financing experienced during the recent [580] period? A. Yes. The difference between yield to maturity shown by Column 8 and the cost rate to maturity, Column 9, is the cost of financing spread or margin.

It represents the difference between the selling price to the public and the net proceeds to the company after absorption of the underwriting commission and the expenses incident to the issue.

Q. Have you analyzed these data for the purpose of arriving at the margin appropriately included in the replacement cost of debt capital to recognize costs of financing? A. I have.

Q. What is your conclusion? A. I have added a margin of .06 per cent to the capitalization rate of 2.72, fixing 2.78 per cent as the replacement cost rate of debt capital.

Q. What are the characteristics of the data shown by Schedule 8 which you have considered in reaching this conclusion? A. The cost of financing margin, the difference between the yield and cost rate shown by Columns 8 and 9, varies generally with the size of the issue, the coverage prospectively available for equal and prior requirements and with other evidences of the quality of the bond.

Since the proportion of gross income required for equal [581] and senior issues varies only within the limited range of from 11.8 to 28.4 per cent, it is not to be expected that among these instances the cost of financing would vary significantly with coverage of requirement.

There is, however, a significant relationship with the size of the issue. The financing costs are in some part constant, or fixed without regard to the principal amount of the bonds being issued.

The analysis in relation to principal amount of the several issues shows that a cost of financing margin of .07 per cent is typical for issues in the amount of about twenty million dollars.

In some instances, the rate has been .06 per cent and I have used the lower rate, although it is less conservative.

Q. What is the purpose of Schedule 9 which shows data on preferred stock issues of electric and electric combination utilities during the twelve month's ended with March, 1946? A. Its purpose is to provide information which may be used in estimating the replacement cost of preferred stock capital.

Q. What are the sources of the data shown by this schedule? A. The sources are the same as in the case of Schedule 8.

Q. With respect to the determination of proportion of [582] gross income required for equal and senior issues, did you use the same methods as were used in determining the corresponding information shown by Schedule 8? A. I did.

Q. Have you analyzed these data for the purpose of arriving at an estimate of the yield rate on the basis of which Penn Water might obtain an amount of preferred stock capital generally equivalent to that available under the existing capitalization? A. I have.

Q. What is your conclusion? A. 3.60 per cent.

Q. What are the characteristics of the data shown by Schedule 9 which you have considered in reaching this conclusion? A. I have considered the capitalization rates indicated by the percentages shown by Column 9, the relationship between the yield rates experienced and the prospective coverage of equal and prior requirements and the trends indicated by Schedule 9.

Although the refinancing of senior issues and the refinancing of preferred stock at dividend rates below 4 per cent in the majority of instances has generally improved the coverages available, there is an observable relationship between yield rates and the proportions of gross income [583] required for equal and senior issues. For the reasons previously stated, I have not given any particular recognition to the yield rates of 3.25 per cent and 3.35 per cent

experienced by Iowa Power and Light Company and Central New York Power Corporation in February and March of 1946.

Excluding these two issues, the arithmetic average of the thirteen remaining yield rates is 3.93 per cent. The proportion of gross income required for equal and senior issues, however, is typically larger than would be required on the basis of the existing Penn Water capitalization.

Q. In reaching the estimate of 3.60 per cent, have you given consideration to yield at current market prices of the outstanding preferred stock of Penn Water? A. I have given no consideration to the current yield on the outstanding Penn Water preferred stock. The issue is relatively small in amount and I have been unable to find sale prices or even bid and asked quotations on a basis sufficiently continuous and representative that they afford a measure of investor appraisals of this security.

Of course, even if such market prices were available, the possibility of the stock being called would make the yields at market prices of doubtful validity for the present purpose.

Q. Have you also used the data shown by Schedule 9 for the purpose of an estimate of the cost of preferred stock [584] financing? A. Yes. I have estimated .12 per cent as a reasonable margin, assuming that the amount of preferred stock is limited to the proportion represented in the existing capitalization.

In reaching this estimate, I have considered the cost of financing margins experienced in the instances represented on Schedule 9, expressed as the differences between the percentages in Columns 9 and 10 and the typical relationship between these margins and the size of the preferred stock issue.

Q. What does Schedule 10 show? A. The first section of this schedule shows the replacement cost rates which I have estimated for debt, preferred stock and common stock capital on the basis of the existing capitalization of

Penn Water and the composite rate determined by combining the separate rates in proportion to the dollars of capital supplied under the existing capitalization.

Q. What is the source of the cost rate of 9.25 per cent for equity capital? A. The source is the study represented by the chart and the Schedules 1 to 3, inclusive, of Exhibit 29. It is transferred here from Schedule 6.

[585] Q. What do you mean by "Proportional Division of Income (%)", the title of Column 5? A. The 25.9 per cent is the proportion of gross income absorbed by debt requirements on the basis of the debt capital in the amount of 52 per cent and the related cost rate of 2.78 per cent. This is equivalent to a gross income of a little less than four times debt requirements. After preferred stock and prior requirements are met, the proportion of gross income available as equity income is 70.5 per cent.

Q. On the basis of a capitalization corresponding with the existing capitalization of Penn Water, the estimated overall replacement cost of capital is 5.6 per cent? A. That is correct.

Q. What is the purpose of the second part of Schedule 10? A. Its purpose is to present an estimate of the overall total cost rate on the basis of the capital structure which is most economical under recent market conditions and, at the same time, available to a regulated enterprise of this type as a matter of regulatory and managerial policies.

Q. Why have you assumed 25 per cent equity capital? A. I assumed 25 per cent as the minimum ratio of equity to total capitalization which is generally considered acceptable and appropriate in the light of regulatory and financial [586] standards.

Q. The result of this analysis is an overall replacement cost rate of 4.9 per cent? A. That is correct.

Q. How have you determined the cost rates which in your opinion would be applicable if the hypothetical capitalization were in the proportion indicated? A. I have used the capitalization rates of 2.78 per cent, 3.72 per cent

and 9.25 per cent shown by the first part of Schedule 10 and have adjusted these rates for the effect of the increase in proportion of debt and preferred stock capital and the decrease in proportion of equity capital.

Q. How have you determined the amounts of these adjustments? A. The differences between the cost rates used in the first and second parts of Schedule 10 represent my judgment as to the adjustments required to reflect the change in capital structure. I have given consideration to the relationships between capitalization rates and proportional division of income indicated by the data on Schedules 8 and 9 and also to the relationships indicated by analyses of other similar data.

Q. What are the amounts of these adjustments? A. For the cost of debt capital the adjustment is an increase of 0.5 per cent in the yield rate and no change in the margin for cost of financing. For the cost of preferred [587] stock capital it is an increase of .3 per cent in the yield rate and a decrease from .12 to .08 per cent in the cost of financing spread. For the cost of equity capital the adjustment is an increase of 1.0 per cent in the capitalization rate and no change in the cost of financing margin.

MR. SPARKS: Mr. Examiner, I suggest this as being a good break, if the Examiner should desire to take a recess at this time.

TRIAL EXAMINER: Just before we do that, what is the significance of the term "replacement cost of capital" as you have used it in Schedule 10?

MR. SPARKS: I think the witness explained that, and he can explain it better than I can, your Honor. I should be glad to have him do so off the record, if that would be helpful.

TRIAL EXAMINER: No, it will be on the record. The Examiner had a little difficulty in grasping what the witness was implying, or what he meant to imply by that term. If he would state that.

MR. SPARKS: I will be glad to have the witness restate it.

THE WITNESS: I mean by replacement cost of capital that cost which is currently available on the basis of a hypothetical capitalization and without including any cost related to past financing or cost otherwise experienced by [588] the company.

MR. GOLDBERG: May I ask a question at this point?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: I notice in your answer, Dr. Foster, you related it to a hypothetical situation. I had understood by "replacement cost of money" you had used the coupon rate of bonds which would be issued by Penn Water to refund the presently existing bonds.

THE WITNESS: No, the cost rate is never measured by the coupon rate alone.

MR. GOLDBERG: That is true.

THE WITNESS: Because discount and premium and rate adjustment on coupons subject to that adjustment, and subject to the further adjustment of the underwriting commissions and incidental expenses, I believe you stated the definition correctly.

MR. GOLDBERG: I related my question to bonds and to the same thing—that is, the same thing would apply to the preferred stock and equity capital as you use it in your exhibit?

THE WITNESS: Yes, as a matter of general experience, yes.

* * *

[594] By MR. SPARKS:

Q. What is the purpose of Schedule 11? A. Its purpose is to make available estimates of the "Competitive Return" as tests of the reasonableness and adequacy of the

return which would be provided by application of the experienced cost of capital rate to the original cost rate base.

An application of the experienced cost of capital rate to a given rate base, representing either original cost or [595] replacement cost, gives an arithmetic result which should be tested by reference to alternative results determined by rational methods which are consistent with economic behavior. The rational criteria are the costs established by alternative opportunities available to investors at the time the investments were made or the cost established by the alternative opportunities existing at the time the charges for service are being fixed.

[596] TRIAL EXAMINER: You state that the purpose of the exhibit is to make available estimates of the "Competitive Return" as tests of the reasonableness and adequacy of the return which would be provided by application of the experienced cost of capital rate to the original cost rate base.

Where on Schedule 11 do you show your estimate of the competitive return?

* * *

[597] THE WITNESS: Several estimates or evidences of the competitive return are shown by Schedule 11 in the several paragraphs numbered Roman II, III, and IV. It is obvious, I think, that the rate of return corresponding to the current competitive return on the cost of constructing the substitute plant capable of providing the same service has a greater economic significance and meaning, and that estimate is treated in the paragraph Roman II-B.

TRIAL EXAMINER: You are referring to the return, not as a percentage? I did not understand part of your answer.

THE WITNESS: No, I am not now referring to the return as an annual return expressed as an amount of money. I now refer to the return in the latter sense.

TRIAL EXAMINER: What element of that is competitive?

THE WITNESS: Both elements—meaning by "elements" the amount of investment required to provide the service to the yield basis upon which that investment would be supplied by investors.

TRIAL EXAMINER: The competitive feature is shown in the per cent, is it not?

THE WITNESS: No. The procedure is one which estimates return by reference to the percentage rate being experienced competitively and currently in the market, and by [598] reference to the amounts required to be invested in order to supply the service. In other words, annual cost of capital is dependent not only upon the cost rate, but upon the amount of investment required. The effort here is to express the annual cost of capital on a competitive basis which is equivalent, of course, to the alternative opportunities currently available to the investor.

TRIAL EXAMINER: But the competitive part of the amount is obtained by applying that percentage figure to the assumed rate base? Is that correct?

THE WITNESS: The amount estimated and reflected in competitive cost is obtained by applying the rate representing the competitive cost of capital currently to a base or amount which also represents the competitive or current costs.

TRIAL EXAMINER: Cost arrived in that manner, because of the introduction of the percentage figure?

THE WITNESS: I do not quite follow you?

TRIAL EXAMINER: Is that because of the introduction of the percentage figure?

THE WITNESS: No; because of the fact that we resort to the competitive basis in order to provide a criterion or test requires that not only the rate be fixed on a current

or competitive basis, but that the principal amount be constant or fixed.

[599] TRIAL EXAMINER: That is, consistent with the percentage?

THE WITNESS: Consistent with the basis upon which the percentage is fixed, or consistent with the theory. If your Honor please, I might attempt to illustrate further by making the assumption that the annual rate which represents the replacement cost of capital, in view of the investors' expectations in the current market is applied not to the cost of replacing the plant but to the original cost, or the amounts actually expended in past years in constructing the plant. That would do violence to the replacement cost concept because it would represent application of the competitive rates and dollars of investment varying from the dollars of investment required to provide a substitute plant both because of the general change in price levels and technological improvements which have taken place.

TRIAL EXAMINER: Very well.

With respect to Schedule 11, and the portions that are now subject to the objection made by Staff counsel, counsel for the company has introduced some element other than the actual legitimate cost of the property in determining the test of reasonableness on the regular return shown on Schedule 11?

MR. SPARKS: Just as the witness has testified.

TRIAL EXAMINER: Yes. The Examiner is going to sustain the objection of Staff counsel.

MR. SPARKS: We take exception to that ruling, of [600] course, if your Honor please, and I now proffer all of Schedule 11 by the following questions and answers——

* * * *

[602] MR. SPARKS: I might say that the first two questions have to do with first:

Question: Where did you obtain the amount of $36,704,706 purporting to represent the consolidated original plant as at December 31, 1945?

To which the reply is:

Answer: That figure was supplied to me by the company; and the next question is:

Question: Where did you obtain the working capital estimate of $977,160 appearing in the same paragraph of Schedule 11?

To which the answer is:

Answer: It was supplied to me by the company.

Question: Where did you obtain the estimated cost of constructing, as of December 31, 1945, a substitute new plant capable of providing the same service, shown by paragraph II (a) of Schedule 11?

Answer: It also was supplied to me by the company.

Question: Where did you obtain the trended cost of construction on physical properties, as of December 31, [603] 1945, appearing in paragraph III (a) of Schedule 11?

Answer: This figure was also supplied to me by the company.

Question: Where did you obtain the statement of nominal dollar investment adjusted for changes in purchasing power of the dollar to 1945 appearing as the first item in paragraph IV (a) of Schedule 11?

Answer: It was supplied to me by Professor H. B. Dorau. I understand that the adjustment has been based upon the Bureau of Labor Statistics Index of Changes in Wholesale Commodity Prices.

Question: What application have you made of the estimate of $55,394,792 for the purpose of providing a criterion of the reasonableness and adequacy of the experienced cost rate of 6.0 per cent assuming that this cost rate is applied as a rate of return to an original cost rate base?

Answer: Paragraph II (a) of Schedule 11 shows that if the overall replacement cost rate of 4.9 per cent were applied to the estimated cost of a substitute plant, plus the working capital estimate, an annual return of $2,762,000 would be provided. The paragraph II (a) shows also that a rate of return allowance of 7.3 per cent would be required to provide an equivalent annual return if the rate base were fixed at $37,680,000.

The $2,762,000 is an estimate of the return which would [604] be available if full competition is assumed. It represents the cost of capital established by consideration of the alternative opportunities available to investors during the recent past.

Question: What consideration have you given in this connection to depreciation as a negative component of the return or rate base?

Answer: None. I understand that the $36,704,706 is total original cost, undepreciated.

I do not know whether there is any objection to those questions or not.

MR. GOLDBERG: There is no objection to those questions.

MR. SPARKS: I did not think there would be, Mr. Goldberg.

TRIAL EXAMINER: Proceed.

MR. SPARKS: May that statement be made by the witness?

TRIAL EXAMINER: Yes.

By MR. SPARKS:

Q. Where did you obtain the amount of $36,704,706 purporting to represent the consolidated original cost of plant as at December 31, 1945? A. The figure was supplied to me by the company.

Q. Where did you obtain the working capital estimated at $977,160 appearing in the same paragraph of Schedule 11? A. It was supplied to me by the company.

* * * *

[607] MR. SPARKS: This question has to do with what consideration Dr. Foster has given to depreciation in connection with his use of Schedule 11.

* * *

* * * I shall continue. To complete the answer to the last question.

A rate of return, otherwise reasonable, applied to this sum as a rate base provides a return which is subject to whatever is the appropriate deduction, or credit to consumers, for employment by the company of the assets reflected in the depreciation reserve balance.

Similarly since the purpose is to test the reasonableness and adequacy of the return which would be provided by such an application, I have given no consideration to depreciation as a negative component in the application of other methods. The results of these other applications are similarly subject [608] to the appropriate deduction, or credit to consumers, on account of the employment by the company of the assets reflected in the depreciation reserve balance.

Question: What is the significance of the computation shown by paragraph II (b)?

Answer: Alternative cost, competitively and currently available, involves replacement of existing capitalization with a hypothetical, available capitalization as well as replacement of existing plant with facilities of modern design capable of providing the same service.

However, for what significance it may have as secondary evidence, I have recognized here the replacement cost of capital rate which corresponds to the existing capital structure of the company. Since the use of this rate is a compromise with the com-

petitive cost concept, I have made in this connection a second and off-setting compromise.

I have added to the original cost figure 42.6 per cent instead of 100 per cent of the difference between original cost and the estimated cost of constructing a substitute plant. The 42.6 per cent is, of course, the ratio of equity capital to total capital represented by the existing capitalization.

The common stockholders, under the competitive cost theory, are not entitled to protection against risk of loss from changing circumstances which affect either the [609] alternatively available capitalization, the investment required to supply service, or the demands for service.

Since the common stockholders assume these risks subject to the contracts with bondholders and preferred stockholders, the statement of competitive costs should consistently recognize the cost established by competitive alternatives.

For this reason, the cost rate of 5.6 per cent applied to the estimated replacement cost of plant may give an unreasonable result. Therefore, I have adjusted the estimated replacement cost of plant by including only the proportion of the difference between original cost and replacement cost which corresponds to the proportion of equity in the existing capitalization.

Question: What application have you made of the trended cost of construction of physical properties for the purpose of making available a criterion of the reasonableness and adequacy of the return which would be provided by applying 6.0 per cent to an original cost rate base?

Answer: Paragraph III (a) of Schedule 11 shows that I have applied the replacement cost of capital rate of 4.9 per cent to the trended cost of construction of physical properties as at December 31, 1945, plus estimated working capital.

The amount of annual return which would be provided on this basis is $3,106,000, and this annual return would [610] correspond to a rate of return of 8.2 per cent on a rate base of about $37,680,000.

The result of this application is a test of the reasonableness and adequacy of the return provided by applying a rate of return to the original cost rate base.

Question: Have you in this connection given consideration to depreciation as a negative component of the return or rate base?

Answer: I have not, for the same reason which was stated in discussing the analysis presented by paragraph II (a).

Question: Does the computation shown by paragraph III (b) correspond to that shown by paragraph II (b)?

Answer: It does. It is made in a similar manner and for a similar reason.

Question: What application have you made of the nominal dollar investment adjusted for changes in purchasing power of the dollar to 1945, for the purpose of making available a test of the reasonableness and adequacy of the return which would be provided by applying 6 per cent to an original cost rate base?

Answer: Paragraph IV (a) shows that I have applied the replacement cost estimate of 4.9 per cent to the dollars of investment adjusted for changes in purchasing power of the dollar to 1945 and plus the working capital estimate for the purpose of determining the annual return which would be [611] available on this basis. The result is an annual return of about $2,500,000 which is equivalent to a rate of return of 6.6 per cent on the original cost rate base.

Question: Does the computation shown by paragraph IV (b) correspond to those shown by paragraphs II (b) and III (b)?

Answer: It does. It has been made in a similar manner and for a similar reason.

Question: In view of the tests which are thus available, in your opinion, are the replacement cost rates of 4.9 or 5.6 per cent measures of the rate of return reasonably applicable to a rate base representing original cost of property?

Answer: No. The replacement cost rate represents the cost of obtaining currently dollars of capital which have a purchasing power much less per dollar than the purchasing power which existed when the original cost in dollars were invested.

Application of the replacement cost of capital rate to the original cost rate base, where the price level has risen significantly and the cost of capital rate has at the same time declined, does not conform to any consistent basis of return determination. It would provide a return less than would be provided by either the basis upon which the investment was originally committed to the enterprise or the return available now to investors from other investments [612] in enterprises of corresponding risks and uncertainties.

It would expose investors in regulated enterprises to the hazard of whichever is the lesser, not only with respect to the different kinds of evidence of the rate base, but also to the greater hazard of whichever is lesser with respect to rate base and rate of return in combination with each other.

Question: You distinguished two bases upon which the rate making process may seek to induce the investment of capital in regulated enterprise. One was defined as the competitive replacement basis. The other was the investment cost basis.

You said that application of methods of return determination which correspond to these two regulatory concepts provide test of the reasonableness of the return otherwise arrived at. You have now applied a method consistent with the competitive replacement basis of regulation.

Have you given consideration to original cost of capital or historical cost of capital as criteria of the reasonable and adequate return.

Answer: Yes. I have given careful consideration to these criteria but have not attempted to give them quantitative expression. It has been unnecessary to do so in view of the results of the test by reference to competitive cost.

Penn Water was established and developed during the [613] period from 1905 to 1912 and later. Compared with the present, that was a period of relative scarcity of capital, relatively higher interest rates, and relatively higher costs of equity capital. The capital costs initially incurred included those necessary to attract capital to a competitively new type of enterprise.

The undertaking was exposed to the hazards of a business engaged in the utilization of a water power resource and to the hazards of construction in a river whose behavior characteristics were in part unknown and in part unpredictable.

The cost of capital included the cost of waiting for the prospective return during a significant period required to achieve full utilization of the capacity.

In view of the effect of these factors upon the cost rates at which the initial portion of the invested capital was obtained, it has appeared unnecessary to attempt a precise statement of those rates.

[614] Mr. Sparks: If your Honor please, I believe the next question is admissible, and a proper question. I would like to put that to the witness.

Trial Examiner: Please do so.

By Mr. Sparks:

Q. What is your conclusion as to the return which is reasonable and adequate for Pennsylvania Water & Power Company?

THE WITNESS: Does my undertaking to answer that question imply that I could have done so without reference to the facts that have been excluded? If that is so, I cannot answer it.

TRIAL EXAMINER: You may answer the question simply as put, on any basis that you now have, and the effect of that basis will come out on further examination.

THE WITNESS: Very well, sir.

A. It is my opinion that the test by reference to competitive costs provides the most significant evidence of the fair return. For this reason, I conclude that the fair return is not less than $2,450,000. Expressed in relation to an original cost rate base of $37,680,000 the conclusion is that the fair rate of return is not less than 6.5 per cent.

Q. If the conclusion were expressed in relation to an original cost rate base of about $33,500,000, what would be the fair return and what would be the effect on the rate of return of not less than 6.5 per cent? [615] A. There would be no significant effect on my conclusion as to a fair return of not less than $2,450,000, but the 6.5 per cent would be increased approximately in proportion to the decrease in the original cost rate base. The effect of such an assumption as to original cost would be limited to the results of the tests provided by Paragraph II (b) and Paragraphs III and IV of Schedule 11.

MR. GOLDBERG: Now, Mr. Examiner, the witness is answering now with respect to portions of the schedule which have been excluded.

MR. SPARKS: May he finish the answer, if your Honor please?

TRIAL EXAMINER: Yes.

THE WITNESS: I used the results of the tests provided by Paragraph IV as a matter of convenience only to state the extreme lower limit of the range of reasonableness.

TRIAL EXAMINER: With respect to the answer that you gave immediately after the proffer of evidence, do you wish to add any qualification, or have you just added that qualification?

MR. SPARKS: Would you like to have the question reread to you, Doctor?

THE WITNESS: I would like to inquire as to what the Examiner means by "qualification"?

TRIAL EXAMINER: In response to your inquiry the [616] Examiner stated that you could answer the question put to you by counsel, and anything that was necessary to clarify that answer, or to qualify it, as the case may be, could be elicited at another time. The Examiner does not want the witness to understand that he is not permitted to qualify his answer now if he wishes to do so.

THE WITNESS: I have no reason to qualify the answer if it is considered that the answer I made is in the light of the general study which I undertook and carried to a conclusion.

* * *

[617] Q. I understand that this conclusion as to the fair return is before whatever may be the appropriate credit to consumers for the earning capacity of depreciation funds in view of the risks present in their utilization by the company?

* * *

[618] A. That is correct.

* * *

[630] TRIAL EXAMINER: * * * In connection with the existing offer of proof the Examiner denies the offer beginning with line 19 of page 602 of the record transcript, and ending with line 6, page 612 thereof.

With respect to that part of the offer which lies beyond that point in the transcript the Examiner will strike the remaining portion of the offer of proof and

direct counsel to put the witness on the stand and address questions to him for specific ruling, on a question and answer basis.

Now then with respect to the statement of Trial Examiner made at page 604, line 16, to simplify the record the Examiner changes from "yes" to "no" with this understanding that there [631] is no objection to a witness stating what is consolidated original cost, what is working capital, or what is total original cost, now the effect of the ruling now being made is to make it consistent with the first ruling in connection with the offer of proof, page 602 to page 612.

MR. GOLDBERG: Mr. Examiner, with respect to transcript 604, it appears from the record that I stated there was no objection to the questions that had begun on page 602 down to my statement on 604. I did make the statement at the time, but I made it because I had missed the objectionable portions of the questions and answers that had preceded my statement. I now want the record to show that I object to those questions and answers that relate to the objectionable portions of Schedule 11.

* * *

[634] MR. SPARKS: Do I understand that all of the questions and answers which appear in the transcript beginning on [635] page 602, line 19 and ending on Page 612, line 6, have been excluded as evidence?

TRIAL EXAMINER: Insofar as all of the offer is directed to the purpose of qualifying the parts of Schedule 11 which will be excluded.

MR. SPARKS: If Your Honor please, that seems to me to leave us in the air where we have no definite ruling on which portions actually are excluded.

TRIAL EXAMINER: The Examiner has been definite and will be and states that the testimony offered at that place in the record just designated by counsel is

excluded and states as his reason for excluding it that it is directed to the qualification of the objectionable portions of Schedule 11.

MR. SPARKS: Very well, sir.

MR. GOLDBERG: And I think the Examiner has made it clear that if any portion of the exhibit would not be objectionable, since it is offered in bulk, the Examiner has no recourse but to exclude all of it.

[636] TRIAL EXAMINER: With that idea in mind, I stated that the evidence on consolidated original plant, working capital and total original cost as it appears in the witness' testimony if separated therefrom and put in as separate testimony, would be received.

• • •

[638] DIRECT EXAMINATION (Resumed).

By MR. SPARKS:

• • •

[639] Q. Doctor, you distinguished in your testimony, two bases upon which the rate making process may seek to induce the investment of capital in regulated enterprise. One was defined as the competitive replacement basis. The other was the investment cost basis. You said that application of methods of return determination which correspond to those two regulatory concepts provide tests of the reasonableness of the return otherwise arrived at. You have now applied a method consistent with the competitive replacement basis of regulation. Have you given consideration to original cost of capital or historical cost of capital as criteria of the reasonable and adequate return?

MR. GOLDBERG: Before the witness answers that question, I would like to have counsel for the Respondent state what he means by "you have now applied a method consistent with the competitive replacement basis of regulation". Does he by that statement refer

to any portions of Schedule 11 to which counsel for the Staff has objected?

MR. SPARKS: I will be glad to ask the witness that question.

MR. GOLDBERG: It is not the witness' statement; it is your statement.

MR. SPARKS: I am asking the witness if that is correct.

[640] TRIAL EXAMINER: Just a minute. He may ask the witness that question.

By MR. SPARKS:

Q. Is it correct, Doctor, that you have applied a method consistent with the competitive replacement basis of regulation?

MR. GOLDBERG: That is not my inquiry. My inquiry is, did you by that statement—and the witness is going to answer for you, Mr. Sparks—refer and intend to refer to those portions of Schedule 11 of Exhibit 30 to which Staff counsel has objected?

THE WITNESS: The answer is that the results of the competitive method here referred to are expressed in Schedule 11.

MR. GOLDBERG: Where in Schedule 11?

THE WITNESS: Throughout Schedule 11.

MR. GOLDBERG: Is it expressed in Roman numeral No. I?

THE WITNESS: Roman numeral No. I is an amount shown on Schedule 11 for the purpose of making possible the tests by reference to the competitive cost method.

[641] MR. GOLDBERG: So that if I understood your statement, it is not shown in I? That is merely basic data?

THE WITNESS: It is an essential part of the method employed in Schedule 11.

MR. GOLDBERG: But the methods you employed in Schedule 11 are not reflected in I, isn't that so?

THE WITNESS: That is so.

MR. GOLDBERG: And the methods you employed are reflected however, in Roman II-A through IV-B of Schedule 11, is that right?

THE WITNESS: No more than reflected in I as isolated separate amounts.

MR. GOLDBERG: Do you show any rate of return in I?

THE WITNESS: No rate of return is recorded under that part of that paragraph, no.

MR. GOLDBERG: And it is the rate of return and dollars of return that reflect the results of your application of the method in Schedule 11, isn't that so?

THE WITNESS: In the following paragraphs of Schedule 11, amounts of return are recorded which reflect the testing. In each of those paragraphs, rates of return are stated which represent the amount of return in relation to the figures shown in I.

MR. GOLDBERG: So then, Mr. Examiner, it is now obvious that by the statement Mr. Sparks made in introducing the question, "You have now applied a method consistent with [642] the competitive replacement basis of regulation," he had reference to the results of Roman II-A through IV-B of Schedule 11 and therefore, I object to the question.

TRIAL EXAMINER: When you say that you have applied a method, Mr. Witness, is that method reflected in Schedule 10?

THE WITNESS: Schedule 10 represents a study which is an essential part of the method to which I have referred.

TRIAL EXAMINER: Does this testimony that counsel now proposes to have the witness give relate to Schedule 10?

MR. SPARKS: It relates generally to all of Dr. Foster's bases, if Your Honor please. The real question is, "Have you given consideration to original cost of capital or historical cost of capital as criteria of reasonable and adequate return?"

MR. GOLDBERG: Then why don't you merely ask that question without introductions?

MR. SPARKS: I will let my question stand as I have put it.

MR. GOLDBERG: If you leave it in the way that you have stated it, then I object to it.

TRIAL EXAMINER: Will counsel address the bench and not one another?

MR. GOLDBERG: I intended to address the bench, Mr. Examiner, and state that the question as stated with that introduction clearly relates to the objectionable portions of Schedule 11, and therefore I object to it. There is a [643] purpose for that introduction.

TRIAL EXAMINER: Just a minute. Where have you given consideration to original cost of capital or historical cost of capital as criteria of a reasonable and adequate return?

THE WITNESS: Do you mean by the question "where", in which schedule or exhibit?

TRIAL EXAMINER: Yes.

THE WITNESS: The answer is at no point in a schedule or exhibit.

TRIAL EXAMINER: In connection with your testimony, where have you?

THE WITNESS: I have done so in consideration of the general principles that there was rate-of-return determina-

tion, in consideration of the bases of return determination, and in reaching the final conclusion as to the return required for this company, I gave consideration to the original and historical cost of capital to this company.

TRIAL EXAMINER: I will sustain the objection to counsel's question, and he may put to the witness the question, "Have you given consideration to original cost of capital or historical cost of capital as criteria of the reasonable and adequate return?"

MR. SPARKS: Do I understand, if Your Honor please, that Your Honor has ruled that my question is not admissible?

TRIAL EXAMINER: That is correct.

[644] MR. SPARKS: Now I offer the answer which the witness would have given if he had been permitted to answer, if your Honor please. I offer this as one of the factors which the witness has taken into consideration in arriving at his conclusion as to the fair rate of return, and the fair return to the Respondent, if he had been permitted to answer, he would have stated as follows:

"Answer: Yes. I have given careful consideration to these criteria but have not attempted to give them quantitative expression. It has been unnecessary to do in view of the results of the test by reference to competitive cost.

"Penn Water was established and developed during the period from 1905 to 1912 and later. Compared with the present, that was a period of relative scarcity of capital, relatively higher interest rates, and relatively higher costs of equity capital. The capital costs initially incurred included those necessary to attract capital to a competitively new type of enterprise. The undertaking was exposed to the hazards of a business

engaged in the utilization of a water power resource and to the hazards of construction in a river whose behavior characteristics were in part unknown and in part unpredictable. The cost of capital included the cost of waiting for the prospective return during a significant [645] period required to achieve full utilization of the capacity. In view of the effect of these factors upon the cost rates at which the initial portion of the invested capital was obtained, it has appeared unnecessary to attempt a precise statement of those rates."

* * *

[649] Q. What is your conclusion as to the return which is reasonable and adequate for Pennsylvania Water & Power Company? A. It is my opinion that the test by reference to competitive costs provides the most significant evidence of the fair return. For this reason, I conclude that the fair return is not less than $2,450,000. Expressed in relation to an original cost rate base of $37,680,000 the conclusion is that the fair rate of return is not less than 6.5 per cent.

[650] Q. If the conclusion were expressed in relation to an original cost rate base of about $33,500,000, what would be the fair return and what would be the effect of the rate of return of not less than 6.5 per cent? A. There would be no significant effect on my conclusion as to a fair return of not less than $2,450,000, but the 6.5 per cent would be increased approximately in proportion to the decrease in the original cost rate base. The effect of such an assumption as to original cost would be limited to the results of the tests provided by Paragraph II (b) and Paragraphs III and IV of Schedule 11. I——

* * *

Q. Please continue your answer. A. I used the results of the tests provided by Paragraph IV as a matter of convenience, only to state the extreme lower limit of the range of reasonableness.

MR. GOLDBERG: I now move to strike out that portion of the last answer beginning with the words, "the effect of such an assumption as to original cost would be limited to the results of the tests provided by—".

TRIAL EXAMINER: The motion to strike is sustained.

MR. SPARKS: To which I except.

[651] By MR. SPARKS:

Q. I understand that this conclusion as to the fair return is before whatever may be the appropriate credit to consumers for the earning capacity of depreciation funds in view of the risks present in their utilization by the company? A. That is correct.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[656] Q. Did I understand your testimony to be with respect to the subject of rate of return, Dr. Foster, that if the investment base is employed in fixing the fair return or fair rate of return, then, the experienced cost of money, rather than the current cost of money should be employed in determining the fair rate of return?

* * *

A. I did say that in my opinion the experienced or past cost of capital rate is consistently and constantly applied in relation to the investment cost rate base. It is [657] consistently applied because it is consistent with the logical basis of regulation. I said also that in my opinion a competitive cost rate is consistently applied in relation to a rate basis reflecting the cost of constructing a substitute plant capable of supplying the same service.

I did say, however, that either method followed rigidly as a matter of formulae might, under conceivable circumstances, give unreasonable results.

Q. Well, then, if I understand it, to put it in my terms; if they are acceptable to you; you stated that if the invest-

ment rate base is used in order to be consistent in determining the fair return or fair rate of return, the experienced or past rate cost of capital should be employed in relation to your rate base; is that right? A. I said that employment is consistent. I avoided making necessarily a virtue of that consistency.

Q. You are saying that that is what should be done? A. No.

Q. That is, that the rate consistently should apply to the investment rate base, experienced or past cost of capital; is that right? A. If I understand your question, if you are talking now about the end result the answer is "no."

Q. I am talking about establishing a fair return or fair rate of return, which I understand to be the subject of [658] your testimony. That was the subject of your testimony, was it not? A. It was.

Q. And relating it to the subject of your testimony, I thought I understood you to state that it would be inconsistent—state, in effect that it would be inconsistent in fixing the fair return or fair rate of return to employ the investment rate base and relate it to current cost of money. Was I correct in my understanding? A. As a matter of method of regulation, consistency, I believe, requires the relation of one kind of past cost to the other, as you just stated.

It does not follow, however, that the result of that method is either reasonable or adequate or consistent with other tests of the appropriate, reasonable rate of return.

Q. In other words, you are saying that relating like things—assuming that they are like—does not necessarily mean that the resulting return will be a fair return. Is that right? A. Yes, recalling my expression of a moment ago, there is not necessarily merit in consistency.

• • •

[659] Q. I am interested in finding out under what circumstances and in what instances you would be of the

opinion that the consistent application would not result in a fair return.

Am I to understand from your testimony that the application of past cost of money to the investment rate base would be inappropriate where there has been, since the investment of the dollars in that investment rate base, an increase in the price levels? A. I am or might refer to that circumstance, to answer your question, by making reference now to an extreme [660] situation. Assume, for instance, that at the time of the investment of $10,000,000, then the cost of capital rate is 7 per cent. Assume that during the subsequent 20 years there has been inflation of serious magnitude and proportions so that at the time of the rate proceeding 20 years hence the cost of constructing the plant capable of supplying the same service is $50,000,000, and not $10,000,000; and that there has been no significant change in the rate reflecting the cost per dollar of capital investment.

In that hypothetical situation I would conclude that the consistent application of the rate of 7 per cent to the original dollars of investment would provide an annual return neither adequate nor reasonable.

Q. You say there would have to be a significant change in price level; is that right? A. The question of whether or not the given change is significant depends upon other considerations and circumstances which may be present.

Q. What are the other considerations and circumstances? A. There are many such. For instance, the closeness with which the capitalization reflects original investment is one.

Q. Any others? A. They do not occur to me at the moment. There are others.

Q. That is the only one that occurs to you. I want [661] you to take your time and think about it.

(After a short pause.)

A. That is the only one that occurs to me at the moment.

Q. What in your opinion is a significant change in price levels that should be given consideration? A. You desire now that I express that in quantitative terms?

Q. However you feel that you ought to express it. A. I would have to ask you what you mean by "price level" in that case.

Q. How do you use the phrase? A. I use the phrase as a general one, referring to any and all kinds of prices.

Q. In other words, you do not relate it solely to prices which are involved in constructing a utility plant; is that right? A. As a general term it is not so related.

Q. In your testimony do you relate it solely to the construction of a utility plant? A. No. In my testimony I have referred to the changes in cost of constructing a utility plant, also to changes in the general level of wholesale commodity prices.

[662] Q. Well, let us first think in terms of relating it to utility plant, which is our immediate concern in this case. What would be a significant change in price levels, in your opinion? A. I would not undertake, Mr. Goldberg, to answer that question in the abstract and unrelated to a specific problem or set of circumstances.

Q. Well, you have unquestionably, I assume, considered that in relation to this case, haven't you? A. I have.

Q. And you must have, in that connection, come to at least a general conclusion as to what you would consider a significant change ir price levels, as related to the construction of utility plants, isn't that so? A. I did come to the conclusion that the changes which have taken place in the cost of constructing utility plant since the date when the property of this company was in fact constructed have been significant. I also was of the opinion that the changes which have taken place in the general level of wholesale commodity prices since the dates of the construction of the facilities of this company have, in fact, been significant.

Q. So that if I understand your last answer, you did not come to any general conclusion as to significant changes,

but merely a specific conclusion in this case, is that right? [663] A. That is all that I either could have done or had any occasion to do.

Q. On your Exhibit 30, Schedule 10, the Schedule is entitled, "Over-all Replacement Cost of Capital as at December 31, 1945." Did you mean to state by presenting that schedule that 9.25 per cent as shown in Roman No. I, the section for equity capital, is the replacement cost of equity capital? A. I mean to say that for the purposes for which used here, I concluded that 9.25 per cent is the rate which represents the replacement cost of equity capital.

Q. Well, did you mean that the company would retire its outstanding equity capital and issue new equity capital? Is that what you had in mind? A. I intended, Mr. Goldberg, to make it clear that any estimate of the replacement cost of capital, whether that capital is represented by debt, preferred stock or common stock, must be hypothetical and must be imputed.

Q. Well, we know that debt capital is replaced, do we not? That is common practice and goes on every day, isn't that so? A. Debt capital arrangement or contract is a limited term contract.

Q. At least we know that debt capital is replaced day in and day out? You have seen it happen in the newspapers [664] and have seen the announcements, isn't that so? A. Outstanding debt is refinanced; yes, if that is what you mean.

Q. And that is what you mean by replacement, is it not? A. No.

Q. You don't mean refinancing? A. No.

Q. What do you mean by replacement cost of capital when you show 2.78 for the debt capital on Schedule 10? A. I refer on Schedule 10 and in the definition of replacement cost of capital to the cost rate at which a utility—here the Pennsylvania Water & Power Company—might under current market conditions obtain the supplies of debt

capital, assuming a hypothetical capitalization and freedom from the heritage of past contractual arrangements for capital.

Q. Do you mean 2.78 per cent on schedule 10 to represent the cost of a refunding issue, or of a new issue in addition to the presently-existing issue of bonds? A. It may be neither, Mr. Goldberg.

Q. I want to know what it means in Schedule 10. I am a little puzzled. I thought I understood it. I thought I understood the 2.78 per cent to represent the cost of refunding the presently-outstanding debt capital of the [665] respondent company? A. The cost of refunding the presently outstanding debt capital necessarily includes the cost of calling that debt. No such costs are included here or could be on the basis of the definition of replacement cost of capital. As I stated, replacement cost represents that cost which would be incurred if the entire capital requirements of the utility were obtained under current market conditions in the proportions indicated by this exhibit and without consideration of any costs carried over from past arrangements with investors.

Q. Are you saying that the 2.78 per cent shown on Schedule 10 as debt capital is the cost of refunding under the present market the outstanding bonds of Penn Water with the exception that it does not include certain additional costs, such as you say the cost of calling. That, you say, should be included? A. It does not, as a matter of definition, include any costs carried over from prior issues such as the redemption premiums.

Q. But exclusive of that, you say it is the cost of refunding the presently-outstanding bonds, is that right? A. It is, of course, imputed or an estimate so that it may or may not correspond to the cost which would actually be experienced if today Penn Water were to issue refunding bonds in the amount indicated.

[666] Q. But it is the—— A. (interposing) Let me add one thing.

Q. Go ahead. A. I was careful in describing the cost rate to say that for the purposes for which used, it does not and should not reflect the rates temporarily available in a current market, and I indicated that it was based primarily upon the late 1945 experience, rather than the dip in interest rates which occurred during the first month of 1946.

Q. In other words, reflecting those, the 2.78 per cent might be even lower? A. If without regard to purpose it had been adjusted directly to the most favorable and perhaps accidental experience, it undoubtedly would have been lower.

Q. But this 2.78 is your estimate of the cost of replacing the presently outstanding bonds of Penn Water exclusive of such other costs which you state should be included but have not been included in the 2.78, isn't that so? A. Subject to the qualifications which I expressed a moment ago, that is correct.

Q. Haven't I stated all the qualifications in my question? Would you like to have the question read? A. If you expect a further answer, yes.

Q. I would like to have an answer that does not require me to relate it back to some earlier answer of yours.

[667] TRIAL EXAMINER: Read the question.

(The question was read.)

TRIAL EXAMINER: Can you answer the question without having to refer to the qualifications? Is the question itself complete?

THE WITNESS: No, the question is not complete.

TRIAL EXAMINER: Very well.

THE WITNESS: Because the 2.78 is not, in a strict sense, an estimate of the replacement cost rate which would be experienced by Penn Water today. It is subject to the qualifications which I expressed as to the lack of significance of spot prices for the purposes for which the estimate was made.

By Mr. Goldberg:

Q. And by "spot prices," you have reference to the particular occurrences of favorable refinancing in the early part of 1946? A. I had in my testimony particular reference to the experience of the Madison Gas and Electric Company in February, 1946.

Q. Getting back to this 9.25 per cent from which I was temporarily diverted, we were discussing the fact in that connection that debt capital is replaced. That is also the fact, is it not, with respect to preferred capital? That, we find, is frequently replaced by companies, isn't that so? A. Preferred stock capital or preferred stock capital [668] contracts, like debt contracts, are refinanced, yes.

Q. To secure the advantages of lower interest rate and the lower cost of money, is that not right? A. That is right, and possibly other advantages.

Q. But I have difficulty in understanding the concept of the replacement cost of capital in connection with common stock. Is it your statement that companies make a practice of retiring their outstanding common stock and replacing it with other common stock? A. I made no such statement.

Q. Well, what do you mean by "replacement cost of capital" when you refer to the 9.25 per cent? Isn't that the cost, as you see it, of retiring the outstanding common stock of Penn Water and replacing it with another issue of common stock? A. No, I have excluded from the definition of the replacement cost of debt and preferred stock capital, the costs which would be incurred in retiring the outstanding debt and preferred stock.

Q. With that qualification, is that what you intended the 9.25 per cent to represent? A. With that qualification, the definition of the replacement cost of equity capital is consistent with and in fact, is the same definition as the terms "replacement cost of debt capital" and "replacement cost of preferred stock [669] capital."

Q. Then you have assumed in Schedule 10 in reflecting the 9.25 and the 10.25 per cent as the replacement cost of

equity capital, that Penn Water will retire its outstanding common and issue a new common, is that right? A. No, I did not say that. Perhaps I may attempt a direct statement having direct definition of the replacement cost of equity capital. Replacement cost of equity means the estimated cost rate which would be incurred if the enterprise as a going concern were to obtain currently the required amounts of equity capital in given proportion in a capitalization. I said, "as a going concern" because, for the purpose of the use here, I made that assumption.

Q. That brings me to one point that I would like to clear up. Schedule 10 reflects the replacement cost of capital of a going concern—right? A. That is right.

Q. Not a hypothetical new company just starting out in business? A. That is right.

Q. Have you assumed that this going concern would not have any equity capital outstanding before it went out into the current market? A. What do you mean by "outstanding"? The corporation necessarily has shares of stock.

[670] Q. If it is a going concern, it necessarily must have had an outstanding capital structure, is that right? A. That is right.

Q. Did this going concern shown on Schedule 10 have any equity capital? A. It is a hypothetical situation, of course.

Q. I don't know that that answers the question, Dr. Foster. I am sure you intended to answer it. A. Any corporation existing as a going concern has a capitalization. It is, I think, appropriate, however, to attempt an estimate of the capital cost rates which would be incurred if such corporation were to obtain the capital in the current market, and to exclude from that estimate the amount of cost which exists because of past contractual arrangements.

Q. Would this going concern shown on Schedule 10, Roman Numeral I, have debt, preferred and equity capital

at the time it looked to the current market? A. The purpose of——

Q. (Interposing) Please, Dr. Foster, will you try to answer the question?

TRIAL EXAMINER: Read the question.

(The question is read.)

TRIAL EXAMINER: Answer the question.

THE WITNESS: For the purpose of an estimate of the [671] replacement cost of capital, I have assumed the corporation to have outstanding debt, preferred stock and equity capital in the proportions corresponding to those which represent Penn Water's actual present capitalization.

By MR. GOLDBERG:

Q. It is almost actual rather than hypothetical? A. It is actual in that sense, yes.

Q. And you have assumed, in Schedule 10, further that the outstanding equity capital will be replaced, haven't you? A. I don't think, Mr. Goldberg, that it is a question of replacement. I think that it is a question of an estimate of the cost rate at which a hypothetical corporation having given characteristics would be able to obtain equity capital in the current market.

Q. And that necessarily involved an assumption of going out into the current market and replacing outstanding capital, replacing the outstanding capital structure, is not that so? A. Well, if you were attempting an estimate of the cost rate at which a specific corporation could replace its existing capital, that would be true. That is not what I have done here.

Q. You have assumed a company without any capitalization of debt, preferred and equity—right? A. That is right.

Q. And you have assumed, subject to the qualifications [672] you have already stated in the record, that the debt

capital could be replaced at 2.78, is that right? A. Well——

Q. (Interposing) I said "subject to the qualifications you have already stated."

MR. SPARKS: I do not think that is a complete question, if Your Honor please. I object to it.

TRIAL EXAMINER: Just a minute. Can you answer that question in that form?

THE WITNESS: I have not, Mr. Examiner, assumed replacement. The inquiry is directly as to the cost rates at which a hypothetical corporation would be able to obtain capital of these kinds in the current market.

By MR. GOLDBERG:

Q. For its presently outstanding capital, right? A. I don't know what that question means, Mr. Goldberg.

Q. You have got Penn Water in this case, haven't you? That is the company with which we are concerned—the principal company—right? A. Yes, sir.

Q. It has debt capital, preferred capital and equity capital, is that right? A. Yes, sir.

Q. And it has certain costs of money associated with that debt capital and preferred capital—right? [673] A. It has certain experienced costs of money, yes.

Q. And you have intended to reflect on Schedule 10, have you not, how that experienced cost of money is affected by current costs of money, subject to the qualifications you have already stated, isn't that so? A. If I understand your question, no; because a statement of how that experienced cost of money would be affected by refunding under current market conditions would be very different from the results that I have here.

Q. Because you would include these other costs involved in that refunding, such as call, that you consider applicable to a cost of refunding, is that right? A. Certainly, because the cost of that new capital would include these other costs.

Q. You told us that Schedule 10 reflects a going concern—right? A. I said the estimates are based upon the assumption of the existence of a going concern.

Q. And necessarily, having assumed a going concern, you have assumed that that going concern has a capital structure with related experienced cost of money to that capital structure—right? A. No, I do not assume that it has a capital structure. In Paragraph H of Schedule 10 I chose a different capital structure.

[674] Q. That just involves a different assumption? A. Right, but a capital structure implies given proportions, and for the purpose here I may assume any proportions which are appropriate.

Q. Having assumed a going concern in connection with Schedule 10, did you assume any proportions of the capitalization of that going concern? A. I assumed the proportions which I stated in Column 2 of Schedule 10, both for the first and the second parts of that schedule.

Q. In other words, with respect to the first part of Schedule 10, you assumed that the going concern had debt capital, preferred stock capital and equity capital—right? A. No, Mr. Goldberg; I assumed that the corporation as a going concern was to obtain in the current market, capital in these proportions from different classes of investors.

Q. Is the capitalization you reflected in Schedule 10 the first capitalization of that going concern? A. It is unnecessary, Mr. Goldberg, for my purpose, to make any such assumption.

Q. Now, Dr. Foster——

TRIAL EXAMINER (interposing): Read the question. And will you answer it, Mr. Witness, as directly as you can?

(The question was read.)

THE WITNESS: The only answer that I can give, Mr. Examiner, [675] is that I do not know.

By Mr. Goldberg:

Q. Can you have a going concern without an existing capitalization? A. No.

Q. Now, you assumed a going concern, did you not? A. For this purpose, yes.

[676] Q. And the going concern is Pennsylvania Water & Power Company—right? A. The going concern is a corporation having the characteristics of the Pennsylvania Water & Power Company other than the proportions of debt, preferred stock and equity capital in its capitalization.

Q. You intended Schedule 10 to have some significance in relation to your conclusions on fair rate of return, didn't you? A. I did and do.

Trial Examiner: Let me ask the witness a question. In your Column 2 you are assuming no fixed amount of capital that is to be obtained? It can be $35,000,000, $2,000,000, or any amount so long as the proportions are as stated there.

The Witness: Yes, with this one qualification, that if the amount were reduced to extremely small quantities, it would of course affect the cost rates.

Trial Examiner: Can you state simply without going into too much detail just how you obtained the figure 2.78?

The Witness: The figure 2.78 is my estimate of the cost rate at which a corporation similar to Penn Water with respect to all characteristics affecting the cost of capital could obtain in the current market amounts of capital corresponding to the amounts required for investment to supply service by Penn Water, assuming the capitalization corresponding [677] to Penn Water's capitalization.

Trial Examiner: How does the 2.78 result from your Schedule 8. What did you do?

The Witness: I examined the yield and costs rates indicated by Schedule 8 to have been experienced by other

companies in recent financing, both new and refunding. Those cost rates exclude, in the case of those other instances, all costs related to refunded issues. I examined those cost rates in relation to various factors, particularly the capital structures expressed as the proportion of gross income available to pay the interest on those bonds, and as a matter of judgment I reached the conclusion that the replacement cost rate appropriate for Penn Water is 2.78 per cent.

TRIAL EXAMINER: Is 2.78 per cent a simple arithmetic average of the cost rate column of Schedule 8—that is Column 9?

THE WITNESS: No, Mr. Examiner, it is not an average rate, it is not an average of any kind. Those cost rates vary with the quality of the bonds represented by them. The final column of Schedule 8 headed, "Moody's Rating" is some measure of that quality.

TRIAL EXAMINER: Actually what did you do to derive 2.78?

THE WITNESS: I did several things, and in what I say I am neglecting the distinction between yield rate and cost of [678] financing. I examined the cost rates in Column 9 in relation to the indication of quality shown by the ratings in Column 12; that is, I separated them out as between AA and the A rates. There is other evidence to the general effect of the quality of Penn bonds as being intermediate between the qualities typically represented by the ratings A and AA but closer to the AA.

TRIAL EXAMINER: Did you classify all the A bonds in Schedule 8 and then all of the AA?

THE WITNESS: I did that and separately averaged them.

TRIAL EXAMINER: You separately averaged them?

THE WITNESS: Yes.

TRIAL EXAMINER: What was it? Was it a weighted or an arithmetic average?

THE WITNESS: An arithmetic average. I think there are 11 of each rate.

TRIAL EXAMINER: What did you do with those arithmetic averages?

THE WITNESS: I laid them aside for a time—in fact I am stating the reverse of what I actually did. In fact what I previously did was this,—I had charted the yield rates for all of the bonds represented on Schedule 8 in relation to times interest requirements provided as indicated by the pro forma income statement contained in the prospectus. There is of course generally a relationship between the coverage of [679] interest requirements and the yield rate. As I said in the direct testimony, the coverages provided in all these instances are so broad that that general relationship is obscured.

TRIAL EXAMINER: I do not want to get into this in too much detail, but I just want to see what your studies were. You made this chart of times-interest coverage.

THE WITNESS: It provides a curve.

TRIAL EXAMINER: Yes.

THE WITNESS: So that one gets away from the invalidity of an averaging process.

TRIAL EXAMINER: What did you do next?

THE WITNESS: As a matter of judgment then, I estimated the yield rate which would be experienced on the basis of the coverage which would be provided in the Penn Water situation.

TRIAL EXAMINER: Under what conditions?

THE WITNESS: Assuming refinancing or assuming the issuance of those bonds at the rates indicated and on the basis of the assumption as to capital structure which is expressed in both Parts I and II of Schedule 10.

TRIAL EXAMINER: What times-interest factor did you use for Penn Water?

THE WITNESS: I have forgotten, Mr. Examiner. It is a large coverage.

TRIAL EXAMINER: Where did you get that figure?

[680] THE WITNESS: That represents the coverage which would be provided on the basis of the experienced gross income of Penn Water.

TRIAL EXAMINER: Then what did you do with your two averages that you obtained from Schedule 8? Merely check them?

THE WITNESS: I had one average, that being the average yield rate experienced in the issuance of the AA and A bonds during the past year. I had a further or different analysis which was that of a relationship which does not provide an average. On the basis of those two analyses of Schedule 8, I as a matter of judgment concluded that 2.72 is the replacement cost rate before the cost of financing margin which is appropriate for the purpose here. I then analyzed the behavior of the cost of financing margin which is represented by the differences between Columns 8 and 9, and again as a matter of judgment used .06 as a loading of the 2.72.

TRIAL EXAMINER: Your 2.72 comes from two separate determinations of yield that you obtained in three different processes—one from your chart, one from your averages, and one through this other process?

THE WITNESS: Yes. It is available as the result of several, or at least two approaches to the analysis of the data shown by Schedule 8.

TRIAL EXAMINER: Why do you limit Schedule 10 to [681] replacement cost? Would it not also be valid to state the replacement or additional cost—that is addition to capital?

THE WITNESS: It is perhaps only a matter of definition, Mr. Examiner. Schedule 10 represents the cost rate which would be experienced in obtaining debt and for other kinds of capital in approximately the amounts indicated and irrespective of the purpose, whether new capital or refunding.

TRIAL EXAMINER: The word "replacement" can come out of your title without in any way affecting the validity of the data, is that true?

THE WITNESS: The word "replacement" is in the title in order to afford a distinction in definition between different kinds of capital cost; that is, replacement cost, experienced cost, historical cost, and original cost.

TRIAL EXAMINER: Replacement cost then, according to your definition, can cover just simply additions to the capital?

THE WITNESS: The replacement cost is an estimate of the cost which would be incurred under the given circumstances for the purpose of obtaining additional capital to be used for construction purposes.

By MR. GOLDBERG:

Q. In connection with your last answer, do you mean that the 2.78 on Schedule 10 represents the cost of debt [682] capital in addition to outstanding debt capital which is not being refunded? A. Not necessarily, Mr. Goldberg, because it does not necessarily follow that the cost which would be experienced in obtaining relatively small increments of new debt capital is the same cost as would be experienced currently to replace the entire amount of debt capital.

Q. You mean the cost of securing additional debt capital may vary—it may differ—from the cost of refinancing existing debt capital, is that right? A. It may vary from the cost which would be experienced in obtaining currently the total amount required.

Q. Is this 2.78 replacement refunding cost subject to the qualifications you made earlier in your testimony? A. It certainly, Mr. Goldberg, is not the cost which would be experienced in refunding. It is the cost as estimated which would be experienced currently by a company having these risks in obtaining the amounts of debt capital in approximately these quantities indicated.

Q. Obtaining it for the first time, or obtaining it for the purposes of refunding existing debt capital? A. Either, Mr. Goldberg, subject to the qualifications with respect to the carry-over costs related to past contracts.

Q. Are you saying that your company on Schedule 10 [683] went into the market to secure 52 per cent of additional debt capital?

• • • •

A. I am sorry, but I do not understand the question.

By Mr. Goldberg:

Q. Did the going concern which you have assumed in Schedule 10 have any debt capital? A. No, I have assumed that this going concern went into the market to obtain debt capital in amounts constituting 52 per cent of the total proceeds from the issuance of securities.

Q. In other words, it had no debt capital before it went into the market, is that right? A. One may make any assumption that may be desired with respect to the capitalization before the financing of which we are speaking. I have made no assumption.

Q. When did this going concern that you assumed, go into business? A. I have not been concerned with when it went into business nor with the costs which it may unavoidably have experienced in reaching the status of a going concern and being able to go into the market on the bases indicated by Schedule 10. If I had been concerned with those costs, I would [684] necessarily have recognized costs of capital substantially in excess of those that are reflected in Schedule 10.

• • •

[695] Q. Now, Dr. Foster, it is my recollection that at the conclusion of your direct testimony you stated that the 6.5 per cent rate of return, which you testified is, in your opinion, a fair and reasonable rate of return in this case, should be adjusted to the extent of the credit and the assets represented by the depreciation reserve balance. Is that right?

MR. SPARKS: Just to correct the record, Dr. Foster [696] testified to a rate of return of not less than 6.5.

MR. GOLDBERG: All right.

By MR. GOLDBERG:

Q. Dr. Foster, is my recollection correct about that? A. Yes, sir.

Q. Would the adjustment be a downward adjustment of 6.5 per cent? A. I testified that the conclusion as to fair return and as to rate of return is subject to whatever may be the appropriate treatment of depreciation for the purpose of return determination. As to whether or not rate of return would be adjusted downward, I think depends upon the form of that treatment.

Q. As I have your testimony, the question was:

> "Question: I understand that this conclusion as to the fair return is before whatever may be the appropriate credit to consumers for the earning capacity of depreciation funds in view of the risks present in their utilization by the company?
>
> "Answer: That is correct."

Now will the fair return be adjusted downward as the result of that appropriate credit? A. Your previous question concerned the rate of return; your present question concerns the fair return?

Q. That is right. [697] A. The answer need not necessarily be the same to both questions.

Q. A fair return is the result of the application of rate of return to the rate base; isn't that so? A. Assuming the procedure by using the rate base and rate of return, yes.

[698] Q. Did you assume a rate base? A. I assumed that the procedure would be by determination of a rate base.

Q. And that was basically your testimony in this case, is that right? A. It was basically the form of the testimony, yes.

Q. So that if there is an adjustment of the fair return downward as the result of the appropriate credit, then in turn there will be an adjustment downward of the fair rate of return, isn't that so? A. That does not necessarily follow.

Q. Well, then, getting back to the form in which you answered the question, what would be the effect on the fair return of the appropriate credit to consumers for the earning capacity of the depreciation funds generated by the charges to depreciation? A. The trend of the adjustment would be a downward adjustment.

Q. And assuming no change in the rate base, what would be the effect of the downward adjustment as a result of this credit to fair rate of return? A. The effect on what?

Q. On the fair rate of return? What is the effect on the fair rate of return of an adjustment downward of fair return resulting from the credit, assuming no change in the [699] rate base? A. There may be no effect on the rate of return. It depends upon the form of the treatment of depreciation for the purposes of the fair return determination.

Q. What did you have in mind when you were talking about appropriate credit to consumers? A. I had in mind any treatment of depreciation which is appropriate and reasonable for the purpose of recognizing depreciation for a fair return determination.

Q. Did you have any specific mode of procedure in mind? A. No, I had in mind any of the alternative modes of procedure which are available to regulatory commissions.

Q. Did you have in mind an undepreciated rate base when you made that statement? A. The use of an undepreciated rate base is among the modes of procedure which are available.

Q. Did you have in mind an appropriate credit to consumers in connection with an undepreciated rate base? A. An appropriate credit to consumers in connection with an undepreciated rate base is among the modes of procedure.

Q. That is not the question. Did you have in mind an undepreciated rate base in connection with an appropriate credit to consumers? [700] A. I have answered to the effect that I had in mind an undepreciated rate base as among the modes of treatment which are available.

Q. And did you also have in mind other modes of treatment of the undepreciated reserves? A. I answered that I had in mind the several modes of procedures.

Q. Name them; which ones did you have in mind? A. The use of the depreciated rate base is among those modes of procedure.

Q. Go ahead. A. The use of an undepreciated rate base with the rates of that credit varying from the minimum rate to a maximum rate.

Q. Did you have in mind the use of a credit to consumers in connection with the depreciated rate base? A. Yes.

Q. Do I understand that when you stated that your fair return is subject to the appropriate credit, you did not have in mind what the credit would be or the direction of the adjustment? A. I have indicated that a credit necessarily implies a direction of adjustment. To answer the first part of your question, I made no study of the appropriate credit.

Q. But you did not extend your thinking of the effects [701] of an adjustment for appropriate credits to the consumers for the earning capacity of the depreciation funds to its effect on the fair rate of return, is that right? A.

I have testified as to the direction of the effect on the return allowance, if that answers your question.

Q. No, it does not.

TRIAL EXAMINER: Read the question.

(The question is repeated.)

THE WITNESS: In that case I do not understand your question.

By MR. GOLDBERG:

Q. You told us that the effect of the credit on fair return would be downward—right? An adjustment downward? A. I have said that the recognition of the depreciation, whether by credit or otherwise, results in an adjustment of the fair return allowance downward from what it would be in the absence of such recognition.

Q. Yes. Now, you understand what rate of return is as distinguished from return, don't you? A. I believe so.

Q. I thought so.

MR. SPARKS: I object to that.

TRIAL EXAMINER: Just a moment. Objection sustained.

MR. GOLDBERG: To what? I have no question pending.

TRIAL EXAMINER: It is not necessary to make that kind [702] of a statement.

MR. GOLDBERG: I was just agreeing with the witness that I thought he understood it from his direct testimony. I think I am entitled to agree with the witness.

By MR. GOLDBERG:

Q. Now, Mr. Foster, since you understand the difference between rate of return and return, have you thought through what the effect on the rate of return would be of the appropriate credit to consumers for the earning capacity of depreciation funds? A. I have, I believe, testified

that there is not necessarily any effect on the rate of return depending upon the form or mode of treatment of depreciation in connection with fair return determination.

Q. You don't know what effect it would have on the rate of return in this case, isn't that so? A. I have attempted to answer your question, Mr. Goldberg.

TRIAL EXAMINER: Answer the question, Mr. Witness. Read the question.

(The question was read.)

MR. SPARKS: What do you mean by "it", Mr. Goldberg?

MR. GOLDBERG: We are talking about the effect of the appropriate credit that he mentioned, on the rate of return.

TRIAL EXAMINER: Let us not have any exchanges between [703] counsel. If you have an objection to the question, state it.

MR. SPARKS: I object to it. I think that Mr. Goldberg should make his question clear.

MR. GOLDBERG: Let us have the question read again.

TRIAL EXAMINER: Read the question.

(The question was repeated.)

MR. GOLDBERG: By "it", I will explain, Mr. Examiner, that I meant the appropriate credit to the consumer for the earning capacity of the depreciation funds as just testified to by the witness.

TRIAL EXAMINER: Answer the question.

THE WITNESS: The answer to the question is that I do. That effect on the rate of return depends upon the mode of treatment of depreciation.

By Mr. Goldberg:

Q. Assuming an undepreciated rate base what did you conclude? A. Assuming an undepreciated rate base, there is a fair return of not less than 6.5 per cent which remains unchanged.

Q. Assuming a depreciated rate base, what did you conclude? A. The fair rate of return at 6.5 per cent also remains unchanged.

Q. So the fair rate of return remains unchanged in your opinion, whether the appropriate credit is associated [704] with an undepreciated or depreciated rate base, is that right? A. The use of an undepreciated rate base provides indirectly the credit which is provided directly by the adjustment of the fair return where the mode of treatment is the use of an undepreciated rate base.

Mr. Goldberg: I submit to the Examiner that the witness is able to answer the questions directly and I would like such an answer.

Trial Examiner: The Examiner will strike the answer. Read the question.

(Question read.)

The Witness: The fair rate of return remains unchanged, yes.

By Mr. Goldberg:

Q. Doctor, referring you to the second page of Schedule 6 in Exhibit 29, will you tell us how you arrived at the 9.25 per cent there shown as the applicable cost rate to equity capital? A. The applicable cost rate of 9.25 per cent was arrived at as the result of the study of the several kinds of evidence of the cost of equity capital as the result of various studies to which I testified at some length.

Q. What are these several kinds of evidence that you mentioned? A. The first to which I referred includes the [705] evidence with respect to capitalization rates and the evidence with respect to cost of equity financing.

Q. What evidence did you consider in connection with the cost of equity financing? A. I considered the available evidence with respect to the rates at which investors had capitalized the prospective income from their investments in Pennsylvania Water and Power Company.

Q. Are these rates shown in the exhibits anywhere that you have presented—that is, the rates at which the investors have capitalized prospective income? A. No.

Q. Does it appear anywhere in the work papers? A. No.

Q. Where does it appear? A. The rates at which investors capitalized the present income, whether income available from Pennsylvania Water and Power Company or any other company are necessarily subjective.

Q. You mean they may vary with the individual who is applying the judgment? A. They vary with the individual who is applying the judgment.

Q. Do I understand from that, that you have not intended here to reflect the informed investors' rate [706] of capitalization? A. I have intended here to use the best available evidence of the investors' capitalization rates.

Q. I am trying to find out where that evidence is. I may like to examine it. A. Oh, I misunderstood you. That evidence is presented in Chart 1 of Exhibit 29 as evidence rather than as capitalization rates themselves. It is presented also in Schedule 1 and Schedule 3 as well as in the testimony generally.

[707] Q. You mean by "the rates at which investors have capitalized prospective income" the earnings price ratios? A. I tried to make it appear that I do not, Mr. Goldberg.

Q. I did not hear that answer. A. I do not.

Q. I notice Schedule 1 which you indicate represents part of the evidence of the rate at which investors have capitalized prospective income contains monthly earnings price ratios, and that is why I thought that your use of the phrase "the rate at which investors have capitalized pro-

spective income" was synonymous with earnings price ratios. Am I wrong about that? A. The title of Schedule 1 is merely "Monthly Earnings Price Ratios."

Q. Yes, and that was one of the evidences as I understood it that you used in arriving at the rate at which investors capitalized prospective income, is that right? A. I also characterized it as evidence and was careful to distinguish evidence from the fact of the capitalization rate.

Q. I am following your language. I am saying that Schedule 1 was evidence to you of the rate at which investors have capitalized prospective income—is that right? A. That is right.

[708] Q. And as far as Schedule 1 is concerned, that evidence of the rate is synonymous with earnings price ratios, is that right? A. No.

Q. Schedule 3 shows earnings price ratios for a selected group of companies, doesn't it? A. For a group of six companies, yes.

Q. A selected group? A. I said on direct testimony that it was not a group which resulted from a process of selection.

Q. Didn't you testify that you had available for use at least one other company that you did not use? I think it was the Southern California Edison? A. Well, available in the sense that it could have been utilized and included with additional effort, yes.

[709] Q. So at least to that extent selection had to be made, you had to determine that certain companies would be eliminated for various reasons? Right? A. I eliminated one company for the reason which I stated.

Q. Were there any other companies outside those in Schedule 3, that you considered and rejected? A. I know of no other companies.

Q. By that you mean that the only companies which you went to and examined the data were those listed at the bottom of Schedule 3, and Southern California Edison

Company? A. The only companies for which I examined the data over the period shown by Schedule 3 are those listed at the bottom of that schedule.

Q. How is it you happened to select the first companies you went to? Were you familiar with them? A. Well, I am generally familiar with the corporate organization of these companies from time to time, yes.

Q. So you had occasion when requested to make a study to automatically know what companies fit the respondent company; is that right; without having to consider a great group of companies? A. I do not know what you mean by "fit the respondent company."

Q. Comparable. [710] A. I have not testified that I considered these companies comparable.

Q. Do you? A. The earnings price ratios shown by Chart 1, I believe, demonstrate that they are not closely comparable.

Q. Is your subjective rate of capitalization and prospective income in any way influenced by these data that are shown on Schedule 3? A. The capitalization rate is the rate at which investors trading in the market capitalized what they believed to be the prospective income. The answer is that those rates could not have been influenced by these data shown on Schedule 3. They might have been influenced, of course, by similar information available to those who made the investment decision.

Q. I have not, apparently, made my question clear. I will restate it. A. Thank you.

Q. I want to know whether the subjective rate at which investors capitalized the prospective income arrived at by you in this case was influenced by the earnings price ratios reflected in Schedule 3 of Exhibit 29? A. Referring specifically to the rate of 8.5 per cent, the answer is that, yes, I considered the earnings price ratios shown by Schedules 1 and 3 in arriving at that [711] conclusion.

Q. And the 8.5 per cent rate is the one you considered applicable to the respondent company, Pennsylvania Water & Power Company, right? A. Yes.

Q. Dr. Foster, it was determined, you say, at least in part on evidence of earnings price ratios of companies that are not comparable to Pennsylvania Water & Power Company; is that not so, Doctor? A. I testified on direct that I used earnings price ratios shown by Schedule 3 merely for the purpose of background and to permit a more intelligent interpretation of the meaning and significance of the Penn Water earnings price ratios.

Q. When you say you used it merely for the purpose of background and for a more intelligent appraisal of the appropriate rate for Pennsylvania Water & Power Company, could you, perhaps, be more explicit about how Schedule 3 serves as a background to your conclusion? A. Perhaps I can do so by reference to the chart upon which these data shown by Schedule 3 are plotted.

Q. Yes? A. As soon as I saw that information, that the evidence of the rates at which Penn Water investors capitalized the prospective income, it has a more direct and useful application for the purpose. I desire to know whether or not the [712] variations in the earnings price ratios of the Penn Water common stock, as evidenced by the capitalization rate followed a course which was generally similar to the variations of fluctuations in the earnings price ratios of other electric and electric combination companies. The determination of those earnings price ratios and their analysis in relation to the Penn Water earnings price ratios tended to answer that question.

Secondly, since Penn Water is not a distributing company, and has characteristics which are different from those of electric companies which are both producing and distributing companies, I was interested to know whether typically, over a term of years, the earnings price ratios of Penn Water would be found at a higher or lower level than those of these other electric companies.

Thirdly, with reference to the meaning and significance of the earnings price ratios as evidence of the capitalization rates, I was interested to know whether or not the fluctuation of the earnings price ratios in relation to events

and circumstances which may be assumed to influence investor appraisals was generally the same for other earnings price ratios as it was found to be for the Penn Water earnings price ratios.

Q. So that you plotted on Chart 1 the earnings price ratios, for instance, for Penn Water, and for the group of companies, and compared the fluctuations and the evidences [713] you assumed brought them about. Is that right? A. I made those comparisons, and, also, I noted the comparative levels, from time to time.

Q. Did you conclude that the fluctuations on Penn Water's earnings price ratios followed the same trend as the fluctuation of the earnings price ratios of the group of companies? A. To some extent, yes.

Q. You mean by that that at some period they did and at others they did not? A. The earnings price ratios of Penn Water common stock, like the earnings price ratios of any other one company, are subject to influences which are unique and peculiar to that situation.

Q. All these companies that you selected for study and comparison with Penn Water, how many of them have contracts which virtually guarantee a return on their equity capital? A. None to my knowledge.

Q. Do you know whether Penn Water has a contract which virtually guarantees a return on its equity capital?

* * *

[714] By Mr. Goldberg:

Q. What is the answer? A. I have no knowledge that it has such a contract.

Q. Did you study the contracts that Penn Water has? A. I did.

Q. Did you study the contract that Penn Water has with Consolidated of Baltimore? A. I did.

Q. Is it your view that that contract does not virtually guarantee a return on Penn Water's equity capital? A. It is my view that, as a matter of fact, that contract gives to Penn Water an assurance of return which it otherwise would not have.

Q. Will you agree that that contractual arrangement with Consolidated constitutes virtually a guarantee of earnings on Penn Water's capital stock? A. The answer I think obviously depends upon the meaning of the expression "virtually guarantees."

Q. I will say that I am using it in its ordinary dictionary sense. A. The contract provides for Penn Water an assurance of stability of return substantially more than would otherwise be available.

Q. But you will not agree with me, will you, that the [715] contract constitutes virtually a guarantee of earnings to Penn Water's capital stock? A. I will not agree that any arrangement which can be made affords a guarantee or even virtually a guarantee of return to business operation.

Q. Did you examine the annual reports of Penn Water to its stockholders? A. I did.

Q. Did you, after an examination of those reports, reach the conclusion that if such a representation was made to the stockholders, it was erroneous? A. Mr. Goldberg, as to whether or not it was erroneous, it depends on the intent and meaning of the words used. I did not attempt to pass judgment upon the correctness of the representation or statement in the annual report.

[716] Q. I would like to show you the 1931 annual report of Pennsylvania Water and Power Company to its stockholders, and more particularly to the last paragraph on page 14 of that report, and ask you if you ever read that paragraph? A. I have done so.

Q. Does it not state there that:

> "The new contractual arrangement with the Consolidated Company covers a period of 48 years and constitutes virtually a guarantee of earnings for the company's capital stock, since all the payments which the Consolidated Company is obligated to make to your company are an operating expense of that company

and thus come ahead of dividends, ahead of the return on its preferred and common stock."

You can read anything else you like. A. It appears as you have read it, apparently.

Q. Am I to understand that you do not agree with that statement? A. I have had no occasion to agree or disagree with that statement.

Q. So that is something you had to consider in reaching the conclusion as to the fair rate of return on this company, is that not true? A. Would you mind asking that question again?

Q. I will put it this way: Is that not something you had to consider in reaching a conclusion as to the fair rate [717] of return for the Pennsylvania Water and Power Company, Dr. Foster? A. I did not have to consider whether or not, as a fact, any given degree of guarantee is provided by the contract.

Q. Would that not affect the rate at which investors would capitalize the prospective income of Penn Water? A. Undoubtedly, it had influence on the rate at which investors capitalized the prospective income from Penn Water.

Q. But although that is the case, and you are concerned with that, you did not consider whether or not the contract constitutes virtually a guarantee of earnings of Penn Water's equity? A. On the contrary, I have given full consideration to the degree to which that contract and the company's statement with regard to it influenced the investors' appraisal of the return from Penn Water.

Q. Would you not have to reach your own conclusion as to whether the statement which I have shown to you and which I have read into the record was a correct statement? A. No, I am not providing the capital funds for Penn Water. I am concerned only with the investors' appraisal of the funds, and I have not attempted to substitute my judgment as to the meaning of the facts for those expressed by investors in their market transactions.

[718] Q. Did you not have to decide whether an informed investor would view the contract as Penn Water viewed it? A. I did not find it necessary to ascertain the significance which the informed investor attached to the contract because the informed investor expressed that significance in what he bid for the stock.

Q. As reflected by the earnings price ratios? A. As reflected by the market price of the stock considered in relation to the prospective income.

Q. Did you ignore the factors you set out at the top of Chart I in reaching that conclusion? A. I am sorry, but I do not understand your question.

Q. You have in Chart I at the upper half a rather wide column with a series of one-line comments, right? A. Yes.

Q. You put them in there because you thought they had some effect on the earnings price ratio; is that so? A. I put them in there because they are statements of events and circumstances which may have had some effect or which it is rational to believe did have some effect on the earnings price ratios.

Q. But you do not think that the guarantee, the virtual guarantee of a return on equity capital until 1980 was a significant fact; is that right? A. I have not so testified. I have testified that I [719] assumed that it was considered by investors and appraised by them.

Q. Why did you not put that in the column on Chart 1? A. If you will look, Mr. Goldberg, at the space adjacent to the month of June, I believe, 1931, you will find the words, "Revised Contract with Consolidated".

Q. Now, what does that mean? Why didn't you say there instead of what you have there, "Revised Contract with Consolidated Guaranteeing until 1980 the Earnings" —(laughter).

It may be funny to others but to me it is a serious matter. We are concerned here with a chart which purports to reflect the significant facts of the life and history of this company up until the present time. I want to know from

this witness what does this revised contract with Consolidated mean, and what it meant to the informed investors? A. The informed investors, to them it was something which meant the contract together with its terms.

Q. Did you, when you said revised contract with Consolidated, mean, and is it your statement which you intend to make here to this Commission, that the revised contract with Consolidated was virtually a guarantee of earnings for the Penn Water common stock? A. The words which I read, together with others appearing in that chart No. 1 are concise or typical statements which I intend to represent whatever may be the facts in that [720] connection.

Q. What was the fact before you when you read that contract, and reached the conclusion that it was virtually a guarantee—— A. (Interposing) If I may interrupt, I have already answered that question by saying that I reached that conclusion that that contract afforded a high insurance or assurance of return irrespective of fluctuations which otherwise would have been experienced.

Q. But that statement where your only conclusion was, upon examination of that contract, that this is a revised—wherever that statement appears—the statement, "Revised Contract with Consolidated," that alone is of no significance; would you say that it taken alone constitutes virtually a guarantee to Penn Water's equity capital stockholders of a return on their stock; isn't that so? A. The words appearing in the margin there, as you see them on the chart, are to be taken to mean the fact of the revision of the contract and the fact of whatever the terms of the revised contract may have been.

[721] Q. Are we to take it to mean that you intended to say that the investor considered that that contract constituted virtually a guarantee of earnings on Penn Water's common? A. May I have that question repeated?

(The question was repeated.)

THE WITNESS: No.

• • •

[732] THOMAS R. TATE,
was called as a witness by and on behalf of the Respondent, being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION.

By MR. SPARKS:

Q. Mr. Tate, please state your full name, place of residence and occupation. A. Thomas R. Tate. I reside at 2126 Yorktown Road, Northwest, Washington, D. C. I am a professional engineer and the Washington representative of the firm of Chas. T. Main, Inc., architects-engineers of Boston, Massachusetts.

Q. What education have you had? A. Three years of high school, one year at William Jewell College, Liberty, Missouri, and I completed the four-year engineering course of the School of Engineering, University of Missouri, in three years and one summer graduating in 1912 with the degree of Bachelor of Science in Electrical Engineering. Since that time, I had a lecture course in public utility economics in the extension division of the University of Wisconsin at Milwaukee, Wisconsin, and have completed several of the Army's extension courses.

[733] Q. Are you a registered professional engineer? A. Yes, sir; in the State of New York.

Q. Are you a member of any engineering societies and organizations? A. Yes, sir, I am. I am a fellow in the American Institute of Electrical Engineers, a member of the American Society of Mechanical Engineers, a member of the American Society of Civil Engineers, a member of the Washington Society of Engineers and a military engineer member of the Society of American Military Engineers and a member of other scientific clubs and organizations.

Q. Mr. Tate, will you please summarize your engineering and construction experience? A. I have had several years of experience after high school and during and

between college and engineering school in the operation, design, and construction of operating electric utilities. I have had 34 years of experience since graduation of which four years were with operating electric utilities, 20 years with consulting and construction engineering organizations, and 10 years of government work including eight and one-half years with the Federal Power Commission, and one and one-half years with the Public Utilities Commission of the District of Columbia.

Q. Starting with your first connection with public utilities, will you please state in chronological order your [734] experience and the nature of your duties? A. To begin with, I should like to mention that whereas most engineers have to attain their basic knowledge of public utilities by beginning at the bottom upon graduation and working up to a position where they can exercise their engineering training, I had this experience before graduation.

In the summer of 1905, I started with the Union Electric Light and Power Company of St. Louis, Missouri, now known as the Union Electric Company of St. Louis, Missouri, as a meter repairman and then after a short period of meter reading, was sent out as a helper testing meters and later was transferred to the Electrical Testing Laboratory where I calibrated various instruments and made acceptance and efficiency tests on electrical machinery. At this time, I attended the company's school and had a practical course in electricity and magnetism and had a more intensive course in algebra and trigonometry.

My work in this department involved the testing and calibrating of electrical measuring instruments at the main generating station of the company known as Ashley Street and various substations, testing feeders for voltage tests at load centers and setting relays and regulators.

My experience in the generating station and substation was so interesting to me that I transferred over to the Operation Department and became a substation operator at Station A. [735] Then after one year at college and one

year at the University of Missouri, I worked for the Union Electric Company during vacation and during the years 1909 and 1910 as ground man, lineman, line slip man, estimator and inspector, laying out new wood pole transmission lines and distribution systems.

Q. What has been your experience since graduation in 1912? A. The day after graduation, I started to work for, as it was then called, the Milwaukee Electric Light and Railway Company of Milwaukee, first as foreman of construction of lines to rural communities and lake resorts, then an engineering clerk, writing up orders for construction, then as engineer of wire for the Wire Department, then assistant electrical engineer and finally at the time I left the employ of the company, I was its distribution engineer.

In these several capacities, I laid out and supervised the constructing of steel tower and wood pole transmission lines, customers substations and supervised the re-design of a greater part of Milwaukee's distribution system. I also handled the street and interurban railways and company's telephone and dispatching system.

During this period, I supervised the design of a 7'0" diameter tunnel under the Milwaukee River for steam mains and electric cables, and laid out underground and overhead systems. I also participated in the making of electrolysis surveys and [736] in the operation of the company's gas plant at Racine, Wisconsin.

I examined for purchase hydroelectric plants and distribution system at Fox River and Burlington, Wisconsin, and made system power studies.

Q. Did you have any valuation experience while with the Milwaukee Company? A. Yes, sir, while I was there we started a valuation of all of the company's property and I had charge of the valuation of all of the electric property.

Q. When did you leave the Milwaukee Company and what was your next connection and the nature of your

duties? A. I left the Milwaukee Company in August, 1914, to become electrical engineer and assistant to the manager of The Janesville Electric Company of Janesville, Wisconsin.

As I was the only professional engineer in the employ of the company besides the manager, my duties included the supervision of operation of four hydroelectric plants and two steam power plants; the supervision of all construction, the handling of complaints and line and plant troubles, and required the design of a new head gate structure for the main hydroelectric plant; the supervision of rebuilding of one hydroelectric plant destroyed by fire; the handling of rate matters, voltage tests, power surveys, system maintenance and other operating and financial matters. During this time, [737] I also designed and constructed a new white way street lighting system for the City of Janesville.

Q. When did you leave the Janesville Electric Company and what was your next connection and duties? A. I left Janesville in the summer of 1916 to accept a position with Harold Almert, Consulting Engineer in Chicago, who was engaged on a valuation of the Commonwealth Edison Company, at that time a 50 million dollar property. My duties involved the making of inventories of the substation properties and the underground conduit and cable system.

Q. What was your next position and your duties? A. In January, 1917, I became assistant electrical engineer on the design and construction of a blast furnace and steel mill plant for the Mark Manufacturing Company, now owned by the Youngstown Sheet and Tube Company at Indiana Harbor, Indiana.

In this position, I assisted the electrical engineer on the design, in keeping records of orders placed, shipments and materials and equipment required and on hand, and in the writing of specifications and in the inspection of the construction work.

Q. When did you leave the Mark Manufacturing Company and what was your next position and duties? A. In

August, 1917, I accepted a position with Perin and Marshall, consulting engineers and constructors of New [738] York City as electrical engineer in charge of design of the electrical work for the firm. This organization was engaged in designing and constructing blast furnaces and steel mills in India, China, Great Britain, Canada, and the United States, also, in the design and construction of vegetable oil mills, chemical plants, cement plants, and in mining and metallurgical operations associated with blast furnaces and steel mills.

I was with this organization for six years and in addition to my supervision of design, I also had charge of all the inspection, expediting, ocean shipping, specificating (sic) writing and purchasing and general office routine.

The work involved steam power stations, transmission lines, substations, by-product coke oven plants and similar work to that done by public utilities.

In this capacity, I personally purchased about $28,000,000 worth of material and equipment and handled the purchase of over $60,000,000 within this country, in Canada, and, after World War I, in various European countries.

During this period, I also visited all of the principal steel mills in St. Louis, Chicago, Cleveland, Pittsburgh, Bethlehem and others in the East and some of those in the South. I also had charge of the design of penstocks and anchorages for two 15,000 kilowatt capacity hydroelectric units operating at 1748 feet net effective head for the Andhra Valley Power Supply Company of Bombay, India, and [739] made numerous hydroelectric power estimates and studies.

Q. Please describe your duties in your next connection. A. In July, 1923, I became associated with the firm of McClellan and Junkersfield, Inc., of New York City, first as assistant electrical engineer and then on report and valuation work.

In this capacity, I participated in the design of Cahokia Station at St. Louis and the Avon Station at Cleveland, of high voltage transmission lines and step-up and step-down substations and in the preparation of estimates and had charge of the following undertakings:

Valuation of the Wichita, Newton and Hutchinson, Kansas, natural gas properties of the Electric Bond and Share Company;

A report on a steam electric power station and a district steam heating station for the City of Toronto, Canada;

A report on transportation for the Public Utilities Commission of the District of Columbia;

And a transportation survey for the City of Milwaukee, Wisconsin.

I also assisted and had charge of a portion of the investigation of all the Cities Service Company's utility properties in the United States and I had charge of the investigation in the States of Colorado and Wyoming, and of all the North American Light and Power Company properties in St. Louis, Missouri, and southern Illinois, and prepared numerous reports [740] and financial statements while with this organization.

Q. Mr. Tate, will you please describe your next connection and duties? A. In 1928, I became chief engineer and assistant to the president of the Trojan Engineering Corporation of New York City.

In this capacity, I supervised the design and construction of hydroelectric stations, steam power plant additions, Diesel Engine plants, transmission lines and substations, gas works, natural gas pipe lines, gas distribution systems, ice plants, irrigation plants and general utility structures. I made rate investigations and valuations for rate cases and for purchase and supervised the numerous investigations and the preparation of reports involving water power studies and additions and betterments to existing systems as well as new processes.

Q. When did you leave the Trojan Engineering Corporation and what was your next connection? A. At the end of 1931, I left the Trojan Company and in January, 1932, I became chief valuation engineer for the Public Utilities Commission of the District of Columbia.

In this capacity, I had entire charge of the valuation of the Washington Gas and Light Company, the Georgetown Gas-Light Company, and the Chesapeake and Potomac Telephone Company, and assisted on the valuation of the Capital Traction [741] Company and the Washington Railway and Electric Company and participated in valuation and rate cases.

In the Chesapeake and Potomac Telephone case, I prepared a trended cost of reproduction which was accepted by the Public Utilities Commission and the company. It was based upon trends developed by me largely from the Telephone Company's experience, records and costs.

Q. When did you become an employee of the Federal Government? A. In September, 1933, I accepted a position with the Public Works Administration as Engineer Examiner. My work involved the examination and preparation of reports covering the engineering soundness of applications for loans by municipalities and private interests for water supply and treatment, sewers, gas systems, hydroelectric and irrigation projects, Diesel Engine plants, and gas and electric distribution systems.

Q. How long were you with the Public Works Administration and what was your next position and your duties? A. I left the Public Works Administration on December 28, 1933, to accept a position with the Federal Power Commission as Director of its National Power Survey. My duties were as follows:

Director of National Power Survey, in charge of a survey of the water resources of the United States as they relate to [742] the conservation, development, control and utilization of water power; and of the relation of water power to other industries and to interstate and foreign

commerce; and of the transmission of electrical energy in the United States and its distribution to consumers, and the development of a program of public works.

From March 26, 1936, to July 1, 1941, I was Chief of Division of Gas and Electric Resources, formerly Division of Power Resources and Requirements, in charge of engineering studies and investigations of the power resources of the entire country, including studies of existing and potential markets, economic trends; growth of population and power demands; studies to encourage and promote coordination of power resources and requirements; investigations of the ownership, operation, and control of electric facilities; investigations of the cost of generation, transmission, and distribution of electric energy; and investigations relating to the transportation and sale of natural gas in interstate commerce, and investigations for other purposes; and such other duties as the Commission assigned.

From July 1, 1941, to June 13, 1942, active duty ending April 30, 1942, I was chief of the Bureau of Electrical Engineering and Director of the Commission's National Defense Power Staff. My duties were, under the administrative direction of the Commission and/or the Chairman. I supervised and directed; the collection and analysis of [743] reports covering the operation of utility systems; studies of existing power loads and probable power loads resulting from war orders; determination of capacity available to carry loads, and the areas in which additional capacity is needed and the amount and kind thereof; collaboration with the War Production Board and the Executive Office of the President in locating new industries; cooperation with the United States Corps of Engineers, the Bureau of Reclamation and the Tennessee Valley Authority in planning of power projects to meet the requirements of war industries; collaboration with the War Production Board in determining priorities for power facilities and the rationing of power in areas having deficiencies;

technical studies, in cooperation with the Commission's Bureau of Water Power, relating to power markets for dams to be constructed by the government for multi-purpose river basin developments; investigations and planning for interconnection and coordination of power supply facilities, including new and emergency transmission lines where needed; investigations of applications for approval of consolidations, mergers, security issues, acquisition or disposal of property of utility companies and of interlocking directorates; investigations to determine the jurisdiction of the Commission over electric utility systems; and to carrying out of the Commission's special defense power functions as defined in the Federal Power Act and in the President's letter to the Commission of June 14, 1940.

[744] Q. Will you state when you left the Federal Power Commission and describe your next connection and duties? A. I resigned from the Federal Power Commission effective April 30, 1942, and joined the staff of Chas. T. Main, Inc., architects-engineers of Boston, as its Washington representative, which position I now hold.

My work involved valuation and rate cases, investigations and reports for various agencies of the Federal Government, municipalities, and private interests and has covered the fields of hydroelectric power, steam electric power stations, Diesel Engine plants, transmission systems, munitions plants, natural gas pipe lines and distribution systems, and during the World War II, the handling of matters with the War and Navy Departments, the War Production Board and other war agencies.

MR. SPARKS: Mr. Examiner, I have a document entitled, "Cost of Constructing and Reproducing the Entire Physical Properties of the Pennsylvania Water & Power Company, and Susquehanna Transmission Company of Maryland, as of December 31, 1945." I ask that this be marked for identification as Exhibit No. 31.

TRIAL EXAMINER: The document may be marked Exhibit 31 for Identification.

(The document referred to was marked Exhibit No. 31 for Identification.)

[745] By MR. SPARKS:

Q. Mr. Tate, I hand you a document entitled——

MR. GOLDBERG (interposing): Just a minute. I would like to have a copy of it.

MR. SPARKS: Here is one. I am glad to give you a copy of it.

MR. GOLDBERG: Thank you.

By MR. SPARKS:

Q. Mr. Tate, do you have a copy of the document to which I have just referred, and which has been marked for identification as Exhibit No. 31? A. Yes, sir.

Q. The document entitled in part, "Cost of Constructing and Reproducing the Entire Physical Properties of the Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland as of December 31st"? A. Yes, I do.

Q. Can you identify it? A. Yes, I can.

Q. Mr. Tate, did you prepare this exhibit? A. It was prepared under my direction.

Q. What is the purport of this exhibit? A. This exhibit shows the cost of constructing and reproducing the entire physical properties of the Pennsylvania Water & Power Company, and its subsidiary company in Maryland, [746] the Susquehanna Transmission Company of Maryland.

Q. What is the basis of this exhibit? A. The exhibit represents the results of a study and an investigation of the cost of constructing the entire physical properties of the two companies as of December 31, 1945, by the use of modern construction methods.

Q. How much time was spent in this study and investigation? A. The work was started on or about January 12, 1946, by myself, and beginning on or about January 26 I had the assistance of several engineers from our home office in Boston most of whom had spent a month to six weeks going over the property, and I also had the assistance of several of the company's engineers and accountants and clerks, more or less, continuously up to the present time.

Q. Did you examine the properties that you are determining the cost of reproducing? A. I personally examined the Holtwood Hydroelectric Plant, the Holtwood Steam Plant, the Coal Preparation Plant, the River Coal Plant with the exception of floating equipment, all the major substations, buildings and structures of the companies, several of the patrolman's buildings, some of the buildings in the Village at Holtwood, and all of the company's transmission lines at various points.

Q. How much time was spent in your examination of [747] these properties? A. Three consecutive days, plus parts of other days.

Q. Had you at any time previously, visited the Holtwood Hydro Plant? A. When I was with the Federal Power Commission I visited Conowingo, Safe Harbor, and Holtwood in 1935 and I believe I also saw the Holtwood Hydro Plant in 1936 at the time of the World Power Conference in Washington, but do not recall going inside the plant at that time.

Q. How complete was your recent inspection? A. I examined the hydro plant, steam plant, coal preparation plant, river coal plant and some of the major substations thoroughly, except for the spillway of the dam at Holtwood, which was under water and could not be seen.

Q. Did you also examine the Safe Harbor Plant? A. Yes, sir.

Q. Mr. Tate, what was the purpose of your examination of the property of the company? A. The purpose

of my examination of the properties was to see the major items of equipment, the type of structures, the kinds of material used in the construction, and to familiarize myself with the methods used in the construction, and the character of the soil and rock encountered in the excavation.

The principal purpose of this examination was to compare [748] the Safe Harbor plant with Holtwood as we have used the actual cost of constructing Safe Harbor as a base for the determination of the cost of reproducing Holtwood.

* * *

[749] Q. In what way have you applied the Safe Harbor costs?

* * *

[750] MR. SPARKS: Would you like to have the question read?

THE WITNESS: No, sir; I have it. We have applied the Safe Harbor costs in three major phases of our work.

(A) In the use of a composite labor force such as would be required to reconstruct the Holtwood project.
[751] (B) In the use of Safe Harbor costs of excavation and concrete work.

(C) In the application of indirect costs and general overhead charges.

MR. GOLDBERG: Is that the end of the answer?

MR. SPARKS: Yes.

MR. GOLDBERG: I now move to strike the answer, Mr. Examiner, because, as I have previously stated, the witness is now engaged in setting forth the basis he used in reaching his results as set forth in the Exhibit 31, and I submit, Mr. Examiner, again that if the exhibit is to be rejected, by the same token, this witness is not entitled to testify on the methods he followed in determining that result.

TRIAL EXAMINER: The motion to strike is granted.

By MR. SPARKS:

Q. Will you explain the method of applying the Safe Harbor composite labor force?

MR. GOLDBERG: The same objection, Mr. Examiner, for the reasons already stated.

TRIAL EXAMINER: Objection sustained.

MR. SPARKS: May I take an exception to Your Honor's rulings and state at this time that the remainder of the testimony of this witness will relate to the study of the cost of constructing and reproducing the entire physical [752] properties of the Respondents as of December 31, 1945, as embodied in the document marked for identification as Exhibit 31, and ask for Your Honor's ruling as to whether we shall proceed, or whether such testimony is not admissible.

TRIAL EXAMINER: What is meant by that part of the heading that embraces "Cost of Constructing"? Cost of constructing as of what time?

MR. SPARKS: As of December 31, 1945.

TRIAL EXAMINER: So much of the exhibit and so much of the evidence as counsel would submit as relates to reproduction cost will be excluded.

MR. SPARKS: Well, if Your Honor please, reproduction cost may have several connotations. We have here an exhibit which has been described as the cost of constructing and reproducing the entire physical properties of these Respondents as of December 31, 1945. I don't know from Your Honor's ruling what you mean by "reproduction cost"—that is, whether your understanding of the term "reproduction cost" applies to this exhibit.

MR. GOLDBERG: May I inquire——

TRIAL EXAMINER (interposing): The Examiner understands that what you mean by "reproduction cost"

is what is generally known as reproduction cost new in a rate proceeding.

MR. SPARKS: I don't know that I mean that, if Your Honor please. This witness has prepared this study and he [753] is prepared to describe it in detail and show what it is. I think that is the only logical way to determine the character of the study.

TRIAL EXAMINER: The Examiner will inquire of the witness if this exhibit does not relate to what is generally known as reproduction cost as of some date subsequent to the actual date of construction of the property.

THE WITNESS: I might answer that by saying that this is not a hypothetical cost of reproducing the property such as is commonly considered, but it constitutes for the most part a trending of the original dollars of surviving property—the original cost of surviving property—trending those dollars up to December 31, 1945, price levels.

TRIAL EXAMINER: It does not relate in any way to what is known in the Federal Power Act as "Actual legitimate original cost"?

THE WITNESS: Yes, sir, it is related to that in so far as the company's costs themselves are the actual original cost of the property.

TRIAL EXAMINER: Those are your starting figures?

THE WITNESS: Yes, sir.

TRIAL EXAMINER: But your cost of constructing and reproducing the entire physical properties of the Pennsylvania Water and Power Company and the Susquehanna Transmission Company of Maryland as of December 31, 1945, except for the [754] starting figures, is not actual, legitimate original cost?

THE WITNESS: Except for the starting figures, and I might say that we have eliminated all of the original overheads and indirect charges, and have dealt only with labor

and materials, trending those labor and materials up to the December 31, 1945 price level, but in a few instances where modern construction methods would have reduced the cost considerably, we have used modern construction methods as determined from the cost of the Safe Harbor plant which was built in 1930 or 1931.

MR. GOLDBERG: Mr. Tate, may I ask a question, Mr. Examiner?

TRIAL EXAMINER: Proceed.

MR. GOLDBERG: Has anybody spent the dollars represented by your result?

THE WITNESS: Spent the dollars?

MR. GOLDBERG: Yes, expended them.

THE WITNESS: No one has expended them; no, sir.

MR. GOLDBERG: Obviously, Mr. Examiner, it is not actual cost, and it is only actual cost with which the Commission is concerned. I note that the exhibit contains a column—I think on every page beginning with page 1 and running through page 59—entitled "Actual original Cost of Surviving Property". I assume that that is what it purports to be, and on that assumption, of course, I would not object to [755] that column being received in evidence, because as I understand it, that is no more than the company's claimed actual legitimate cost as presented by Mr. Gunn, but related to surviving property.

TRIAL EXAMINER: Is counsel's statement as to the column headed, "Actual Original Cost of Surviving Property," correct?

MR. SPARKS: As I understood Mr. Goldberg's statement, he said "Actual Legitimate Cost". We have not placed anything in the record characterized as such. Mr. Gunn presented an original cost study.

TRIAL EXAMINER: Are all these figures to be found in Exhibit 31 for Identification in the column headed as described by the Examiner, are they all consistent with and to be found in the witness Gunn's exhibit?

MR. SPARKS: Let me inquire, Mr. Examiner.

TRIAL EXAMINER: Very well.

MR. SPARKS: I might say, if Your Honor please, that I am informed by Mr. Gunn that in the study which has been presented he has more than the $36,414,232 as shown on the first sheet of the tabulations in Exhibit 31.

MR. GOLDBERG: He has about $300,000 more, I think. I suppose that is the overhead. Is that right?

TRIAL EXAMINER: Just a minute. If Mr. Gunn is going to testify, he had better testify from the stand.

[756] MR. GOLDBERG: Perhaps Mr. Gunn had better tell Mr. Sparks and let Mr. Sparks answer.

The figure of $36,414,232 appearing on page 1 of Exhibit 31 in the column entitled, "Actual Original Cost of Surviving Property" is the same figure appearing in Exhibit 25, pages 2 and 3 as "Total Electric Plant in Service."

MR. SPARKS: That is correct. The difference, if Your Honor please, between the figures shown in Exhibit 31 and the total figures shown on Mr. Gunn's exhibit 25 is made up of, first, an adjustment as shown in line 42 of page 2 of Exhibit 25, and construction work in progress as shown in line 44 of page 3 of Exhibit 25 and Electric Plants Held for Future Use, shown in line 25 of Page 3 of Exhibit 25.

MR. GOLDBERG: May I address a question to the witness Tate?

TRIAL EXAMINER: Yes.

MR. GOLDBERG: Mr. Tate, is it not a fact that that portion of the title, "Cost of Construction," contained on the title page of Exhibit 31 relates to the column in the exhibit headed, "Actual Original Cost of Surviving Property"?

THE WITNESS: Well, I think it applies to both columns, because the second column is headed, "Trended Construction Cost as of December 31, 1945."

MR. GOLDBERG: You say it applies in the second column because you use the first column as a jumping-off [757] point?

THE WITNESS: We use a part of it. It is put there for comparison. We eliminated the overheads and used only the actual costs of labor and material.

MR. GOLDBERG: And the column has been included for comparative purposes only?

THE WITNESS: That is right.

MR. SPARKS: You are speaking now with respect to Mr. Goldberg's last question of the column headed, "Actual Original Cost of Surviving Property" on page 1 of the tabulation Exhibit 31?

THE WITNESS: Yes, sir.

TRIAL EXAMINER: The Examiner will not receive evidence of trended construction costs as of December 31, 1945.

MR. SPARKS: Well, now, may I ask if Your Honor intends that ruling to apply to Exhibit 31 marked for Identification in whole?

TRIAL EXAMINER: If the exhibit is offered as an entirety, the Examiner will be compelled to exclude it because of the inclusion therein of trended construction costs, but if the actual original cost of surviving property were offered independently, the Examiner would receive it.

MR. SPARKS: Then, to refer to the testimony at this moment, if Your Honor please, may I say that all of the [758] testimony which Mr. Tate would give at this time would relate to Exhibit 31 as a whole.

TRIAL EXAMINER: He will testify to actual original cost of surviving property?

MR. SPARKS: I think if I may put a question to the witness, if Your Honor please?

TRIAL EXAMINER: You may inquire of the witness.

By MR. SPARKS:

Q. What data would you testify to as to the source of the figures shown under the columns headed, "Actual Original Cost of Surviving Property"? A. That those figures were furnished to me by the company.

Q. Furnished you by the company? A. Yes.

TRIAL EXAMINER: That would be the sum and substance, substantially, of your testimony with regard to actual cost?

By MR. SPARKS:

Q. Would that be the same as the testimony with regard to actual original cost? A. We have made some examinations ourselves of some of the items in order to trend the cost, but so far as the figures set forth in this first column are concerned, they were furnished us by the company.

Q. Mr. Tate——

[759] MR. GOLDBERG (interposing): Mr. Sparks, it is a fact that the data is not being offered in support of the company's claim of cost or claim related to original cost; is that so?

MR. SPARKS: That is correct.

MR. GOLDBERG: In that event, the figures in that column, Mr. Examiner, are already in the record in

Exhibit 25, and of course, there is no need to duplicate them.

TRIAL EXAMINER: With that understanding of what the witness' testimony will be, the Examiner will rule that the testimony will not be received in evidence.

MR. SPARKS: That is on the understanding of what we have stated as to what this testimony of the witness will be related to Exhibit No. 31 for Identification?

TRIAL EXAMINER: Yes.

MR. SPARKS: Very well, sir. I desire to make a proffer.

TRIAL EXAMINER: Is this proffer in narrative form?

MR. SPARKS: It is.

TRIAL EXAMINER: Proceed.

MR. SPARKS: I desire to make the following proffer of reproduction costs concerning both Exhibit 31 for Identification and the testimony of the witness:

On behalf of the Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland we offer in evidence Exhibit No. 31 and the testimony of Mr. Thomas R. Tate, Washington representative of the firm of Charles T. Main, [760] Incorporated, in explanation and support of said exhibit. Mr. Tate is a graduate engineer of the University of Missouri with the Degree of Bachelor of Science, Electrical Engineering, 1912. He had several years' experience with operating utilities in various departments before graduation and since graduation has had thirty-four years' experience, four years with operating utilities and twenty years with consulting engineers and engineering and constructing organizations, and ten years of government experience of which 8½ years were with the Federal Power Commission, and 1½ years with the Public Utilities Commission of the Dis-

trict of Columbia. His experience covers the design, construction, operation and valuation of utility properties and industrial plants. He is a fellow in the American Institute of Electrical Engineers, a member of the American Society of Mechanical Engineers, American Society of Civil Engineers and other engineering organizations, and a registered professional engineer of the State of New York. He has given testimony before various utility regulatory commissions, and Federal District Courts. The exhibit is entitled "Cost of Constructing and Reproducing the Entire Physical Properties of the Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland as of December 31, 1945." This exhibit and the testimony in connection therewith establishes the cost of construction and reproduction cost new of the physical [761] property of these companies in the amount of $62,410,377.

This cost of reproducing the properties of the two companies is not a hypothetical cost of reproduction containing various speculative assumptions. It is, in fact, an adjusted trend to December 31, 1945, price levels of the actual original dollars invested in the surviving property.

The exhibit and testimony are based upon the following premises:

1. That the entire properties would be reproduced identically as they were originally constructed, except some minor items no longer obtainable in which case, the cost of the nearest equivalent modern substitute was used.

2. That substantially the same construction period as was encountered in construction of the Safe Harbor project was used in reproducing the hydroelectric plant, and that the Holtwood Steam Plant would be constructed during a portion of the same period.

3. That similar climatic and river flow conditions prevailed.

4. That the modern construction methods, facilities, and procedure that were actually used in the original construction of Safe Harbor would be repeated in reproducing the Holtwood Hydroelectric plant and similar modern methods would be employed in reproducing the Holtwood Steam Plant.

5. That modern construction methods would also be used [762] in reproducing the transmission lines, substations and other property of these companies.

6. That wages and material prices would remain as they were on December 31, 1945, throughout the entire reproduction period.

7. That sufficient labor would be available to reproduce the properties at the wage rates prevailing as of December 31, 1945.

8. That sufficient materials and equipment would be available at published and quoted prices on December 31, 1945, within prevailing OPA and other governmental regulations.

The adoption of the above premises considerably simplifies the determination of the reproduction cost and makes the total cost conservatively below the probable cost if the properties were to be constructed today; because there have been increases in wage rates and material prices since December 31, 1945.

Exhibit No. 31 and the testimony of Mr. Tate in support thereof are offered for the following purposes:

1. As a basis for determining the extent of the justification for the replacement of property so that the integrity of the original investment of the owners of this property will remain unimpaired.

2. To be used in connection with determining the rate of return approximately applicable to whatever

rate [763] base or bases the Commission may determine, so as to test the propriety and reasonableness of the rate of return and the return and the return allowance by comparison with the returns currently available to other and competitive enterprises of corresponding risk and uncertainty.

3. To be considered and weighed by the Commission in determining the reasonableness of any of the rates, charges or classifications of Respondents as may be subject to the jurisdiction, if any, of the Commission by determining the fair value of the properties of Respondents used and useful in the rendering of the particular services for which such rates, charges and classifications are demanded, observed, charged or collected, and by determining the fair return allowable on such fair value.

Do I understand that Your Honor rules that Exhibit 31 marked for Identification is not admitted in evidence?

TRIAL EXAMINER: May the Examiner see counsel's statement as he has read it?

MR. SPARKS: Yes. Also, I would like to inquire whether Your Honor rules that the testimony in regard to Exhibit 31, whether that is admitted in evidence?

TRIAL EXAMINER: Exhibit 31 for Identification will not be received in evidence. The testimony of the witness as embraced in counsel's proffer of proof will not be [764] received in evidence.

MR. SPARKS: We take an exception, if Your Honor please.

* * *

[765] WILFRED McGREGOR HALL,
was sworn as a witness for and on behalf of the Respondent, and after being examined testified as follows:

DIRECT EXAMINATION.

By MR. SPARKS:

Q. What is your name? A. Wilfred McGregor Hall.

[766] Q. What is your occupation? A. I am an engineer.

Q. Where do you live? A. 1514 Beacon Street, Brookline, Massachusetts.

Q. Where did you receive your education? A. I am a graduate of the University of Colorado, Boulder, Colorado, in 1916. Majored in hydraulic engineering and received a degree B. S. in Civil Engineering.

Q. By whom are you employed? A. I am a director, stockholder and active member of the firm of Charles T. Main, Inc., 201 Devonshire Street, Boston, Massachusetts.

Q. Are you a licensed engineer? A. I am a licensed professional engineer in the State of New York, and the insular possession of Puerto Rico. I have been a senior member of the American Society of Civil Engineers since 1928 and have been listed in "Who is Who" in Engineering since 1937.

Q. How long have you been engaged in practice in engineering? A. 30 years, chiefly in hydroelectric development including dams, power plants, reservoir relocations, construction, preliminary investigations, designs, hydraulic and power studies, cost estimates, large and small projects for 24 years; and consulting engineering, sales [767] engineering, steam plant construction, industrial plant construction, marine construction and military service for the remaining six years. I have been employed in an executive and administrative capacity for the past 24 years.

Q. How much of the time was spent on actual construction? A. 14 years, including work as field and assistant engineer on three projects covering the period of

three years. Engineer in charge or superintendent on six projects covering the period of eleven years.

Q. What is your experience in engineering design? A. Seven years, covering various types of permanent structures and construction plants as well as various temporary structures, camps, villages, offices, shops and coffer dams of various types. My designing experience covers preliminary studies, preliminary designs, appraisals and reports on power and industrial plants and projects.

Q. Have you been design and construction manager of large projects? A. Yes. I held that position on three projects covering a period of four years.

Q. Have you conducted preliminary investigations of various projects? A. Yes. I spent approximately three years entirely in this work.

[768] Q. And you have spent some time in consulting, sales and the army? A. Yes, two years.

Q. In connection with all of this work, have you made a great many estimates of the cost of engineering work? A. Yes, over a period of 25 years, I have made estimates for twenty or more large construction projects which were actually constructed and have made sixty or more bids or preliminary estimates on projects of various sizes. I have also made estimates and appraisals for many types of structures chiefly in connection with hydroelectric developments.

Q. What are the nature of projects on which you have gained your construction experience? A. Dams, dykes, coffer dams, canals, revetments, pipe lines, flumes, penstocks, surge tanks, reservoirs, power plants, pumping plants, switch yards, transmission lines and tunnels.

Q. And you have done design estimates and preliminary investigation in connection with all those types of structures? A. Yes, and also in connection with caissons, marine construction, building construction, industrial construction, docks and bridges.

Q. Have you laid out construction plant, designed and specified proper construction equipment for numerous [769]

projects? A. Yes, that has been a part of my experience for some twenty years.

Q. Will you please give us a record of your employment since you have been practicing engineering? A. From May, 1916, to December, 1917, I was employed by Chas. T. Main, Inc., as field and assistant engineer on the Holter hydroelectric project for the Montana Power Company. This was a 70,000 hp installation costing about $6,000,000 and included 300,000 cubic yard gravity concrete dam.

From January, 1918, to March, 1918, inclusive, I was superintendent of construction for the U. S. Indian Irrigation Service on a small flood control project involving earth and rock jetties, dykes and small dams.

From May, 1918, to December, 1918, I was in the U. S. Army discharged as a Second Lieutenant.

From January, 1919, to January, 1920, inclusive, I was employed by J. A. P. Christfield Contracting Company now United Engineers and Constructors on the Stevenson hydroelectric project of the Connecticut Light and Power Company which involved the installation of a 200,000 cubic [yard] gravity dam, ultimate capacity of 50,000 hp and expenditure of about $6,000,000.

From February, 1920 to April, 1920, I was resident [770] engineer for Chas. T. Main, Inc., on mill building construction costing about $300,000 for the Sanford Mills, Fall River, Massachusetts.

From May, 1920, to March, 1921, I was in direct charge of a portion of the field investigation of hydroelectric sites located on tributaries of the Congo River, Africa. I was employed under Mr. W. F. Uhl, member of the firm of Chas. T. Main, Inc., in this investigation for the Union Miniere du Haut Katanga, Elizabethville, Belgian Congo, Africa, for the proposed construction of high concrete dams and large power installations.

From April, 1921, to August, 1922, inclusive, I was employed by Chas. T. Main, Inc., in connection with the design

and completion [of] plans for several projects in the Belgian Congo, Africa, and several minor hydroelectric projects.

From September, 1922, to April, 1924, I was employed by the U. G. I. Contracting Company, now United Engineers and Constructors, on preliminary investigation of hydroelectric developments for the Connecticut Light and Power Company and the Gloversville New York Utility Company and during this period in 1923, I worked on special designs and construction for a steam power plant.

From May, 1924, to November, 1925, I was in engineering charge and later construction superintendent for the [771] U. G. I. Contracting Company on the Soft Maple hydroelectric project of the Northern New York Utilities, Inc. This project involved a 30,000 hp installation and cost approximately $3,500,000.

From December, 1925 through June, 1926 I was in charge of field investigation on the Housatonic River for the Connecticut Light and Power Company. These were preliminary investigations involving large concrete earth dam projects and power plants.

From July, 1926, to July, 1928, I was employed by the U. G. I. Contracting Company on the Rocky River hydroelectric project of the Connecticut Light and Power Company. The project involved the construction of earth dams, dykes, canals, generating station and pumping plant. I was in charge of engineering and general superintendent of the project, and in 1928 was also district construction manager. My duties not only included the complete hydroelectric project, but also supervision of construction of various substations and transmission line installation.

From August, 1928 to December, 1928, I was in charge of construction on a harbor pipe line installation for the New Haven Gas Company, involving the construction of 6,000 lineal feet in tide water, 40 feet deep.

From January, 1929 to June, 1931 I was superintendent [772] of construction in charge of engineering and construc-

tion on the Jerry O'Connell, Banaeiras, Brazil, hydroelectric project owned by the Compania Electrica de Bahia. I was employed by the Electric Bond and Share Company and the project involved the construction of a hollow, multiple arch concrete dam about one-third of a mile long. The entire project cost approximately $6,000,000.

From July, 1931 to June, 1932, I was engaged in the sale of used construction equipment and steel sheet piling in New York City.

From July, 1932 to October, 1932 I was located in New York City engaged in the practice of consulting engineer.

From 1933 to April, 1937, I was construction engineer in charge of construction on the Wheeler Dam and power plant project of the Tennessee Valley Authority. The ultimate cost of this project was approximately $45,000,000.

From July, 1937 to July, 1941, I was employed as manager of construction and design on several projects for the Insular Government of Puerto Rico, costing about $13,000,000. The projects involved the construction of 3 power plants for an installed capacity of 50,000 kva and included 500,000 cubic yards of concrete, 2,000,000 cubic yards of earth excavation and fill, 1,000,000 cubic yards of rock excavation, 3 tunnels, totaling 3 miles in length, 10 miles of concrete and steel pipe, electrical substation [773] and transmission lines.

From August, 1941 to date, I have been with the firm of Chas. T. Main, Inc. I have been an active member of the firm and a stockholder since October, 1942 and a director since January, 1943. My duties are those of a consultant and executive in connection with designs, construction and appraisals of hydroelectric water supply, water treatment and industrial projects.

Hydroelectric power plant designs totaling 1,200,000 kw in six projects for the U. S. Army Engineers—including Wolf Creek—300,000 kw, Dale Hollow—60,000 kw, Center Hill—150,000 kw and Table Rock—140,000 kw. Also during

this period, I have made appraisals of hydroelectric project with a total capacity of 250,000 kw.

Q. Mr. Hall, have you been engaged in making certain studies and estimates related t the properties of the Pennsylvania Water and Power Company and the Susquehanna Transmission Company of Maryland? A. I have.

Q. Would you please explain the nature of these studies and estimates? A. My work has consisted mainly of making estimates of the cost of a substitute plant.

Q. Just what do you mean by substitute plant? A. In our studies of the Pennsylvania Water & Power [774] Company and the Susquehanna Transmission Company of Maryland properties, consideration was given to the fact that changes in the art had taken place since some of these properties were originally constructed and estimates were made of the cost as of December 31, 1945 of building modern plants to take the place of those presently in use.

Q. Did these estimates cover all of the properties of these companies? A. No, the items covered by the substitute plant estimates were, first, the Holtwood Hydro Plant with the exception of three items, namely land and land rights, the operators' village and roads, railroads and bridges; second, the Holtwood Steam Plant excluding the river coal plant and third, that portion of the two companies' transmission plant represented by the Holtwood Substation, the 66 KV Transmission lines between Holtwood and the Highlandtown Substation and the Highlandtown substation itself, excluding only such land and land rights as are associated with them.

Q. And how were these estimates related to the study which has been marked for identification Exhibit 31? A. I have prepared a summary and an outline of the procedure followed in estimating the substitute plant and the manner of combining these estimates with costs shown in the study marked for identification as Exhibit 31 to determine the cost as of December 31, 1945 of rebuilding [775] all of the properties of these two companies.

MR. SPARKS: Mr. Examiner, I have a document entitled "Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland, outline of Estimating Procedure, substitute and reproduction plant costs as of December 31, 1945," which I ask to be marked for identification as Exhibit 32.

TRIAL EXAMINER: The document may be marked Exhibit 32 for Identification.

(Document marked for identification Exhibit No. 32.)

By MR. SPARKS:

Q. Mr. Hall, do you have before you the document to which I have just referred, which has been marked for identification as Exhibit 32? A. I do not.

Q. I will now hand it to you. Do you now have it? A. I now have it.

Q. As I understand it, the first pages in the exhibit marked for identification as Exhibit 32 contain a description of your procedure in arriving at the summary shown on pages 12, 13 and 14 and the remaining pages show certain supporting data. Is that correct? A. Yes, sir.

Q Now, please, what do the various columns in the summary sheets 12, 13 and 14 of the exhibit marked for [776] identification as Exhibit 32 show?

MR. GOLDBERG: Mr. Examiner, may we have a statement from counsel as to the purpose of Exhibit 32 for Identification, and the testimony?

MR. SPARKS: The purposes, I will state, briefly, at this time are related to the rate of return study, and to contentions that may be made by the company for rate base and to our depreciation studies.

TRIAL EXAMINER: The relationship with respect to these studies set forth is on the basis on substitute plant based on the trended cost?

MR. SPARKS: Page 12 of the exhibit——

TRIAL EXAMINER: (Interposing.) Based on what theory of cost?

MR. SPARKS: I think that if Your Honor would not mind having the witness answer that, he could do it better than I.

[777] THE WITNESS: Based upon the substitute plant as a plant of modern design as described here in the exhibit.

TRIAL EXAMINER: Using what?

THE WITNESS: Using a plant of modern design, practice and construction costs as of December 31, 1945.

TRIAL EXAMINER: Construction costs as of December 31, 1945?

THE WITNESS: Yes. That applies to a large portion of the features of the plant. Other features are presumed to be the same as the original, and in some cases, such as the matter of railroad relocation where items are turned over to these other parties at the time of reconstruction.

MR. GOLDBERG: Mr. Examiner, is this witness being offered to testify as to the alleged actual depreciation of the properties of the Susquehanna Transmission Company of Maryland and the Pennsylvania Water & Power Company?

MR. SPARKS: He is not.

MR. GOLDBERG: What is the pending question?

(The pending question was read.)

MR. GOLDBERG: Mr. Examiner, for the reasons already stated in connection with Exhibits 30 and 31, I object to the question.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: The first column shows the trended cost statement which has already been described. The second

[778] column represents the trended costs of the original plant items which are substitute plant the estimate is to replace. The third column shows that portion of the trended cost statement which represents property of modern design and for which no substitution would be made today that would differ materially in design, performance or cost.

The fourth column is a summary of the substitute plant estimate.

The fifth column is the sum of columns 3 and 4. This sum shown in Column 5 represents the cost at December 31, 1945, of rebuilding all of the properties of these two companies in accordance with modern design and practice.

The figures shown for land and land rights, Account 340 in Columns 1, 3, 4 and 5 were obtained from the company.

By MR. SPARKS:

Q. What is the total cost of rebuilding all of this property as of December 31, 1945?

MR. GOLDBERG: Objection, Mr. Examiner, for the reasons already stated.

TRIAL EXAMINER: The objection is sustained.

MR. SPARKS: May I say at this point, if your Honor please, that all of the rest of the testimony which we would offer through Mr. Hall will relate to the exhibit marked for identification No. 32. Is it the Examiner's ruling that that testimony will not be or is not admissible in evidence?

[779] TRIAL EXAMINER: It is.

MR. SPARKS: I take an exception. We desire to make an offer at this time, if your Honor please, of the testimony which would be tendered in the record by Mr. Hall, of Exhibit 32.

On behalf of the Pennsylvania Water & Power Company and the Susquehanna Transmission Company of Maryland, we offer in evidence Exhibit No. 32 and the testimony of Mr. W. M. Hall, member of the firm of Chas. T. Main, Inc., in explanation and support of said exhibit. Mr. Hall, an active member of the firm of Chas. T. Main, Inc., is a graduate of the University of Colorado, a member of the American Society of Civil Engineers and a licensed professional engineer of the State of New York. His engineering experience covers a period of 30 years during which time he has been active in design, supervision and construction of power plants both steam and hydro as well as having had a vast experience in other engineering fields. The exhibit is entitled "Substitute and Reproduction Plant Costs as of December 31, 1945." This Exhibit 32 and the testimony in connection therewith establishes the cost of a modern substitute plant in the amount of $55,394,792. This study shows the cost of a modern substitute plant at the same location, of the same capacity and capable of performing the same functions as property of present companies now perform. It is based upon the following premises:

[780] 1. That a modern new hydroelectric plant would be substituted for the Holtwood hydroelectric plant and located at the same site.

2. That a modern new steam-electric power station and coal preparation plant would be substituted for the present Holtwood steam station and coal preparation plant and located at the same site.

3. That the two 25 cycle transmission lines running from Holtwood Substation to the Highlandtown Substation in Baltimore would be replaced with a modern transmission line of higher voltage and located along the same right of way but with a 50 foot wider right of way wherever required.

4. That the Holtwood Substation and the Highlandtown Substation would be replaced with modern substitutes and located at the same sites.

5. That all the other properties of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland would be reproduced exactly as they now exist which includes land and land rights, roads, railroads, trails, the Holtwood Village, the transmission lines other than the 25 cycle Holtwood to Highlandtown lines, and the substations other than Holtwood and Highlandtown, together with all other general plant.

6. That the costs shown in this study for the identical items replaced as referred to in paragraph 5 above, were [781] obtained from company Exhibit 31, entitled "Cost of Constructing and Reproducing the Entire Physical Property of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as of December 31, 1945."

7. That as to the items which are not identically reproduced, the new structures, equipment, and so forth, would be those used in a modern plant constructed today at the same location in a plant of like capacity and capable of performing the same functions that the companies' present plant now performs.

8. That substantially the same construction period as was encountered in the construction of Safe Harbor and other similar large projects was used in reproducing the substitute plant.

9. That average climatic and river flow conditions prevail.

10. That the modern construction methods, facilities, and procedure that were actually used in the original construction of Safe Harbor and other large

projects would be repeated in reproducing the substituted portions of the companies' plant.

11. That wages and material prices would remain as they were on December 31, 1945, throughout the entire reproduction period.

12. That sufficient labor would be available at the [782] prevailing wage rates used to reproduce the properties.

13. That sufficient materials and equipment would be available at present published and quoted prices within prevailing OPA and other governmental regulations.

Exhibit No. 32 and the testimony of Mr. Hall in support thereof are offered for the following purposes:

1. As basis for determining the extent of the justification for the replacement of property, for determining the proper accruals for the depreciation in the property so that the original investment of the owners in property will remain unimpaired.

2. To be used in connection with determining the rate of return appropriately applicable to whatever rate base or bases the Commission may determine, so as to test the propriety and reasonableness of the rate of return and the return allowance by comparison with the returns currently available to other and competitive enterprises of corresponding risk and uncertainty.

3. To be considered and weighed by the Commission in determining the reasonableness of any of the rates, charges or classifications of Respondents as may be subject to the jurisdiction, if any, of the Commission, by determining the fair value of the properties of Respondents used and useful in the rendering of the particular service for which such rates, charges and classifications are demanded. observed. charged [783]

or collected, and by determining the fair return allowable on such fair value.

I understand, if your Honor please, that your Honor rules that Exhibit 32 marked for Identification and the testimony of Mr. Hall with regard to that exhibit are not to be admitted?

TRIAL EXAMINER: May I see counsel's statement as he read it?

MR. SPARKS: Yes, sir. (Handing paper to Trial Examiner.)

TRIAL EXAMINER: Exhibit 32 for Identification will not be received in evidence and the testimony of the witness Hall likewise will be excluded in so far as the testimony has been described in counsel's offer of proof.

MR. SPARKS: May I ask whether your Honor rules that if the testimony of Mr. Hall be not fully described in the proffer such as that if I say that all of Mr. Hall's testimony which he would give would relate to Exhibit 32, that that testimony would likewise be excluded?

TRIAL EXAMINER: Yes.

MR. SPARKS: I take an exception.

* * *

[795] TRIAL EXAMINER: The Examiner will not receive the testimony to which counsel has referred.

MR. SPARKS: Very well, sir. We take an exception to the Examiner's ruling excluding the evidence, and I will make an offer of proof.

We offer the testimony of Roland L. Bortner, assistant secretary and right-of-way engineer for the Pennsylvania Water & Power Company, as follows: That Mr. Bortner is a graduate of the Baltimore Polytechnic Institute, has attended Pennsylvania State College and Johns Hopkins University, that he has

had experience in purchasing and valuing rights-of-way since 1923. Between June, 1919, and 1920 he held positions connected with land and right-of-way surveys with the Baltimore & Ohio Railroad and the City of Baltimore. He has had experience in the valuation of land and land rights since 1923 with the Pennsylvania Water & Power Company. He cooperated with the War Department in the acquisition of a right-of-way between Gunpowder and Magnolia, Edgewood Arsenal, and in the last five years has done considerable work for the Consolidated Gas Electric Light & Power Company of Baltimore in connection with the acquisition of rights of way in [796] Baltimore County, Maryland. That he made appraisals of the fair market value of the land and land rights of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as of December 31, 1945, covering transmission line rights-of-way and substation or terminal sites listed in Account 340 used by the witness Tate in his reproduction study, Exhibit 31, and testimony, in the amount of $4,027,220, and used by the witness Hall in his substitute plant study, Exhibit 32, and testimony, in the amount of $4,080,689.

The testimony of the witness Bortner is offered as evidence of the fair value of land and land rights of the Respondents carried in Account 340 for rate base purposes and for any other appropriate purpose.

And I understand that your Honor's ruling is that such testimony would not be admitted?

TRIAL EXAMINER: That is correct.

* * *

[797] TRIAL EXAMINER: The hearing will be in order.

Whereupon

HERBERT B. DORAU,

a witness produced on behalf of the Respondents, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. HULL:

Q. Please state your name, address and occupation. A. My name is Herbert B. Dorau, I reside at 268 Mountain Avenue, Ridgewood, New Jersey. I am a professor of Economics in New York University, chairman of the Department of Public Utilities and Transportation in the School of Commerce of New York University, and professor in the Graduate School of Business of New York University. I have been a consulting economist for more than twenty years.

Q. Will you summarize your education and professional training? A. I was graduated from Lawrence College, Appleton, Wisconsin, in 1919 with an A. B. degree. After one year of graduate study in economics at the University of Wisconsin I was granted an M. A. degree. I continued graduate study at the University of Wisconsin in the field of public utilities and transportation while serving as an instructor. The University of Wisconsin granted the Ph. D. degree in 1928.

[798] During the years 1920-1925 I was an instructor at the University of Wisconsin teaching courses in economics, transportation, money and banking and corporation finance.

In 1925 I accepted appointment as assistant professor of Economics in charge of instruction in public utilities at Northwestern University School of Commerce.

In 1928 I became associate professor. In 1929 Northwestern University granted me a year's leave of absence during which time I engaged in economic and financial consulting work in New York. My leave of absence was extended for a second year during which year I was a lecturer

in Public Utilities in New York University while engaging in financial consulting work.

Since 1932 I have been on the faculty of New York University, as associate professor of Economics to 1936 and as professor of Economics since that time.

During the years 1921 to 1929 I was successively research assistant, research instructor and research associate in the Intitute for Economic Research, engaging in and directing economic research in the fields of public utilities and urban land economics.

I am the author of the following books and articles—and I will be glad to shorten the proceedings and offer this for the record if you so desire.

• • •

[799] TRIAL EXAMINER: You may do so, and the reporter will incorporate it into the record at this point.

(The books and articles referred to are as follows:)

Books

"The Changing Character and Extent of Public Ownership in the Electric Light and Power Industry;"
"Urban Land Economics" (with A. G. Hinman);
"Materials for the Study of Public Utility Economics"; joint author;
"Economic Principles and Problems;"
"Planned Society, Yesterday, Today and Tomorrow;"
"Real Estate Merchandising."

By Mr. Hull:

Q. Will you state in somewhat greater detail the character and range of your professional work as an economist? A. My first employment in an economic capacity was for the Public Utilities Acquisition Committee of the Common Council of the City of Milwaukee during 1920, to determine the probable cost of capital for municipal utility acquisition purposes.

[802] This involved a study of the comparative cost of public utility capital and was my initial study of the problem of the cost of money to public utilities. I have since engaged, in so far as my university obligations would permit, in a wide range of economic, financial, accounting and statistical studies concerned with public utility industries and others.

From 1936 to 1938 I made an extensive analysis of the reports of the F. T. C. investigation of utility accounting and financial practices, during 1939 and 1940 I made an extensive statistical analysis on a nationwide basis of comparative electric rate levels and factors influencing rate levels. During the years 1928 to 1932 I had extensive experience in the field of investment analysis and some experience in the financing of public utility enterprises.

I have from time to time acted as consultant to the New Jersey Board of Public Utility Commissioners and served on the Port Protection Committee of the New York Port Authority; during 1930 to 1931 I was a member of the President's Committee on Housing and Home Ownership.

I have appeared in a professional and expert capacity before the Public Utility Commissions of the States of Illinois, Pennsylvania, Indiana and New York; before the Securities and Exchange Commission, the Interstate Commerce Commission and the Federal Power Commission in cases involving the rate of return, depreciation and accounting matters.

[803] I have appeared, by invitation, before professional societies and industrial association meetings such as the American Economic Association, the American Gas Association, and the National Accounting Conferences of the electric and gas utility industries. I originated and for a number of years made the periodic analyses of utility financing published by the Journal of Land and Public Utility Economics.

Q. Have you prepared an exhibit setting forth the changes in the supply of money in the United States over the period 1914-1946? A. I have prepared a tabulation and charts setting forth deposits, investments and loans of all banks as well as currency in circulation and gold stocks in millions of dollars for the period 1914-1946, yes, sir.

[804] Q. Will you briefly explain the meaning and significance of this exhibit?

• • •

[807] A. Very well. The chart in this exhibit graphically sets forth the rise in total bank deposits, gold stocks and currency in circulation, 1914-1945, and the rise of loans from 1914 to 1929 and the subsequent decline of loans. It can be readily and quickly seen that total deposits have gone through two periods of substantial increase since 1933. The first rise took place from 1933 to 1943, during

which period total deposits rose from $36,919 million to $71,027 million. The second and even more rapid rise brought the total of the June 30, 1942, of $71,027 million to $137,688 million as of June 30, 1945.

• • •

[810] MR. HULL: Mr. Examiner, I would like to have marked for identification as Exhibit No. 33 a document bearing this title:

"Before the Federal Power Commission—In the matter of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, IT-5915—Testimony and Exhibits of Dr. H. B. Dorau relating to the Supply of Money and the Value of the Dollar."

• • •

[812] Q. Dr. Dorau, do you have before you a copy of the exhibit which I have just described and which has been marked for identification as Exhibit No. 33? A. I have.

Q. Will you state whether or not you prepared the explanatory matter preceding the charts in this exhibit? A. I did.

Q. And the charts were prepared under your supervision? A. They were.

• • •

Q. Doctor, what is the meaning and significance of total deposits in dollars? A. Total deposits in dollars measure the quantity of dollar money which the banks owe the depositors and which the depositors can withdraw from the banks and spend as they may choose, time deposits with notice, other deposits on demand. Total deposits measure the potential expressible money spending power of depositors. Deposit dollars are money and thus a major part of the money supply of the country. [813] The increase in deposits therefore measures, to a large extent, the increase in the supply of money in the United States.

Q. Are there other components of the money supply? A. Yes, currency in circulation.

Q. Will you explain your exhibit in further detail? A. With respect to currency in circulation, reference to the chart indicates a gradual increase until 1939 when a rapid rise began. From a level of $6,461 million as of June 30, 1938, the currency in circulation rose to $9,612 million in 1941 to $17,421 million in 1943 and to $26,746 million in 1945.

As of June 30, 1945, currency in circulation was more than eight times the amount of June 30, 1914, and more than four times the quantity as of June 30, 1938.

Gold stocks, because they are at least in theory the basis of our monetary standard of value, are also important. The gold stock of the country has increased from $1,699 million as of June 30, 1915, to $20,213 million as of 1945. The rapid increase in gold stock took place after 1933, since which date the rise has been five-fold.

In 1933 the total of deposit money and currency in circulation was $42,353 million; in 1945 the total of deposit money and currency was $164,667 million, or close to a four-fold increase.

[814] The difference between total deposits and loans is also important. Loans represent the extent to which people are in debt to the banks as distinguished from deposits which reflect the extent to which banks are in debt to their depositors.

As of June 30, 1919, following the last previous war, the excess of deposits over loans may be seen by reference to the tabulation which is a part of this exhibit, to have been only $7,322 million—$32,012 million less $24,690 million.

As of June 30, 1945, the excess of deposits over loans was $109,709 million, or fifteen times the excess of deposits over loans in 1919.

Q. What is the economic significance of this substantial increase in the quantity of money for the determination of a fair return in utility regulation? A. The money revolution in the United States since 1933 constitutes the

largest monetary inflation in the history of the country. The increase in the number of dollars of money in the country since 1933, and even more strikingly since 1941, is without parallel and unprecedented in this country.

The dollar is the economic measure of investment and return, of sacrifice and income. The quantity of dollars is therefore one of the important factors determining the size of the dollar as a unit for the measurement of [815] economic sacrifice and return.

The yardstick as a linear measure does not change in linear significance when the number of yardsticks is increased, but the size of the dollar as a standard of measurement tends to decrease with an increase in the effective quantity of spendable dollars.

A change in the magnitude of any unit of measurement and enumeration destroys its validity as a standard of measurement and comparison.

Merely calling the changed unit of measurement by the same name does not make it the same. The summation of such changed units of measurement, simply because they continue to have the same label, is as invalid as adding pears, peaches, peas and persimmons. The accounting summation of unlike dollars does not measure the investment sacrifice.

If the mile as a unit of linear measurement should have changed in magnitude as the dollar has changed as a measure of sacrifice and gain, no sensible person would draw any conclusions from a comparison of ton-miles of railway service in 1907, 1917 and 1935. Before any informed person would believe that the ton-miles in 1917 exceeded the ton-miles in 1935, he would demand that such calculations be translated into an equated or equivalent number of ton-miles on the basis of the relative magnitude of the different length of the miles used.

[816] Progress in every field of human endeavor has depended on the establishment of standard and comparable units of measurement. When the horsepower was the

power of a horse instead of the energy equivalent of 550 foot-pounds per second, the enumeration of horsepowers was of limited accuracy and meaning.

When the foot was literally a "foot-length" instead of, as now 12 inches, linear measurement and comparison were uncertain and unreliable. It would be no more inappropriate to add nautical miles and land miles than to add 1907 dollars and 1917 dollars, but no respectable geographer would do so.

If the mile as well as the dollar has been redefined at 59 per cent of its former magnitude in 1934, geographers and engineers would not make comparisons and enumeration without equating and adjusting for the difference in the actual comparative magnitude of the standard of measurement.

Q. Can the differences in the dollar as a unit of measurement of economic cost and income be equated so as to afford a reasonably comparable standard for the measurement of investment and return in utility regulation? A. Yes, the variability of the dollar as a unit of economic measurement can be measured with reasonable accuracy so as to afford the basis for equating one size dollar with another. The size of the dollar is measured by the goods and services which it can buy. Money is but the medium of exchange [817] and the dollar is the unit of measurement, but the dollar varies in its purchasing power, its exchangeability for goods and services, and thus in its size.

This variability of the dollar can be equated so that the dollars of different size can be legitimately added and expressed as the equivalent of a fixed and certain sum of any other size of dollar, just as the sum of nautical and land miles can be equated and expressed as either so many nautical miles or the equated number of land miles.

Q. Have you prepared an exhibit which sets forth the change in the yearly average size of the dollar over the period 1902-1945? A. Yes, I have prepared a tabulation which sets forth the purchasing power change in the size

of the dollar by years from 1902 to 1945 and a seven-year moving average from 1905.

Column 1 identifies the years from 1902 to 1945.

Column 2 records the wholesale price index as reported by the United States Department of Labor, Bureau of Labor Statistics, with the average for 1926 equal to an index of 100.

Column 3 translates the index of wholesale prices into the purchasing power of the dollar which is determined by calculating the reciprocal of the annual averages in Column 2, i. e., by dividing the index of wholesale prices [818] into 100.

Column 4 records the total of the seven years of Column 3; i. e., the total of the years 1902-1908 for 1905, and for each succeeding seven-year group in the same way down to 1943, for which a five-year total is ascertained, and for 1944 for which year a three-year total is determined, and for 1945, for which a one-year total is taken.

Column 5 records the calculated seven-year moving average of Column 3 plotted on the fourth year center, except that for the year 1943 a five-year average is calculated and recorded, for 1944 a three-year average, and for 1945 a one-year average.

Column 6 records the translation of the seven-year moving average index of the purchasing power of the dollar to an index with 1945 as 100 for ease of comparison.

Q. Does the United States Department of Commerce calculate and report the changing purchasing power of the dollar? A. Yes, in the Survey of Current Business.

Q. Does it use the same index of wholesale prices which you have used? A. Yes, the Department of Commerce calculates the purchasing power of the dollar as the reciprocal of the index of wholesale prices.

Q. Why did you use a seven-year moving average, [819] except as noted? A. The period of time from 1902 to 1945 is long enough to accommodate a seven-year average, and a seven-year average satisfactorily eliminates

minor and short-term changes which are more in the nature of fluctuations.

Q. Why did you use a five and three-year average for 1943 and 1944 and the one-year average for 1945? A. In order to taper off the seven-year average and bring it down to the current time and date of 1945. This is satisfactory and justified since the trend during these years was in the same direction and accelerating. Moreover, since the continuing trend in 1945 and 1946 is strongly in the direction of higher prices and a cheaper dollar, the result is conservative.

Q. What, in brief, does the index developed, in Column 6 of this exhibit, disclose as to the changing economic size of the dollar? A. Treating the 1945 dollar as 100, or par, the dollar of 1905 was 73.2 per cent larger. The average size of the dollar was larger than in 1945 in every year down to 1918. From 1918 to 1923 it was slightly and temporarily below 100, but since 1922 the purchasing power of the dollar has been above 1945 by as much as 42.3 per cent in 1934 and on the average for the period 23 per cent above 1945.

[820] From 1905 to 1918 the purchasing power of the dollar was on the average 50 per cent above 1945.

From 1918 to 1923 it was on the average 5 per cent below 1945.

For the entire period 1905-1945, the average purchasing power of the dollar on the basis calculated in column 6, was 28 per cent above 1945.

Q. Do you find in these evidences of the changing magnitude of the dollar any basis for the conclusion that the changes in the economic size of the dollar can be disregarded because the fluctuations are compensatory? A. No. There is no evidence to support such an assertion in this exhibit or, in my opinion, anywhere. I have just pointed out that the average of the entire period is 28 per cent above 1945 and that in every year except five during a 44-year period the purchasing power of the dollar was

above 1945. My use of a seven-year moving average is proper treatment of mere fluctuations in the short term, and even if in the long term there were compensations, changing investments and investors would make the assumption of a constant dollar inequitable.

The long term trend, however, is not and has not been compensatory. The price level has been rising since 1897 and the dollar reciprocally declining in size. The trend continues.

[821] Forces and factors justifying the expectation that the dollar will continue to shrink in size are clearly in evidence. Among the more obvious of these factors are the unparalleled quantity of money, the rate of spending, the size of the public debt, and the new and high levels of wages.

Q. Has the dollar been legally re-defined during the period covered by your exhibit? A. Yes, before January 31, 1934 the "dollar" was the name for 23.22 grains of fine gold; after January 31, 1934 the name "dollar" was used to mean 13.714 grains of fine gold. The legal post-1934 dollar is only 59 per cent the size of the pre-1934 dollar. The dollar has been changed legally as well as economically, but the name remains the same, and so bookkeepers add and subtract these different dollars without distinction.

Q. Has the distinction between the calculation of economic sacrifice and return in nominal and actually comparable dollars been recognized in other economic areas? A. Yes. In the field of wage determination and administration the distinction between nominal dollar wages and real wages is fully recognized and well understood by wage earners and others.

Q. What is the economic meaning of the term investment? A. The investment process consists of converting liquid [822] or alternatively applicable economic resources into direct goods capable of income production. Invest-

ment involves the sacrifice of alternative goods and the alternative goods given up measure the investment made.

An investment may be made through the medium of money—as is most common in our day—or by direct investment of labor, risk-taking and the cost of waiting or postponement of income to the future. The investment in any economic undertaking may and commonly does consist of both money investment and direct investment. In any case the investment is measured by the sacrifice made to produce a future income, whether accounted for by bookkeeping or not, and whether in the form of money expenditures or direct sacrifices made without the intervention of the medium of exchange money.

Q. Assuming the entire investment of two enterprises to be reflected by the same number of accounted-for dollars, does it follow that the investment in the two enterprises is the same? A. No, it is the same only in the number of nominal dollars. If those dollars are not of equal size and economic significance, the investment sacrifice is not the same. If one was in 1918 dollars and the other in 1905 dollars, the actual investment would—as measured by the index of dollar purchasing power in Column 6 of my exhibit—be 73 per cent greater in 1905 dollars than the investment [823] of the same number of accounted-for 1918 dollars.

A larger number of small dollars may actually constitute a smaller investment than a smaller number of larger dollars.

Q. What is the economic meaning of the investment standard for utility rate-making? A. The investment standard proposes that the investor receive a fair return on the dollars—or dollar equivalent—which he gave up and invested, i. e; on the sacrifice which he made. It is a sacrifice standard as distinguished from a value standard and cannot be fairly construed to mean the sacrifice of an equal number of other dollars since they would not measure the investment sacrifice made.

Q. Does the sum of the nominal dollars invested—in money and/or goods and services—measure the investment actually made if made in dollars of different economic size and purchasing power? A. Obviously not. An investment made by the sacrifice of dollars having a purchasing power of 100 would be equal to the investment of twice the same number of 50-cent dollars. It seems almost too simple to have to explain that an investment sacrifice of 1,000,000 hundred-cent dollars is the same as an investment of 2,000,000 fifty-cent dollars.

* * * *

[828] MR. GOLDBERG: Let us put it this way: The prices of the very informed investor and the informed investor will both reflect in varying degrees the purchasing power of the dollar; is that not so?

THE WITNESS: I think as a general thing, that is satisfactory, yes.

* * * *

By MR. HULL:

Q. Is it possible to express the nominal investment in an enterprise made in various kinds of dollars in terms of an equivalent number of dollars of equal size and equal investment significance? [829] A. Yes, very easily. The relative size and investment significance of the dollars sacrificed each year can be determined by reference to an index of purchasing power. By weighting the dollars invested each year by their purchasing power an average puchasing power dollar related to any desired base can be obtained and the investment in terms of any weight of dollar determined. In this way the constant dollar equivalent of the investment of heterogeneous dollars of different vintage and size can be determined.

Q. Have you applied this method to the dollars invested in electric plant in service of Pennsylvania Water & Power Company including Susquehanna Transmission Company to determine the investment sacrifice of 1945 dol-

lars? A. Yes, I requested that the company provide me with a distribution of the $36,414,232 of electric plant in service, before adjustments and construction work in progress and property held for future use, by years according to year of origin of the dollars of electric plant in service December 31, 1945.

The Company provided the desired information and I have used the same in the first numerical column of a two-page tabulation and chart which I have prepared.

Q. Will you explain this tabulation and chart?

MR. GOLDBERG: Mr. Examiner, I think it is appropriate for me to make an objection to that question. That question [830] now brings us to the application of the testimony we have here to the actual cost of Pennsylvania Water & Power Company properties and the Susquehanna Transmission Company properties as claimed by those companies. The result, Mr. Examiner, is not the actual cost base or price. And this brings into the record elements which the Commission has rejected, and which the courts have sustained in reviewing the Commission's rejection.

I submit, Mr. Examiner, that it does not alter the situation any to protest that the translation of the actual investment by application of the current purchasing power of the dollar does not represent the result which can be termed reproduction cost, or trended original cost, or any other name that you may care to apply. The fact still remains that it is not actual cost, which is the only type of evidence the Commission has signified it is willing to receive. The fact that it is not actual cost, Mr. Examiner, I submit is fairly evident by the earlier answer of the witness when he stated:

"The investment standard proposes that the investor receive a fair return on the dollars, or dollar equivalent, which he gave up and invested,

that is to say, on the total sacrifice made. It is a sacrifice standard as distinguished from a value standard and cannot be fairly construed to mean the sacrifice of an equal number of other dollars since they would not measure the [831] investment sacrifice made."

In other words, Mr. Examiner, the translation that the witness comes up with in his exhibit and testimony, certainly that is not the actual cost of the properties of the Respondent companies.

TRIAL EXAMINER: Does counsel for the Respondents desire to reply?

MR. HULL: Yes, Mr. Examiner.

First, the Respondents believe that the exhibit and testimony of Dr. Dorau show very much more clearly than anything else could show what was the actual cost of the present property of the Respondent company.

It is a study which has not been, to our knowledge, ruled upon by this Commission as to its relevancy or admissibility, or by any court in the land.

A similar study was presented to the Examiner in the Safe Harbor Case, which case is now before the Commission for determination. After having been offered there and considered by the Examiner for some days, he ruled that it should be admitted because it was the type of study which had not theretofore been passed upon by the Commission.

MR. GOLDBERG: Mr. Examiner, may I bring counsel for Respondents down to date?

A somewhat similar study expressing alleged cost of these items in terms of valuations of the current purchasing power [832] of the dollar, was presented in the City of Pittsburgh v. Pittsburgh and West Virginia Gas Company and others, and in the matter of Pittsburgh and West Virginia Gas Company and Kentucky-

West Virginia Gas Company cases, Dockets G-627 and G-635 before Trial Examiner Marsh, who was the sitting Examiner in those cases.

On objection by counsel for the Staff—and it so happens, Mr. Examiner, that I am Counsel in those cases also—the Examiner excluded such evidence on the grounds that it no longer was evidence of actual cost, which was the only character of evidence that the Examiner would receive, in the light of the Commission's decision.

While it is true, Mr. Examiner, that the presiding Examiner in the Safe Harbor Case received the evidence, it is obvious from his careful consideration of the evidence, the very considerable misgivings he had in regards to its reception, and I submit that an examination of this case clearly discloses, and it is all laid out in the brief of that case, Mr. Examiner, that such evidence would not be admissible, and I am certain that the Commission will so hold when it considers the case.

I further submit, Mr. Examiner, that we are now arguing upon a question which has already been ruled upon by the Examiner in the excluding of IV-A of Schedule 31, I believe, or perhaps 32.

[833] TRIAL EXAMINER: Do the other counsel desire to be heard, counsel for the interveners?

(There was no response.)

MR. HULL: Mr. Examiner, might I make this suggestion: The testimony which Dr. Dorau has prepared explanatory of this exhibit, of it we have now heard 12 pages, and four and a half pages remain. I suggest that we hear the remainder of the testimony before your Honor makes his ruling.

* * *

TRIAL EXAMINER: Data contained on the schedule and chart now under discussion relating to the original

investment in electric plant in 1945 dollars will be excluded.

MR. HULL: I apologize for my lack of familiarity with the procedure in this form. Do I understand that I shall proceed with the questions and answers, and then make a further offer, or should I now make the offer? Is now the time to make the offer?

TRIAL EXAMINER: That is a matter in counsel's discretion. You can advise the Examiner of what you intend to offer in evidence from this point on, and the Examiner will indicate whether he will or not accept it.

MR. HULL: I do not know how I can advise you without [834] reading the testimony.

TRIAL EXAMINER: The Examiner will not receive any testimony or evidence going to the original investment in electric plant in terms of 1945 dollars.

MR. HULL: Your Honor, I do not understand. I have tried to make it clear that this is not the only purpose for which this witness is presented. This witness is also being presented for his evidence and testimony bearing upon the rate of return.

TRIAL EXAMINER: Counsel had better proceed with the questions.

MR. HULL: Thank you.

By MR. HULL:

Q. Dr. Dorau, will you explain this tabulation and chart, please?

TRIAL EXAMINER: There is an objection to that. The tabulation and chart referred to as the chart headed, "Pennsylvania Water & Power Company, Original Cost of Electric Plant in Present Dollars," and the tabulation headed "Original Cost of Electric Plant in Present Dollars—the Purchasing Power of the Dollar as Measured by Wholesale Prices as Reflected

by a Seven-Year Moving Average—1905-1945", is that correct?

MR. HULL: Yes.

TRIAL EXAMINER: The Examiner will sustain the objection to that question on the ground that inseparably bound [835] up in that tabulation and in the chart is this matter of original investment in electric plant in 1945 dollars.

MR. HULL: Is that in addition to your Honor's previous ruling?

TRIAL EXAMINER: That is a statement of the grounds for the ruling.

MR. HULL: I will proceed.

By MR. HULL:

Q. Dr. Dorau, is the $50,091,106.00 indicated on the tabulation and chart upon which the Examiner has just ruled, the cost of reproduction of electric plant in service as of December 31, 1945?

MR. GOLDBERG: Mr. Examiner, before the witness answers, and before I object, I would like to make one comment. One figure is $50,091,000 odd, which is the figure which appears on the tabulation; and then we have the figure of $50,093,000 odd on the chart. I assume that the figure on the chart was rounded off, but it was rounded off to too great an extent.

MR. HULL: My question really refers to the same figure, whether there is some typographical error or not.

MR. GOLDBERG: I was wondering whether they were the same, or whether there was some arithmetical error.

MR. HULL: I think there is.

MR. GOLDBERG: I object to any testimony bearing on the figures stated by counsel which are the results

of the [836] application of the purchasing power of the dollar.

TRIAL EXAMINER: Let the Examiner ask the witness a question whether that is or not true: Doctor, is it or not a fact that the $50,093,000 is or not the result of the application of the purchasing power of the dollar to the original cost of electric plant of Pennsylvania Water & Power Company?

THE WITNESS: Yes, as calculated and established, and as previously described.

TRIAL EXAMINER: The objection is sustained.

By MR. HULL:

Q. Dr. Dorau, is the determination in this exhibit the same as the trended original cost? A. No, it is not.

MR. GOLDBERG: Same objection. I move to strike the last answer to the extent given.

TRIAL EXAMINER: The answer as given by the witness to the pending question is stricken. The objection to the question is sustained.

By MR. HULL:

Q. Dr. Dorau, in your opinion, is the fair original cost in homogeneous current dollars a useful factor in the determination of a fair return under regulation?

[837] MR. GOLDBERG: Same objection, Mr. Examiner?

TRIAL EXAMINER: Objection is sustained.

By MR. HULL:

Q. Dr. Dorau, in your opinion, is the fair original cost in—I beg your pardon, I asked you that question—is it, in your opinion, useful for the determination of the rate base or the fair rate of return? A. It——

MR. GOLDBERG: Same objection.

TRIAL EXAMINER: The objection is sustained.

MR. GOLDBERG: Mr. Examiner, may I add at this time that obviously, since the index used by the witness does not relate to utility construction costs, it is utterly immaterial and irrelevant to any issues in this case.

TRIAL EXAMINER: You may proceed.

MR. HULL: Now, Mr. Examiner I desire to offer in evidence Exhibit No. 33.

The Respondents offer to prove by the witness on the stand, Dr. Dorau, a duly qualified economist with a wide experience in the field of public utility regulation, that he has made studies and prepared exhibits based on reliable statistics which have been compiled by the several departments and bureaus of the United States Government, which show the following:

First, the amount of money in circulation, and the [838] availability for the purchasing of commodities and services, and for investment in each of the years from 1916 to 1945, inclusive.

Secondly, the purchasing power of the dollar in each year from 1905 to 1945, inclusive, as measured by wholesale prices and as reflected by the seven-year moving average, and

Third, upon the basis of these studies and data furnished to him by Respondents and in evidence in this proceeding before the Commission to show:

(a) The original investment of the Respondents in the electric plant in each year from 1905 to 1945, both, inclusive, measured by nominal dollars.

(b) The same original investment in each year from 1905 to 1945, both inclusive, measured by dollars having a purchasing power of dollars in 1945.

(c) The original investment of the Respondents in electric plant was cumulative to the end of each year

from 1905 to 1945, inclusive, measured in nominal dollars, and

(d) The same original investment cumulative to the end of each year from 1905 to 1945, inclusive, measured by dollars having the purchasing power of dollars in 1945.

These studies and exhibits and the testimony of Dr. Dorau relating to it are further offered for the following purposes: First, to be considered and weighed by the Commission in determining the appropriate rate of return which the [839] Commission should apply to the rate base of the Respondent companies in order to determine the rates, charges, classifications, rules, regulations, practices or contracts of the Respondents, subject to the jurisdiction of the Commission, if any, are just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be observed and enforced.

Secondly, to be considered and weighed by the Commission in determining the rate base to which the Commission should apply the appropriate rate of return in order to determine whether the rates, charges, classifications, rules, regulations, practices or contracts of the Respondents which are subject to the jurisdiction of the Commission, if any, are just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be observed and enforced.

Third, to be considered and weighed by the Commission in ascertaining how many dollars having the purchasing power of 1945 dollars, the Respondents must receive in the near future from their operations in order to avoid the infringement of their constitutional right under the Fifth Amendment to the Constitution of the United States to earn a fair return for the amount of the property which they have dedicated to the public use.

Fourthly, to be considered and weighed by the Commission [840] the actual investment which the investors of Respondents have made in the property which they have dedicated and devoted to public use.

MR. GOLDBERG: Mr. Examiner——

TRIAL EXAMINER (interposing): Has counsel finished?

MR. HULL: Yes.

MR. GOLDBERG: May I inquire, first, whether that offer also includes the offer of the Exhibit No. 33?

MR. HULL: It is intended to include the exhibit excepting insofar as the testimony found in the exhibit is of record.

MR. GOLDBERG: The thing that troubles me—I tried to listen carefully—it seems to me that, at the outset, the offer of proof undertook to prove through the witness on the stand testimony which the Examiner has admitted in the first twelve pages of the witness' testimony.

[841] MR. HULL: All I intended to include in the offer was the testimony in the latter part, which was excluded by the Examiner as the questions were asked.

MR. GOLDBERG: With that amendment, I think that clears it up.

With respect to the exhibit, Mr. Examiner, I might state that I do not object to the first chart, as such; nor to the tabulation following that first chart, as such; since that is related to the testimony which has been admitted;

Nor do I object to the third tabulation, consisting of 2 pages, the testimony relating to that, Mr. Examiner, has been admitted.

It is the record tabulation in the exhibit.

But I do object, Mr. Examiner, to the tabulation, consisting of 2 pages, which precedes the last page of exhibit, and to the last page of the exhibit, which is the chart applying Dr. Dorau's theory.

I recognize that the portions of the exhibit to which I have objected contain evidence which has already been admitted, in part, and is being offered for admission, in part.

I have reference to the original investment in electric plant in terms of nominal dollars as expressed by this witness in his exhibit; to the purchasing power of the dollar—1945 equals 100, as expressed by the witness in his exhibit.

Inasmuch as, however, Mr. Examiner, such evidence is [842] already in the record, and will be received in the record, I assume, I do not exclude those portions of the tabulations of the chart to which I have objected from my objection.

* * *

TRIAL EXAMINER: The Examiner will rule to exclude Exhibit No. 33, with the following statement:

That if the data contained on the chart headed, "Deposits, Investments and Loans of All Banks; Currency in Circulation and Gold Stocks 1914-1946 (millions of dollars)" and the tabulation headed likewise;
[843] And the further tabulation entitled, "The Purchasing Power of the Dollar as Measured by Wholesale Prices as Reflected by a Seven-Year Moving Average—1905-1945," are submitted in the form of a separate exhibit, that exhibit will be received in evidence.

The further evidence of the witness, Dorau, as stated in counsel's offer of proof, will not be received.

MR. HULL: Mr. Examiner, in view of your Honor's ruling, we may wish to submit a new exhibit including the tabulations which you indicated you would admit.

However, we are very near the end of our direct case, and it may not be physically possible for us to make up those exhibits in time to get them in before the conclusion of our direct case. May we have leave to submit them as soon as it is possible to prepare them?

TRIAL EXAMINER: Yes, advising the Examiner as early as possible when you expect to be able to submit the new exhibit.

• • •

[844] MR. MILLER: Mr. Examiner, I move that the order of procedure be changed so that Pennsylvania Public Utility Commission may produce its evidence on the issue of allocation of any rate reduction after Pennsylvania Water & Power Company, the Federal Power Commission Staff, and Consolidated Gas Electric Light and Power Company of Baltimore have presented their evidence on this issue.

The basis for this motion is the belief that under the suggested changed procedure, duplication of testimony would be avoided and our evidence could be presented in more concise and expeditious form.

MR. FRANCE: If Your Honor please, the Public Service Commission of Maryland likewise desires to move that the order of procedure be changed so that it will be permitted to introduce its evidence after the staff of the Federal Power Commission has introduced their evidence.

TRIAL EXAMINER: The Examiner may say that he has been authorized by the Commission to entertain the motions that counsel have now made, and the Examiner assumes that counsel for the Consolidated Gas Electric Light and Power Company of Baltimore renews his motion made yesterday afternoon?

[845] MR. STUBTEVANT: I do.

TRIAL EXAMINER: Upon further deliberation, the Examiner will rule that the order of presentation of evidence in this proceeding be changed so that the Commission Staff's presentation of evidence will immediately follow completion by the Company of its presentation, and thereafter the order as between Consolidated Gas Electric Light and Power Company of Baltimore, Pennsylvania Public Utility Commission and the Public Service Commission of Maryland will be observed as previously set.

You may proceed with the witness.

MR. SPARKS: If Your Honor please, may the order to which Your Honor has referred authorizing you to change the order of procedure be made a part of the record in this case by reference?

TRIAL EXAMINER: I don't know in just what form that is and I am not able to rule in accordance with that at this moment. The Examiner does not consider it necessary, however.

MR. SPARKS: May I ask Your Honor then as to the date when Your Honor was authorized to change the order of procedure in the case?

TRIAL EXAMINER: Yes, the Examiner was authorized this morning.

MR. SPARKS: This morning?

TRIAL EXAMINER: Yes.

• • •

[849] GEORGE W. SPAULDING,

• • •

DIRECT EXAMINATION.

By MR. MYSE:

• • •

Q. Mr. Spaulding, considering the nature of Penn Water's and Safe Harbor's contracts with Baltimore Company, and the coordinated operation of their hydro resources with the steam generating resources of their customers, including Baltimore, is it your opinion that a cost of service determination can be made of Penn Water's and Safe Harbor's costs for firm power services rendered to Baltimore Company? A. Yes, it is.

[850] Q. Have you made such a study? A. Yes, such a study has been made under my direction.

Q. Will you state the results of that study? A. That study shows that Penn Water's and Safe Harbor's costs for the firm power services rendered to Baltimore Company in 1945, were $5,645,000, and that the costs for such services to be rendered in 1946 are estimated to be $5,623,000.

Q. Are such cost determinations for firm power services only? A. Yes.

MR. MYSE: Mr. Examiner, I ask to have identified as Exhibit No. 34 a chart with the label thereon: "Pennsylvania Water and Power Company, Safe Harbor Water Power Corporation and Susquehanna Transmission Company of Maryland—Facilities Used in Rendering Firm Power Services to Baltimore Company."

TRIAL EXAMINER: The document may be marked Exhibit No. 34 for Identification.

(The document referred to was marked Exhibit No. 34 for Identification.)

By MR. MYSE:

Q. Mr. Spaulding, does this chart which has been marked for identification Exhibit No. 34 show the general

location of the facilities used in rendering firm power service to Baltimore Company? A. It does.

• • •

[856] Q. Do the costs determined for firm power services rendered to Baltimore Company in your study include the costs incurred by Penn Water and Safe Harbor in rendering services to the Pennsylvania Railroad in Maryland? A. Yes, it does.

Q. How are Penn Water and Safe Harbor compensated for such costs? A. The costs incurred by Safe Harbor in rendering joint services to Pennsylvania Railroad in Maryland are included in the basis for the bills rendered by Safe Harbor to Baltimore Company and Penn Water under the Safe Harbor contract identified as Items E, F and G.

In connection with such billing, as shown by Exhibit 17, Baltimore Company pays Safe Harbor 2/3 of such cost and Penn Water pays 1/3. Penn Water's compensation for its costs incurred in rendering joint services to Pennsylvania Railroad in Maryland is received as revenue from Baltimore Company under Penn Water's agreement with Baltimore Company, identified as Items H and I; costs for such services are included in the basis for the bills rendered under this contract.

• • •

[862] Q. Are you familiar with Exhibit 31 prepared by Mr. Tate offered in evidence and with the supporting testimony offered in this proceeding? A. Yes.

Q. Are you familiar with Exhibit 32 prepared by Mr. Hall and offered in evidence and with the supporting testimony offered in this proceeding? A. Yes.

Q. Are you familiar with Exhibits 29 and 30 prepared by Dr. Foster and offered in evidence and with the supporting testimony that he offered in this proceeding? A. Yes.

Q. From your knowledge of Exhibits 29 and 30 and 31, can you say whether or not the cost of firm power serv-

ices rendered to Baltimore Company by Penn Water for 1945 and 1946 would be increased or decreased if you had used the property construction costs from Mr. Tate's Exhibit 31, together with the appropriate rate of return as testified to by Dr. Foster, instead of the investment costs and the rate of return used in your Exhibit 35?

MR. GOLDBERG: Objection, Mr. Examiner, on the ground that the question involves proposed testimony and exhibits [863] offered which were excluded.

TRIAL EXAMINER: Objection sustained.

MR. MYSE: I take an exception.

By MR. MYSE:

Q. From your knowledge of Exhibits 29 and 30 and 32 can you say whether or not the cost of firm power services rendered to Baltimore Company by Penn Water for 1945 and 1946 would be increased or decreased if you had used the property costs from Mr. Hall's Exhibit 32, together with the appropriate rate of return as testified to by Dr. Foster instead of the investment costs and rate of return used in your Exhibit 35?

MR. GOLDBERG: Objection.

TRIAL EXAMINER: Objection sustained.

MR. MYSE: In view of the Examiner's rulings to the last two questions, I desire to make a proffer. We offer to prove by the testimony of this witness, Mr. Spaulding, that Penn Water's costs of rendering firm power services to Baltimore Company are $560,000 in excess of Penn Water's costs shown on Exhibit 36 if the property construction costs shown in Mr. Tate's Exhibit 31 are used together with the appropriate return as testified to by Dr. Foster or offered in evidence in connection with his testimony, instead of the investment costs and return used in Exhibit 35.

Likewise, we offer to prove by this witness that [864] Penn Water's costs of rendering firm power serv-

ices to Baltimore Company are $269,000 in excess of Penn Water's costs as shown on Exhibit 36 if the costs shown in Mr. Hall's Exhibit 32 are used, together with the appropriate return as testified to by Dr. Foster or offered in connection with his testimony, instead of the investment costs and return used in Exhibit 35.

TRIAL EXAMINER: The evidence offered will not be received.

• • •

[867] MR. HULL: Mr. Examiner, Respondent companies have now completed the direct testimony which they have prepared and will offer for the specific purposes of determining as of December 31, 1945:

Firstly: The amount or extent of actual depreciation which existed in the properties of the companies as of that date;

Secondly: the amount of the depreciation reserve [868] balance which was adequate as of that date;

Thirdly, the amount which should be charged for annual depreciation for a reasonable period in the future beginning with that date.

They have not as yet and are not now ready to offer certain studies which they propose to prepare and offer which:

Firstly: Will show the effect of the use of a depreciated rate base which the Commission staff has indicated that it proposes to recommend to the Commission upon the investors of the two companies; and

Secondly: Will rebut the testimony which Commission counsel at transcript page 45 stated that he will present with respect to the earnings of the investors of the companies in the past.

In his opening statement of the issues, Commission's counsel beginning at transcript page 43, line 15,

and extending to page 44, line 22, stated that he would offer proof to show that the "gross investment for the rate base is $32,920,738 which is $5,663,494 less than Holtwood's book figures" and that the last mentioned sum "does not represent actual cost and should be disallowed."

At transcript page 45, lines 4 and 8, Commission's counsel stated that the Staff "will also present analyses of the company's past earnings which will show that the company has earned at least 10 per cent rate of return on its net [869] investment including working capital during its entire period of operations."

He further stated at transcript page 44, lines 11 to 15 that "the Staff does not propose to recommend to the Commission that Holtwood be required to change from the straight line method of depreciation it has always been using". He did not state when he referred to "the straight line method of depreciation it has always been using" that he meant to include as a part of that method the use of an undepreciated rate base with a credit to the rate payers of a reasonable rate of interest on the balance in the depreciation reserve. That is in fact the method which Holtwood has been using since 1931.

It is scarcely to be supposed that he intended to indorse that method, because later on the same page of the transcript at lines 21 and 22 he stated that "the present book reserve is not excessive and should be used in reaching a net rate base in this case".

This statement as we understand it implies that the Staff proposes to recommend that the present book reserve be deducted from the original investment in arriving at a rate base to be used in this case.

Now, a consideration of these statements of Commission counsel will show that the studies which Respondents will make and to which I have just referred are composed almost wholly of evidence that will be

in rebuttal to that which the [870] Staff will offer, and in order that these studies may be most helpful to the Commission they should be based upon the facts as presented by the Commission staff in its direct case.

In order to prepare the studies the Respondents will require all the data necessary to duplicate the Commission's Staff's computations of the depreciation reserve requirements as of December 31, 1945, for Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, together with an explanation of the methods followed in arriving at its results.

These data should include:

(A) The amounts of depreciable property in the same detail as to accounts which Commission's Staff used in computing the company's reserve requirements and the annual allowance for depreciation.

(B) The life table used by Commission's Staff in the same detail as to elements for items of property which the staff used in computing any and all composite lives which entered into any part of their computations.

(C) The date fixed by the Commission's Staff as the date of the beginning of commercial operation of the initial project.

(D) Yearly additions to plant with the original cost and life table used with respect thereto both in the same [871] detail as to accounts which the Commission's Staff used in computing the company's reserve requirements and allowance for depreciation.

(E) Debits to the depreciation reserve by years and by accounts in the same detail as stated in Paragraph (A) above.

(F) The amounts of total investment in electric plant as of the end of each year, and the amount of working capital both as recommended by the Commission Staff.

We bring the matter to the attention of the Examiner at this time for the reason that if the Examiner should be of the opinion that the proposed studies and the testimony relating to them would not be properly in rebuttal, then the Respondent would be compelled to request to the Commission's Staff to supply these data as promptly as possible with the necessary information, and we would have to ask the Examiner for a recess of a sufficient period thereafter to permit these studies to be completed before our direct case is closed.

[872] Now, if I may repeat very briefly the fact that these studies we will make are primarily rebuttal, and if we are furnished promptly with this information that we will be able, by the time that we come to rebuttal testimony, to have the studies completed, but we do not want to close our direct case, by any chance, these are going to be ruled out as rebuttal.

TRIAL EXAMINER: As you say, this is a short summation of your entire statement.

MR. HULL: Yes.

TRIAL EXAMINER: Does Staff counsel have any statement to make in reply?

MR. GOLDBERG: Yes, Mr. Examiner, but a brief one, not as extended as Mr. Hull's, I am sure. Mr. Hull has listed a series of data which he says will be required by the companies to undertake to prepare certain studies which he states he believes are in the nature of rebuttal studies. I am pretty sure that much, if not all, of the data he mentioned will be presented by the Staff when it puts on its case, in the exhibits, or in the oral testimony, or in both. If it does not appear in the exhibits, or in the oral testimony, it

probably appears in the working papers, exhibits very often representing mere summarizations. It may be, however, that certain of the data, without attempting to name it, may not appear either in the working papers or in the testimony, or in the exhibits. [873] I am not saying that may be the case. I do not know. If that be the case, there is no obligation upon the Staff to supply any data named by the counsel that does not appear in the exhibits, or the testimony, or the working papers. The Staff presents its case on the basis that it deems sufficient. That is the only obligation it has in the case. I might inquire at this time whether Mr. Hull now commits himself to furnishing to the Staff all of the data in their possession bearing on the items enumerated by him.

* * * *

MR. HULL: Mr. Examiner, as I understand it, we do not have such data and, therefore, could not supply such data. However, the data requested are, as we understand, all necessary for the computation of the reserve requirement, and the annual depreciation allowance on the theories entertained by the Commission's Staff. I am perfectly willing to commit myself at this time to furnish you with any information that we have, but some of this we do not have——

MR. GOLDBERG (interposing): All right.

[874] MR. HULL: —and never used.

MR. GOLDBERG: Then we both make the same commitments in this case, and I say to the extent there may be such information that counsel for the Respondents seeks in the working papers of the Staff or the exhibits or the oral testimony presented here it will be solely because the Staff presented its case—I mean if it is not in such places—it will be solely because the Staff presented its case in the manner that it deemed sufficient, and such data as does not appear in those

sources I state that it will be the responsibility of the Respondents to secure from their own records which are, of course, the sources of our information.

• • •

TRIAL EXAMINER: Now in the matter of counsel's statement, the Examiner is not able at this time to rule what is rebuttal and what is not proper rebuttal. The ruling can only be made when the case has progressed to a stage beyond this.

The letter addressed to Pennsylvania Water & Power Company, November 16, 1945, by the Acting Secretary of the [875] Commission, states what the order of procedure at this hearing will be as far as Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland are concerned. And the Examiner has called upon those companies to present their evidence in chief, or the case on direct, and can only leave it up to counsel for those two companies to determine what their direct testimony and evidence will be.

If counsel desires to take the risk of a later ruling on the part of the Trial Examiner as to what is proper on rebuttal, that is his responsibility. The Examiner will be guided by the general rules of law as to what rebuttal, proper rebuttal testimony is.

MR. SPARKS: May I say, Mr. Examiner, that we have about reached the point where we would normally close, but Mr. Hull has pointed out the situation which results from the order of the Commission requiring us to go first, in this respect: That we were not advised of any of Commission's counsel's contentions until the opening part of the case. It was, therefore, encumbent upon us to guess as to what we ought to put in, as to what might meet future contentions that may be made by Staff counsel, and by others, all others, in fact. So it looks to us as if your Honor's ruling leaves us in

this position where we cannot say that our direct testimony is closed, since it may very well be that other testimony we have, when we have seen the Commission's case, will be relevant, [876] but may be subject to a technical statement as to whether it is direct or rebuttal, or redirect. So I am saying, in substance, simply this, your Honor, that we have completed our presentation, and we have complied with the order as far as we can see, but we do not feel that we ought to be required to say that our direct testimony is now completed when we are not in the position, because of the order of procedure, to state whether or not our direct testimony is completed.

TRIAL EXAMINER: What was that last?

MR. SPARKS: What I am saying, in substance, is simply this, your Honor, that we believe we have complied with the order as far as we can see, but we do not feel that we ought to be required to say that our direct testimony is now completed when we are not, in fact, in a position because of the situation in regard to the order of procedure to state whether or not our direct testimony is, in fact, completed.

Just one other point in that connection: That is this, do we understand now that your Honor has been authorized to change the order of procedure? We do not know whether that extends to the point that your Honor can say that the order may be varied so far as Respondents are concerned in respect that we have mentioned, but if so, we think that it would be proper for your Honor to permit, if it requires a variation in the order of procedure, to permit us to put on such testimony as we believe is proper after the data are in the record, [877] or after they have been furnished to us.

TRIAL EXAMINER: The Examiner said he was authorized to entertain the motions made by counsel for

the Public Service Commission of Maryland, the Pennsylvania Public Utility Commission, and counsel for the Consolidated Gas Electric Light & Power Company, and made no further statement. The Examiner's ruling on those motions was specific. The Examiner cannot change the order of procedure any further.

Counsel for the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland will have to use their own judgment as to what they desire to put on as their direct testimony in this proceeding.

MR. SPARKS: May I point out to your Honor, then, that the ruling will require us to ask for time to gather the data that we have requested of Staff counsel to make the computations necessary for the purposes which Mr. Hull mentioned in order that we may present that as direct testimony, in the event that it may be held that testimony, or part of it, or all of it, is not proper rebuttal testimony.

TRIAL EXAMINER: The Examiner understands counsel's statement made with reference to Respondent companies having completed direct testimony that they have prepared to offer with respect to depreciation and various items related thereto, which he recited.

Counsel takes the position that he is unable to prepare [878] these studies unless he has opportunity to and is able to obtain such data from Staff counsel.

MR. SPARKS: Yes, your Honor.

TRIAL EXAMINER: Then how can counsel support a request for the recess, having that in mind?

MR. SPARKS: It is our position, if your Honor please, as Mr. Hull stated, that this evidence that we would offer, we believe, is rebuttal evidence, but it is only the factor entering into the situation that per-

haps it may be held not to be rebuttal, but to be proper direct testimony, in which event when we come to rebuttal time we would be in a rather serious predicament.

TRIAL EXAMINER: You are asking the Trial Examiner to rule at this time as to what is the scope of your direct testimony; at least what the scope of your direct testimony should be.

MR. SPARKS: I do not believe so, your Honor.

I believe I can state it this way: We are prepared to say to your Honor that this is all the evidence we have at this time, but there is the likelihood, or possibility, rather, that some further testimony we have may be termed direct testimony and in that event we merely want your Honor to permit us to put it on, and permit us to finish our case today without saying that we close our direct presentation.

MR. GOLDBERG: Mr. Examiner, I gather the impression [879] from Mr. Sparks' statement that in addition to the matters discussed by Mr. Hull, the company is thinking in terms of presenting that testimony; and also they are thinking of presenting other testimony, which I seem to gather is prepared at this time. I would like to inquire, if there is other prepared testimony, what is its nature.

MR. SPARKS: I think the answer to that is "no", if your Honor please.

MR. GOLDBERG: Now, Mr. Examiner, I would just like to say this in response to Mr. Sparks' statement, the Staff was not advised of the company's contentions in this case, but the Staff, nevertheless, prepared its case on the basis of its own investigation, and its own position on the elements of this rate case. I do not know why the Respondents could not have gone out and have done likewise. I submit further, Mr. Examiner, that the Respondents, while perhaps not as spe-

cifically advised, as they were at the outset of the hearing, of the position of the staff, they were well aware of that position, particularly certain counsel in this case who participated in the Safe Harbor Water Corporation rate case, Docket IT-5914. For that matter, Mr. Examiner, the Commission could have said to the company, "Come on in and defend your rates." There is no obligation on the Commission or the Staff or anybody else to put in any case. And the Commission could have done that and the company would have had to come forward with every bit of [880] evidence that they had in support of their position without anything else being done. The contentions of the Staff make no difference whatsoever as to that type of testimony. The fact of the matter is that all of the testimony could have been presented on the basis of the company's own contentions, not on the basis of the Staff's contentions, if the company had seen fit to do so, and could, of course, have been presented as direct testimony, but there is nothing incumbent upon the Staff with regard to the nature of the direct testimony of the company.

TRIAL EXAMINER: Counsel for the company's position is this, is it not, that without presentation of evidence by Staff counsel he would not undertake at this time any further preparation of evidence; in other words, there are no studies on these subjects which are mentioned in counsel's statement? There are no studies on those subjects now under course of preparation; is that correct?

[881] MR. SPARKS: I do not think that is quite true, because there were some statements by Mr. Goldberg with regard to the effect of a depreciated rate base, as Mr. Hull has mentioned, that we might find ourselves in the position of having to answer even though there was no testimony in the record presented by Staff counsel.

MR. GOLDBERG: If that be so——

TRIAL EXAMINER: The whole thing is that no steps are in progress on the part of the company for the preparation of testimony or exhibits for offering at this stage of the proceeding; that is your case on direct?

MR. SPARKS: That is correct, if Your Honor please, except for the corrections and what we suggest as to whether some of the testimony described by Mr. Hull may be held some time to have been proper on direct and not on rebuttal.

TRIAL EXAMINER: The counsel will not be able to determine what he shall do in that direction until the Examiner has ruled what is the proper scope of rebuttal; is that it?

MR. SPARKS: Yes.

TRIAL EXAMINER: The Examiner can only make his ruling when he arrives at that point.

MR. SPARKS: But I think Your Honor could rule that we need not be in the position of saying that our direct testimony is completed, but I think we can say that we [882] have nothing further to offer at this time.

TRIAL EXAMINER: The Examiner cannot anticipate what his ruling will be in regard to rebuttal in the light of all the discussions we have had. The Examiner will rule that this is time for the counsel for the two companies to present whatever testimony in evidence they wish to present in connection with their case in chief.

MR. SPARKS: We will take an exception.

* * *

[883] MR. SPARKS: If Your Honor please, may I ask Your Honor to direct Staff counsel to furnish or make available to Respondents the data requested by Mr.

Hull in his statement this afternoon, and to give us a recess of six weeks from the time that that is furnished or made available to us, to permit us to prepare further evidence with regard to depreciation.

TRIAL EXAMINER: This matter still has to do with the stage in this proceeding which will be reached in the due course of events and which has to do with rebuttal testimony.

The request that counsel now makes will undoubtedly be answered in part if Staff counsel now proceeds to put on his testimony.

MR. SPARKS: That, I think, is the difficulty, Your Honor. It may be answered only in part.

TRIAL EXAMINER: We will take that matter up when we come to it.

MR. SPARKS: I understand then that Your Honor has denied my request?

TRIAL EXAMINER: That is correct.

MR. SPARKS: We take an exception, if Your Honor please.

Now, if Your Honor please, we request that Respondents be given a recess of at least two weeks in order that we may do the best we can with what data we have to prepare [884] further testimony on depreciation before we close our case.

TRIAL EXAMINER: Counsel is now in no way modifying the statement which was made with regard to the Respondent companies' having completed the direct testimony which they have prepared and will offer, as contained in the statement which was made after the last witness left the stand.

MR. SPARKS: No, we are not varying that statement, if Your Honor please, but——

TRIAL EXAMINER (interrupting): This present request relates to that identical statement, does it not?

MR. SPARKS: It relates to that statement, and to the further statement that we will have some additional evidence which may be subject to the question of whether it is direct or rebuttal evidence.

TRIAL EXAMINER: The Examiner has already stated his position with regard to that question, and the request is denied.

MR. SPARKS: May I make it plain, if Your Honor please, that we did not mean to imply that we have completed and closed our direct evidence on depreciation. That was the whole purpose of the statement which Mr. Hull made.

* * *

[885] TRIAL EXAMINER: The Examiner understands counsel's position and has instructed counsel for the company to proceed at this time with such evidence and testimony as properly relates to his case in chief, and if counsel is unable to do that at this time, the Examiner will instruct that the proceedings continue at this moment.

MR. SPARKS: We take an exception to Your Honor's ruling, and I state at this time that this is all the evidence we have to offer at this time as to our case in chief, and I should like to call Your Honor's attention to the fact that there are a number of exhibits on which ruling has been reserved, so that we cannot close our case in chief until those rulings have been made.

May I also say, if Your Honor please, that for the purpose of expediting these proceedings and to advise the Respondents of the contentions of the Government, as represented by the Staff of the Commission and Commission counsel, it is requested that Commission counsel be required to state for the record the contentions of the Commission Staff as to each of the following particulars:

1. Is the authority of the Commission to regulate and control rates or charges in this proceeding to be exercised under Part I of the Federal Power Act? If so, under which sections?

2. Is it contended that either of the States of [886] Pennsylvania or Maryland has not authorized, empowered or provided a commission or other agency for the regulation and control of the rates and charges of payment for services to be rendered by Respondents or by their customers engaged in public service, within the meaning of Section 19?

3. Is it contended that either of the States of Pennsylvania or Maryland has not provided a commission or other authority to enforce the requirements of Section 20 within their respective States?

4. Is it contended that the States of Pennsylvania and Maryland are unable to agree, through their properly constituted authorities, on the services to be rendered by Respondents or on the rates or charges of payment therefor, within the meaning of Section 20?

5. Is it contended under Section 20 of the Act that the Commission has jurisdiction in this proceeding to regulate and control the services rendered by Respondents to Consolidated Gas Electric Light & Power Company of Baltimore, and to regulate and control the component part of the rates and charges of payment for such services as do not constitute interstate or foreign commerce, particularly the special facilities services comprising the furnishing of the Highlandtown substation facilities and the Gunpowder Falls transmission line in the State of Maryland?

6. Is it contended under Section 20 that the Commission [887] has jurisdiction in this proceeding to regulate and control any of the services rendered by Pennsylvania Water & Power Company, by itself or

jointly with Safe Harbor Water Power Corporation, to Metropolitan Edison Company, Pennsylvania Power & Light Company, Philadelphia Electric Company, or Pennsylvania Railroad Company, all in the State of Pennsylvania, and to regulate and control the rates and charges of payment for any of such services? If so, which services, rates and charges to which companies?

7. Is it contended that the Commission has jurisdiction in this proceeding under the Act to regulate and control or to determine and fix by order any divisions of rates or charges which may be received by Pennsylvania Water & Power Company for services rendered jointly with others? If so, which divisions?

8. Is it contended that the Commission has jurisdiction in this proceeding under the Act to regulate and control or to determine and fix by order any rates or charges for services rendered jointly with others without making such other participants in such joint services parties respondent to this proceeding?

9. Is it contended under Part II of the Act that the Commission has any jurisdiction to determine and fix by order any of the rates, charges or classifications of Pennsylvania Water & Power Company for services rendered its customers? [888] If so, is the authority of the Commission in this proceeding to be exercised under Part II of the Act, particularly Sections 206 (a) or 206 (b) thereof?

10. Is it contended under Part II that the rates or charges of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation for services to Consolidated Gas Electric Light & Power Company of Baltimore are for the transmission or the sale of electric energy, within the meaning of Sections 201 (b) and 206 (a), and that thereby the Commission has jurisdiction in this proceeding under such Sections to

determine the justness and reasonableness of such rates or charges and to fix the same by order?

11. Is it contended under Part II that the Commission has any jurisdiction in this proceeding to determine and fix by order the component part of the rates and charges of Respondents for the special facilities services rendered to Consolidated Gas Electric Light & Power Company, comprising the furnishing of the Highlandtown substation facilities and the Gunpowder Falls transmission line in the State of Maryland?

12. Is it contended under Part II that the Commission has any jurisdiction in this proceeding to determine and fix by order the component part of the rates and charges of Pennsylvania Water & Power Company and Safe Harbor Water Power Corporation to Consolidated Gas Electric Light and [889] Power Company for the services rendered by them jointly with others to the Pennsylvania Railroad Company in the State of Maryland?

13. Is it contended under Part II that the rates or charges of Pennsylvania Water & Power Company, by itself or jointly with Safe Harbor Water Power Corporation, for any of the capacity, energy or special services to Metropolitan Edison Company, Pennsylvania Power & Light Company, Philadelphia Electric Company or Pennsylvania Railroad Company, all in the State of Pennsylvania, are subject to the jurisdiction of the Commission in this proceeding? If so, which of the rates or charges for such services to which of such customer companies?

14. Is it contended under Part II that the rates and charges of Pennsylvania Water & Power Company jointly with Safe Harbor Water Power Corporation, Consolidated Gas Electric Light and Power Company of Baltimore and Potomac Electric Power Company

for services to Pennsylvania Railroad Company are sales of electric energy at wholesale, within the meaning of Sections 201 (b) and 201 (d), and are thereby subject to the jurisdiction of the Commission in this proceeding?

15. Which of the rates, charges, or classifications for services, which it may be contended are subject to the jurisdiction of the Commission in this proceeding under Part II, or which of the rules, regulations, practices or [890] contracts affecting such rates, charges or classifications is it contended are unjust, unreasonable, unduly discriminatory, or preferential?

The Respondents state that in order to expedite this proceeding in an orderly manner and to afford them a fair and adequate opportunity to know and meet any of such contentions, if made, Commission Counsel should be required to reply to the foregoing interrogatories. The complexity of the questions which may arise, as stated in the foregoing interrogatories, illustrates and shows the handicap that the Respondents have been subjected to by the orders of the Commission in this proceeding. Failure to indicate the contentions of the Government in the above respects, or in any other respect unknown to Respondents, will deprive Respondents of the fair hearing required by the Federal Power Act and by the due process clause of the Fifth Amendment to the Constitution of the United States.

For the foregoing reasons, it is also requested that counsel for any of the other parties to this proceeding also be required to state for the record their contentions as to each of the foregoing particulars. In addition, it is also requested that each of such other parties be required to state whether or not it is contended that the character and form of the rates, charges or classifications for services rendered by Respondents under any existing contracts or [891] the

services themselves should be changed or modified in any manner.

We ask, if Your Honor please, that the statement of contentions which we have just requested be made to the Respondents no later than the time when counsel for the Staff completes his direct testimony.

* * *

[892] TRIAL EXAMINER: With respect to counsel's statement as to contentions, the Examiner deems that no ruling is required at this time.

MR. SPARKS: That certainly is acceptable, if your Honor please, so long as we can get a statement of those contentions before counsel for the Commission closes his direct case.

TRIAL EXAMINER: At that time if counsel for the companies feels that he needs further specification of the issues, he will renew his motion to the Trial Examiner.

MR. SPARKS: Very well, sir.

MR. GOLDBERG: Mr. Examiner, I am not making any undertaking at this time to respond to any of the inquiries [893] addressed to counsel by Mr. Sparks. In the first place, I do not think that it is necessary for counsel for the Staff to take any position with respect to those matters.

Moreover, Mr. Examiner, if my recollection serves me right, all or virtually all of those claims contained in those paragraphs enumerated by Mr. Sparks were recited in one form or another in Respondents' petition for specifications of issues and reconsideration of the order of procedure, and the Commission denied that petition.

Moreover, it appears to me from the Commission's order that it has announced under what authority this proceeding would go forward, and I think that we can

take that announcement to mean that the Commission considers that it has jurisdiction under the Federal Power Act.

In any event, as I say, I am not making any commitment now with respect to those inquiries. I did not pretend to follow them. They were being read quickly and they were rather long and rather complicated.

I should like to ask of counsel—they can do it now or they can do it before this proceeding terminates, but certainly before this proceeding terminates—that they set forth in detail in what respects the companies' presentation of its case in this proceeding would be affected by the answers that would be made to those questions, whether they be yes or no or howsoever they may be made; in other words, what case would [894] they present in these proceedings had they known what the contentions were—and I submit they know what the contentions are.

I would like to have them set forth in what respects they consider specifically that they are deprived of due process of law.

I submit, Mr. Examiner, that no matter what position the Staff would take with respect to the inquiries directed to the Staff that the Respondents would present no different case than they are now presenting or will have presented when these proceedings are terminated. In no way whatsoever could the claims as to jurisdiction affect their claims as to the elements of a rate case. I know not of one element of evidence that they would present in this proceeding if the answers to the questions were one way or another, and I will await with patience and with a great deal of anticipation a response to these inquiries.

I have a few questions to direct at this time to counsel myself.

At transcript page 34, counsel stated that this Commission "has no jurisdiction over the rates, charges

and classifications of Pennsylvania Water & Power Company under Part 2 of the Act for the reason that the company is to be treated as a licensee and may be considered to be a purchaser of power from a licensee for use in public service, and is therefore [895] subject to Part 1 of the Act only". Does counsel for the respondent mean by that statement that the Commission must treat the respondent as a licensee? That is the first question.

MR. SPARKS: Do you expect an answer now in view of your reply to my inquiries?

MR. GOLDBERG: That is a very simple question and it is set forth in the transcript. If you feel you cannot answer it now, I have no objection to your thinking it over.

MR. SPARKS: I have no doubt that I can answer it, but I would like to know what your other questions are.

MR. GOLDBERG: Surely. Is it the contention of the respondents that Penn Water is presently subject to Part 1 of the Act including Section 20, assuming that the prerequisites of Section 20 are valid and have been met, and by "prerequisites" I mean those alleged conditions in Section 20 to which counsel has already referred?

MR. SPARKS: The question is not clear to me, if your Honor please.

MR. GOLDBERG: What is there about the question that counsel does not understand?

TRIAL EXAMINER: The reporter will repeat it.

(The record is read.)

MR. SPARKS: I don't know which prerequisites he is talking about, if your Honor please. Section 20 is a long [896] paragraph.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: I will specify. I have reference to this phrase "or such states are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor".

Now, the next question is: When counsel made the statement "may be considered to be a purchaser of power from a licensee for use in public service and is therefore subject to Part 1 of the Act only", which appears at transcript page 34, lines 10 to 12, did counsel mean by that statement that Penn Water must be treated as subject to Part 1 of the Act, if subject to the Act at all, because it purchases electric energy from Safe Harbor, a licensee under Part 1?

TRIAL EXAMINER: Read that.

(The record is read.)

TRIAL EXAMINER: Before we get into a discussion of all of these contentions, which it occurs to the Examiner is more properly a matter for briefs, the Examiner will ask counsel how necessary it is to have answers at this time in his proceeding with his direct evidence?

MR. GOLDBERG: Having stated a contention in the record, Mr. Examiner, I believe I am entitled to know what it means, and all my questions are related to a clarification of their first contention set forth on page 34 of the transcript.

[897] My other questions, about due process and what sort of a case they would have put in here if they knew what the answers to the questions would be—which I submit they know—and that, Mr. Examiner, relates to matters directed to the Staff counsel.

* * *

[898] STANLEY W. ROLAND,
a witness called by Federal Power Commission, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. GOLDBERG:

Q. Please state your name and address. A. Stanley W. Roland, 4316 North Glebe Road, Arlington, Virginia.

Q. Mr. Roland, may I suggest that you speak up? They cannot hear you over to the left of me at the table. What is your occupation? A. Electrical engineer.

Q. Are you employed by the Federal Power Commission? A. Yes, sir.

Q. What is your position with the Federal Power Commission? A. I am the head of the Electric Rate Investigation Section in the Division of Rates and Certificates.

Q. How long have you been employed by the Federal Power Commission? A. Since April, 1934.

Q. Will you state your educational training as it relates to your profession? A. I received the Bachelor of Science Degree in [899] Electrical Engineering from the University of Wisconsin in 1926. Received the Master of Science Degree in Electrical Engineering from the Harvard Engineering School in 1933. Completed graduate courses in Public Utility, Economics and Power Transmission at the Massachusetts Institute of Technology during the summer of 1931.

I also did some graduate work in Electrical Engineering in connection with my teaching at the Michigan State College and at the University of Missouri.

Q. Please describe your experience as an engineer before coming to the Federal Power Commission? A. Prior to entering the University of Wisconsin, I was employed for about six months as an apprentice electrician for an electrical contractor in Rockford, Illinois, and for about 1½ years as a meter-tester and as an electrician on

substation construction work for the Rockford Electric Company.

Between school terms, while attending the University of Wisconsin, I was employed by the same company as an electrician for maintenance and new construction work at its combined steam and hydroelectric power station at Rockford. I also worked as a draftsman and inspector in the company's distribution department.

Following graduation from the university I was employed as a cadet engineer by The Milwaukee Electric [900] Railway & Light Company. By that Company I was first assigned to the electrical maintenance crew at Lakeside steam electric station, and from there I was transferred to the Power Sales Department where I stayed until 1928. My work in that department consisted primarily in making studies of the comparative costs of purchased power and power generated at customer-owned power plants.

I also made studies and recommendations regarding the installation of capacitors and synchronous motors on customers' premises, and worked together with the engineering department in planning customer-owned substations.

During the 1928 and 1929 school-year, I was employed as an instructor in Electrical Engineering at the Michigan State College, Lansing, Michigan.

From 1929 to 1932, I was employed as an instructor in Electrical Engineering at the University of Missouri. During the summer of 1930 I was employed as a test engineer in the Power Transformer Department of the General Electric Company, Pittsfield, Massachusetts.

I came with the Federal Power Commission in 1934. During the school-year 1940-1941 I was an associate in Electrical Engineering at George Washington University, teaching an evening class in Electrical Engineering.

Q. Would you describe in general the nature of your experience with the Federal Power Commission? A. When I first came with the Commission in April, [901]

1934, I was assigned to work on the preparation of questionnaire forms to gather engineering and statistical information for the National Power and National Electric Rate Surveys, and to set up the machinery for obtaining this information from all the major electrical utility companies in the United States.

After completing this work I was assigned to assist the Chief of the Power Requirements Division in studying the possibility of interconnecting and coordinating the operations of the hydro and steam-electric facilities in several of the Southeastern states, and to devise methods for making similar studies for other areas in the country.

I spent about one year as a special assistant to the Commissioner in charge of the National Power and Electric Rate Surveys, devoting my time principally to review and analysis and editing of numerous engineering and statistical reports prepared by the staff of the Survey.

Subsequently, I devoted some time to the preparation of the questionnaire form called "Power System Statement" Form No. 12, which is used to gather data on the facilities and operations of electric power systems in the United states.

[902] In 1938, several Commission engineers, and I, were loaned to the City of Fort Worth, Texas, to make field and office studies to determine the cost of constructing an electric distribution system for the city. For two years, I made office and field studies of the facilities and operations of a number of electric utilities to determine whether or not such facilities were subject to the jurisdiction of the Federal Power Commission.

These studies included analyses of contracts, computations and preparation of exhibits relating to energy flows over the facilities of Jersey Central Power and Light, Public Service Electric and Gas Company of New Jersey, and of the Staten Island Edison Corporation, Docket IT-5518.

I also made field studies of the facilities, operations, energy transfers across state boundaries, and sales at

wholesale of a number of operating companies comprising the New England Power and Western Massachusetts Companies.

I made similar field studies regarding energy flows on the Hartford Electric Light Company and Connecticut Power Company system.

In connection with Docket IT-5513, involving New York Power and Light Corporation and Twin States Gas and Electric Company, I made a field study and testified as to the facilities used for the transmission and sale of electric energy across a state boundary.

[903] I have participated in other proceedings before the Commission involving studies of power contracts and of the facilities for the transmission and sale at wholesale of electric energy transmitted to or from points outside the State.

During the course of my employment with the Commission, I have had a number of special assignments covering technical studies relating to the adequacy of transmission facilities; engineering and economic studies to determine probable markets for power in the vicinity of proposed hydroelectric projects; field and office studies regarding the facilities and operations of The Deepwater Operating Company and the Delaware Power and Light Company, in connection with a preliminary investigation of the rates charged the Philadelphia Electric Company; analysis of documents submitted by public utilities regarding the proposed sale of their properties, and the preparation of reports thereon to the Commission covering the engineering and economic aspects of such proposals; field investigations and cost studies in connection with the Commission's investigation of the southwest power pool which was formed to supply power to a large aluminum plant in Arkansas.

I spent about one year analyzing the proposed cost of special facilities involved in war power contracts subject to Commission review under the President's directives, to determine their reasonableness. Immediately prior to the

assumption of my present duties, I was head of the Transmission [904] Section in the Commission's Bureau of Power.

Q. Who is your immediate supervisor at the present time? A. Mr. Edgar S. Coffman, Chief, Division of Rates and Certificates.

Q. Is your work in the Division assigned by Mr. Coffman? A. Yes.

Q. What assignments were you given in connection with this proceeding? A. I was instructed by Mr. Coffman to prepare a report describing the facilities and operations of Pennsylvania Water and Power Company, and the Susquehanna Transmission Company of Maryland's properties; to estimate the probable service lives of the properties owned by these two companies; to make a study of the transmission of electric energy by Pennsylvania Water & Power Company and by Susquehanna Transmission Company of Maryland, from Pennsylvania to points of sale at wholesale for resale in Maryland and from Maryland to points of sale at wholesale for resale in Pennsylvania.

I was also instructed to estimate the cost to Pennsylvania Water & Power Company of furnishing electric service to its resale customers, and to ascertain the date that commercial operations of the Holtwood hydroelectric project commenced.

Q. What parts of this assignment did you personally [905] undertake? A. I prepared the estimates of probable service lives and made the study of transmission of electric energy across state lines.

The other assignments were handled by Mr. George Davis and Mr. Clifton Howell, under my general supervision. Mr. Howell assisted me in my assignment regarding service lives as did Mr. M. E. Bybuth and Mr. I. C. Jeffery, both of whom are no longer with the Commission.

Q. As a result of studies made, are you prepared to state whether Pennsylvania Water & Power Company owns

and operates facilities for the generation of electric energy? A. I am.

Q. Does Pennsylvania Water & Power Company own and operate facilities for the generation of electric energy? A. Yes, it does. In my testimony, I usually refer to Pennsylvania Water & Power Company as "Holtwood".

Q. What type of generating facilities does Holtwood own and operate and where are they located? A. Holtwood owns and operates a hydroelectric plant and a steam electric plant, both of which are located on the Susquehanna River at Holtwood, Pennsylvania. In my testimony, I usually refer to these plants as the Holtwood plants.

Q. Does Holtwood own and operate facilities for the transmission of electric energy? [906] A. Yes.

Q. Does the Susquehanna Transmission Company of Maryland own and operate facilities for the transmission of electric energy? A. Yes. In my testimony, I usually refer to Susquehanna Transmission Company of Maryland as "Susquehanna".

Q. Are the facilities owned and operated by Holtwood and Susquehanna usually referred to as the Holtwood System? A. Yes, they usually are, and in my testimony when I refer to the Holtwood System, I refer to the facilities owned and operated by Holtwood and Susquehanna.

Q. Does Holtwood receive electric energy from other electric utility companies? A. Yes.

Q. From what companies does Holtwood receive electric energy? A. From the Safe Harbor Water Power Corporation, Metropolitan Edison Company, Pennsylvania Power and Light Company, Philadelphia Electric Company, and Consolidated Gas Electric Light & Power Company of Baltimore.

Q. Have you made a study to determine whether or not the transmission facilities owned and operated by Holtwood and Susquehanna Transmission Company of Maryland transmit energy from a state to points outside thereof? A. I have.

[907] Q. Will you outline briefly the sources of information which you employed in making the studies which you stated you have made? A. I examined reports which are filed with the Federal Power Commission each year by Holtwood and Susquehanna. The reports designated "Power System Statement", Federal Power Commission Form No. 12, contain system operating data, maps, diagrams and other engineering data.

Other reports which I examined are designated "Annual Report", Federal Power Commission Form No. 1, and contain financial and operating data as well as information as to physical facilities.

I also examined information which I obtained from Holtwood especially for these studies, regarding the amounts of generation at the Safe Harbor and Holtwood plants, energy transfers over various circuits, energy sales by Holtwood, points of delivery and metering for various periods of time which I specified.

I also discussed matters relating to energy flow, interconnection points, metering points, and points of sale to other utilities with engineers at Holtwood.

Holtwood also furnished me with a pamphlet containing system engineering data, which I used, and I examined some of the facilities involved in these studies, in the field.

MR. GOLDBERG: Mr. Examiner, at this time I ask to [908] have marked for identification as Exhibit No. 37 a map entitled, "Transmission Lines and Interconnections of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland."

TRIAL EXAMINER: The map will be marked Exhibit No. 37 for Identification.

(The document referred to was marked Exhibit No. 37 for Identification.)

By Mr. Goldberg:

Q. Mr. Roland, what do those various sources of information which you employed in making your studies show regarding the ownership of transmission lines by Holtwood and Susquehanna? A. In answering that question, I would like to refer to a photostatic copy of a transmission map which Holtwood filed with the Federal Power Commission in its Federal Power Commission Form No. 12, "Power System Statement" for 1944, and which carries Holtwood file number A-130463, which is now Exhibit No. 37.

This map marked for identification as Exhibit No. 37 shows the transmission lines owned and operated by Holtwood and Susquehanna as well as transmission lines owned by others. The solid black lines shown as located within the State of Pennsylvania designate transmission lines owned and operated by Holtwood.

The solid black lines shown as located within the State [909] of Maryland designate transmission lines owned and operated by Susquehanna. A short section of 110 kv line extending from Consolidated of Baltimore's Philadelphia Road Substation, located across the street from Highlandtown Substation, to its Gunpowder Substation, is owned by Susquehanna but leased to the Baltimore Company. This is shown as a dashed line on the map.

Q. What does Exhibit 37 show with respect to the various lines owned and operated by Holtwood and Susquehanna? A. Exhibit 37 shows for each line owned and operated by Holtwood and Susquehanna the type of supporting structure, kva rating per phase, frequency, number of circuits per structure, kva rating per circuit, length of the line, and the size and type of conductor.

For example, the two lines shown in heavy black are 220 kv, three-phase, 60 cycle, single circuit lines supported on steel towers.

The two lines extending from Holtwood to Highlandtown are 66 kv, 3-phase, 25 cycle, each line consisting of two circuits supported on steel towers.

The line extending from Conestoga Substation near the Safe Harbor plant to Perryville, Maryland, consists of four 132 kv single phase, 25 cycle circuits supported on steel towers.

The line from Holtwood to Coatesville consists of two [910] 66 kv, 3 phase, 60 cycle circuits, supported on steel towers.

The line from Holtwood to York is also two 66 kv, 3 phase, 60 cycle circuits, supporting on steel towers. The tie line between the Safe Harbor and Holtwood Plants is also double circuit, 66 kv, 3 phase, 60 cycle, supported on steel towers.

Q. Are the lines which you have described facilities for the transmission of electric energy? A. Yes, they are.

Q. Does Holtwood deliver electric energy to other companies which those companies sell? A. Yes.

Q. To what companies does Holtwood deliver such energy? A. Consolidated Gas Electric Light and Power Company of Baltimore; Pennsylvania Power and Light Company; Philadelphia Electric Company; Metropolitan Edison Company, and to Pioneer Electric Company.

Q. Does Holtwood deliver any electric energy to any other person? A. Yes.

Q. To whom does it make such deliveries? A. To Pennsylvania Railroad Company.

Q. Under what contracts are Holtwood's deliveries made to other utility companies? A. Deliveries to the Baltimore Company are made under [911] contracts in evidence in this proceeding as Items E, F, G, H and I.

Deliveries to Pennsylvania Power and Light Company and to Pioneer Electric Company are made under Lancaster Power Supply contract of May 1, 1933, between Holtwood, Safe Harbor and Pennsylvania Power and Light Company, as supplemented by agreements of June 19, 1934, November 1, 1939, and October 14, 1941.

Firm deliveries to Philadelphia Electric Company are made under Coatesville Power Supply contract of August

1, 1933, between Holtwood, Safe Harbor and Philadelphia Electric Company, as supplemented by agreement of December 13, 1938.

The sale of interchange power to Philadelphia Electric Company through the Pennsylvania Railroad is provided for in the parallel operation agreement of June 22, 1938, between Baltimore Company, Philadelphia Electric Company, Safe Harbor, Holtwood and Pennsylvania Railroad, and in the interchange and load shifting agreement of June 22, 1938, between Holtwood and Philadelphia Electric Company.

Deliveries to Metropolitan Edison Company are made under contract of November 15, 1945, between Holtwood and Metropolitan Edison Company.

Q. Have you examined the contracts which you have just named? A. Yes.

[912] Q. Have you examined the billings under those contracts? A. Yes.

Q. Does Holtwood receive delivery of electric energy under any of those contracts from any of the companies to which it makes deliveries? A. Yes.

Q. Will you name them? A. Baltimore Company, Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company.

Q. Does Holtwood receive payment from any of the companies to which it makes deliveries of electric energy under any of the contracts which you named? A. Yes.

Q. What service does Susquehanna perform? A. Susquehanna is engaged solely in transmitting energy for Holtwood.

Q. Does Holtwood sell any of the electric energy delivered under any of the contracts to which you have referred? A. Yes.

Q. To what companies does Holtwood sell electric energy delivered to those companies by Holtwood under any of the contracts to which you have referred? A. Baltimore Company, Pennsylvania Power & Light Com-

pany, Philadelphia Electric Company and Metropolitan Edison [913] Company.

Q. Does Holtwood sell electric energy under those contracts to any of the four companies which you named, for resale? A. Yes.

Q. Will you name the companies? A. Baltimore Company, Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company.

Q. I take it that by the Baltimore Company you mean the Consolidated Gas Electric Light and Power Company of Baltimore? A. Yes, sir.

Q. Does Exhibit 37 designate the points at which the Holtwood System interconnects with the faciilties of other utility companies? A. Yes.

Q. At what points does the Holtwood System connect with the facilities of Consolidated Gas Electric Light & Power Company of Baltimore? A. The Holtwood System connects with the facilities of the Baltimore Company at the latter's Riverside and Westport Substations and at Susquehanna's Highlandtown Substation in Baltimore, Maryland. These three points are designated on the transmission map, Exhibit No. 37, by the symbol "W".

[914] Q. Does Holtwood deliver energy to Baltimore Company at these points? A. Yes.

Q. Does Holtwood make deliveries of energy to others for the account of Baltimore Company? A. Yes.

Q. At what points are such deliveries made? A. Holtwood delivers energy to the Pennsylvania Railroad at Conowingo and Perryville, Maryland, for the account of the Baltimore Company. These points of delivery are designated by the symbol "W-1". I am referring to Exhibit 37 again.

When I say that Holtwood delivers energy to the Railroad Company at these points for the account of the Baltimore Company, I mean that the actual sale to the Railroad Company is made by Baltimore, but the energy sold is

transmitted to these points over facilities owned and operated by Holtwood and Susquehanna.

Holtwood also delivers energy to the Potomac Electric Power Company for the account of the Baltimore Company at the point of connection of the 220 kv transmission facilities owned by Susquehanna Company and the 220 kv facilities owned by the Potomac Electric Power Company, at a point northeast of Takoma Park, Maryland. At this point, designated on Exhibit 37 as "W-1", the sale of energy to the Potomac Electric [915] Power Company is made by the Baltimore Company.

Q. What are, in general, the facilities by means of which the sales of electric energy by Holtwood, for resale, to which you have testified are made? A. Such facilities include transmission lines, substations, metering and other equipment used for recording and billing the amounts sold.

Q. Have you made studies to determine, for some particular period, the amounts of electric energy transmitted from Pennsylvania, over the facilities of Holtwood and Susquehanna across the Pennsylvania-Maryland state line to points of delivery in Maryland? A. Yes.

Q. Upon what information are these studies based? A. They are based upon information furnished me by Holtwood showing the amounts of energy transmitted over those circuits from Holtwood to the Baltimore Company, in Maryland, and to the Potomac Electric Power Company during the years 1943 and 1944. Potomac Electric Power Company's facilities are usually referred to as the Washington System.

The combined facilities of Consolidated Gas Electric Light & Power Company of Baltimore, and of Potomac Electric Power Company, are usually referred to as the Baltimore-Washington System. In my testimony, I sometimes use these abbreviations.

[916] MR. SPARKS: Your Honor, I wonder if the witness could go a little more slowly. It is very hard to follow

him when he is speaking so rapidly, and Mr. Goldberg is speaking so rapidly.

THE WITNESS: I will be glad to do so.

By MR. GOLDBERG:

Q. Is electric energy also transmitted over the transmission facilities owned and operated by Susquehanna and Holtwood from the Baltimore-Washington System to the Holtwood System in Pennsylvania? A. Yes.

Q. Have you made studies to ascertain the quantities of energy which have been so transmitted? A. Yes.

Q. Have you prepared an exhibit showing the quantities of energy which have been so transmitted? A. Yes.

MR. GOLDBERG: At this time, Mr. Examiner, I ask to have marked for identification as Exhibit No. 38 a tabulation entitled "Electric Energy Transfers Across Maryland-Pennsylvania Boundary over Facilities of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, by Months, Values in Megawatthours."

TRIAL EXAMINER: The document handed the reporter will be marked Exhibit 38 for Identification.

[917] (The document referred to was marked Exhibit No. 38 for Identification.)

By MR. GOLDBERG:

Q. What does Exhibit No. 38 show with respect to the amounts of energy transmitted from Holtwood's system in Pennsylvania to the Baltimore-Washington system in Maryland over transmission facilities owned and operated by Holtwood and Susquehanna? A. This exhibit prepared from data furnished me by Holtwood, shows the amounts of electric energy transmitted during each month of the years 1943 and 1944 from the Holtwood System in Pennsylvania to the Baltimore-Washington System in Maryland over the 220 kv and 66 kv transmission circuits.

[918] Q. Mr. Roland, was Exhibit 38—I think you have already stated—— A. I beg your pardon?

Q. What does 38 show with respect to the amount of energy transmitted over the Holtwood system in Pennsylvania to the Baltimore-Washington system, and over the other transmission facilities owned and operated by Holtwood; is that what it does show? Is that correct? A. It does show the energy transmitted from Pennsylvania to Maryland, and from Maryland to Pennsylvania. This exhibit was prepared from data furnished me by Holtwood, showing the amount of electric energy transmitted during each month for the years 1943 and 1944 from the Holtwood system in Pennsylvania to the Baltimore-Washington system, and over the 220 kv and 66 kv transmission circuits.

Q. I notice on Exhibit 38, Column headings, "Meter 5", "Meter 6", "Meter 34"; to what do those numbers refer? A. These numbers identify the meters by reference to a diagram prepared by Holtwood.

When I first requested Holtwood for information regarding energy generation and energy flows at various points on the system, I requested that I be furnished with a diagram showing interconnection points and metering points. In order to simplify the work for the Commission's staff, Holtwood prepared a one-line diagram of the Holtwood-Safe Harbor- [919] Baltimore-Washington transmission system showing thereon the location of certain watthour meters. Each of these metering points was given a number. In furnishing the information regarding energy generation and energy transfers, Holtwood identified the point of metering by referring to the numbers shown on the one-line diagram. I have copies of that diagram which carries the Company file Number H-1045.

MR. GOLDBERG: Mr. Examiner, at this point I ask to have marked for identification as Exhibit No. 39 a diagram entitled, "Pennsylvania Water & Power Company, one-line Diagram of Main Metering Points on Holtwood-Safe Harbor-Baltimore-Washington Interconnected System."

TRIAL EXAMINER: The diagram just handed to the reporter will be marked as Exhibit No. 39 for Identification.

(Exhibit No. 39 was marked for Identification.)

By MR. GOLDBERG:

Q. Mr. Roland, is Exhibit 39, which I show you, the one-line diagram to which you have referred in your last answer? A. It is.

Q. What does this diagram show? A. On this diagram, it will be noted that Meter No. 5 is located at the Safe Harbor Plant and is in the 220 kv circuit extending from Safe Harbor to Ellicott and from there to Westport and to Takoma. It will also be noted [920] that Meter No. 6 is located at the Safe Harbor Plant and is in the circuit extending from Safe Harbor Plant to Riverside. These meters are of the ratchet type and therefore, measure the energy transferred in one direction only, that is, there are two sets of ratchet meters in each circuit, one measuring the send-out over that circuit from Safe Harbor, and the other measuring the amount delivered to the Safe Harbor bus from that circuit. Similar metering equipment is installed in the other 220 kv circuit. Meter No. 34 is located on the low tension side of the Highlandtown Substation. This meter is not of the ratchet type and, therefore, measures the net amount of energy delivered to the Baltimore Company at this point.

Q. What does Exhibit 38 show with respect to the amount of energy transmitted by the Holtwood System from Pennsylvania across the Pennsylvania-Maryland boundary to the Baltimore-Washington System in Maryland over the 220 kv circuits? A. During the year 1943, a total of 435,416 mwh, as measured by meters located at Safe Harbor, were transmitted from the 13 kv 60 cycle bus at Safe Harbor to the Baltimore-Washington system in Maryland over the two 220 kv circuits. During the year 1944, 281,610 mwh were so transmitted from Pennsylvania to Maryland.

Q. At what points was the energy transmitted from [921] Pennsylvania to Maryland over the 220 kv circuits, delivered to Baltimore-Washington system? A. The amounts of energy which I stated were transmitted from Pennsylvania to Maryland over the 220 kv circuits were delivered to the Baltimore Company at Riverside and Westport, and to the Washington Company at Takoma Park.

Q. What does Exhibit 38 show with respect to the amount of electric energy transmitted from Maryland to Pennsylvania over the two 220 kv circuits? A. During the year 1943, 127,838 mwh were transmitted over the two 220 kv circuits from Maryland to the 13 kv, 60 cycle bus at Safe Harbor. During the year 1944, 201,075 mwh were transmitted from points in Maryland to Safe Harbor over the two 220 kv circuits.

Q. What does Exhibit 38 show with respect to the amount of energy transmitted from Pennsylvania to the Highlandtown Substation in Baltimore over the 66 kv circuits? A. During the year 1943 a net of 370,806 mwh of electric energy was transmitted by the Holtwood System from Pennsylvania to the Highlandtown Substation over the 66 kv circuits. The energy supplied to the Highlandtown Substation over these circuits is 25 cycle, 3 phase. During the year 1944, a net of 321,206 mwh were transmitted by the Holtwood System from Pennsylvania to the Highlandtown Substation in Maryland over the 66 kv circuits.

[922] Q. Is electric energy also transmitted from the Highlandtown Substation to the Holtwood Hydro Electric Plant over the 66 kv circuits? A. The records which I obtained from Holtwood show that there were times when small amounts of energy were transmitted from the Highlandtown Substation to the Holtwood Substation over the 66 kv circuits. The data indicate, however, that the amounts transmitted from Highlandtown to Holtwood are extremely small in comparison to the amounts transmitted from Holtwood to Highlandtown. I was also informed by

the operators at the Highlandtown Substation that it was very seldom that energy was transmitted from the Highlandtown Substation to Holtwood. An examination of the hourly data furnished by Holtwood at my request for 20 days of 1944 indicates that the amount of energy transmitted from Highlandtown to Holtwood was less than 1 per cent of the amount of energy transmitted from Holtwood to Highlandtown.

Q. Have you attempted to show the amount of electric energy transmitted from Pennsylvania to Maryland and from Maryland to Pennsylvania, over the 220 kv and 66 kv circuits, in graphic form? A. I have.

MR. GOLDBERG: At this time, Mr. Examiner, I ask to have marked for identification the exhibit No. 40, a chart [923] bearing the title, "Electric Energy Transfers Across Maryland-Pennsylvania Boundary over Facilities of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland by Months."

TRIAL EXAMINER: The chart handed the reporter may be marked Exhibit No. 40 for Identification.

(Exhibit No. 40 is marked for Identification.)

* * *

[926] Q. Mr. Roland, at the conclusion of yesterday's session we had just marked Exhibit No. 40 for identification? A. Yes.

Q. Will you explain what that exhibit shows with respect to transmission of electric energy between Maryland and Pennsylvania by Holtwood and Susquehanna Transmission Company? A. Exhibit 40 shows the amounts of electric energy transmitted from Pennsylvania to Maryland, and from Maryland to Pennsylvania, over each of the 220 kv circuits and over the 66 kv, 25 cycle circuits, during each month of 1943 and 1944. The length of the bar above the zero line is a measure of the amount of electric energy transmitted to Pennsylvania from Mary-

land. The length of the bar below the zero line is a measure of the amount of electric energy transmitted during the month from Pennsylvania to Maryland. The cross-hatched portion of the bars below the line represent net energy transfers over the 66 kv, 25 cycle circuits to Highlandtown. The remainder of the bar represents energy transfers over the two 220 kv circuits. This chart was prepared from data shown in Exhibit 39.

Q. Mr. Roland, am I correct—I think I heard you say that the bar chart was prepared on the basis of the [927] data in Exhibit 39? A. Yes.

Q. Is it not Exhibit 38? A. Well,——

Q. I think it should be. I show you Exhibit 38. A. (Inspecting) It should be Exhibit 38.

Q. Then you amend your answer to read Exhibit 38? A. I do.

Q. What accounts for the substantial variations shown in the amounts transmitted from Maryland to Pennsylvania during 1943 and 1944? A. These variations are primarily the result of variations in the flow of the Susquehanna River.

During the spring months when the river flow is high generation at Safe Harbor and Holtwood Hydro is also high, hence, during these months the flow of energy is predominantly from Pennsylvania to Maryland. During the low-flow period, which usually occurs during the summer and fall the generation at Safe Harbor and at the Holtwood plants is not sufficient to meet the requirements of Holtwood's customers in Pennsylvania, hence, during those periods substantial quantities of steam-generated energy are transmitted from Maryland to Pennsylvania to supplement the output of Safe Harbor and Holtwood plants.
[928] During 1943, the flows in the Susquehanna River were such that the generation at Safe Harbor and Holtwood Hydro was greater than the average by 95,232 mwh. In 1944, the output of Safe Harbor and Holtwood Hydro plants was less than average by 181,386 mwh. This largely

accounts for the relatively greater amounts of energy transmitted from Pennsylvania to Maryland in 1943. It also accounts for the relatively greater amounts of steam generated energy which were transmitted from Maryland to Pennsylvania in 1944.

The amounts of energy transmitted across the Pennsylvania-Maryland boundary over the 220 kv and 66 kv circuits of Holtwood is also affected to some extent by the amounts of economy energy interchanged by Holtwood and its Pennsylvania customers.

MR. GOLDBERG: At this time, Mr. Examiner, I would like to have marked for identification as Exhibit 41 a diagram entitled "Pennsylvania Water & Power Company, Baltimore, Maryland, System and Interconnections Showing Interconnecting Lines for the Various Companies."

TRIAL EXAMINER: The diagram will be marked Exhibit No. 41 for Identification.

(The document referred to was marked Exhibit No. 41 for Identification.)

By MR. GOLDBERG:

Q. Mr. Roland, relating your answer to Exhibit 41, [929] what do your studies show regarding the amounts of electric energy transmitted from the Conestoga Substation to the Pennsylvania Railroad at Conowingo and Perryville over facilities owned and operated by Holtwood and Susquehanna? A. The markings in blue ink on this diagram were made by me after consulting with Mr. Von Eiff, interconnection engineer for Holtwood. This diagram shows four circuits extending from the Conestoga Substation to Perryville. Two of these circuits, designated as P-5 and P-6, because of the switching at Perryville, transmit most of the energy interchanged with Philadelphia Electric Company, at Perryville through the facilities of the Pennsylvania Railroad Company. That is, at times Holtwood supplies energy to Pennsylvania Railroad for rail-

road service north of Perryville which is considered interchange delivery by Holtwood to Philadelphia Electric Company.

At other times, Philadelphia Electric Company supplies energy to Holtwood at Perryville through the facilities of the Pennsylvania Railroad. Such deliveries are considered as interchange deliveries by Philadelphia Electric Company to Holtwood. Some of the energy so delivered by Philadelphia Electric Company is transmitted by Holtwood from Perryville to Conestoga Substation. The balance of the energy received by Holtwood from Philadelphia Electric Company, at Perryville is used for railroad service south of Perryville [930] and, therefore, is considered a delivery by Holtwood to Pennsylvania Railroad for the account of the Baltimore Company.

During 1944, Holtwood delivered 36,527 mwh to the Pennsylvania Railroad at Perryville for the account of the Philadelphia Electric Company, since it was for railroad service north of Perryville. Approximately 30,000 mwh of this amount was transmitted from the Conestoga Substation to Perryville over the circuits designated as P-5 and P-6.

The balance of the energy delivered at this point for the account of the Philadelphia Electric Company was transmitted over the two circuits designated as P-7 and P-8, or from Washington over the Railroad Company's lines.

During 1944, Philadelphia Electric Company delivered to the Holtwood Company at Perryville, a total of 33,388 mwh. About 10,800 mwh of this energy was transmitted from Perryville to Conestoga over the circuits designated as P-5 and P-6. The remainder was supplied to the Railroad Company's facilities south of Perryville, which is considered a delivery by Holtwood to the Railroad Company, for the account of the Baltimore Company.

The two circuits shown on Exhibit 41 and designated as P-7 and P-8 transmit energy from the Conestoga Substation to the Pennsylvania Railroad Company at Fishing

Creek, between Holtwood and Conowingo, and at Conowingo and Perryville. [931] The amounts transmitted over these circuits to the Pennsylvania Railroad Company at Conowingo and Perryville, Maryland, are deliveries to the railroad for the account of the Baltimore Company, that is, sales to the railroad in Maryland, are considered as sales by the Baltimore Company to the railroad.

In 1944, the Holtwood Company transmitted 122,477 mwh to the Railroad Company, at Conowingo and Perryville over circuits P-7 and P-8 for the account of the Baltimore Company.

Data furnished by the Holtwood Company indicates that relatively small amounts of energy were transmitted over circuits P-7 and P-8 from Perryville to the Conestoga Substation.

Q. Mr. Roland, referring to the diagram marked for identification as Exhibit 41, which I show you, am I right in reading that diagram that the two small blue lines below the words "Donegal Tap" are the Donegal Tap? A. Well, the Donegal Tap is right outside of the Safe Harbor Station. On this diagram the Donegal Tap really would be above the blue lettering "Donegal Tap".

Q. Above and to the right, is that correct? A. Yes.

Q. I see. A. The blue lines below the words "Donegal Tap" indicates the interconnection between the facilities of Safe Harbor and Holtwood.

[932] Q. Now, with respect to the amounts of electric energy which Exhibits 38 and 40 show as being transmitted by the Holtwood System from Pennsylvania to the Baltimore-Washington System in Maryland over the 66 kv circuits during the year 1944, where was that energy generated? A. During the year 1944, most of that energy was generated at Holtwood Hydro Plant in Pennsylvania.

Q. How do you determine that? A. The energy delivered by Holtwood to Baltimore Company at Highlandtown over the 66 kv circuits is 25 cycle, 3 phase. The gen-

erators producing that 25 cycle, 3 phase energy are at the Holtwood Hydro Plant.

Q. How much 25 cycle hydro generating capacity is installed at Holtwood hydro? A. There are 8 water turbine driven 25 cycle generating units having an aggregate capacity of 87,000 kilowatts at the Holtwood hydro plant.

Q. What is the principal market for the energy generated by these units? A. Most of the energy generated by these units is delivered to Baltimore Company at Highlandtown.

Q. How much was generated by the 25 cycle units at Holtwood in 1944? A. Generation by the main 25 cycle units at Holtwood totalled about 388,000 mwh in 1944.

[933] Q. What other market is there for 25 cycle energy generated at Holtwood? A. In 1944, Holtwood delivered 30,034 mwh of 25 cycle energy to Pennsylvania Power and Light Company at Lancaster, and during the same year 13,283 mwh of 25 cycle energy were supplied to the 60 cycle system through the two 5,000 kilowatt frequency changers located at Holtwood hydro.

Q. As I understand it, the only outlet for 25 cycle energy generated at Holtwood hydro, other than to Baltimore, is to Pennsylvania Power & Light Company, and to the 60 cycle system through the frequency changer. Is that right? A. Yes.

Q. How much of the 25 cycle energy generated at Holtwood hydro was delivered to Baltimore in 1944? A. A net of 321,206 mwh.

Q. Was the generation and delivery of that energy a part of Holtwood's service to Baltimore? A. Yes.

Q. With respect to the amounts of electric energy which Exhibits 38 and 40 show as being transmitted by the Holtwood system from Pennsylvania to the Baltimore-Washington system in Maryland over the 220 kv circuits during 1944. Where was that energy generated? A. Most of it was generated at the Safe Harbor plant.

Q. How do you determine that? [934] A. During 1944 relatively small amounts of energy were supplied to the Safe Harbor plant from other sources in Pennsylvania, hence most of the energy transmitted from Safe Harbor to Maryland over the 220 kv circuits came from Safe Harbor generation.

Q. To what other companies does Safe Harbor sell its capacity and energy? A. The entire output of Safe Harbor is sold two-thirds to Baltimore Company and one-third to Holtwood.

Q. Who transmits the energy sold to the Baltimore Company by Safe Harbor? A. The energy purchased by Baltimore Company from Safe Harbor is transmitted from Safe Harbor over the Holtwood system.

Q. With respect to the amounts of electric energy which Exhibits 38 and 40 show was transmitted from the Holtwood System in Pennsylvania, to the Baltimore-Washington System in Maryland, during the year 1944, was that electric energy consumed at points outside of the State of Pennsylvania? A. Yes. The Baltimore Company sells the energy it received from Holtwood to its customers in Maryland. One of Baltimore's customers is the Potomac Electric Power Company, which receives electric energy directly from Susquehanna's facilities at Takoma Park Maryland. Potomac Electric Power [935] Company distributes that energy to its customers in Maryland and in the District of Columbia.

Q. With respect to the amounts of electric energy which Exhibits 38 and 40 show was transmitted from Maryland to Pennsylvania, during 1944, in which state, or states, was that energy generated? A. Electric energy transmitted from Maryland to Pennsylvania, over the 220 and 66 kv circuits was generated in the plants of the Baltimore Company, in Maryland, or in the plants of the Potomac Electric Power Company, in the District of Columbia. Some of it may have been generated in the plants of industrial

companies located in Maryland which supplied relatively small amounts of energy to the Baltimore Company.

Q. With respect to the amounts of electric energy which Exhibits 38 and 40 show is transmitted from Maryland, to Pennsylvania, did you make any studies to ascertain whether or not any of that energy was sold by Holtwood for resale to other electric utility companies in Pennsylvania? A. Yes, I did.

Q. Referring to Exhibit 41, will you designate the points at which Holtwood sells electric energy to others in Pennsylvania, at wholesale for resale? A. Holtwood sells electric energy for resale to Pennsylvania Power & Light Company at the Donegal Tap, which [936] is located near the Safe Harbor plant; at Lehman Farm. At the interconnection point shown directly below the number designating circuit 18 at the Holtwood hydro plant, and at the interconnection point shown directly below the number designating Circuit No. 3, at the Holtwood hydro plant.

Holtwood sells electric energy for resale to the Philadelphia Electric Company, at the latter's Newlinville Substation in Coatesville, Pennsylvania. The interconnection points at this substation are shown directly below the numbers designating Circuits 13 and 14.

Holtwood also sells electric energy for resale to the Metropolitan Edison Company, at the Violet Hill Substation in York, Pennsylvania. The points of interconnection at this substation are shown to the right of the 69 kv bus in circuits 82 and 83 at Violet Hill.

At this point, since the low tension equipment including the transformers at Violet Hill Substation were recently sold to the Edison Light & Power Company, the interconnection points as shown on Exhibit 41 at the Violet Hill Substation are different from what they now show on Exhibit 41. The interconnection point shown just to the left of the numbers 82 and 83 are correct. The interconnection points shown in the four low tension feeders should

be eliminated and there should be interconnection points shown between the high tension side of the transfer and the high tension bus; that is, in [937] each one of the transformer circuits between the high tension side of the transformer and the high tension bus.

Q. In other words, if I understand that last answer, Mr. Roland, the diagram marked as Exhibit 41 was prepared before that sale of the Violet Hill Substation took place, is that right? A. That is correct.

TRIAL EXAMINER: When did that sale take place? How recently?

THE WITNESS: I was just informed that it was, I believe, in February or March of this year that the sale took place.

TRIAL EXAMINER: Can you make the changes on Exhibit 41 for Identification which would bring that exhibit up to date?

THE WITNESS: Yes.

TRIAL EXAMINER: It would be preferable to have a supplemental sketch rather than to change the exhibit itself. Is that possible?

MR. GOLDBERG: Will it be satisfactory to the Examiner if the witness indicates by a cross, let us say, the new points of delivery?

TRIAL EXAMINER: I think so.

MR. GOLDBERG: And eliminate the old points of delivery shown on Exhibit 41 by just crossing them out?

By MR. GOLDBERG:

[938] Q. Can that be done that way, Mr. Roland?

TRIAL EXAMINER: So long as it is clear what the old points were and what the new points are after the changes have been made.

By MR. GOLDBERG:

Q. Can it be done in the way I suggested, Mr. Roland? Have the Exhibit 41 show the new points of delivery by cross-marks which we can designate as "new points of delivery since sale of the Violet Hill Substation", and then we can designate the old points by writing on the exhibit "old points of delivery prior to sale of substation". Can it be done that way, Mr. Roland? A. Yes, that can be done.

MR. GOLDBERG: May I suggest then, Mr. Examiner, that that be done as has just been indicated?

MR. MYSE: It might be wise to check whether or not there has been a change in the metering points as well as the interconnection. I think there has been some change—I am not sure.

TRIAL EXAMINER: That can be taken up before the exhibit is ruled on.

MR. GOLDBERG: Then we will check on that and make all the necessary changes to make it conform to the situation since the sale of the substation early in 1946.

By MR. GOLDBERG:

[939] Q. Now, Mr. Roland, will you continue with your answer with respect to delivery points by Holtwood? A. Holtwood sells and receives energy on an interchange basis with the Philadelphia Electric Company, at Thorndale, Pennsylvania, and at Perryville, Maryland, through the facilities of the Pennsylvania Railroad Company.

Q. Will you describe the facilities by means of which electric energy shown on Exhibits 38 and 40 was transmitted from Maryland to Pennsylvania, and can be transmitted to the interconnection points which you have just described, using if you will Exhibit 41 for reference purposes. A. The bulk of the electric energy transmitted from Maryland

to the Holtwood System in Pennsylvania, is transmitted over the two 220 kv circuits.

Small amounts of energy are transmitted from the Highlandtown substation in Maryland, to the Holtwood plant in Pennsylvania, over circuits 1, 2, 5 and 6.

The energy transmitted from Maryland to Pennsylvania, over the 220 kv circuits comes into the Safe Harbor Plant over circuits Nos. 2302 and 2303. There are transformers in these two circuits which step the voltage down from 220 kv to 13 kv. These transformers are owned and operated by the Safe Harbor Water Power Corporation. The 13 kv side of these two transformers, Nos. 2202 and 2203, connect directly to the north and south buses at Safe Harbor. From this bus, [940] energy received from Maryland can be transmitted through Circuits 692 and 693, through transformers in each circuit which steps the voltage up to 69 kv, to Donegal Tap and to Lehman Farm. At these two points, electric energy is sold at wholesale for resale to the Pennsylvania Power and Light Company.

Electric energy delivered to the bus at Safe Harbor can also be transmitted over Circuits 692 and 693, to the 13 kv, 60 cycle bus at Holtwood plant, over Circuits 15 and 16 via Lehman Farm.

Energy transmitted from Maryland to the 13 kv, 60 cycle bus at the Holtwood plant over the circuits which I have named can be transmitted from this bus to the Metropolitan Edison Company, at the Violet Hill Substation in York over Circuits 11 and 12, to the Philadelphia Electric Company at its Newlinville Substation in Coatesville over Circuits 13 and 14, and to the Pennsylvania Power and Light Company's Engleside Substation in Lancaster over Circuit 18.

Electric energy transmitted to the 60 cycle bus at Holtwood can also be transferred to the 25 cycle buses at the Holtwood hydro plant, through frequency changers 61 and 62. From the 69 kv, 25 cycle bus at the Holtwood hydro plant, electric energy can be transmitted to the Pennsyl-

vania Power & Light Company's Engleside Substation in Lancaster over Circuit No. 3.

[941] Q. Are the facilities which you have designated facilities for the transmission of electric energy? A. Yes.

Q. You stated that you made studies to ascertain whether or not electric energy transmitted from Maryland to Safe Harbor is sold by Holtwood to its customers in Pennsylvania. Is that correct? A. Yes.

MR. GOLDBERG: At this point, Mr. Examiner, I would like to have marked for identification an exhibit consisting of 22 pages entitled, "Generation and Transmission of Electric Energy on Holtwood-Safe Harbor System and Transmission from Maryland to Holtwood's Resale Customers in Pennsylvania by Hours for Twenty Days of 1944."

TRIAL EXAMINER: The document handed to the reporter may be marked Exhibit No. 42 for Identification.

(Exhibit No. 42 is marked for Identification.)

By MR. GOLDBERG:

Q. Mr. Roland, referring to Exhibit 42 for Identification which has just been marked? A. Yes, sir.

Q. Did you prepare this exhibit? A. It was prepared by me and one of my assistants under my direct supervision.

Q. What in general does it purport to show? [942] A. This document shows the generation and transmission of electric energy on the Safe Harbor-Holtwood System as well as the amounts of electric energy transmitted from Maryland to Holtwood's resale customers in Pennsylvania during each hour of twenty days in 1944.

Q. Does it show the percentage of the energy delivered to Holtwood's wholesale customers in Pennsylvania which is transmitted from Maryland? A. Yes, that is shown in columns 14, 17 and 29.

Q. How were the twenty days chosen which you used in your study? A. I selected representative days. On July 26, 1945, I called on Mr. Von Eiff, Interconnection Engineer of Holtwood, to discuss with him the matter of obtaining a record of hourly watt-hour meter readings at various points on the Holtwood system during a low-flow period.

Mr. Von Eiff stated that in 1944 low flows occurred during the month of August. I asked for a period of low flows for the reason that during low flows on the Susquehanna River, I anticipated that electric energy transfers from Maryland to Holtwood's customers in Pennsylvania would be at a maximum. On the basis of Mr. Von Eiff's statements I selected the week beginning August 20, 1944. At that time, on blank forms which I had with me, I designated the various circuits with the appropriate meter number for which I wished to secure [943] hourly data for the entire week of August 20, 1944. Mr. Von Eiff had the hourly readings which I requested transcribed from Holtwood Company log sheets to the blank forms which I had provided. The completed forms were mailed to us on August 20; I returned to Baltimore during the latter part of August, 1945, and examined the company's log sheets showing hourly generation at Safe Harbor as well as the hourly input to Safe Harbor from Maryland over the 220 kv circuits for each day of 1944. From an examination of these log sheets and from an examination of a tabulation showing average daily river flow in the Susquehanna River at Holtwood for each day of 1944, I designated twelve additional days and requested that Holtwood furnish hourly data for each of these days similar to that furnished for the week of August 20. In November I asked Mr. Von Eiff to furnish similar data for April 19, 1944.

MR. MYSE: Do you mean 1944?

THE WITNESS: I meant to say 1945—in other words, I returned to Baltimore during the latter part of August,

1945, and examined company's log sheets. Is it to that you refer?

MR. MYSE: Yes.

By MR. GOLDBERG:

Q. Proceed. A. In making my selections I endeavored to designate days which would cover a wide range of stream flow but which would give particular emphasis to and would be reasonably [944] representative of those periods when river flows were such that the amounts of energy supplied from Maryland to supplement the Safe Harbor and Holtwood plants were a maximum. For this reason, 17 of the total of 20 days I designated were for days when the average daily stream flow was 21,200 cfs or less.

MR. GOLDBERG: Mr. Examiner, I ask to have marked for identification as Exhibit No. 43 a tabulation entitled, "Pennsylvania Water & Power Company Susquehanna River Flows."

TRIAL EXAMINER: The tabulation may be marked Exhibit No. 43 for Identification.

(The document referred to was marked Exhibit No. 43 for Identification.)

By MR. GOLDBERG:

Q. Briefly, Mr. Roland, refer to Exhibit 43 and tell us what that exhibit shows? A. Well, it shows the river flow in the Susquehanna River, 24 hour average in thousands of cubic feet per second, as measured at the Holtwood Plant.

Q. That is for the year 1944 only? A. For the year 1944.

Q. How does a flow of 21,200 cfs compare with the median flow of the Susquehanna River? A. The median flow of the Susquehanna River at Holtwood based on 1917 to 1941 flows is 21,000 cfs.

[945] Q. On how many days in an average year of flow would the flows be equal to or less than 21,000 cfs? A.

According to a flow duration curve for the Susquehanna River at Holtwood based on 1917 to 1941 flows, which was submitted by Pennsylvania Water & Power Company, in its application for license for the Holtwood project—Exhibit I-1 Section 12—stream flows would be equal to or less than 21,000 cfs for approximately 182 days of the year. That is such flows would be available approximately 50 per cent of the time.

Q. Referring to Exhibit 43, for how many days in 1944 was the average stream flow 21,200 cfs or less? A. There were 218 such days.

Q. During what months did they occur? A. January, February, June, July, August, September, October, November and December.

Q. Do you consider that energy flows on the Holtwood-Safe Harbor system during the selected 17 days on which stream flow was 21,200 cfs, or less, are reasonably representative of energy flows during the 218 days during which stream flow was 21,200 cfs or less? A. Yes. By that I mean, that if detailed studies of hourly flows were made for the 218 days, the results would, in general, be comparable to the results shown in Exhibit 42 for the selected 17 days when flows were [946] 21,200 cfs or less.

Q. On what basis did you select the other three days? A. April 27, 1944, was designated as an example of high river flow. The flow on that date was 149,100 cfs. December 11, 1944, was designated because it was the day when the system peak load of the year occurred on the Safe Harbor-Holtwood-Baltimore power pool. The river flow on December 11 was 37,400 cfs. April 19, 1944, was designated because it was the day of maximum hourly output from the Safe Harbor-Holtwood system. The river flow on that day was 61,500 cfs.

Q. Why did you designate only three days of high river flow? A. In general, as river flows increased above 21,200 cfs, the number of hours of zero generation at Safe Harbor decreased as did the amounts transmitted to Safe

Harbor from Maryland. When river flows were in excess of roughly 40,000 cfs, little or no energy was transmitted from Maryland to Safe Harbor. In view of this situation, I decided to make only a few calculations for periods of river flows in excess of 21,200 cfs.

Q. What approximations or errors, if any, are involved in your studies in which you show the amounts of energy transmitted from Maryland to the Holtwood system in Pennsylvania and sold by Holtwood for resale in Pennsylvania? [947] A. I was advised by Mr. Von Eiff that Holtwood attempts to limit the errors in its watt-hour meters to within plus or minus two per cent. Operators read these to the nearest mwh which may introduce a fairly large percentage of error where the readings are very small. Most of the readings which I am dealing with in my study are, however, sufficiently large so that any error from this source is negligible.

In view of the fact that the meter readings which I employ in my studies are readings to the nearest mwh, I also made my calculation to the nearest mwh. Calculated values of less than 0.5 are indicated by a dash. I have also neglected transmission losses in my studies which introduces a small error. In a few cases, energy transfers over a particular circuit reversed its direction during the hour. For those hours, I used the net transfer over the circuit during the hour for some of my calculations. This may introduce a small error.

During the low-flow periods, one of the house units at Safe Harbor is in operation either for generation or as a condenser, even though the main generating units are idle. During periods of high flow, when the main units are in operation as generators, both house units are also in operation as generators. I was advised that up to two megawatts might be delivered to the main bus from the house units during the high flow periods. In my studies, I have not taken [948] into account the fact that during low flows, station service may be supplied from the main bus and that

during high flows some of the output of the house units may be supplied to the main bus.

Q. In your opinion, do the possible errors which you named, and the approximation which you used, materially affect the accuracy of your computations? A. No, excepting the computations for the relatively few hours during which the energy transfers were very small.

Q. Referring to Exhibit 42, will you describe how you computed the quantities of electric energy, if any, transmitted from Maryland to Pennsylvania Power & Light Company, at Donegal Tap and at Lehman Farm and to Pennsylvania Water & Power Company's Holtwood Station, using some particular hour as an example. A. From data shown on the first five columns of Exhibit 42, I computed the percentage of the total amount of energy supply to the 13 kv, 60 cycle bus at Safe Harbor which was transmitted from Maryland.

For example: Column 1, of page 1, which is for Wednesday, January 26, 1944, shows the amount of generation by the 60 cycle main units at Safe Harbor during each hour of the day. During the hour ending 2 A. M. that day the generation by these units was zero. The output of the main 60 cycle generators at Safe Harbor is measured by meter No. 1, which [949] metering point is shown on Exhibit 39. Column 2 shows the amount of energy transferred from the 25 cycle bus to the 13 kv, 60 cycle bus at Safe Harbor through the frequency changer. The amounts shown in Column 2 are measured by meter No. 3 "out".

During the hour ending 2 A. M. on January 26 no energy was transferred from the 25 cycle bus to the 60 cycle main bus through the frequency changer.

Column 3 shows the amounts of energy supplied to the 13 kv, 60 cycle bus at Safe Harbor from the 69 kv circuits. These amounts are measured by meter No. 8 "in".

During the hour ending 2 A. M., no energy was supplied to the Safe Harbor bus over the 69 kv circuits.

Column 4 shows the amounts of electric energy transmitted from Maryland to the 13 kv, 60 cycle bus at Safe

Harbor over the two 220 kv circuits as measured by meters numbers 5 and 6 "in".

During the hour ending 2 A. M., on January 26, sixty-seven megawatthours were transmitted from Maryland to the 13 kv, 60 cycle bus at Safe Harbor. Column 6 shows the percentage of the total amount of energy supplied to the 13 kv, 60 cycle bus at Safe Harbor which was transmitted during the hour from Maryland. That is, this column is equal to the entries in column 4 multiplied by 100 and divided by the entries in column 5.

[950] During the hour ending 2 A. M. on January 26, 100 per cent of the electric energy supplied to the 13 kv, 60 cycle bus at Safe Harbor was transmitted from Maryland.

From the entries in Columns 7 through 10, I computed the percentage of the total sendout from Susquehanna-Safe Harbor over the 69 kv circuits which was transmitted from Maryland.

For example: Column 7 shows the amounts of electric energy transmitted from the 13 kv, 60 cycle bus at Safe Harbor to Maryland as measured by meters numbers 5 and 6 "out". No energy was so transmitted during the hour ending 2 A. M. on January 26.

Column 8 shows the amount of energy transferred from the 13 kv, 60 cycle bus to the 25 cycle bus at Safe Harbor through the frequency changer and is measured by meter No. 3 "in". During the hour ending 2 A. M., 23 megawatt hours were so transferred.

Column 9 shows the sendout from Safe Harbor over the 69 kv circuits as measured by meter No. 8 "out". During the hour ending 2 A. M., 43 megawatt hours was transmitted out of Safe Harbor over the 69 kv circuits towards Donegal, Lehman Farm and the Holtwood Station.

Column 10 shows what portion, in megawatt hours, of the total send-out from Safe Harbor over the 69 kv circuits was [951] transmitted from Maryland. During the hour ending 2 A. M., the total sendout from Safe Harbor over the 69 kv circuits was transmitted from Maryland. Column

11 shows the percentage of the total sendout from Safe Harbor over the 69 kv circuits which came from Maryland. During the hour ending 2 A. M., this percentage was 100, being equal to column 10, multiplied by 100 and divided by column 9.

From columns 12 and 13, I computed the percentage of the deliveries made to Pennsylvania Power & Light Company at Donegal, which were transmitted from Maryland. That is, column 12 shows the amount of energy delivered to Pennsylvania Power and Light Company via Donegal. The entries in this column are equal to the sum of the deliveries to Lancaster as measured by meter No. 12; to Little Inch and Big Inch as measured by meters 9 and 10; to South Manheim as measured by meter No. 13; to South Akron as measured by meter No. 14, plus or minus the net interchange at Harrisburg as measured by meter No. 11.

From these meter readings, I determined that 7 megawatt hours were delivered to Pennsylvania Power and Light Company, at the Donegal Tap during the hour ending 2 A. M., on January 26.

Column 13 shows what portion, in megawatt hours, of the total deliveries to Pennsylvania Power and Light Company via Donegal were transmitted from Maryland.

[952] During the hour ending 2 A. M., this was 7 megawatt hours. Column 14 is the ratio of column 13 to column 12 in per cent. During the hour ending 2 A. M., 100 per cent of the total amount delivered to Pennsylvania Power and Light Company via Donegal was transmitted from Maryland.

From columns 15 and 16, I computed the percentage of the deliveries made to Pennsylvania Power & Light at Lehman Farm, which were transmitted from Maryland.

For example: Column 15 shows the amount of electric energy delivered to Pennsylvania Power and Light Company at Lehman Farm and is measured by meter No. 15 to Lancaster. During the hour ending 2 A. M., January 26, 16 megawatt hours were delivered to Pennsylvania Power and Light Company at this point.

Column 16 shows the portion, in megawatt hours, of the total deliveries to Pennsylvania Power and Light Company at Lehman Farm which was transmitted from Maryland. During the hour ending 2 A. M., 16 megawatt hours, or the total amount delivered to Pennsylvania Power and Light Company at Lehman Farm during the hour, was transmitted from Maryland.

Column 17 is the ratio of column 16 to column 15 in per cent.

From the entries in columns 18 and 19, I computed the percentage of the deliveries to the 13 kv, 60 cycle bus at Holtwood via Lehman Farm, which were transmitted from [953] Maryland. That is, column 18 shows the amount of electric energy transmitted to the 13 kv, 60 cycle bus at Holtwood via Lehman Farm as measured by meter No. 28 "in" at Holtwood. During the hour ending 2 A. M., 20 megawatt hours were so transmitted. The minus sign in front of some of the entries in column 18 means that the flow during the hour was in a direction opposite to that indicated by the column heading.

[954] That is, for some of the hours the flow reversed its direction and energy was transmitted from the 13 kv, 60 cycle bus at Holtwood toward Lehman Farm.

Column 19 shows the portion, in megawatthours, of the total deliveries to the 13 kv, 60 cycle bus at Holtwood via Lehman Farm, which came from Maryland.

MR. MYSE: May I interrupt for a moment and ask you what that small N in parentheses is?

MR. GOLDBERG: I was just about to reach that.

By MR. GOLDBERG:

Q. Will you please continue? A. During the hour ending 2 A. M., January 26, 20 megawatthours, or the total amount delivered to the bus at Holtwood, came from Maryland.

Column 20 is the ratio of Column 19 to Column 18 in percent.

Q. I note that opposite some of the entries, for example during the hour ending 11 P. M., Column 18, for January 26, 1944, you have an "N" in parenthesis. What does the "N" signify? A. The letter "N" following some of the entries in Column 18 means net flow during the hour. That is for some of the hours the flow reversed its direction in the hour, so I used the new flow. For example, on January 26, 1944, during the hour ending 11 P. M., 7 megawatthours was transmitted [955] to the 13 kv, 60 cycle bus from Lehman Farm as shown in Column 25 and 1 megawatthour was transmitted from that bus to Lehman Farm as shown in Column 30 during the same hour both being measured by Meter No. 28. The net flow for that hour was, therefore, 6 megawatthours.

Q. Do blank spaces indicate zero values? A. Yes.

Q. How do you conclude that all of the electric energy delivered to Pennsylvania Power and Light Company at Donegal and at Lehman Farm and that all of the energy delivered to the 13 kv, 60 cycle bus at Holtwood via Lehman Farm during the hour ending 2 A. M., January 26, came from Maryland? A. All of the energy delivered at those three points during that hour was transmitted from Safe Harbor over the 69 kv circuits. All of the electric energy supplied to the 13 kv, 60 cycle bus at Safe Harbor during that hour came from Maryland; therefore, all of the energy supplied to Pennsylvania Power & Light Company at Donegal and at Lehman Farm, and to the Holtwood bus via Lehman Farm had to come from Maryland.

Q. In other words, if I understand your answer, of the 67 megawatthours transmitted from Maryland to Safe Harbor during the hour ending 2 A. M., January 26, 23 megawatthours were supplied to the 25 cycle bus through the frequency changer and 43 megawatthours were transmitted away from Safe Harbor over the 69 kv circuits—am I right so far? [956] A. Yes.

Q. And of that latter amount, 7 went to Pennsylvania Power & Light Company at Donegal, 16 went to Pennsyl-

vania Power & Light Company at Lehman Farm, and the 20 megawatthours remaining went to the bus at Holtwood. Is that correct? A. Yes.

Q. Did that same condition obtain during other hours on January 26, 1944? A. Yes. The same condition obtained during the first seven hours of the day and also during the hours ending 11 P. M., and 12 P. M.

Q. Have you prepared an exhibit showing the magnitude and direction of flow on the Holtwood-Safe Harbor System for the hour ending at 2 A. M., on January 26, 1944? A. I have.

MR. GOLDBERG: At this time, Mr. Examiner, may I have marked for identification as Exhibit 44 the exhibit described by the witness in his last answer?

TRIAL EXAMINER: Yes, the document may be marked Exhibit 44 for identification.

(The document referred to was marked Exhibit No. 44 for Identification.)

By MR. GOLDBERG:

Q. Mr. Roland, I show you Exhibit 44 and ask you if that is the exhibit to which you have referred in your last [957] answer. A. That is correct.

Q. And I take it the numbers near the arrows indicate the magnitude of flows in megawatthours, is that correct? A. That is correct.

MR. MYSE: Do the figures show the net flow during the hour?

THE WITNESS: As I recall, for this particular hour there was no reversal during the hour, therefore it would not only be the net but would be also the gross flow. I mean, the direction of flow was in the same direction during the hour.

By MR. GOLDBERG:

Q. Referring you to page 1 of Exhibit 42, the hour ending at 2 A. M., on January 26, 1944, it appears, does it

not, that there were no reversals of flow? A. That is correct, yes.

Q. In your studies of energy transfers for the 20 days, did you find hours in other days when all the energy delivered to Pennsylvania Power & Light Company at Donegal and at Lehman Farm and all the energy delivered to Holtwood via Lehman Farm, was transmitted from Maryland? A. Yes. There were 204 hours representing 43 per cent of the total hours in the 20 days when all the energy delivered to Pennsylvania Power & Light Company at Donegal was [958] transmitted from Maryland.

There were 189 hours representing 39 per cent of the total hours, when all the energy delivered to Pennsylvania Power & Light Company at Lehman Farm, and 180 hours representing 38 per cent of the total hours, when all the energy delivered to the bus at Holtwood via Lehman Farm, was transmitted from Maryland.

Q. During how many hours of the 20 days, did you find that there was no generation by the main 60-cycle generators at Safe Harbor? A. There were 239 such hours representing 50 per cent of the total hours.

Q. During how many hours of the 20 days did you find that all of the energy supplied to the 13 kv, 60 cycle bus at Safe Harbor came from Maryland? A. There were 213 such hours representing 44 per cent of the total number of hours in the 20 days.

Q. Did you determine how many hours during the year 1944 when there was no generation by main units at Safe Harbor? A. Yes. In 1944, there was no generation by main units at Safe Harbor during 1,882 hours, or 21.4 per cent of the total hours in the year.

Q. Did you make such a determination for each month in the year 1944? [959] A. Yes.

Q. What percentage of the total hours of each month in 1944 was the generation by main units at Safe Harbor zero during the hour? A. There was no generation by main units at Safe Harbor during 22.2 per cent of the

hours in January; 19 per cent in February; zero per cent in March, April and May; 8.3 per cent in June; 29.8 per cent in July; 48 per cent in August; 45 per cent in September; 32.2 per cent in October; 36.7 per cent in November, and 16 per cent in December.

* * * *

[960] Q. Mr. Roland, do you find it generally true that when the hydro units at Safe Harbor are shut down, energy is transmitted to Safe Harbor from Maryland? A. During the 20 days energy was transmitted to Safe Harbor during all the hours when the main hydro units were shut down. On the basis of this sampling, which I consider to be reasonably representative, and judging from the fact that during all months of 1944, except the high-flow months of March, April and May, substantial quantities of energy were transmitted to Safe Harbor from Maryland, I would conclude that energy was transmitted to Safe Harbor from Maryland when the hydro units at Safe Harbor were shut down.

Q. Were there some hours during the 20 days when electric energy was transmitted from Maryland to Safe Harbor during the same hours when energy was generated by the main units at Safe Harbor? A. Yes.

Q. Will you state how much electric energy was transmitted from Maryland to Safe Harbor during some hour when there was generation by the main units at Safe Harbor? A. Referring to page 3 of Exhibit 42, which is for Wednesday, Feb. 16, 1944, it will be noted that during [961] the hour ending 1 P. M., 37 megawatthours were transmitted to the 13 kv 60 cycle bus at Safe Harbor from Maryland as shown by column 4.

During the same hour, 15 megawatthours were generated by the main 60 cycle units at Safe Harbor as shown in column 1. No energy was supplied to the 60 cycle bus during that hour from the frequency changer. The total amount of energy supplied to the 60 cycle bus at Safe Harbor during that hour was, therefore, 52 megawatthours.

Of this amount, 71 per cent was transmitted from Maryland.

Q. During that some hour, how much was delivered from Safe Harbor to Pennsylvania Power and Light Company? A. During the hour ending 1 P. M., on February 16, 1944, a total of 41 megawatthours as shown by column 9 were transmitted to the Donegal Tap from the Safe Harbor bus, over the 69 kv circuits. During that hour, eight megawatthours were delivered to Pennsylvania Power & Light Company at the Donegal Tap, and 23 were delivered to Pennsylvania Power & Light Company at Lehman Farm, as shown in columns 12 and 15 respectively.

Q. During the hour ending 1 P. M., February 16, 1944, how much was delivered from Safe Harbor to the 13 kv, 60 cycle bus at the Holtwood Substation? A. During that hour, 10 megawatthours were delivered to the 13 kv, 60 cycle bus at the Holtwood Substation, as [962] shown by Column 18.

Q. Did you attempt to determine what part, if any, of the electric energy transmitted from Maryland to Safe Harbor during the hour ending 1 P. M., on February 16, 1944, was sold to Pennsylvania Power & Light Company at Donegal and Lehman Farm, and what part, if any was transmitted to the Holtwood bus? A. Yes, I did.

Q. Upon what basis did you make that determination? A. A bus, such as the 13 kv, 60 cycle bus at Safe Harbor, the 13 kv, 60 cycle bus and the 11 kv, 25 cycle bus at Holtwood Station, provides a common connection for several supply and feeder circuits and may be regarded as pooling the energy delivered to it by the supply circuits. For this reason, I have assumed that circuits transmitting electric energy from such a common connection, which is jointly supplied from two or more sources simultaneously, transmit energy from each of those sources in the ratio that the amounts supplied from each bears to the total supply.

Q. Why did you make that assumption? A. The layout of the main buses and circuits and switching arrange-

ments at Safe Harbor and Holtwood hydro are such that co-mingling of energy takes place when energy is supplied at those points simultaneously from more than one source. For this reason, it was necessary to apportion [963] a share of the energy supplied from each source to each of the sendout circuits.

Q. In your opinion is such an assumption reasonable? A. Yes.

Q. Is it necessary to make that assumption for every hour in order to determine the percentage of energy transmitted from Maryland in the circuits showing sendout from Safe Harbor? A. No.

Q. Under what conditions is it unnecessary? A. It is unnecessary when the entire supply at Safe Harbor is from Maryland, that is, when the entry in column 6 is 100 per cent.

Q. Is it unnecessary to make that assumption for other hours in order to determine whether or not some energy transmitted from Maryland is sent out from Safe Harbor during such hours? A. Yes.

Q. Have you nevertheless used that assumption to determine the percentages shown in column 6 for certain hours in which it is not necessary to use the assumption in order to determine that some of the send-out from Safe Harbor over the 69 kv circuits must be energy transmitted from Maryland? A. Yes.

• • •

[964] Q. Mr. Roland, a moment ago when you said that it was unnecessary when the entire supply at Safe Harbor is [965] from Maryland, that is, when the entry in column 6 is 100 per cent, were you referring to column 6 of Exhibit 42? A. That is correct.

Q. Under what conditions do you do that? A. When the sendout over the 69 kv circuits at Safe Harbor exceeds the supply to the 13 kv, 60 cycle bus from the main 60 cycle generators and from the frequency changer at Safe Harbor,

some of the sendout over the 69 kv circuits had to come from Maryland. That is, when the entry in column 9 is greater than the sum of the entries in columns 1 and 2, the difference had to be supplied from Maryland.

Q. Referring to your calculations in which you have used the assumption to which you previously referred, will you please describe the application of that assumption? A. As I stated previously, on February 16, 1944, during the hour ending 1 P. M., 41 megawatt hours were transmitted from Safe Harbor to Donegal over the 69 kv circuits, and that of this amount, 8 megawatt hours were delivered to Pennsylvania Power & Light Company at Donegal, and 23 megawatt hours to Pennsylvania Power & Light Company at Lehman Farm. I also stated that the remaining 10 megawatt hours were delivered to the 13 kv, 60 cycle bus at the Holtwood Substation.

Since 71 per cent of the amount transmitted at Safe Harbor came from Maryland during that hour, I have [966] considered that 71 per cent of the amount transmitted from Safe Harbor and sold to Pennsylvania Power & Light Company at Donegal and Lehman Farm, and that 71 per cent of the amount transmitted from Safe Harbor to the Holtwood Substation during that hour came from Maryland, and that the balance came from the 60 cycle main generating units at Safe Harbor. Thus, of the 8 megawatt hours delivered to Pennsylvania Power & Light Company at Donegal, 6 megawatt hours as shown in column 13 came from Maryland and 2 megawatt hours from Safe Harbor generation; of the 23 megawatt hours sold to Pennsylvania Power & Light Company, at Lehman Farm, 13 megawatt hours as shown in column 16 came from Maryland and 7 megawatt hours from Safe Harbor generation.

Likewise, of the 10 megawatt hours delivered to the Holtwood Substation, 7 megawatt hours as shown in column 19, came from Maryland and 3 megawatt hours from Safe Harbor generation.

Q. Have you prepared an exhibit showing the magnitude and direction flows of Holtwood and Safe Harbor system and transmission from Maryland to Holtwood's resale customers in Pennsylvania? A. I have.

MR. GOLDBERG: At this time, Mr. Examiner, I ask to have marked for identification Exhibit 45 the diagram referred to.

[967] TRIAL EXAMINER: The diagram may be marked Exhibit 45 for Identification.

(Exhibit No. 45 was marked for Identification.)

By MR. GOLDBERG:

Q. I show you Exhibit 45 for Identification, Mr. Roland, and I ask you if this is the exhibit to which you have referred in your last answer? A. That is correct.

Q. Mr. Roland, what is a "bus"? A. A bus conductor or group of conductors is a switch gear assembly which serves as a common connection for three or more circuits. That is the definition which appears on Page 97 of The American Standard Definitions of Electrical Terms.

Q. Going back to Page 1 of Exhibit 42 you stated that during the hour ending 2 A. M., January 26, 1944, 20 megawatt hours were transmitted from Maryland to the 13 kv, 60 cycle bus at Holtwood. What happened to that energy? A. The 20 megawatt hours transmitted from Maryland to the 13 kv, 60 cycle bus at Holtwood, together with the energy supplied by the steam units at Holtwood and from Pennsylvania Power & Light Company during that hour, was transmitted out from the 13 kv, 60 cycle bus at Holtwood to Metropolitan Edison at York, to Philadelphia Electric Company at Coatesville, to the 11 kv, 25 cycle bus at Holtwood through the frequency [968] changer and to the station service bus at Holtwood.

Q. In column 28 for the hour ending 2 A. M., January 26 you show 20 megawatt hours from Maryland and in column 29 you show 54 per cent from Maryland. How did

you arrive at those amounts? A. Column 21 shows the amount of energy generated by the steam electric units at Holtwood and is measured by meter No. 24. Column 22 shows the amount of energy generated during the hour by the 60 cycle hydroelectric units at Holtwood and is measured by meter No. 25.

Column 23 shows the amount of energy transferred from the 11 kv, 25 cycle bus to the 13 kv, 60 cycle bus at Holtwood through the frequency changer and is measured by meter No. 23 "out."

Column 24 is the total amount of energy supplied to the 13 kv, 60 cycle bus at Holtwood from the 60 cycle generating units and from the frequency changer at Holtwood.

Column 25 shows the amounts transmitted from Lehman Farm to the 13 kv, 60 cycle bus at Holtwood as measured by meter No. 28 "in."

Column 26 is the sum of the amounts supplied to the 13 kv, 60 cycle bus at Holtwood from the Metropolitan Edison Company and the Pennsylvania Power & Light Company and is equal to the sum of the meter readings numbers 27 and 29 "in."

[969] Column 27 shows the total amount of energy supplied to the 13 kv, 60 cycle bus at Holtwood.

Column 28 has the same entries as column 19 and shows the portion in megawatt hours of the total amount of energy transmitted to the 13 kv, 60 cycle bus at Holtwood via Lehman Farm which came from Maryland.

Column 29 is the ratio of the column 28 to column 27 expressed in per cent. During the hour ending 2 A. M. a total of 37 megawatt hours was supplied to the 13 kv, 60 cycle bus at Holtwood. Of this amount 20 megawatt hours or 54 per cent was transmitted from Maryland via Safe Harbor and Lehman Farm.

Q. Will you explain what the entries in columns 30 to 35 inclusive represent? A. Column 30 shows the amount of energy transmitted from the 13 kv, 60 cycle bus at Holtwood to Pennsylvania Power & Light Company and in a

few instances to Safe Harbor via Lehman Farm. The amounts so transmitted are measured by meter No. 28 "out".

Column 31 shows the amount of energy delivered to the Metropolitan Edison Company and the Edison Light and Power Company at Violet Hill Substation in York, Pennsylvania, over circuits 11 and 12. The amounts delivered to these two companies are measured by meter No. 29 "out".

Column 32 shows the amount of energy delivered to [970] Pennsylvania Power & Light Company, over circuit No. 18 as measured by meter No. 27 "out".

Column 33 shows the amount of energy delivered to Philadelphia Electric Company, at Coatesville over circuit Nos. 13 and 14, as measured by meter No. 26. In this connection, I should point out that the meters used for billing Metropolitan Edison Company are located at the Violet Hill Substation, therefore, the amount actually delivered to this company at Violet Hill over circuits 11 and 12 would be less than the amount measured by meter No. 29 in the amount of transmission losses between Holtwood Station and the metering points at Violet Hill Substations.

Likewise, the amount delivered to Philadelphia Electric Company at Coatesville is less than the amount shown by meter No. 26 by the amount of losses between Holtwood and Coatesville.

Column 34 shows the amount of energy delivered to the frequency changer from the 13 kv, 60 cycle bus at Holtwood as measured by meter No. 23 "in". Column 35 is the total amount of sendout from the 13 kv, 60 cycle bus at Holtwood.

Q. I notice in some of your answers you have used the expression "PP & L Company" occasionally. When you use that in your answer or anywhere in your exhibits, does it refer to the Pennsylvania Power & Light Company?

A. Yes.

Q. What portion of the total amount of electric [971] energy transmitted from the 13 kv, 60 cycle bus at Holtwood to the Metropolitan Edison Company, to Philadelphia Electric Company, and what portion of the total amount supplied to the frequency changer during the hour ending 2 A. M., on January 26, came from Maryland? A. As shown in column 29, 54 per cent of the total amount of electric energy supplied to the 13 kv, 60 cycle bus at Holtwood during that hour was transmitted from Maryland. As I stated previously, I have considered that circuits transmitting electric energy from any bus which is supplied from two or more sources simultaneously, transmits energy from each of those sources in the ratio that the amount supplied from each bears to the total supply.

Accordingly, 54 per cent of the electric energy delivered to the Metropolitan Edison Company and to the Philadelphia Electric Company, and 54 per cent of the energy supplied to the frequency changer during the hour 2 A. M., January 26, was electric energy transmitted from Maryland.

In other words, during that hour approximately 3 megawatt hours were transmitted from Maryland to the Metropolitan Edison Company and approximately 11 megawatt hours were transmitted from Maryland to the Philadelphia Electric Company, and approximately 5 megawatt hours were transmitted from Maryland to the 60 cycle end of the frequency changer at Holtwood.

[972] Q. In other words, then, to obtain the amounts of electric energy transmitted from Maryland to the Metropolitan Edison Company over circuits 11 and 12, and to the Pennsylvania Power & Light Company, over circuit 18, and to the Philadelphia Electric Company, over circuits 13 and 14 and to the frequency changer from the 13 kv, 60 cycle bus at Holtwood, you multiply the percentage figures shown in column 29 by the total deliveries as shown in columns 31, 32, 33 and 34. Is that correct? A. Yes.

Q. Column 29 then shows the percentage of the total deliveries of electric energy to Metropolitan Edison over circuits 11 and 12; to Pennsylvania Power & Light Company over circuit 18; and to Philadelphia Electric Company over circuits 13 and 14 which came from Maryland via Safe Harbor? A. Yes.

Q. During how many hours of the twenty days to which you have referred was electric energy transmitted from Maryland via Safe Harbor and Holtwood to Metropolitan Edison at York; to Pennsylvania Power & Light Company, over circuit 18; to Philadelphia Electric Company at Coatesville; and to the 11 kv, 25 cycle bus through the frequency changer? A. Electric energy was transmitted from Maryland via Safe Harbor and Holtwood to Metropolitan Edison Company during 268 hours.

[973] To Pennsylvania Power & Light Company over circuit 18 during 51 hours; to Philadelphia Electric Company during 277 hours; and, to the 60 cycle end of the frequency changer during 217 hours. In terms of percentage of total hours in the 20 days, these amounts are 56, 11, 58 and 45 per cent, respectively.

[974] Q. Will you explain how you derived the entries shown in columns 36 through 39? A. Column 36 shows the amount of energy supplied to the 11 kv, 25 cycle bus from the 13 kv, 60 cycle bus through the frequency changer at Holtwood, as measured by meter No. 22 "out".

Column 37 shows the amount of electric energy generated by the 25 cycle units at Holtwood as measured by meter No. 20.

Column 38 shows the amount of energy transmitted from the Highlandtown Substation in Maryland to the Holtwood Station. The amounts so transmitted are measured by meter No. 34 located at Highlandtown.

Column 39 is the total amount of electric energy supplied to the 11 kv, 25 cycle bus at Holtwood.

Q. Is electric energy at times transmitted from Maryland via Safe Harbor and the 13 kv, 60 cycle bus at Holt-

wood, to the 11 kv, 25 cycle bus at Holtwood? A. Yes. For example, during the hour ending 3 A. M., on January 26, 54 per cent of the energy supplied to the frequency changer from the 13 kv, 60 cycle bus was transmitted from Maryland. Therefore, approximately 4.3 megawatt hours, which is the product of columns 29 and 36, was supplied to the 11 kv, 25 cycle bus at Holtwood from Maryland.

Q. The amount of energy transmitted to the 11 kv, 25 cycle bus at Holtwood from Maryland via Safe Harbor is [975] equal to the entries in column 29 multiplied by corresponding entries in column 36, is that right? A. Yes.

Q. What part of the electric energy transferred to the 11 kv, 25 cycle bus from the 13 kv, 60 cycle bus at Holtwood came from Holtwood's steam-electric units during the hour ending 2 A. M., January 26, 1944? A. The ratio of the entries in column 21 to the entries in column 27 multiplied by the corresponding entries in column 36 are the amounts transferred from the steam-electric units to the 11 kv, 25 cycle bus at Holtwood. For the hour ending 2 A. M., January 26, 1944, the amount transferred was 16 divided by 37 multiplied by 8, or about 3.5 megawatt hours.

Q. What became of the energy transferred from Holtwood's steam plant to the 11 kv, 25 cycle bus? A. The electric energy so transferred was transmitted in part to Highlandtown and in part to Pennsylvania Power & Light Company.

Q. Will you explain the entries in columns 40 to 43 inclusive? A. Column 40 shows the amount of energy delivered to Pennsylvania Power & Light Company, over Circuit No. 3, as measured by meter No. 18, located at Engelside Substation in Lancaster, column 41 shows the amount of energy transmitted [976] from Holtwood to Highlandtown, Maryland, over Circuit Nos. 1, 2, 5 and 6 as measured by meter No. 34 at Highlandtown.

Column 42 shows the amount of energy transferred from the 25 cycle bus to the 13 kv, 60 cycle bus through the frequency changer at Holtwood as measured by meter No. 22 "in".

Column 43 is the total sendout from the 11 kv, 25 cycle bus at Holtwood.

Q. Are there times when electric energy is transmitted from Maryland via Safe Harbor and Holtwood to Pennsylvania Power & Light Company, over Circuit No. 3? A. Yes. For example, during the hour ending 2 A. M., January 26, 1944, two megawatt hours as shown by column 40 were delivered to the Pennsylvania Power & Light Company from the 11 kv, 25 cycle bus at Holtwood. During the same hour 8 megawatt hours as shown in column 36 were transferred from the 13 kv, 60 cycle bus to the 11 kv, 25 cycle bus through the frequency changer and during that hour was the only source of supply to the 11 kv, 25 cycle bus.

As shown in column 29 for the hour ending 2 A. M., January 26, 1944, 54 per cent of the energy supplied to the 13 kv, 60 cycle bus during that hour came from Maryland.

Since all the energy delivered to Pennsylvania Power & Light Company from the 25 cycle bus during that hour came from the 13 kv, 60 cycle bus through the frequency changer, it follows that it would include the same percentage of [977] energy from Maryland as that shown in column 29. In other words, during those hours when no energy is generated by the 25 cycle generators at Holtwood, and no energy is received from Highlandtown, the amount of energy transmitted to Pennsylvania Power & Light Company, over Circuit No. 3, from Maryland via Safe Harbor is equal to the entry in column 29 multiplied by the entry in column 40.

Q. How would you determine what percentage of the total amount of electric energy delivered to Pennsylvania Power & Light Company over Circuit No. 3 came from Maryland for those hours when energy is transferred from the 13 kv, 60 cycle bus through the frequency changer to the 11 kv, 25 cycle bus and when during the same hour energy was generated by the main 25 cycle units at Holtwood? A. The amount of energy in megawatt hours

transmitted from Maryland via Safe Harbor to the 11 kv, 25 cycle bus through the frequency changer is equal to the entries in column 29 multiplied by the entries in column 36. The ratio of the product so derived to the total amount of electric energy supplied to the 11 kv, 25 cycle bus as shown in column 39 multiplied by 100 is the percentage of energy from Maryland via Safe Harbor which is transmitted to Pennsylvania Power & Light Company over Circuit No. 3.

Q. During how many hours of the 20 days was some electric energy transmitted from Maryland via Safe Harbor and [978] Holtwood to Pennsylvania Power & Light Company over Circuit No. 3? A. There were 235 such hours representing 49 per cent of the total hours in the 20 days. The amounts for some of those hours are very small.

Q. Did you find any hours during the 20 days when electric energy delivered to Pennsylvania Power & Light Company over Circuit No. 3 was electric energy transmitted from Highlandtown over Circuits Nos. 1, 2, 5 and 6? A. Yes. During the hours ending 3 A. M. to 6 P. M., on November 12, 1944, all the energy delivered to the Pennsylvania Power & Light Company over Circuit No. 3 came from Highlandtown, Maryland, over Circuits Nos. 1, 2, 5 and 6.

Q. Was the electric energy transmitted from Maryland to the Pennsylvania Power & Light Company at Donegal and Lehman Farm, to Metropolitan Edison Company at York, to Philadelphia Electric Company at Coatesville, as shown by Exhibit No. 42 consumed outside of Maryland? A. Yes.

Q. Was the transmission of electrical energy from Maryland to Pennsylvania a daily occurrence in 1944? A. With the exception of the high flow months, that is, March, April and May, electric energy was transmitted from Maryland to Safe Harbor at some time during practically every day of 1944.

[979] Q. Does it follow from what you have just said, that with the exception of the high flow months of March, April

and May, some electric energy was transmitted from Maryland and delivered to Holtwood's customers in Pennsylvania every day of the year? A. Yes, the number of hours that such transmission from Maryland to Holtwood's customers in Pennsylvania, as well as the amounts transmitted, would vary over a wide range, of course, as shown by Exhibit 42.

Q. From the study you have made, do Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland each own and operate facilities for the transmission of electric energy, which is transmitted from one or more states and consumed at points outside thereof? A. Yes.

Q. Are the amounts of such electric energy so transmitted substantial? A. Yes. This is evident from a comparison of the amounts so transmitted to the requirements at Coatesville, Pennsylvania, a city of 14,006 population, 1940 census. For the entire year of 1944, the energy requirements to serve Coatesville was 152,292 megawatt hours at a maximum demand of 24.5 mw.

Q. Does the transmission of such substantial amounts occur frequently? [980] A. Yes.

Q. Generally speaking, what are the facilities for the transmission of such energy? A. The substations and transmission lines owned by Holtwood and Susquehanna as shown on Exhibit 37 are used for that purpose.

Q. Does Holtwood sell for resale electric energy so transmitted? A. Yes.

Q. To what companies does Holtwood sell for resale electric energy so transmitted? A. Baltimore Company, Pennsylvania Power & Light Company, Philadelphia Electric Company and Metropolitan Edison Company.

Q. Do Holtwood and Susquehanna each own and operate facilities for such sales? A. Yes.

Q. Generally speaking, what are those facilities? A. Those facilities would include the substations and transmission lines owned by Holtwood and Susquehanna, as

shown on Exhibit 37, together with metering and other equipment for billing and recording sales.

Q. Do Holtwood and Susquehanna own and operate facilities for such transmission and sale at wholesale, which are not used for the generation of electric energy? [981] A. Yes.

Q. Do Holtwood and Susquehanna own and operate facilities for such transmission and sale at wholesale, which are not used in local distribution? A. Yes, with the possible exception of some of the low tension equipment at Susquehanna's Highlandtown substation, which might be regarded as distribution facilities.

Q. Do Holtwood and Susquehanna own and operate facilities for such transmission and sale at wholesale which are not used only for the transmission of electric energy which is not transmitted from any state and consumed at a point outside thereof?

• • •

MR. MYSE: I don't understand that question, if your Honor please.

MR. GOLDBERG: Mr. Examiner, there is a purpose in phrasing that question in that fashion.

TRIAL EXAMINER: The witness may answer it.

THE WITNESS: Yes, that follows from one of my previous answers.

By MR. GOLDBERG:

Q. Do Holtwood and Susquehanna own and operate facilities for such transmission and sale, which are not facilities for the transmission of electric energy consumed wholly by the [982] transmitter? A. Yes.

MR. GOLDBERG: That completes Mr. Roland's testimony on this subject, Mr. Examiner, with one question that I meant to ask and failed to.

By MR. GOLDBERG:

Q. Referring to Exhibit 45 which I show you, Mr. Roland, do the figures appearing at the upper section of

that exhibit and the arrows represent the magnitude and direction of flows? A. Yes, the arrows indicate the direction and the figures indicate the amounts in megawatt hours.

Q. And that is true of Exhibit 44, is that right? A. That is right.

MR. GOLDBERG: At this time, Mr. Examiner, I offer in evidence Exhibits 37, 38, 39, 40, 41, 42, 43, 44 and 45.

TRIAL EXAMINER: Is there any objection to the receipt of these exhibits marked for identification?

MR. SPARKS: No objection, subject to cross-examination, your Honor. We would like to ask your Honor to reserve ruling on Exhibit 42.

TRIAL EXAMINER: Any objection by counsel for the interveners, any one of them?

(No response.)

TRIAL EXAMINER: Exhibits 37, 38, 39, 40 and 41 are [983] received in evidence.

(The documents previously marked for identification Exhibit Nos. 37, 38, 39, 40 and 41, are received in evidence.)

TRIAL EXAMINER: The ruling on Exhibit 42 is reserved. Exhibits 43, 44 and 45 are received in evidence.

(The documents previously marked for identification Exhibit Nos. 43, 44 and 45, are received in evidence.)

* * *

CROSS-EXAMINATION.

By MR. MYSE:

* * *

[986] Q. If I understand you then, you did study other days and you just picked out these 20 days from the days you had studied, is that it? A. Well, when you say other days—the data I had for all the days was very meager. I

looked at the log sheets which gave me the generation at Safe Harbor and the deliveries to Safe Harbor over the 220 kv circuits, and I believe that is all that I had before me. And the number of hours of generation by days at Safe Harbor. I believe that is all the information that I had available when I selected the 20 days, plus this record of the stream flows—the daily stream flows.

* * * *

[987] Q. Referring to Exhibits 38 and 40? A. 38 and 40?

Q. Yes. A. I have that before me.

Q. On both these exhibits you have a note that the amount shown did not include transfers across the Pennsylvania-Maryland boundary over the Conestoga-Perryville lines; is that correct? [988] A. Yes.

Q. Will you tell me why you did not include those transfers? A. I do not know whether I could have gotten the data accurately by months for that.

Q. Does that complete your answer? A. I was just considering and trying to think back as to why I did not include them. I think the main reason probably was I considered that the deliveries to the railroad company were deliveries to the ultimate consumer, and we were not concerned with that.

Q. All the deliveries over this line were deliveries to the ultimate consumer; is that correct? A. No, that is not true because part of the deliveries over that line is for interchange with the Philadelphia Electric Company. That is the only reason I can think of now, I may have had for not taking that into account.

* * *

[990] RE-DIRECT EXAMINATION.

By MR. GOLDBERG:

* * *

[991] Q. Referring to the notes on Exhibits 38 and 40 which are to the effect that they do not include the transfers across Pennsylvania, Maryland Boundary over the Con-

estoga-Perryville line: Did I understand you to say that that line is used to serve the railroad? A. Not exclusively.

Q. Is the service to the railroad single phase service? A. Yes, sir.

* * *

---

[992] SAMUEL JOSEPH,

was called as a witness by and on behalf of the Federal Power Commission, being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION.

By MR. GOLDBERG:

Q. Please state your name? A. My name is Samuel Joseph.

Q. Where do you reside? A. I reside in Paterson, New Jersey.

Q. What is your present occupation? [993] A. I am engaged in the textile manufacturing business in Paterson.

Q. Please explain the nature of your participation in this case? A. On August 1, 1945, I was granted a year's leave of absence by the Commission under an arrangement which contemplated that I would return from time to time for such work as the Commission might require.

In September or October, 1945, the Commission requested me to testify in the Louisville Gas & Electric Company case before the Kentucky Public Utilities Commission and I did so.

On February 1, 1945, after my leave had run for six months, I tendered my resignation effective at the pleasure of the Commission. My resignation was accepted as of April 12, 1946.

I was requested to accept an assignment covering limited participation in this case in the capacity of con-

sultant to the Commission. It is in this latter capacity that I now appear as a witness.

Q. Will you please state your educational background? A. I graduated from the Wharton School of the University of Pennsylvania in 1928, with a degree of Bachelor of Science. I attended Columbia University Graduate School of Business Administration and did some work towards a master's degree. I graduated from the Brooklyn Law School in 1933 [994] with a degree of Bachelor of Laws. I was granted a certificate as a certified public accountant by the State of New York in 1932, and was admitted to the bar of the State of New York in 1934.

Q. Will you please state your experience? A. I was first employed in the rate regulating field in 1934. I have worked on state-wide investigations of the telephone rates in Louisiana, Alabama and West Virginia.

I have also worked on investigations of other utility companies, including electric, water and gas companies.

I have testified before the Louisiana and Alabama Public Service Commissions, the Public Service Commission of West Virginia, the Federal Power Commission, the Utah Public Service Commission, the Kentucky Public Utilities Commission and the Securities and Exchange Commission.

In 1943 I was loaned by the Federal Power Commission to the Office of Price Administration. I testified as a witness for the Office of Price Administration in a case involving the Washington Gas Light Company before the District of Columbia Public Utilities Commission.

In 1942 I was loaned by the Federal Power Commission to the Utah Public Service Commission, and testified as a witness for that Commission in a case involving the Utah Power and Light Company. On October 10, 1944, the Utah Commission's order in all respects was unanimously affirmed by the [995] Supreme Court of the State of Utah. In discussing the question of rate of return the Utah Su-

preme Court, in its opinion, made specific reference to the exhibit I had introduced in that case.

I began employment with the Federal Power Commission in August, 1939. I was first employed as a Senior Examiner of Accounts and was assigned to the investigation of the Natural Gas Pipeline Company of America and the Texoma Natural Gas Company, as accounting examiner in charge.

Q. Was that the case that went to the Supreme Court in which the Commission's order was affirmed? A. That was the case, yes, sir.

Q. Will you proceed with your statement of your experience? A. While with the Federal Power Commission I received several promotions and held the position of Chief Examiner of Accounts in the Division of Finance at the time of my resignation.

I have taken part in the investigations of the following companies:

The Southern Bell Telephone and Telegraph Company, in the States of Louisiana and Alabama; New Orleans Public Service Company; Louisiana Power and Light Company; Louisiana Public Utilities Company; Baton Rouge Water Company; Chesapeake and Potomac Telephone Company of West Virginia; [996] Wheeling Electric Company; Appalachian Electric Power Company; the Natural Gas Pipeline Company of America and Texoma Natural Gas Company; Panhandle Eastern Pipe Line Company; Michigan Gas Transmission Corporation; Interstate Natural Gas Corporation; El Paso Natural Gas Company; Washington Gas Light Company; Utah Power and Light Company; Cities Service Gas Company; Memphis Natural Gas Company; Mississippi River Fuel Corporation; Safe Harbor Water Power Corporation; and Louisville Gas & Electric Company.

My duties with the Federal Power Commission included responsibility for making studies and conducting research on the subject of fair rate of return for public

utilities. In this connection I was charged with the duty of keeping informed on the important subject of income and excess profits taxes, and the relationship of such taxes, both present and prospective, to the earning of a fair rate of return by the utility companies.

Q. While you were employed as a member of the Commission's staff did you prepare exhibits on the subject of fair rate of return? A. I did.

Q. Did you submit such exhibits and testify on the subject of fair rate of return in proceedings before the Federal Power Commission and other commissions? A. Yes, I did. I prepared and submitted exhibits [997] on the subject of fair rate of return in the Interstate Natural Gas Company case, the El Paso Natural Gas Company case, the Cities Service Gas Company case, the Mississippi River Fuel Company case, the recent Safe Harbor Water Power Corporation case, and the United Fuel Gas Company case, all of which were before the Federal Power Commission.

In addition, I prepared and submitted exhibits on the subject of fair rate of return in the Utah Power and Light Company case before the Utah Commission and in the Louisville Gas & Electric Company case before the Kentucky Commission.

Q. Can you give a general description of the nature of the exhibits which you sponsored in these cases? A. Briefly, the exhibits which I sponsored might be described as comprehensive statistical compilations which were designed to afford, and which in my opinion actually did afford, the Commissions to whom they were presented a sound basis for the exercise of judgment in the establishment of a fair rate of return for public utilities. The exhibits were brought down to date for use in each proceeding. This work of keeping the information current was done by myself and other members of the Commission's staff.

Q. I take it from what you have said that the exhibits were prepared for the specific purpose of aiding the

Federal Power Commission and other commissions in deciding the issue of fair rate of return in a rate case, is that [998] correct? A. Yes, sir.

Q. When you compiled and prepared the exhibits of which you have spoken, did you have in mind any decision or decisions of the United States Supreme Court? A. Yes, I had in mind especially the Bluefield Water Works decision.

In addition, I considered as pertinent the statement made in the United Railways v. West case, to the effect that what is a fair rate of return is not capable of exact mathematical demonstration.

I might add that exhibits similar to those I have mentioned were before the Supreme Court in the Natural Gas Pipeline Company of America case, and in the Hope Natural Gas Company case.

MR. GOLDBERG: At this time, Mr. Examiner, may I have marked for identification with the next exhibit number—I think it is 46—the document entitled: "Docket IT-5915, Pennsylvania Water & Power Company, Rate of Return Study," dated April 15, 1946.

TRIAL EXAMINER: The document may be marked Exhibit 46 for Identification.

(The document referred to was marked Exhibit Exhibit 46 for Identification.)

By MR. GOLDBERG:

[999] Q. Mr. Joseph, I direct your attention to Exhibit No. 46 for Identification, and ask you whether that exhibit is similar to the exhibit on fair rate of return which you sponsored in the cases you have mentioned? A. Yes, it is.

Q. How was the Exhibit 46 for Identification prepared? A. Basically, the exhibit flows from those exhibits which I prepared while I was a member of the Commission's staff.

The charts and tabulations are substantially similar to those used in the exhibits which I previously sponsored.

The statistics and information subsequent to that contained in the last similar exhibit which I sponsored has been compiled by members of the Commission's staff in accordance with my request.

Q. Mr. Joseph, does each chart or table in Exhibit 46 for Identification show the source from which you obtained the data and information contained therein? A. Yes, I think it does. Throughout the exhibit the source of the data is shown in an appropriate place at the bottom or end of the schedule.

Q. In your judgment, Mr. Joseph, does Exhibit No. 46 for Identification give the Commission the data and information upon which it can rely in establishing a fair rate of return for the Pennsylvania Water & Power Company and [1000] Susquehanna Transmission Company of Maryland in these proceedings? A. Yes, in my opinion the exhibit furnished the Commission with a comprehensive statistical background, and affords a sound basis for the exercise of judgment in the establishment of a fair rate of return for an electric utility such as the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland.

Q. To your knowledge the Exhibit No. 46 for Identification, or a substantially similar exhibit, has been submitted by Federal Power Commission witnesses in other proceedings before this Commission? A. Yes. My predecessor, Mr. Charles W. Knapp, Jr., submitted very similar exhibits in the Natural Gas Pipeline Company of America case, the Chicago District Electric Generating case, the Colorado Interestate case, the Hope Natural Gas Company case and in the earlier Safe Harbor Water Power Corporation rate case.

Q. You mean the 1939 Safe Harbor case, is that right? A. Yes, the 1939 Safe Harbor case.

Q. Has the exhibit been brought down to date for each proceeding? A. Yes. In so far as possible the exhibit contains the latest information at the time of its compilation for use.

[1001] Q. Will you, Mr. Joseph, define the terms "return" and "rate of return"? A. The "return" received by a public utility consists of the amount of revenue remaining after deduction of necessary and reasonable operating expenses, rents, taxes, and depreciation and amortization accruals, but before provision for interest, dividends, or additions to corporate surplus. This "return" is ordinarily conceived of as the product of a "rate base" times a given "rate of return". Conversely, the "rate of return" may be defined as that percentage rate which, when applied to the rate base, will yield the total overall return for the particular utility.

MR. GOLDBERG: That ends the direct testimony of this witness, Mr. Joseph.

At this time I offer in evidence Exhibit No. 46 for Identification.

TRIAL EXAMINER: Any objection to the offer of the exhibit?

MR. SPARKS: No objection, subject to cross-examination.

TRIAL EXAMINER: Any objection on the part of counsel for any of the intervenors?

(No response.)

TRIAL EXAMINER: Hearing no response, Exhibit No. 46 for Identification is received in evidence.

(Exhibit 46 for Identification is received in Evidence.)

• • •

[1066] JOHN M. NEWLANDS,
a witness produced on behalf of the Federal Power Commission, being duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. GOLDBERG:

Q. Will you state your full name for the record, please? A. John M. Newlands.

Q. Are you employed by the Federal Power Commission? A. I am.

Q. How long have you been employed by the Federal Power Commission? A. Continuously by the Commission since March, 1939.

[1067] Q. What is your position with the Federal Power Commission? A. I am a Chief Examiner of Accounts.

Q. In what bureau or division of the Commission are you employed? A. In the Division of Accounts of the Bureau of Accounts, Finance and Rates.

Q. Will you describe generally your education and experience and your duties with the Commission? A. I attended Bates College, Lewiston, Maine, and was graduated with the degree of Bachelor of Science in 1928. I studied accounting and finance at Northeastern University, Springfield, Massachusetts.

I am a certified public accountant in the State of New York. I was employed for about 2 years prior to my graduation from college by the Diamond Match Company as bookkeeper in charge of all factory accounting and cost records for the Springfield, Massachusetts plant.

After graduation I joined the staff of Scovell Wellington Company of New York City, certified public accountants with whom I remained about nine years as a senior accountant making audits and investigations.

* * *

[1068] A. In 1938 I entered the employ of Arthur Andersen and Company, Certified Public Accountants, as senior ac-

countant. I left in March, 1939, to join the staff of the Federal Power Commission.

My assignments as public accountant included educational institutions, investment companies, manufacturing and commercial firms, building contractors, including such institutions and firms as Cornell University, White, Weld & Company, L. C. Smith & Corona Typewriters, Inc., Bigelow Sanford Carpet Company, Revere Copper & Brass Company and Henry Holt and Company.

Since entering the employ of the Federal Power Commission I have been engaged mainly on accounting investigations in connection with rate cases, but also assisted in a special investigation of the Associated Gas & Electric Company in 1939.

Q. Will you describe the rate cases on which you have worked and the work you did? A. In the Hope Natural Gas Case, Docket G-100, 101, 113, and 127 I participated in the investigation of the plant investment and the preparation of the study of the depreciation reserve requirement and annual depreciation expense.

[1069] I participated in the investigation of the plant investment of Chicago District Electric Generating Company, Docket IT-5500.

I investigated the plant investment of Natural Gas Pipeline Company of America and Texoma Natural Gas Company, Dockets G-109 and G-112 under the supervision of Mr. Joseph.

In the United Gas Pipeline Company case, G-148, I investigated the plant investment and the historical growth of the United Gas system and prepared a report thereon.

In the Southern Carbon Company case, Docket G-462, I investigated the plant investment and annual and accrued depreciation and prepared a report thereon.

I also collaborated in a report on the revenues, expenses and working capital.

I was in charge of the investigation of the plant investment of the Ohio Fuel Gas Company until transferred to Baltimore on the present case.

Q. What did you do in connection with this proceeding? A. I directed a staff of accountants, making an accounting investigation of the Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, including the plant investment, annual and accrued depreciation, revenue, expenses, working capital, and miscellaneous matters.

[1070] Q. Mr. Newlands, in your answer preceding the last one, you mentioned that you worked under Mr. Joseph's supervision. Is that the same Mr. Joseph who has testified in this proceeding? A. It is.

Q. What records did you use in carrying out your assignment? A. I examined the corporate and accounting records and supplementary documents and correspondence of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland, and the similar records of its predecessors, McCall Ferry Power Company, Susquehanna Contracting Company, J. E. Aldred, Receiver, for the McCall Ferry Company, and the Bondholders Committee.

* * *

[1075] Q. Did your examination of Pennsylvania Water & Power include the records of its merged subsidiaries? A. Yes. I examined the books of all merged subsidiary companies. Holtwood Power Company, Susquehanna Transmission Company of Pennsylvania and Pennsylvania Transmission Co.

Q. Did you examine the books of any other subsidiaries of Pennsylvania Water & Power Company? A. Yes. I examined the books of Holtwood Coal Company, Baltimore Electro Alloys Company and Susquehanna Canal and Power Company to a limited extent.

Q. As a result of your examination did you prepare a report? A. Yes.

[1076] Mr. Goldberg: At this time, Mr. Examiner, we ask to have marked for identification as Exhibit 51 a report entitled "Docket IT-5915, Pennsylvania Water &

Power Company corporate and financial History—Early History of the Holtwood Project—Plant Investment."

TRIAL EXAMINER: The document will be marked Exhibit No. 51 for Identification.

(Document marked Exhibit No. 51 for Identification.)

By MR. GOLDBERG:

Q. I show you Exhibit 51 for Identification and ask you if this is the report to which you have referred? A. It is.

Q. Of what does the report consist? A. The report is prepared in two parts; Part I consists of a written statement and Part II consists of schedules and appendices.

Q. What is the nature of the written statement? A. The written statement describes the scope of the report, the corporate and financial history of the company, the early history of the Holtwood Development and the plant investment, including a discussion of some of the examiner's adjusting entries.

Q. Will you please describe the schedules and appendices? A. The schedules have all been prepared on a [1077] consolidated basis where applicable. Schedule 1 is a consolidated balance sheet of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland as at December 1, 1945.

Schedule 2 summarizes the plant as recorded on the books and as adjusted by the examiners.

Schedule 3 shows a summary of Electric Plant in Service as reclassified by the company in its plant reclassification studies, reconciled with the original cost as determined by the examiners. The details of construction work in progress are shown on Schedule 4, similar details at December 31, 1944, and 1943 being shown on Schedules 5 and 6, respectively.

A summary of Plant Held for Future Use showing the purpose for which it is held is shown on Schedule 7. The

examiners' adjusting entries are listed on Schedule 8 with a recapitulation on Schedule 9. Schedules 10 to 27 contain supporting details or explanations of the adjustments.

The appendices present balance sheets and statements of cash receipts and disbursements for the predecessor companies and organization, McCall Ferry Power Company, Susquehanna Contracting Company, J. E. Aldred, Receiver for McCall Ferry Power Company and the Bondholders' Committee.

Q. What conclusions did you reach as to the original cost of Electric Plant in service of Pennsylvania Water & Power Company and Susquehanna Transmission Company of Maryland [1078] at December 31, 1945? A. I determined that the original cost of the consolidated Electric Plant in Service of the two companies at December 31, 1945, is $32,920,738.

Q. As I understand it, in all of the figures you have omitted the cents, is that correct? A. Yes.

Q. What conclusions did you reach as to the amount of construction work in progress at December 31, 1945? A. I determined that the amount of the consolidated work in progress at December 31, 1945, is $237,361.

Q. What did you conclude was the amount of Electric Plant Held for Future Use at December 31, 1945? A. I determined the amount of the consolidated Electric Plant Held for Future Use to be $77,918 at December 31, 1945.

Q. How does your determination of the original cost of Electric Plant in Service compare with the cost claimed by the Company? A. The amount determined by me is $3,493,493 less than the original amount claimed by the company as at December 31, 1945, as shown on schedule 3 and $3,468,643 less than the adjusted amount claimed by the company in their Exhibit 25.

Q. Your reference to schedule 3 in your last answer was to Exhibit 51, is that right? A. Yes.

[1079] Q. How does your determination of the amount of construction work in progress at December 31, 1945, com-

pare with the amount claimed by the company? A. It is the same.

Q. How does your determination of the amount of Electric Plant for Future Use compare with the amount claimed by the company? A. It is the same.

Q. Do you recommend that the entire amount of construction work in progress and electric plant held for future use be included in the rate base?

• • •

[1080] A. The answer is "no."

Q. What portion of the amounts in construction work in progress and electric plant held for future use do you recommend for inclusion in the rate base?

• • •

A. In the determination of the rate base for the year 1945, none of the Electric Plant Held for Future Use, as shown by schedule 7, should be included and none of the construction work in progress shown on schedule 4, except Job Order C-1789 for the purchase of additional rights for the Coatesville Transmission Line, in the amount of $30,124. The Electric Plant Held for Future Use is excluded because the company does not have a definite plan for its use.

Construction Work in Progress is excluded because it is the company's policy to compensate itself for its investment in uncompleted construction by adding interest to construction cost until the property is placed in service. The Non-Project Property included therein totaling $52,140, consists mainly of property located above Safe Harbor which cannot be used for [1081] the Holtwood Development.

Job orders totaling $67,848 consisting of rights-of-way held for possible future use in connection with a proposed new Lancaster Transmission Line are excluded because the company has no definite plan for their use. The line

if built will bring in additional revenue to compensate for the additional investment.

The cost of the additional rights for the Coatesville Line on job order C-1789 in the amount of $30,124 is included in the rate base because the property was actually in service during the entire year 1945.

Q. In this case is original cost synonymous with investment? A. Yes.

Q. Why is original cost synonymous with investment in this case? A. Because all of the property was constructed by the present company and its subsidiaries or was placed in operation by it. There were no acquisitions of operating units or systems.

* * *

[1082] Q. On page 40 of the written statement you make a comparison of the amount of interest during construction as determined by the examiners with the total interest actually paid by the company from April 1905 to December 1910.

Would the amount of interest allowed by you exceed the interest paid by the company if you excluded from the interest paid the amount applicable to the period of suspension of construction? A. It would. The total interest paid by the company for the period from April 1905 to December 31, 1910, exclusive of the amount applicable to the period of suspension was approximately $839,000 which is $262,000 less than the amount allowed by the examiners in determining the original cost of the properties.

* * *

[1129] EDWARD L. DUNN,
a witness produced on behalf of the Federal Power Commission, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. GOLDBERG:

Q. Will you state your full name for the record, please? A. Edward L. Dunn.

Q. Are you employed by the Federal Power Commission? A. I am.

Q. How long have you been employed by the Federal Power Commission? A. I have been employed continuously since March, 1937.

Q. What is your position with the Federal Power Commission? A. Supervising Accountant.

Q. In what Bureau or Division of the Commission are you employed? A. I am in the Division of Accounts, which is part of the Bureau of Accounts, Finance and Rates.

Q. Will you describe generally, your education and [1130] experience and your duties with the Federal Power Commission? A. I attended Missouri University for one year and also completed the LaSalle Extension University course in accounting. I have also taken advanced courses in accounting and finance at Columbia University in New York City.

For approximately three years I was in the accounting department of Laclede Christy Clay Products Company, St. Louis, Missouri, performing bookkeeping and cost accounting duties.

In 1934 and 1935 I was in the employ of the Federal Power Commission making accounting examinations and reports on electric power companies involving, among other things, determination of original cost.

Then I left the Commission to enter the employ of National Lead Company, 111 Broadway, New York City. I was in the Comptroller's office as an accountant and my

duties included tax studies, depreciation studies, internal audits, costs of manufacturing and refining, and general accounting duties. I returned to the Commission in 1937.

My duties with the Federal Power Commission since 1937 have consisted of the preparation and supervision of accounting investigations and accounting reports. These investigations and reports include gas and electric rate cases and numerous other cases and special assignments, such as assistance to State regulatory authorities, particularly with respect to rate case matters.

[1131] Q. In your employ at the Federal Power Commission, have you participated in any rate cases? A. Yes.

Q. Will you name the cases and describe your participation? A. One of the early rate cases was Safe Harbor Water Power Corporation Docket IT-5494. I did the field work on that case relating to depreciation accounting, and assisted Mr. C. W. Smith in preparing the report. I had charge of the field investigations and of the reports on plant and depreciation in the Canadian River, Colorado Interstate and Colorado Wyoming cases. Docket numbers G-118, 121 and 124.

I was examiner in charge of the Hope Natural Gas Company Docket G-100, 101, 113 and 127 and the Panhandle Eastern Pipe Line Company case, Docket numbers G-200 and 207, in all of which cases the Commission's orders were sustained by the Supreme Court of the United States.

It was my responsibility to determine the earnings, financial condition, the cost of plant, depreciation and depletion, allowances for working capital, revenues, expenses and taxes in those cases.

I supervised the accounting and reports for the Mississippi River Fuel Corporation, United Carbon Company and Southern Carbon Company rate case Docket numbers G-462 which included the cost of plant, annual and accrued depreciation [1132] and depletion, working capital, revenues, expenses, income accounts and so forth.

I also devoted a substantial part of my time, during the year 1943, to supervising and testifying in the Utah Power & Light Company rate case, decided by the Utah Commission about October, 1943. I testified in that case on annual and accrued depreciation, revenues, expenses, working capital and other subjects.

I was on loan to the Utah Commission. The Utah Commission's decision was affirmed by the Supreme Court of the State of Utah recently. Similarly, I have been on loan to the city of Cleveland, Ohio, and Louisville, Kentucky, in connection with electric rate cases.

Q. In connection with the Commission's investigation of the rates of Safe Harbor Water Power Corporation in Docket IT-5914 were you in charge of certain phases of that investigation? A. Yes, I was in supervisory charge of the accounting work.

Q. Did you make any studies in connection with the Safe Harbor case? A. Yes.

Q. What studies did you make? A. Determination of annual and accrued depreciation, revenues, expenses, cost of plant, working capital, taxes, [1133] balance sheet and surplus analyses, among other.

Q. Did you testify in that case? A. Yes.

Q. On what subjects? A. The subjects covered by the studies I described.

Q. Did you testify in any of the other rate cases you have mentioned? A. Yes.

Q. Please name them and tell us what subject your testimony covered. A. I testified in the Hope Natural Gas Company case on rate base, annual and accrued depreciation, revenues and expenses, taxes and other subjects. I testified in the Panhandle Eastern Pipe Line rate case on operating costs, earnings, depreciation and plant costs. In the Mississippi River Fuel case I testified on taxes, operations, and trended labor costs.

Q. In connection with the Commission's investigation of the rates of Pennsylvania Water & Power Company and

Susquehanna Transmission Company of Maryland are you in charge of the accounting investigation? A. Yes.

Q. Have you had the assistance of other accountants in your work on this case? A. Yes, a staff supervised by John M. Newlands.

[1134] Q. Did they perform their work under your general direction and supervision? A. Yes.

Q. And are the exhibits which you are about to offer based on the investigation made by you and under your direction? A. Yes.

• • •

[1142] Q. Did you make a study of annual and accrued depreciation of Pennsylvania Water & Power Company and Susquehanna Transmission Company? A. Yes, on a consolidated basis.

Q. Did you prepare an exhibit containing the results of your study? A. Yes.

• • •

[1143] Q. Mr. Dunn, I hand you Exhibit 61 for Identification and ask you if that is the exhibit to which you have referred? A. It is.

Q. Generally will you please tell us what this exhibit shows? A. It shows the company's depreciation plan and practices and the depreciation expense and depreciation reserves accumulated pursuant to the plan. It shows the adjustments to the depreciation reserve proposed by the Commission's Staff. It also shows the details of depreciation expense computed on the basis of service lives recommended by the Commission's staff engineers and the cost of plant subject to depreciation. It shows the reserve requirement based upon those service lives, the initial plant investment, additions and retirements from the initial date of operation.

Q. Have you included in the exhibit a statement which explains and supplements the schedule? A. Yes.

Q. What depreciation method does the company follow? A. The straight line depreciation method, based

upon service lives and depreciation rates determined by Mr. Walls and applied to the cost of depreciable property.

Q. Did Holtwood use the amounts recorded in the general ledger plant account in its depreciation computations? [1144] A. No. The cost of depreciable property was obtained from a statement of McCall Ferry Power Company as of January 31, 1909, showing the actual cost in various property accounts and to this was added actual expenditures for the year 1910 and for each successive year thereafter.

Q. How do the present service lives compare with the service lives estimated by the Commission's staff? A. The present overall composite rate used by the company is 2.08 per cent or a composite life of 48 years as compared with the staff's rate of 1.74 per cent or 58 years. However, comparison of service lives as determined by Mr. Walls should be made on the basis of the plant at 1930 because the company has used an overall rate of 2½ per cent on property installed since 1930.

Q. What does the comparison show when the 2½ per cent rate on additions since 1930 is excluded? A. The company's composite rate is 1.89 per cent or 53 years as compared with the staff's rate of 1.74 per cent or 58 years.

Q. Did the company adopt the 2½ per cent depreciation rate on additions simultaneously with the effective date of the contract with Consolidated of Baltimore which provided that Consolidated of Baltimore would pay the allowance for depreciation? A. Yes.

[1145] Q. What is the amount of depreciation expense for 1945 computed on the basis of the staff's depreciation rates applied to the cost of depreciable plant? A. $465,277, which does not include automobile depreciation.

Q. How much depreciation expense did the company charge during the year 1945? A. $574,245, also excluding automobile depreciation.

Q. What is the reserve requirement as of December 31, 1945, based upon the staff's service lives and cost of plant? A. $8,408,373.

Q. How does this compare with the book reserve? A. The book reserve, after applying adjustments thereto for unrecorded retirements and plant additions is $8,763,118 as of December 31, 1945, which is $354,745 more than the reserve requirement.

Q. When was this excess accumulated? A. During the past three years, 1943, 1944 and 1945.

Q. Should the amount of $354,745 be transferred to earned surplus? A. Not in my opinion.

Q. Why not? A. It has been the company's practice to charge certain maintenance to the reserve because it claims the annual depreciation charge provides for such maintenance. [1146] There is a considerable amount of accumulated wear on the surface of the dam which the company claims can be repaired at a cost of from $500,000 to $750,000. In view of the fact that the company has actually collected about $350,000 from its customers for this purpose, the reserve should be retained.

Otherwise, the repairs to the dam would be charged to maintenance, thereby duplicating the costs in the operating accounts and in the power bills.

Q. Should any other item of maintenance be charged to the book reserve in the future? A. No. The reserve is necessary to provide for the retirement of property not maintenance of property. To the extent that a portion of the reserve can be determined to have been accumulated for such large items of maintenance as the resurfacing of the dam or, for example, maintenance which was postponed during the war, which would be maintenance deferred, it is reasonable to charge the cost to the reserve established for such purposes.

Q. Did the company clearly distinguish between deferred maintenance and current maintenance in its charges to the reserve? A. No. Schedule 8 shows a description of the maintenance items charged to the reserve in the amount of $363,769.05. Many of the items fail to meet even the company's definition of deferred maintenance.

[1147] Q. What is the company's definition of deferred maintenance? A. As stated on page 16 of Exhibit 61 it covers in general repair and resurfacing of concrete structures including dam, welding turbines, resurfacing turbine distributors, rewinding generators and rewinding transformers. The rewinding of generators and transformers are replacements; therefore, deferred maintenance, as used by the company, includes deferred replacements. In certain instances the company has charged additions to plant to the reserve. By deferred maintenance is usually meant the amount that would have to be expended to bring the plant to the highest standard of condition. It would cover all ordinary repairs.

Q. Does the depreciation cost include deferred maintenance, either in the annual expense or accumulated depreciation? A. No, but it does cover the cost of items which are retired and replaced as well as items which are retired and not replaced.

Q. What would be the result of charging maintenance to the depreciation reserve? A. The result would be to capitalize operating expenses.

Q. Have you made a study of working capital of Pennsylvania Water & Power Company? A. Yes, on a consolidated basis.

[1148] Q. And by that I assume you mean to include the Susquehanna Transmission Company of Maryland? A. Yes.

Q. Have you prepared an exhibit containing the results of your studies? A. I have.

[1166] GEORGE H. DAVIS,
a witness produced on behalf of the Federal Power Commission, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. GOLDBERG:

Q. Please state your full name. A. George H. Davis.

Q. What is your occupation? A. Electrical Engineer.

Q. Are you employed by Federal Power Commission? A. Yes.

Q. What is your present position? [1167] A. I am employed as an engineer engaged in the investigation of rates, in the Division of Rates and Certificates.

Q. How long have you been employed by Federal Power Commission? A. Since April 1943.

Q. What has been your professional education? A. I was graduated from the University of Maine in 1901 with a degree of Bachelor of Science in electrical engineering and spent the following year as a part-time instructor in the Electrical Engineering Department, and taking graduate courses in engineering.

Q. What has been your experience before coming to Federal Power Commission? A. After 2½ years testing electrical machinery at the Schenectady Works of General Electric Company, a year under civil service appointment with the War Department as electrical engineer at Vancouver Barracks, Washington, and two years with Portland General Electric Company, on construction and operation in Portland and Salem, Oregon, I was employed from 1908 to 1928 by the Idaho Power Company and its predecessors, with headquarters at Boise, Idaho.

Q. What was the nature of your work during that period? A. I was engaged in practically every phase of electric utility operation, holding successively such positions [1168] as meter tester, superintendent of distribu-

tion, division manager, general superintendent of operation and valuation engineer.

This last position was connected with a special assignment on the inventory and appraisal of the company's entire system. Following this, I was given another special assignment to participate as Rate Engineer in a general rate case before the Public Utilities Commission of Idaho.

Q. What was the nature of your work as rate engineer? A. That work involved the preparation of cost studies, the design of rates, the preparation and presentation of exhibits and testimony before the State Commission and later before the Federal District Court.

Q. After leaving the Idaho Power Company, where were you employed? A. I was employed for four years by Electric Bond and Share Company, in New York, where my work consisted of cost and rate studies connected with the various subsidiary operating companies, consulting with members of the operating staffs and assisting them in problems of rate design, [1169] cost analyses, studies of operating results and allied problems.

Q. Where were you next employed? A. In 1932 I was employed by the receivers for the Middle West Utilities Company and later by the reorganized company in Chicago where I was engaged with problems very similar to those in my previous work, having to do with utility operating companies in various parts of the country under widely varying conditions.

Q. What has been the nature of your work with Federal Power Commission? A. I was appointed to the staff in April 1943 as a rate investigator and was engaged in the analysis of large power contracts, in connection with war production. This was for the purpose of determining the reasonableness of the rate and involved cost studies and rate surveys.

Q. Who is your immediate supervisor? A. Stanley W. Roland, Head of Electric Rate Investigations Section.

Q. Is your work assigned by Mr. Roland? A. Yes.

Q. What was your assignment in connection with this proceeding? A. First, to make a complete study of the contracts under which Holtwood sells the output of its plants and [1170] purchases and interchanges energy with other companies. The digest of these contracts which I have prepared is included in the operating report which has been placed in evidence here as Exhibit 47.

Next, to make an analysis of the total capital cost and operating expense of Holtwood and Susquehanna for the year 1944, with an allocation of those costs to the customers being supplied and a comparison of such allocated costs with the charges collected for service for that year.

Q. When you say Holtwood and Susquehanna, what do you mean? A. In my testimony, I refer to Pennsylvania Water & Power Company as "Holtwood" and to The Susquehanna Transmission Company of Maryland as "Susquehanna."

Q. Have you prepared an analysis and allocation of the total costs of Holtwood and Susquehanna? A. Yes.

Q. What are the sources of the information used in your study? A. The basic figures used in my cost analysis, consisting of the rate base, operating expenses, taxes and depreciation for the year 1944 I secured from the accounting examiners of the Commission's staff which figures have been presented in evidence here. The sales and engineering and operating data used are those contained in the annual reports FPC [1171] Form 1, and the Power System Statements FPC Form 12, which have been submitted to the Commission by Holtwood and other companies in the interconnected system serving Federal Power Commission Power Supply area 6.

I have received additional information furnished by Holtwood at the request of the Commission's staff, including complete billing data by months for Holtwood's customers, monthly generation of energy at Holtwood and

Safe Harbor, and monthly transfer of energy over the various transmission lines.

I have visited the Holtwood plants and talked with the operators, particularly concerning the meters and records of measurement on the various outgoing circuits. I have also visited the system load dispatchers' office in Baltimore and examined the metering arrangement.

I have consulted with Mr. Spaulding and Mr. Von Eiff, Interconnection Engineer, and their associates of Holtwood, concerning methods of operation, the interpretation of contracts and costs of production and transmission. In company with Mr. Roland, I consulted with Mr. R. T. Greer, of Baltimore Company, who is in charge of the operations of the interconnected system, concerning the capacity value of the hydro plants to the Baltimore system.

I have examined cost studies made jointly by Holtwood and Baltimore Company. From my study of the contracts, under which Holtwood disposes of its entire output and purchases [1172] ½ of the output of Safe Harbor, I have obtained information concerning the relations of Holtwood with its customers in Pennsylvania, with Baltimore Company and with Safe Harbor. Information as to methods of operation, the use of special facilities, metering and delivery points for firm power and interchange, has also been obtained from these contracts.

Q. What do you mean by Federal Power Commission Power Supply Area No. 6? A. Area 6 includes the Holtwood, Safe Harbor, Baltimore, and Washington systems, but not the systems of Holtwood's customers in Pennsylvania.

Q. When you speak of Holtwood's customers, to whom do you refer? A. There are five customers who receive all of Holtwood's available firm power. These customers are—

Pennsylvania Power & Light Company, Philadelphia Electric Company, Edison Light & Power Company, Penn-

sylvania Railroad Company in Pennsylvania, and Baltimore Company.

Sales to the Pennsylvania Power & Light Company represent the requirements of its Lancaster District. Sales to the Philadelphia Electric Company represent the requirements of Coatesville and adjacent territory. Sales to the Edison Light and Power Company represent 40 per cent of the requirements of the City of York. Sales to the Pennsylvania Railroad Company represent the requirements in Holtwood's [1173] service area in Pennsylvania, and sales to Baltimore Company represent the balance of the dependable capacity available from the Holtwood system, and the balance of the energy that would be available from that system in a year of average river flow.

Q. Has there been any change in the agreements with these customers since 1944? A. Yes, the contract with Edison Light & Power Company for the supply by Holtwood of a part of the requirements of York, Pennsylvania, and the contract with Metropolitan Edison Company for interchange, was canceled as of Dec. 31, 1945.

A new contract was executed between Holtwood and Metropolitan Edison Company for the supply of firm power by Holtwood and economy interchange between the two systems. Under the new contract, Holtwood has no direct relation with Edison Light and Power Company. My study is based on the conditions of 1944, and includes the service supplied to Edison Light & Power Company as reported for that year.

Q. Please outline briefly the method used in your analysis? A. The study consists of six principal steps. One, analysis of plant in service, and the assignment of facilities used primarily for service to one customer directly to that customer, and the assignment to a pool for later allocation of those facilities that are jointly used for [1174] the service of all customers.

Two, analysis of depreciation reserve, working capital, materials and supplies, in order to develop the rate base in

accordance with the assignments of plant in service to individual customers and the pool.

Three, analysis of operating expenses on the same basis as plant and rate base.

Four, assembly of total costs, including operating expense, taxes, depreciation and return in accordance with the assignments to individual customers and the pool.

Five, allocation of pool costs to capacity and energy components and development of unit capacity and energy costs.

Six, application of unit costs to customers measured loads, assembly of special facility and pool costs for each customer and a comparison of total cost of each customer's service with charges collected for that service in 1944.

These six steps of the study are set up in an exhibit consisting of tables showing the results of each step, with supporting schedules showing details of the important items.

MR. GOLDBERG: May we have marked for Identification, Mr. Examiner, a document entitled, "Pennsylvania Water & Power Company, Cost Allocation" as Exhibit 64.

TRIAL EXAMINER: It will be marked 64 for Identification.

(A document is marked Exhibit 64 for Identification.)

[1175] By MR. GOLDBERG:

Q. I show you Exhibit 64 for Identification. Is that the exhibit to which you have just referred? A. It is.

Q. Coming back to the first step, the analysis of plant in service; please identify and explain your assignment of the principal items of plant? A. This analysis of plant is shown in Table I of Exhibit 64. The entire production plant consists of equipment jointly used for service to all customers and is assigned to the pool, as shown in line 3, column 6 of Table I. Some items of transmission plant

are devoted almost exclusively to the service of one customer and are assigned directly to that customer. In this group are the Highlandtown Substation, the Holtwood-Highlandtown Line and the Baltimore Gunpowder Line, which are for all practical purposes, used exclusively for service to Baltimore and are assigned directly to Baltimore Company. These items are shown on lines 4, 5 and 6, column 5 of Table I.

The line from Holtwood Substation to Coatesville, Pennsylvania and the switching facilities at Newlinville Substation in Coatesville are assigned directly to Philadelphia Electric Company as indicated in column 2, Table I.

Four small items consisting mostly of switching stations connections to the Holtwood-Lancaster Line and metering [1176] equipment are assigned directly to Pennsylvania Power & Light Company, as shown by items in column 1, of Table I. The 220 kv lines from Safe Harbor to Baltimore serve more than one purpose.

During the four or five months of high river flow they are used principally for the benefit of Baltimore Company, to transmit Safe Harbor power to Baltimore; during the two or three months of extreme low flow they serve principally to transmit energy from Baltimore to Safe Harbor, to make up the deficiency in Holtwood's supply to its Pennsylvania resale customers and to the Pennsylvania Railroad Company.

During the balance of the year, they are used to transmit energy alternately in each direction; from Safe Harbor to Baltimore during the day to help carry Baltimore Company's peaks; and from Baltimore to Safe Harbor during the night to carry the Pennsylvania loads while the hydro plants store water.

The cost of these lines should therefore, be assigned partly to the pool to represent their joint use for service to all customers, and the balance directly to Baltimore Company to represent that part of their use for Baltimore Company's service alone. The exact proportion is

not mathematically determinable but the joint use for customers other than Baltimore is obviously the smaller part. This joint use consists of supplying the deficiency in Holtwood's [1177] available energy during extreme low water seasons and in supplying energy to the Pennsylvania customers during off-peak periods of other seasons to permit the storing of water at the hydro plant.

Considering these conditions, I have assigned 2/3 of the investment in these lines directly to Baltimore service and 1/3 to the pool, as indicated on lines 7, 8, 9, 10 of Table I.

I believe this to be in reasonably close accord with the proportion of use.

The Conestoga substation at Safe Harbor and the line from this substation to Perryville, Maryland, are used for service to the Pennsylvania Railroad Company in both Pennsylvania and Maryland.

In 1944, 39 per cent of the energy supplied from Safe Harbor through this substation and line was delivered to the Railroad Company in Maryland, for the account of Baltimore Company. 39 per cent of the investment in these facilities is, therefore, assigned to Baltimore Company, and the balance to the Pennsylvania Railroad Company, as shown on lines 11, 12, and 13 of Table I.

The line from Holtwood to the Violet Hill substation at York, Pennsylvania, is also used for more than one purpose. It supplies a portion of the firm requirements of Edison Light & Power Company at York, and also serves as a tie between [1178] Holtwood and Metropolitan Edison Company, for the interchange of energy which latter is a joint use for service to all of Holtwood's customers. The cost of this line is assigned 29% to Edison Light & Power Company, and the balance to the pool on the basis of the energy transmitted, for the two purposes. The substation at York is assigned directly to Edison Light and Power Company on the basis of its use for that customer alone.

The balance of transmission plant consisting of the Holtwood Substation, the Holtwood-Safe Harbor line and miscellaneous items of jointly used facilities are assigned to the pool as shown on line 22 of Table I.

After these direct assignments, there remain some items of intangible and general property shown on lines 24 and 25 which I have assigned to the pool.

The totals of the six groups as thus assigned give the total classified plant in service as shown in line 26 of Table I.

Q. What is the second step? A. Having the total plant in service classified as set up in Table I the next step is to develop the rate base in accordance with the same classification, by deducting depreciation reserve and adding an allowance for working capital to each group of plant investment. This classification is set up in Table II.

Q. How is the depreciation reserve classified? [1179] A. The amount of depreciation reserve applicable to each group in the classified plant is computed on the basis of years in service and the rate indicated by the estimated service life. These amounts, I secured from the Staff's accounting examiner and they are shown in line 3 Table II and on line 3, are shown the amounts of net investment for each group of property obtained by deducting depreciation reserve from the amounts of plant in service.

Q. When you stated you had secured the amount in line 3 from the Staff's accounting examiners, I think you meant to say line 2 rather than line 3, is that right? A. That is right. I beg your pardon. The depreciation reserve which was deducted are the amounts which I secured from the accounting examiners.

Q. And they appear in line 2 of Table II? A. Yes, sir.

Q. How is working capital determined? A. Cash working capital is estimated at 12.5 per cent of operating

expenses, exclusive of purchased power. The total amount thus derived is allocated to the classified plant groups in proportion to the operating expense of each group, exclusive of purchased power. The ratios of operating expense of each group to the total operating expense are shown on line 26 of Table III.

Q. Do you mean line 26? [1180] A. That line is changed to 19.

Q. In other words, when you said line 26, you meant line 19? A. Line 19, yes.

Q. Now go on. A. Materials and supplies, after eliminating fuel and other items belonging to the pool, are allocated to the classified plant in proportion to the investment in each group. The amounts of working capital allocated to the propert groups are shown on lines 4 and 5 of Table II and on line 7, is shown the classified rate base obtained by adding working capital to the net investment.

Q. In your third step the analysis of operating expenses, please explain the principal items? A. Operating expenses are classified into the same groups as the items of plant; that is, the expense assigned to each group is that involved in the operation and maintenance of the facilities and equipment already assigned to that group. The operation and maintenance expenses of the individual lines and substations are assigned directly to the customers, in accordance with the previous assignment of investment. This classification is shown on Table III.

Q. How do you determine the operation and maintenance expense of a particular line or substation? A. The operation and maintenance expense of each line [1181] is shown in Holtwood's report to the Commission, FPC Form 1. The operation and maintenance expenses of individual substations were made available at the request of the Commission's staff. The actual operating expense of the switching stations at Newlinsville Substation, in Lancaster, Donegal Substation, Donegal Tap near Safe Harbor,

Engelside Substation, Manheim and South Akron are not kept separately in Holtwood's accounts, and in this study have been estimated at 2 per cent of the investment.

Q. In Table III of Exhibit 64 why do you show production cost exclusive of purchased power? A. Group totals are obtained without this item for the purpose of obtaining ratios for allocating cash working capital and some items of taxes which are not affected by purchased power.

Q. You show $1,789,874 in Table III as the total operating expense, exclusive of purchased power. Is that the total operating expense of Holtwood and Susquehanna? A. Yes, but that is not the way the company reports it. The total operating expense as reported by Holtwood for 1944 is $2,579,099. The actual expense for which detailed items are reported is $3,207,966. This is reduced in the company's report by a credit of $628,867, representing revenue received from the net interchange of energy with customers in Pennsylvania.

[1182] The reported expense also includes the total cost of Susquehanna, which contains an amount of $128,776 for taxes and $65,060 for depreciation. These amounts are combined with the respective amounts of taxes and depreciation expense of Holtwood, and are deducted from the total actual operating expense. An item of $9,703 designated "miscellaneous credits" in the computation of Holtwood's bill to Baltimore Company is also deducted, which leaves $1,789,874 as shown on Table III. The reconciliation of this amount with the total expense, as reported by Holtwood, is set up in Table III-A.

Q. Coming now to the fourth step, the assembling of total costs, please explain the important items? A. Total costs are assembled under the same classification as that used for plant, and this classification is shown in Table IV. There are five main items:

(a) The operating expenses as classified in Table III, and shown on line 1 of Table IV.

(b) Purchased power, shown on line 2, is 1/3 of the Safe Harbor bill as adjusted by the Commission's accountants, and is assigned entirely to the pool.

Q. Is that line 2 of Table IV? A. Yes.

Q. Proceed. A: (c) Taxes are classified into four groups:

(1) Property and capital stock taxes.

[1183] (2) Old age and unemployment insurance.

(3) Gross receipts and PUC assessment.

(4) Federal and State Income Taxes.

Groups 1 and 4 are allocated to customers and to the pool in proportion to investment.

Group 2 is allocated to customers and to the pool in proportion to operating expenses.

Group 3 is allocated entirely to customers in proportion to gross revenue collected from each.

The total of the groups thus allocated constitute the next item, which is line 3 of Table IV.

(d) Depreciation expense is computed for each item of equipment in the classified plant at the respective rates indicated by the estimated service life of each, and these amounts are totaled for each customer and the pool, and shown on line 4 of Table IV.

(e) The last item is return on the rate base at 5 per cent, which is computed for each customer and the pool from the classified rate base in Table II.

* * *

[1184] Q. Mr. Davis, after you have assembled the total costs of service, what is the next step? A. The total costs of special facilities having been allocated respectively to the customers for whose service they are used, the next step is to allocate to the several customers on the basis of use, the cost of jointly used facilities in the pool. To do this, I have first classified all pool costs into production and transmission costs, dividing production into hydro and

steam and again dividing steam production expense into fixed and variable items.

This allocation is shown in Table V. In this classification of the pool costs, I have started with Plant in Service and followed the same procedure as with the special facilities, allocating depreciation reserve and working capital and setting up the rate base for each property group, as shown in lines 1 to 12, of Table V. I then assembled total costs for these groups in the same way as for the special facilities assigned directly to customers. This classification is shown on lines 13 to 20 of Table V.

Q. What are the items assembled in the total classified pool costs? A. They are the same items that were assigned to the pool in Table IV; namely, operating expense, taxes, depreciation and return.

[1185] Operating expenses are assigned directly to the facilities in each group as shown on line 13 of Table V and in the case of steam production the cost is divided into fixed and variable costs. Taxes, as shown on lines 15 and 16 are allocated to the four groups of pool facilities in the same way they were allocated to individual customers. Items of Property, Capital Stock, and Income Taxes, are functions of investment; Retirement and Unemployment Insurance are functions of operating expense, and these items are allocated respectively in proportion to plant investment and operating expense of the four groups.

Depreciation expense is computed for each group of facilities in accordance with the rate indicated by the estimated service life. Return is computed at 5 per cent of the rate base for each group. Purchased power, representing the cost of Holtwood's one-third share of Safe Harbor power, as such cost has been adjusted by the accounting examiners, is shown on line 19 and is added to Holtwood's hydro production cost. The totals of these four groups are the total pool costs. Hydro production and transmission costs are considered fixed costs and steam production is divided into fixed and variable costs.

Q. Do you show fixed and variable costs of steam production in Table III? A. They are not identified as such, but the cost [1186] of fuel, water and maintenance of boilers, boiler plant equipment, and coal handling equipment are selected as the significant items, varying with the energy output of a steam plant and are classified in Table V as variable costs. All other steam production costs are classed as fixed costs. Detail of this classification is shown in Table V-c.

Q. Is this the generally accepted method of classifying steam production costs? A. I don't know that you would call any method "generally accepted." The expenses which I have classed as variable are the ones which primarily are a function of plant output although they may be affected to some extent by the installed capacity of the plant. Other items of expense which primarily are a function of the capacity of the plant are in turn affected to a slight extent by plant output. Some methods of allocation, therefore, go into minute detail, dividing nearly every item of plant expense between fixed and variable components on ratios which are partly empirical and partly based on judgment. Unless a plant is operated under laboratory test conditions, much of the data necessary for such an allocation are not directly available and judgment becomes the major factor in the allocation. The classification which I have used in this study is a close approximation and I believe it does not omit any detail [1187] which would materially change the final result.

Q. Why should purchased power be classed with the hydro plant costs? A. The Safe Harbor bill is made up of the same type of items as are included in the hydro costs already assembled, being one-third of the total cost of the Safe Harbor plant. This cost should be treated in the same way as the Holtwood hydro group in further allocation.

Q. What further allocation have you made of these four groups of pool costs? A. These costs are next

reclassified into capacity and energy components from which unit costs per kilowatt of capacity and per kilowatt-hour of energy may be derived. This reclassification is shown on lines 21 to 25 of Table V.

Q. What is the basis of this allocation? A. First, all variable costs are placed in the energy component and the steam production fixed cost group in the capacity component.

Q. Is there a particular reason for this? A. As already described, these costs were classified as fixed and variable on the basis of the predominance of plant capacity or of energy output in the factors which determine the amount. I am now attempting to classify all costs on the basis of the function to which the various costs primarily are devoted; that is, whether that of [1188] providing capacity or of supplying energy, which is the same basis on which fixed and variable costs of steam production were classified.

Q. Are costs which may be called variable the only ones which you allocate to the energy component? A. No, there are other considerations indicating the function for which fixed costs are incurred.

Q. What are such considerations? A. We have a good example right here in the case of the Holtwood and Safe Harbor hydro plants. At both of these plants, generating capacity has been installed considerably in excess of the dependable capacity available.

Q. How do you determine how much dependable capacity is available? A. Studies are made by the company at the end of each year to determine how much capacity these hydro plants at Holtwood and Safe Harbor can be expected to provide on the estimated load curve of Federal Power Commission Power Supply Area No. 6 for the following year or in other words, how much the hydro plants will be able to reduce the steam capacity that would otherwise be required to carry next year's load.

Q. What is the basis of these estimates of dependable capacity? A. These estimates are made on the basis of "Most Adverse Flow Conditions" and on "Average or Median Flow [1189] Conditions," and are included in the Power System Statements, FPC Form 12, filed each year with the Commission.

In this allocation, I have used the dependable capacity estimated by the Company for the month of December under adverse flow conditions. The computation of dependable capacity is based on a regular weekly cycle of drawdown and refill of the Safe Harbor pond which requires that the water be up to maximum level every Monday morning. The additional capacity which could be made available in case of emergency by use of this storage in excess of the regular weekly cycle, is also computed.

The dependable capacity reported for December with weekly refill of Safe Harbor pond is 197,000 kilowatts for the combined hydro plants. The excess available by further use of Safe Harbor storage is computed at 57,000 kilowatts. This additional capacity is used only in case of emergency and obviously is of a different quality from capacity under a weekly recovery program. It would be quickly exhausted by a continued emergency and with low river flow would require considerable time for storage replacement. It appears, therefore, that while it does not have the full value of capacity available under normal operation of the storage pond, it is available in case of need and should be credited with some value in this allocation. I have taken the total dependable capacity to be 197,000 kilowatts as reported for weekly [1190] recovery operation, plus one-half of the additional 57,000 kilowatts of storage capacity or a total of 225,500 kilowatts.

Q. How do you use this in determining capacity and energy cost components? A. I have taken this 225,500 kilowatts as the portion of the installed capacity which can be considered as available for providing capacity to firm power customers. The balance of the installed capacity,

or 96,000 kilowatts is the portion which can be considered as installed for the primary purpose of producing additional energy during periods of high river flow.

The installed capacity, or machine capability of the two hydro plants is 334,000 kilowatts. 225,500 kilowatts devoted to providing capacity is 67.5 per cent of the total and on this basis 67.5 per cent of the total hydro cost is allocated to the capacity component and 32.5 per cent the energy component.

Q. In determining the proportion of installed capacity which can be considered firm, why do you include the Safe Harbor plant? A. Dependable capacity is estimated and reported only for the combined hydro plants of Holtwood and Safe Harbor. Holtwood has purchased under contract one-third of Safe Harbor capacity and output. The dependable capacity of Safe [1191] Harbor alone is determined by prorating the aggregate dependable capacity of the two plants in the ratio that the installed capacity of Safe Harbor bears to the installed capacity of the two plants. Holtwood's share of Safe Harbor dependable capacity is obtained by taking one-third of the amount prorated to Safe Harbor.

Q. What other pool costs are included in this reclassification? A. Transmission cost is the only remaining item and that is allocated entirely to the capacity component. This gives a total capacity component of $2,782,719 and a total energy component of $1,412,971 as shown on line 25 of Table V. From the total capacity cost and the total customers load supplied by the plant, a unit cost per kilowatt of capacity is derived. From the total energy cost and the energy delivered to customers, a unit energy cost is derived. From these unit costs and the measured loads of Holtwood's customers, the allocated cost of supplying each customer is derived.

Q. How have you determined the capacity from which you develop a unit cost per kilowatt? A. This unit cost is based on the aggregate noncoincident load delivered to

the customers' meters; that is, the sum of the annual maximum demands of all customers regardless of when each occurred.

Q. Why do you use noncoincident demand? [1192] A. Because it is intended to apply the unit cost thus developed to each customer's maximum demand for the year, and this unit if it is thus applied to the demand of every customer will obviously allocate the total amount of capacity cost, and will allocate it to each customer in proportion to his maximum capacity requirement rather than to his requirement at the particular time the system peak occurs.

Q. Is that, in your opinion, an equitable method of allocating capacity costs to the customers served by Holtwood Company? A. I believe it is equitable because in this way the benefits of all the diversity there is between customers' demands is distributed equally among the customers.

Q. How is this total noncoincident demand determined? A. The maximum demands of the three wholesale customers in Pennsylvania are directly measured. The maximum demand of the Pennsylvania Railroad, in Pennsylvania, is measured in combination with its demand in Maryland. The capacity available for Baltimore Company is not a measured quantity, but is the residuum of the total available dependable capacity after all firm power customers' demands are supplied and must, therefore, be determined by a process of elimination. This process is summarized in Table V-A.

Q. Will you please describe this process? A. I have already discussed the dependable capacity [1193] of the hydro plants made up of 197,000 kilowatts available under a weekly recovery cycle plus ½ of the 57,000 kilowatts additional capacity available from the use of Safe Harbor pondage, making a total of 225,500 kilowatts which is available for the system peak in Federal Power Commission

Power Supply Area 6, and is 67.5 per cent of the total installed capacity.

In addition to the hydro capacity, the Holtwood Steam Plant has an effective capacity of 26,000 kilowatts, all of which is considered dependable due to the ample opportunities for scheduled maintenance. This makes a total dependable gross generating capacity of 251,500 kilowatts.

Deducting the reported station use and transmission loss at the time of system peak of 23,000 kilowatts, leaves a net dependable capacity of 228,500 kilowatts. This is shown on line 12 of Table V-A, together with the amounts for Holtwood and Safe Harbor hydro plants prorated on the ratio of installed capacity. The requirements of the three resale customers in Pennsylvania at the time of system peak was 84,000 kilowatts and that portion of the Pennsylvania Railroad Company requirements delivered in Pennsylvania which is considered to be furnished by Holtwood, and for which Holtwood collects the charges was 28,397 kilowatts.

This is the Pennsylvania portion of the total Pennsylvania Railroad demand based on the proportion of the total [1194] energy that is delivered in Pennsylvania. This makes a total Pennsylvania customer demand at the time of system peak of 112,397 kilowatts which must be supplied out of Holtwood's dependable capacity before any is available for Baltimore.

To translate customer's maximum loads into required station capacity, consideration must be given to the necessary reserves to insure dependable service. A reserve capacity of 10 per cent to 12 per cent is generally considered adequate with a tendency toward lower amounts for larger systems and power pools. Using 10 per cent as a reasonable reserve gives a required capacity of 123,637 kilowatts to furnish dependable service to the Pennsylvania resale customers and to the Railroad load in Pennsylvania. Deducting this required capacity of 123,637 kilowatts from the total dependable capacity of 228,500 kilowatts leaves

104,863 kilowatts of dependable capacity available for Baltimore and the Railroad load in Maryland. By prorating the net dependable capacity of both Holtwood and Safe Harbor hydro plants in proportion to the installed capacity in each, the Safe Harbor portion is determined to be 141,065 kilowatts. Deducting Baltimore Company's two-thirds of this from the balance available from both plants, leaves 10,820 kilowatts of dependable capacity available to Baltimore from Holtwood's plant, plus its 1/3 share of Safe Harbor.

Q. How is this 10,820 kilowatts used in allocating [1195] capacity costs to the customers served by Holtwood Company? A. This 10,820 kilowatts is taken to be the maximum capacity furnished during the year 1944 to Baltimore Company by Holtwood.

Q. Did the load delivered to Baltimore never exceed this amount? A. It was much greater during the months of high river flow, but that was not firm power and could not be depended on to serve firm power loads.

The larger load during periods of high river flow constitutes the use of the excess installed capacity to produce the greatest practicable amount of energy from the available water. This 10,820 kilowatts was all the dependable capacity that Holtwood had left to deliver to Baltimore at the time when Baltimore Company's need for capacity was greatest and when, if Holtwood's capacity had been available, it would have drawn its maximum demand. For the purpose of allocating capacity cost to the service furnished by Holtwood to Baltimore Company, this 10,820 kilowatts is comparable to the maximum annual demands of the Pennsylvania customers, and is included with such demand to determine the aggregate noncoincident demand of all customers on which to base a unit capacity cost. These noncoincident demands totaling 144,780 kilowatts are shown in Table V-D.

Q. What are the annual unit costs per kilowatt [1196] of capacity and per kilowatt hour of energy? A. The

total cost allocated to the capacity component in Table V is $2,782,719 and dividing this by the aggregate noncoincident demand of 144,780 kilowatts gives a unit cost per kilowatt of $19.22 per year.

The total energy sales to Pennsylvania customers and the balance available to Baltimore from Holtwood's plants, plus its 1/3 share of Safe Harbor energy in a year of average river flow is 988,166,756 kilowatt hours. Dividing the total energy cost of $1,412,971 by the total energy gives us a unit cost per kilowatt hour of 1.43 mills.

The sources of energy generated in 1944 and the disposition of this energy are shown in Table V-B. To the total amount of energy available in 1944 is added 104,182,056 kilowatt hours which is the estimated additional amount of energy that would be available to Baltimore Company in a year of average river flow. The sales to resale customers and to the Pennsylvania Railroad Company in Pennsylvania, with the balance available to Baltimore Company adjusted to an average water year, are shown in Table V-D.

Q. What result do you obtain by the application of these unit costs? A. The application of unit costs to the demand and energy of each customer to determine the total cost of power and energy supplied is shown in Table VI. The total costs of [1197] special facilities provided for each customer, as developed in Table IV, are added to the capacity and energy costs, as derived from the unit costs, to get the total Holtwood Company costs. To these totals are added the cost of energy supplied by Baltimore.

Q. What energy is supplied by Baltimore? A. Holtwood is not able to meet its firm power obligations from its own plants during the low water months and the deficiency is made up at times by energy delivered from Baltimore to Safe Harbor over the 220 kilovolt lines. During 1944 Baltimore furnished a total of 125,317,000 kilowatt hours to Holtwood. No charge was made for this energy. The cost of producing and delivering it, however, is a part of the cost of supplying the firm power requirements of

Holtwood's customers and is added to Holtwood's energy cost at 4 mills per kilowatt hour or a total amount of $501,268.

This cost is allocated to each customer in proportion to the energy delivered or available and the total amount is credited to Holtwood's cost of furnishing services to Baltimore.

Q. How is the rate of four mills determined? A. The average production cost of Baltimore Company in 1944 was 4.6 mills and the incremental cost, including only fuel, water and maintenance of boiler and coal handling plants was 3.4 mills. A cost of 4 mills is considered reasonable [1198] for making up the deficiency in the supply of energy to Pennsylvania customers.

Q. What is the final result of your determination of total costs applicable to the several customers? A. After deriving the total cost of furnishing the service to each customer, a comparison of these costs is made with the charges for such service in 1944. This comparison shows a total revenue in excess of allocated cost of $2,720,264, of which 73.7 per cent is applicable to Baltimore, 8.4 per cent to Pennsylvania Power & Light Company, 5.9 per cent to Philadelphia Electric Company, 0.9 per cent to Edison Light & Power Company and 11.1 per cent to Pennsylvania Railroad Company for service in Pennsylvania.

Q. Are the charges shown in Table VI the actual bills rendered to these customers by Holtwood Company? A. They are the actual bills in every case, except for service to Baltimore. In this case, two items are included in addition to the bill rendered by Holtwood.

Q. What are these items? A. First, an amount of $628,876, which is the net revenue received by Holtwood from interchange sales in Pennsylvania, and second, an item of $133,750 which is revenue received from the Conowingo Companies for the addition of 8.5 feet to the elevation of Conowingo forebay, which raises the level of the Holtwood tailrace a corresponding [1199] amount.

RECORD

P.422-497

Q. Why should these items be included in the revenue received from Baltimore? A. Under the contract with Baltimore Company, Holtwood sells the entire residual capacity and energy of its plant, plus its one-third share of Safe Harbor capacity and energy after the firm power requirements of its Pennsylvania customers have been supplied. The energy sold in interchange to customers in Pennsylvania, without firm commitment, was a part of the residuum belonging to Baltimore Company, and was sold with the consent or at the request of Baltimore Company. It was in effect, therefore, a sale by Baltimore Company and the revenue was turned over to Holtwood. The revenue is accordingly added to that collected directly by Holtwood from Baltimore Company.

Q. How is this interchange energy accounted for in your cost allocation? A. It is included in energy sold to Baltimore Company just as if it had actually been delivered to the Baltimore system.

Q. What is the second item in addition to the actual bill rendered to Baltimore Company? A. It is a payment of $133,750 received from Conowingo Companies in compliance with an agreement under which Holtwood allowed the water of the Conowingo Pond to be backed up 8.5 feet [1200] above the level claimed by Holtwood as its tailrace level.

Q. How do you explain the inclusion of this payment in the revenue received from Baltimore? A. This agreement to raise the head of the Conowingo pond at the expense of the head at Holtwood's hydro plant constitutes a sale of a part of the potential capacity of the Holtwood plant, which would otherwise have been available to Baltimore Company. It is, therefore, a part of the residual plant capability to which Baltimore Company is entitled and for which Baltimore Company would otherwise have been obliged to pay. This, therefore, is in effect, a sale by Baltimore of a part of its entitlement from Holtwood's capacity and the money received is turned over to Holtwood.

[1201] CROSS-EXAMINATION.

By MR. MYSE:

* * *

[1203] Q. With respect to Table V, I think you testified that the amount of $992,535 recorded in line 19 as purchased power was adjusted by the accounting examiners. What is the nature of that adjustment you referred to? A. That was a computation of the costs of Safe Harbor on—I am informed by the accounting examiners—on the same basis as the cost that the Holtwood plant is computed as presented here.

Q. Do those costs appear in any exhibits presented to date in this proceeding? A. I could not answer that. The figure was given to me by the accounting examiners.

Q. Which accounting examiners? A. Mr. Dunn.

MR. MYSE: May I ask counsel for the Commission, have those figures been presented in any exhibits to date?

MR. GOLDBERG: I am just trying to consult with Mr. [1204] Dunn. You are referring, Mr. Myse, are you, to line 19, Table V?

MR. MYSE: Yes.

MR. GOLDBERG: Mr. Dunn informs me that that appears in the consolidated income statement, Exhibit 60 on schedule 5 on page 27 of that exhibit.

By MR. MYSE:

Q. Well, then, Mr. Davis, as I understand it, the figure of $992,535 does not represent the actual bills rendered by Safe Harbor in 1944 to Holtwood? A. It does not.

* * *

[1205] Q. Explain a little what you mean by the Holtwood service area in Pennsylvania? A. The railroad load is accounted for and charged for by Holtwood and Baltimore on the basis of the energy delivered in Pennsylvania and

Maryland. I have used that division to indicate service area so far as the railroad load was concerned.

Q. Then, as I understand it, you define Holtwood's service area for the railroad load as all the area in Pennsylvania, is that right? A. Yes.

• • •

[1207] By Mr. Miller:

Q. Your study reflects factual conditions in the year 1944 only and does not apply either to the year 1943 or the year 1945, is that correct? A. Yes.

Q. And of course it does not apply to the year 1946? A. No.

Q. Your approach if applied to different years would produce different results, according to the variation of many factors, among such factors being the river flow of the Susquehanna River, is that not correct? A. I have attempted to compensate for the variations in the river by using the energy that is estimated as available in an average year as reported by Holtwood.

Q. That appears in Table V-A, is that correct? A. Yes, I have added there 104,182,000 kilowatt hours which they estimated would be an additional amount available for Baltimore in an average year.

Q. If contract commitments between the Holtwood Company and the customers have changed since 1944, your results are no longer applicable to such changed conditions, [1208] are they? A. Any change in the sales in Pennsylvania, of course, would mean more capacity used in Pennsylvania—any increase, I should say of sales in Pennsylvania would mean more capacity used in Pennsylvania and less balance available for Baltimore or vice versa.

Q. And your results would change according to the changes in contractual commitments? A. That is right.

• • •

[1211] Mr. Hull: With respect to the revised exhibit in connection with the testimony of Dr. H. B. Dorau.

I call your Honor's attention to the fact that in connection with the testimony of Dr. H. B. Dorau, he heretofore offered an Exhibit 33, which was rejected.

However, counsel for the staff, Commission's staff, [1212] indicated, at transcript page 841 lines 4 to 15, that he had no objection to the first char' and to the first two tabulations of that exhibit.

And Your Honor, at transcript page 842, line 20, running over to page 843, line 18, indicated that if those three documents, the first chart and the two tabulations, were prepared as a separate exhibit and offered they would be received.

We have now prepared a document which I ask to be marked for identification as Exhibit No. 65, bearing this title: "Before The Federal Power Commission—In the Matter of Pennsylvania Water and Power Company and Susquehanna Transmission Company of Maryland IT-5195—Exhibit of Dr. H. B. Dorau Relating to the Supply of Money and the Value of the Dollar." This exhibit which we asked to be marked as Exhibit No. 65 contains the chart and the two tabulations that we have heretofore referred to, and we now offer them in evidence.

MR. GOLDBERG: Am I to understand that this exhibit is being offered in relation to the testimony of Dr. Dorau.

MR. HULL: In conjunction with the testimony.

MR. GOLDBERG: In other words, am I to understand that this testimony is in relation to Exhibit 65?

MR. HULL: That is correct.

MR. GOLDBERG: As I understand, the offer is not intended to relate to the determination of rate base or any of the other elements mentioned by Respondents' counsel when the ruling was [1213] made on Exhibit No. 53—is that the right number? Is that correct?

MR. HULL: 33.

MR. GOLDBERG: 33.

MR. HULL: It is offered for the purpose for which the Examiner said it might be admitted, and you agreed it could be admitted.

MR. GOLDBERG: I agreed it could be admitted as such, as statistics of the purchasing power of the dollar, but I did not agree to its admission if it is intended to be offered in any way to be related to the rate base or rate of return, or any other purpose.

MR. HULL: It is offered in connection with the rate of return,—not in connection with the rate base.

MR. GOLDBERG: In connection with the rate of return you say?

MR. HULL: Pardon?

MR. GOLDBERG: In connection with the rate of return.

MR. HULL: Yes, and any other appropriate use which the Commission may see fit to make of it.

MR. GOLDBERG: Confining myself and guiding myself by the express statement of counsel that he is relating it to these things and without any determination as to how the Commission may intend to use it, I have no objection.

TRIAL EXAMINER: The document heretofore referred to and now handed to the reporter will be marked Exhibit 65 [1214] for Identification.

(A document is marked Exhibit 65 for Identification.)

TRIAL EXAMINER: Before the Examiner concludes his ruling on this exhibit which has now been marked Exhibit No. 65 for Identification is there any other objection by any party present?

(No response.)

TRIAL EXAMINER: Hearing no objection, Exhibit 65 for Identification is received in evidence.

• • •

[1217] TRIAL EXAMINER: The hearing will be in order.

Before we proceed with the testimony, the Examiner would like to inquire as to whether the Intervenors, other than Consolidated Gas Electric Light & Power Company of Baltimore, as to which the Examiner is advised they intend to present testimony, any others intend to present any testimony at this stage of the proceeding; that is, the Examiner will call on the Consolidated Gas Electric Light and Power Company first, and then upon counsel for the Pennsylvania Public Utility Commission, and then upon counsel for the Public Service Commission of Maryland.

At this time those intervenors should be prepared with whatever testimony or evidence they intend to present and offer on direct. Will any of those two counsel have testimony?

MR. MILLER: Mr. Examiner, we will have no direct testimony. We will have testimony in rebuttal we anticipate. I might say, in order to clarify the record as to the Pennsylvania Commission's position, that the Pennsylvania Public Utility Commission has authorized me to state that it denies the jurisdiction of the Federal Power Commission over sales by Respondent, Pennsylvania Water and Power Company, to Pennsylvania customers in Pennsylvania. The bases for this denial are as follows:

[1218] 1. Pennsylvania Water and Power Company is a licensee in legal contemplation since it has filed an application for a license under the Federal Power Act and the Federal Power Commission, taking jurisdiction of that application, has signified that it would

grant a license subject to certain conditions. As a licensee, Pennsylvania Water and Power Company is subject to the rate jurisdiction of the Federal Power Commission under Part I of the Federal Power Act and not under Part II of the Act. Under Part I of the Act, applying to licensees, Federal Power Commission jurisdiction attaches only if and when the states concerned in relation to the transactions involved are unable to agree upon cooperative regulation. Not only is there no showing on the present record that the Commonwealth of Pennsylvania and the State of Maryland are unable through the Public Service Commission of Maryland and the Pennsylvania Public Utility Commission to achieve complete proper and adequate regulation through cooperative procedure, but I can state affirmatively that the Pennsylvania Commission sees no reason to believe that the state authorities cannot achieve such regulation through such procedure. Pennsylvania Public Utility Commission has always been willing and now stands ready to cooperate with the Maryland Commission in the development of appropriate determinations and believes that the cooperative procedure contemplated by the Federal Power Act is not only the legal but the most appropriate and practical [1219] manner in which to attain solution of the problems involved in regulation of the rates of Pennsylvania Water and Power Company;

2. Section 19 of the Federal Power Act clearly provides that the service and rates of a licensee shall be subject to control by the duly constituted agency of the state in which the service is rendered or the rate charged and not by the Federal Power Commission except where no such duly constituted state agency exists.

3. Pennsylvania Public Utility Commission is the duly constituted agency of the Commonwealth of Pennsylvania for the regulation and control of the service

and rates of Pennsylvania Water and Power Company, among others, and, on December 5, 1944, instituted a proceeding to determine the fairness, reasonableness and justness of the rates and charges of that company at our complaint docket No. 14028. This proceeding is active. A questionnaire calculated to elicit pertinent information has been transmitted to Pennsylvania Water & Power Company and the answers filed from time to time are being analyzed by the Pennsylvania Commission staff.

4. Pennsylvania Water and Power Company sales and deliveries to Pennsylvania customers of energy generated by steam or falling water in Pennsylvania do not constitute transactions over which Federal Power Commission has rate [1220] jurisdiction because no element of interstate or foreign commerce is present in such transactions. This position is taken on the basis of the phraseology of Part II of the Federal Power Act which throughout clearly contemplates State Commission jurisdiction over the transactions mentioned.

5. Sales and deliveries of energy by Pennsylvania Water & Power Company to the Pennsylvania Railroad Company in Pennsylvania are not subject to Federal Power Commission rate jurisdiction as such transactions (1) have no element of interstate or foreign commerce and (2) are retail transactions clearly exempted from Federal Power Commission jurisdiction by the phraseology of Part II of the Federal Power Act. Jurisdiction over such sales and deliveries clearly resides in Pennsylvania Public Utility Commission.

6. Federal Power Commission has no jurisdiction to fix or determine the apportionment of joint rates or rates for service rendered jointly with others by Pennsylvania Water & Power Company or for energy sold by Pennsylvania Water & Power Company jointly with others, since the Federal Power Act does not confer

this jurisdiction. Pennsylvania Public Utility Commission, however, is specifically given jurisdiction over the apportionment of joint rates of public utilities by Section 306 of the Public Utility Law, approved May 28, 1937, Pennsylvania Pamphlet Laws 1053, as amended. This situation demonstrates that Pennsylvania Commission regulation of the [1221] rates and charges of Pennsylvania Water & Power Company for energy delivered to Pennsylvania customers in Pennsylvania is complete and the point is particularly pertinent in this record since all of the rates charged by Pennsylvania Water & Power Company to Pennsylvania customers are rates which must be apportioned by reason of the joint obligations of Pennsylvania Water & Power Company and others under all of the contracts with Pennsylvania customers.

It would clarify our manner of thinking on jurisdiction greatly if Mr. Goldberg would state for the record Pennsylvania contracts over which the Commission Staff asserts that the Federal Power Commission has jurisdiction?

• • •

Mr. Goldberg: Mr. Examiner, before I proceed to answer Mr. Miller's request for a statement from me as to what contracts the staff considers the subject of the Commission's jurisdiction, which I thought was clear at this point, but if it is not, I will be glad to restate it, I would like to have Mr. Miller respond to a few questions that I have in connection with his statement so that I may understand his position more clearly.

Does Mr. Miller contend that the Pennsylvania [1222] Commission's jurisdiction attaches both to the generation of hydro electric energy by Pennsylvania Water & Power Company and to the generation of elec-

tric energy by steam by Pennsylvania Water & Power Company, under section 20 of Part I of the Act?

MR. MILLER: I do not understand what you mean by "generation", Mr. Goldberg. We contend that the Pennsylvania Commission's jurisdiction attaches to the rates of the Pennsylvania Water & Power Company for energy generated either by hydro or steam. Does that answer your question?

MR. GOLDBERG: I think so. In other words, you contend that the Pennsylvania Commission may regulate the rates regardless of the fact that part of the electric energy used to service the customers may have been generated by steam?

MR. MILLER: That is correct.

MR. GOLDBERG: Now then, under what section of the Pennsylvania Public Utility Law or any other provisions of Pennsylvania law does counsel for the Pennsylvania Commission contend that the Pennsylvania Commission has authority to sit jointly with a State Commission or confer jointly with them to fix rates?

MR. MILLER: Excuse me while I look it up here (examining). Under Section 913 of the Pennsylvania Public Utility Law.

MR. GOLDBERG: Do you have it there?

[1223] MR. MILLER: Yes.

MR. GOLDBERG: May I see it?

MR. MILLER: Certainly (handing).

TRIAL EXAMINER: Is there some short specific provision in the section that counsel has referred to that can be read into the record?

MR. MILLER: Yes, sir. I will read it, Mr. Examiner.

"Section 913: Joint hearings and investigations. Reciprocity." (A) "The Commission shall have full power and authority to make joint investigations, hold joint hearings within or without the Commonwealth, and issue joint or concurrent orders in conjunction or concurrence with any official, board, commission, or agency of any state or of the United States, whether in the holding of such investigations or hearings, or in the making of such orders, the Commission shall function under agreements or compacts between states or under the concurrent power of states to regulate the interstate commerce, or as an agency of the Federal Government, or otherwise."

The second paragraph of the section deals with motor vehicles and so forth.

MR. GOLDBERG: Does counsel for the Pennsylvania Commission contend that Section 19 of the Federal Power Act relates to interstate commerce?

MR. SPARKS: I did not understand that. Did Mr. Goldberg [1224] say interstate commerce or intrastate?

MR. GOLDBERG: Interstate.

TRIAL EXAMINER: Read the question.

(Question read.)

MR. GOLDBERG: You made some references to Section 19 in your statement. I do not have it before me, but I want to be clear as to your understanding of Section 19. Does it apply, in your opinion, to interstate commerce, or only to intrastate commerce?

MR. MILLER: My point on Section 19, Mr. Goldberg, was simply that it provides as to service and rates that a licensee shall be subject to and controlled by the duly constituted agency of the state in which the service is rendered or the rates charged.

MR. GOLDBERG: Insofar as the service is intrastate commerce, is that right?

MR. MILLER: We claim jurisdiction only over rates for energy delivered in Pennsylvania to Pennsylvania customers.

We feel that that is not interstate commerce in the sense that it can be regulated by the Federal Power Commission.

MR. GOLDBERG: What I am trying to find out is your view of section 19. Is it your view that section 19 relates to regulation of intrastate commerce only?

MR. MILLER: No, I have no such view.

MR. GOLDBERG: Is it your view that section 19 relates [1225] to interstate commerce?

MR. MILLER: No, not alone.

MR. GOLDBERG: Does it at all relate to interstate commerce, to rates involving the transmission of electric energy in interstate commerce?

MR. MILLER: I think, Mr. Goldberg, you are asking me for a legal opinion beyond the scope of my statement as to what the application of section 19 should be.

MR. GOLDBERG: I am trying to find out how you conceive section 19 is to be applied, and that is what I thought your statement involved. Do you contend that if the sales to the Pennsylvania customers are in interstate commerce that such sales may be regulated by the Pennsylvania Commission alone or jointly, as you say, under section 19?

MR. MILLER: Yes.

MR. GOLDBERG: You mentioned a proceeding by the Pennsylvania Commission—I think you stated the order was December 5, 1944?

MR. MILLER: That is correct.

MR. GOLDBERG: Does that investigation relate to the sales of electric energy by Pennsylvania Water & Power Company to the Consolidated Gas Electric Light & Power Company of Baltimore?

MR. MILLER: It is general in its terms and relates to everything which the Pennsylvania Commission may find to [1226] be within its jurisdiction. The jurisdictional lines have not been drawn in that proceeding as yet.

MR. GOLDBERG: Is it the position of the Pennsylvania Commission that the sales of electric energy to the Consolidated Gas Electric Light and Power Company of Baltimore by Pennsylvania Water & Power Company are subject to the Pennsylvania's Commission jurisdiction?

MR. MILLER: That, I think, would remain to be seen. That is not my present position, however. I am limiting my statement or position at this time solely to sales in Pennsylvania to Pennsylvania customers.

MR. GOLDBERG: Then, as I understand it, you are not saying that the present investigation of the Pennsylvania Commission relates to rates involved in the sales of electric energy to the Consolidated of Baltimore by Pennsylvania Water & Power Company, is that right?

MR. MILLER: No, I am not saying that, Mr. Goldberg. I am saying that the jurisdictional lines have not been drawn in that proceeding, but my position in that regard is that the Federal Power Commission does not have jurisdiction but that the Pennsylvania Commission does, over sales to Pennsylvania customers in Pennsylvania.

MR. GOLDBERG: That is the extent of your position, is that right?

MR. MILLER: Yes.

[1227] MR. GOLDBERG: What phraseology of Part II of the Act do you refer to in your statement?

MR. MILLER: I refer to all of the phraseology in Part II of the Act. I would have to read all of Part II, Mr. Goldberg, to answer that question.

MR. GOLDBERG: Is there any part of it that you can point out right now as supporting the position you have taken on this record?

MR. MILLER: We do not rely on any specific part; we rely on the phraseology of the part as a whole.

MR. GOLDBERG: Is there any part out of that you would care to point out to us right now?

MR. MILLER: No.

MR. GOLDBERG: Just one more question. You talked of the jurisdiction of the Federal Power Commission with respect to joint rates. May I have your definition of "joint rates"?

MR. MILLER: I have no definition ready, Mr. Goldberg. I would say that the rates charged by the Pennsylvania Water & Power Company, the Respondent, for services rendered jointly with other parties, would be joint rates.

MR. GOLDBERG: Well, of course, a definition that uses a word to be defined is not very helpful. I appreciate, perhaps, that you may not have been prepared to define the contention you are making. Are you using it in the sense that it was used in the Interstate Commerce Act?

[1228] MR. MILLER: I am using it in the factual sense in which Pennsylvania Water & Power Company renders service in conjunction with other contracting parties.

MR. GOLDBERG: Are you using it at all in the sense that it is used in the Interstate Commerce Act?

MR. MILLER: Yes, I take it it is used in whatever legal sense the factual situation indicates.

MR. GOLDBERG: Now, then, Mr. Examiner, I have been requested by counsel for the Pennsylvania Commission to state the position of the Staff as to the Commission's jurisdiction over the contracts of the Pennsylvania Water & Power Company. I thought it was clear, but I am willing to state it again.

It is the position of the Staff that all of the contracts of the Pennsylvania Water & Power Company for the transmission and sale of electric energy at wholesale in interstate commerce are subject to the Commission's jurisdiction, but the Staff is not contending that the Commission should assert jurisdiction over the contract between Pennsylvania Water & Power Company and the railroad for railroad service. That is the only exception the Staff is making.

In so stating, Mr. Examiner, of course, that does not preclude the Commission from asserting jurisdiction if it wishes to.

MR. SPARKS: At this time, if Your Honor please, I have a statement to make.

[1229] TRIAL EXAMINER: Just one minute. Does counsel for the Public Service Commission of Maryland have a statement to make?

MR. FRANCE: Not except to say that we will have one witness. We will be ready when called, and it should not take over 20 minutes to half an hour on the direct.

TRIAL EXAMINER: Does counsel have anything to say with respect to the remarks just entered in the record by the counsel for the Pennsylvania Public Utility Commission?

MR. FRANCE: If Your Honor please, it is my understanding that the Public Service Commission of Maryland requested the Federal Power Commission to assume jurisdiction in this case. I was not counsel for the Public Service Commission of Maryland at the time the case originally started and I cannot speak at firsthand, but certainly our position is clear in the record.

I think there is a letter in the record from the Public Service Commission of Maryland to the Federal Power Commission requesting them to assume jurisdiction.

TRIAL EXAMINER: Is it proper to construe the situation to sum up to this, that as of the time of the need of the Public Service Commission of Maryland, there has not been any agreement between the States of Maryland and Pennsylvania such as provided for in Section 20 of the Federal Power Act?

MR. FRANCE: No, sir. There were some preliminary [1230] negotiations between the two commissions as I understand it, and subsequently, the Maryland Commission then wrote to the Federal Power Commission requesting it to assume jurisdiction.

TRIAL EXAMINER: Very well.

MR. FRANCE: I think that is an accurate statement.

* * *

[1231] RALPH L. THOMAS,
a witness called on behalf of the Consolidated Gas Electric Light and Power Company of Baltimore, being first duly sworn, testified as follows:

DIRECT EXAMINATION.

By MR. STURTEVANT:

Q. Will you please state your name and your present position? A. Ralph L. Thomas. I am vice president of the Consolidated Gas Electric Light and Power Company of Baltimore; also a director and a member of the Executive Committee of that company. As vice president, I am in charge of the Electric Operation and Engineering including inter-system transactions and operations.

* * *

[1234] Q. In connection with what phase of the present proceeding are you testifying? A. I am concerned solely with the question of the allocation of any reduction in the operating revenue or rates of Holtwood Company that may be ordered by the Federal Power Commission.

Q. Yes,—— A. (Continuing) I want to make that clear, in view of my former association with the Holtwood Company.

* * *

[1235] Q. Mr. Thomas, what type of hydro developments are the Holtwood and Safe Harbor projects? A. Run of river type.

Q. What is meant by a "run-of-river" type development? A. It is a hydro development in which the [1236] quantity of water which can be stored behind the dam is negligible in relation to the annual power output. The purpose of the dam is to create a head and the storage of water is incidental. River flow cannot be stored in any appreciable quantity and to a large extent water must be used as it runs down the river.

* * *

[1237] Q. Mr. Thomas, would it be economic to develop either plant on the basis of continuous power output? A. No, it would not.

Q. To what extent is variation from a true run-of-river output possible at Holtwood and Safe Harbor? A. Mr. Spaulding, in his testimony at page 128, spoke of the utilization of pondage. During low flows the daily cycle consists of lowered output in the early morning hours when the load is light and of increased output in the peak-load hours of late morning and early afternoon. Weekly cycles during which the pond elevation is slightly decreased to get increased power on the heavy load week-days, and then allowed to reach maximum again over the week-end, are also used.

Under exceptional circumstances the drawdown could be extended over a longer period than one week.

Q. Would it be economical to develop either Safe Harbor Plant or the Holtwood Plant on the basis of utilizing the pondage without supplementary steam electric supply? A. No, this would not be economic.

Q. Will you explain how it is possible to justify economically the development of these sites? A. The load of an ordinary electric system is not constant, but varies during the hours of each day and of the week, the peak loads coming in the morning or early hours. Hydro developments of the Holtwood and Safe Harbor type can [1238] be justified if the hydro capacity and energy during periods of low flow can be used to skim off the upper portion of the load curve and supply peak systems.

In this manner the hydro capacity can replace an amount of steam electric capacity many times as great as the continuous firm power available from the same quantity of water.

* * *

Q. How has Holtwood company obtained the backup steam-electric supply with which to firm up its hydro ca-

pacity? [1239] A. * * * Holtwood Company has relied almost entirely on the Baltimore steam plants to firm up its hydro capacity. Initially, there were provisions for minor use of small standby steam-electric plants of the Pennsylvania customers, but generally speaking they soon fell into disuse.

* * *

[1241] Q. Is the supply of power and energy to Baltimore Company similar or comparable to the supply of the four Pennsylvania customers of Holtwood Company? A. It is not.

* * *

Q. Please explain the difference. A. Holtwood Company and Baltimore Company pioneered in developing the correct principles of operating a combined hydro steam generating supply system. Over a period of many years the operations of the plants of the two companies were coordinated to obtain maximum overall economy, usefulness, and reliability. The operating arrangements reached their culmination in the 1931 [1242] Holtwood and Safe Harbor contracts. There has been much testimony regarding those contracts in this and previous cases. Suffice it to say here that under those contracts the Baltimore, Holtwood and Safe Harbor companies were closely knitted together into a unified regional power system by which energy can be generated, purchased and supplied in the most economical manner.

[1243] Baltimore Company is entitled to receive all of the power and energy available to Holtwood Company after the requirements of the Pennsylvania firm power customers had been met, Baltimore Company may therefore be called the residual receiver.

Baltimore Company is also obligated to coordinate its facilities and power supply with those of Holtwood Company, and to supply back-feed steam electric energy to Pennsylvania as required to supplement the hydro supply

and to make it possible for Holtwood Company to sell conventional firm power in Pennsylvania.

• • •

[1253] Q. Now, Mr. Thomas, reverting to the 1931 Baltimore-Holtwood power contract, will you explain the nature of Baltimore Company's payments to the Holtwood Company, and the effect thereof? A. Under the 1931 agreement, Baltimore Company contracts in effect to pay to Holtwood Company annually an amount which, together with whatever revenue Holtwood Company receives from its other customers will yield to Holtwood Company a net revenue determined by the contractual formula which is independent of kilowatts and kilowatt hours.

It is evident that under this arrangement any reduction in rates paid for power and energy by any of the Pennsylvania customers is automatically charged to and immediately made up by Baltimore Company without any compensating increase in the supply of power and energy to Baltimore Company.

Likewise, any increase in operating expenses and taxes that Holtwood Company has is immediately and automatically paid by Baltimore Company.

This contractual arrangement again distinguishes Baltimore Company from the Pennsylvania customers. And I want to emphasize that point particularly because there are some friends of mine here today representing the Pennsylvania customers, and I am not sure they understand the workings of [1254] the Baltimore-Holtwood Contract and understand that when they get a reduction, Baltimore immediately and automatically makes it up.

• • •

[1264] Q. In connection with the comments you have made on Mr. Davis' cost-of-service study, do you desire to say anything about contract renewals entered into by Holtwood Company with the Metropolitan Edison Company for the supply to York? A. Yes. I previously referred to that as the peak service type of contract. Under that contract

Holtwood Company [1265] originally contracted to supply 20,000 kilowatts of peak service to Metropolitan Edison and, due to an increase in load, that has now been increased to 21,000 kilowatts. The use of that figure would, of course, change the results in Mr. Davis' study.

Q. Now, as I understand—— A. Excuse me. I might indicate, however, that that peak service contract also provides for rates which are very much lower than the corresponding rates in the other contract. I am not prepared to say what the net effects of the substitution of 1946 conditions would be.

I might also comment that I think that is a very desirable type of contract for Holtwood Company to have.

• • •

[1282] CROSS-EXAMINATION.

• • •

[1285] By MR. GOLDBERG:

• • •

[1290] Q. Does Consolidated purchase electric energy from [1291] Holtwood?

MR. SPARKS: I object to that, if Your Honor please.

TRIAL EXAMINER: On what ground?

MR. SPARKS: I object to it on the ground that this witness is not qualified to state whether or not the transactions contemplated by those contracts constitute a sale of energy, or whether they constitute a sale of some other kinds of services.

TRIAL EXAMINER: Objection overruled.

• • •

THE WITNESS: Yes, sir; we purchase energy among other services.

By MR. GOLDBERG:

Q. And that energy is purchased under Items H and I in this proceeding? A. Yes.

Q. I show you Items H and I (indicating). A. Yes.

Q. And does Consolidated purchase electric energy from Safe Harbor? [1292] A. Yes.

Q. And does that purchase take place under Items E, F and G in this proceeding?

MR. SPARKS: Same objection, if Your Honor please.

TRIAL EXAMINER: Overruled.

MR. SPARKS: Exception.

THE WITNESS: Yes.

By MR. GOLDBERG:

Q. And when you testified just now that Consolidated purchases electric energy, you were using the term in the sense of kilowatt hours, is that right? A. Yes.

Q. That is right? A. Yes, as far as I know, every report we filed with the Commission showed the number of kilowatt hours we purchase from those companies.

* * *

[1319-A] DIRECT EXAMINATION.

* * *

[1321] MR. SPARKS: Mr. Examiner, in response to the request of [1322] counsel for the Commission contained at pages 894 to 896 inclusive of the transcript record in this proceeding, as to clarification of our statement of the issues, as we saw them, at page 34 of the transcript, we now make the following statement:

Counsel's inquiries were directed to and confined to the first issue with respect to the jurisdiction as stated by us at transcript page 34. His first inquiry was directed to the meaning of that part of our statement that "This Commission has no jurisdiction over the rates, charges and classifications of Pennsylvania Water & Power Company under Part II of the Act, for the reason that the Company is to be treated as a licensee * * * and is, therefore subject to Part I of the Act only."

We mean by that statement that by virtue of the proceedings had by this Commission in its Docket No. IT-5524 and its orders issued therein dated November 3, 1939 and November 23, 1943, in connection with Holtwood Project No. 1881, Pennsylvania Water & Power Company must be treated in this proceeding as a licensee under Part I of the Federal Power Act.

Counsel's second inquiry is far from clear but in an effort to answer it we assume it to be stated as follows:

Is it the contention of Respondents that Pennsylvania Water & Power Company is presently subject to Part I of the [1323] Act, including Section 20, assuming that the States directly concerned are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor?

In answer to this question we repeat that the record does not show that the two states directly concerned, namely, Maryland and Pennsylvania, are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor; in the absence of such evidence and an appropriate finding by the Commission based thereon, this Commission has no jurisdiction over any of the rates, charges or classifications of Pennsylvania Water & Power Company under Part I of the Act. If it is assumed that there will be substantial evidence in the record to support such a finding by the Commission our contention is that any rate regulatory jurisdiction the Commission may have in that event over Pennsylvania Water & Power Company is limited by Section 20 to the authority to regulate and control only so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate commerce.

Counsel's third inquiry was directed to the meaning of that part of our statement at transcript page 34 that "This Commission has no jurisdiction over the rates, charges and classifications of Pennsylvania Water & Power Company under Part II of the Act, for the reason that the Company * * * [1324] may be considered to be a purchaser of power from a licensee for use in public service, and is, therefore, subject to Part I of the Act only."

Counsel inquired if that statement had reference to purchase of electricity by Pennsylvania Water & Power Company from Safe Harbor who is a licensee under Part I. In reply we state that we had reference to the fact that, as the evidence shows, Pennsylvania Water & Power Company does make payments to Safe Harbor, who is a licensee under Part I of the Act as stated by Commission Counsel.

Our contention is, however, that such payments are not the result of a purchase and sale of power by Pennsylvania Water & Power Company from Safe Harbor but are, on the contrary, payments of a division to Safe Harbor of revenues received by Pennsylvania Water & Power Company from Consolidated Gas Electric Light & Power Company of Baltimore for joint services rendered by Safe Harbor and Pennsylvania Water & Power Company to the Baltimore Company and to others. However, if contrary to the evidence in this proceeding it should be contended by Commission counsel that such payments are not divisions but arise out of a purchase and sale of power by Pennsylvania Water & Power Company from Safe Harbor then we contend that by reason of such contention of Commission Counsel, Pennsylvania Water & Power Company must in that event be treated as a purchaser of power from a licensee for use in public service; and that under Section 20 the respective jurisdictions of [1325]

the States and the Commission over the rates and charges of such purchasers of powe. from licensees, together with the statutory conditions and limitations thereon, are the same as over licensees under the Act.

MR. GOLDBERG: Just one or two questions of counsel who just read the statement.

With respect to the second portion—paragraph 2, if I may call it that—I understood counsel to say that if the Commission has any jurisdiction at all, it is limited only to that portion of the service which is in interstate commerce. To use an example, does that statement mean this,—Assume that 50 per cent of the energy used to serve the Pennsylvania customers comes from Maryland and is clearly in interstate commerce, and the balance, the other 50 per cent, originated in Pennsylvania and was used to serve the customers in Pennsylvania; does counsel mean that in the illustration I have just used if the Commission has jurisdiction at all, the Commission may only fix 50 per cent of the rate?

MR. SPARKS: I think the answer to that is that our contention would be that the Commission could not fix any of the rate.

MR. GOLDBERG: I am glad I asked that question because it puts a different light on the statement.

The other question that I ask for clarification purposes is, I noted in response to my third inquiry, Mr. Sparks [1326] said, "purchase of electricity".

Did he mean purchase of electric energy?

MR. SPARKS: My recollection is that Mr. Goldberg used the same word.

MR. GOLDBERG: No, my question is at page 896 and I said, "Because it purchases electric energy." That is at lines 13 and 14 on that page.

MR. SPARKS: If Your Honor please, our use of the term there was in the light of the provision in Section 20 which refers to power, and if the word is to be changed, then we would use the word "Power" in our answer.

MR. GOLDBERG: May I ask how counsel for the Respondents interprets Section 20?

MR. SPARKS: It covers all character of services, if Your Honor please, such as they may be provided for under their various contracts.

MR. GOLDBERG: In other words, you think that the phraseology of Part I is broader than it is in Part II?

MR. SPARKS: I am not sure what you mean by that, Mr. Goldberg.

MR. GOLDBERG: You made specific reference to power in Section 20 and stated it would include all services in the contract of Holtwood, and I was wondering if you were making a distinction between the use of that word and the use of the phraseology in the jurisdictional provisions of Part II.

[1327] MR. SPARKS: We do take the position that the word "Power" is a broader word than the word "energy" in Part II.

MR. GOLDBERG: Electric energy?

MR. SPARKS: Electric energy.

MR. GOLDBERG: Just one or two other questions.

One of my purposes in asking these questions is, as the Examiner knows, the large number of questions that have been directed to me, and although I feel they have been answered, I plan to study them during the recess. I want to study them in the light of the answers that have just been given.

Counsel stated with respect to the illustration I used—50 per cent interstate electric energy, and 50

per cent intrastate electric energy—that it would be their contention that the Commission has no jurisdiction at all. Is it the contention of the Respondent that if any part of the electric energy used to serve, let us say, the Pennsylvania customers, is in intrastate commerce, then the Federal Power Commission has no jurisdiction?

MR. SPARKS: Yes.

• • •

[1331] TRIAL EXAMINER: The Examiner assigns the following item designations to material introduced in evidence by Respondent's counsel by reference to the official files of the Commission:

Item "O" will designate the petition for specification of issues and reconsideration of direction fixing order of procedure filed April 3, 1946, now referred to at transcript 49 and 1329.

Item "P" to the letter addressed to Pennsylvania Water and Power Company by the Acting Secretary of the Federal Power Commission dated November 16, 1945, stating the order of procedure, now referred to in the transcript at 49 and 1329.

• • •

[1333] MR. GOLDBERG:

• • • You will recall, Mr. Examiner, that at transcript pages 885 to 890, inclusive, counsel for the Respondents in this proceeding requested that staff counsel be required to state for the record the contentions of the staff with respect to certain matters included in fifteen inquiries which counsel for Respondents read into the record.

If the Examiner has no objection I will go forward with the position of the staff at this time?

TRIAL EXAMINER: Does counsel wish to state it orally, or has he the matter referred to prepared in

form for submission to the reporter for incorporation into the record?

MR. GOLDBERG: I am afraid I must state it orally by reason of its preparation. I think probably it would enable everyone here who has not heard the questions before, to understand the answers.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: Counsel for Respondents stated that answers to the inquiries by staff counsel were necessary "to expedite this proceeding in an orderly manner and to afford them"—that is the Respondents—"a fair and adequate opportunity to know and meet any of the contentions of the Staff."

Counsel for Respondents also stated that the "complexity of the questions which may arise, as stated in the (fifteen) inquiries, illustrates and shows the handicap to which [1334] Respondents have been subjected by the orders in this proceeding."

Respondents state further, Mr. Examiner, through their counsel, that failure to indicate the contentions of the Staff in regard to the fifteen inquiries will deprive them of the fair hearing required by the Federal Power Act and the fifth amendment of the Constitution.

Before turning to the fifteen questions, I should like to state that notwithstanding Respondents' statements to the contrary they have been heretofore advised of Staff counsel's position on all of the matters contained in the fifteen inquiries. That presentation of their case has in no wise been handicapped. This clearly appears from the record, and further Respondents' presentation discloses a complete awareness of Staff counsel's contentions.

Staff counsel, however, Mr. Examiner, has no objection to stating again his position with respect to

the matters referred to in the fifteen questions, and I shall answer them in the order in which they appear in the transcript.

Question No. 1 is as follows:

"Is the authority of the Commission to regulate and control rates or charges in this proceeding to be exercised under Part I of the Federal Power Act? If so, under which sections?"

Although the question, Mr. Examiner, is phrased in terms of Commission action, I assume that the Respondents intended [1335] to secure Staff counsel's position.

Staff counsel contends that jurisdiction in this case exists under Parts I and II of the Act, and more particularly under Sections 20, 205, 206 and related sections.

[1336] Question number two is as follows: "Is it contended that either of the states of Pennsylvania or Maryland has not authorized, empowered or provided a commission or other agency for the regulation and control of the rates and charges of payment for services to be rendered by Respondents or by their customers engaged in public service within the meaning of Section 19?"

Staff counsel, Mr. Examiner, does not understand the reference to or the relevance of Section 19 in this case. If Respondents will explain to staff counsel the relevance or the reference to Section 19, I will undertake to respond in the light of that explanation, should response be necessary.

Question number three is as follows: "Is it contended that either of the states of Pennsylvania or Maryland has not provided a commission or other authority to enforce the requirements of Section 20 within their respective states?"

Staff counsel contends that assuming there has been no repeal by implication of the provisions of Section 20 relating to state activity in regard to interstate rates by licensees, that the state commissions of Maryland and Pennsylvania have no legal power to agree on the rates and services rendered by Penn Water in interstate commerce to Consolidated of Baltimore, Pennsylvania Power and Light Company, Metropolitan Edison Company, and Philadelphia Electric Company.

Question number four is as follows: "Is it contended [1337] that the states of Pennsylvania and Maryland are unable to agree, through their properly constituted authorities, on the services to be rendered by Respondents or on the rates or charges of payment therefore within the meaning of Section 20?"

In view of my answer to question three the answer to question number four is, of course, "Yes."

Question number five is as follows: "Is it contended under Section 20 of the Act that the Commission has jurisdiction in this proceeding to regulate and control the services rendered by Respondents to Consolidated Gas Electric Light and Power Company of Baltimore and to regulate and control the component parts of rates and charges of payment for such services as do not constitute interstate or foreign commerce, particularly the special facilities services comprising the furnishing of the Highlandtown and the Gunpowder Falls transmission line in the state of Maryland?"

Staff counsel contends that the agreement of June 1, 1931, and supplements thereto, between Consolidated of Baltimore and Penn Water, which agreement is known in this proceeding as items "H" and "I", is a contract by Penn Water for the sale of electric energy to Consolidated of Baltimore at wholesale in interstate commerce, and that under such contract Penn Water

does sell electric energy at wholesale in interstate commerce to Consolidated. Further, staff counsel contends that there is no question of intrastate commerce involved in [1338] Items "H" and "I".

Staff counsel contends, also, that the Commission has jurisdiction under Section 20 to regulate and control the rates and charges for the interstate transmission and sale of electric energy for resale which is made by Penn Water under Items "H" and "I".

Question No. 6 is as follows: "Is it contended, under Section 20, that the Commission has jurisdiction in this proceeding to regulate and control any of the services rendered by Pennsylvania Water and Power Company, by itself or jointly with Safe Harbor Power Corporation, to Metropolitan Edison Company, Pennsylvania Power & Light Company, Philadelphia Electric Company, or Pennsylvania Railroad Company, all in the state of Pennsylvania, and to regulate and control the rates and charges of payment for any of such services? If so, which services, rates and charges to which companies?"

Staff counsel contends that Penn Water sells electric energy at wholesale in interstate commerce to Metropolitan Edison Company, Pennsylvania Power and Light Company, and Philadelphia Electric Company, and that the sales of electric energy made under those contracts are not made jointly by Penn Water and Safe Harbor.

Staff counsel further contends that Safe Harbor sells all of its electric energy under the contract identified in this proceeding as Items "E", "F", and "G" to Penn Water and [1339] Consolidated of Baltimore.

Staff counsel contends that the rates and charges under Items "H" and "I" in this proceeding and in the sales of electric energy to Pennsylvania Power and Light Company, Metropolitan Edison Company,

and Philadelphia Electric Company, are all subject to the Commission's jurisdiction under Section 20. Staff counsel is not asserting any claims with respect to Exhibit 10, which is the Pennsylvania Railroad contract, but that is not to say that the Commission is without jurisdiction over that contract.

Question number seven: "Is it contended that the Commission has jurisdiction in this proceeding under the Act to regulate and control or to determine and fix by order any division of rates or charges which may be received by Pennsylvania Water and Power Company for services rendered jointly with others? If so, which divisions?"

Question number 7 has no relevance to the proceeding for, as staff counsel views it, Penn Water has no joint rates.

Question number eight is as follows: "Is it contended that the Commission has jurisdiction in this proceeding under the Act to regulate and control, or to determine and fix by order, any rates or charges for services rendered jointly with others, without making such other participants in such joint services parties respondent to this proceeding?"

This question is likewise irrelevant, because as staff [1340] counsel views it, Penn Water has no joint rates.

Question number nine: "Is it contended, under Part II of the Act, that the Commission has any jurisdiction to determine and fix by order any of the rates, charges or classifications of Pennsylvania Water and Power Company for services rendered to its customers? If so, is the authority of the Commission in this proceeding to be exercised under Part II of the Act, particularly Sections 206 (a) or 206 (b) thereof?"

Staff counsel contends, among other things, that the Commission has jurisdiction under Part II to de-

termine and fix by order the rates, charges or classifications of Penn Water for the transmission and sale of electric energy at wholesale in interstate commerce to Consolidated of Baltimore, Pennsylvania Power and Light Company, Philadelphia Electric Company, and Metropolitan Edison Company.

Staff counsel contends that such authority exists, particularly under Sections 205, 206 and related sections.

Question number ten: "Is it contended under Part II that the rates or charges of Pennsylvania Water and Power Company and Safe Harbor Water Power Corporation for services to Consolidated Gas Electric Light and Power Company of Baltimore, are for the transmission or the sale of electric energy within the meaning of Sections 201 (b) and 206 (a), and that thereby the Commission has jurisdiction in this proceeding under such sections to determine the justness and reasonableness of [1341] such rates and charges and to fix the same by order?"

Staff counsel contends that Penn Water sells electric energy at wholesale in interstate commerce for resale to Consolidated of Baltimore under Items "H" and "I", so designated in this proceeding, that the sales of electric energy in interstate commerce for resale made by Safe Harbor are made only under Items "E", "F" and "G", and that Safe Harbor and Penn Water are not engaged jointly in selling electric energy at wholesale in interstate commerce for resale to Consolidated of Baltimore, and that the Commission has jurisdiction under Part II to regulate the rates or charges for the transmission or sale of electric energy to Consolidated of Baltimore by Penn Water.

Question number eleven: "Is it contended under Part II that the Commission has any jurisdiction in this proceeding to determine and fix by order the com-

ponent parts of the rates and charges of Respondents for the special facilities services rendered to Consolidated Gas Electric Light and Power Company, comprising the furnishing of the Highlandtown substation facilities and the Gunpowder Falls transmission line in the state of Maryland?"

Staff counsel contends that the Commission has complete jurisdiction under Part II of the Act to regulate the interstate transmission or sale of electric energy for resale in interstate commerce to Consolidated of Baltimore by Penn Water.

[1342] Question number 12: "Is it contended under Part II that the Commission has any jurisdiction in this proceeding to determine and fix by order the component parts of the rates and charges of Pennsylvania Water and Power Company and Safe Harbor Water Power Corporation to Consolidated Gas Electric Light and Power Company for the services rendered by them jointly with others to the Pennsylvania Railroad Company in the state of Maryland?"

Question number 12 is irrelevant for, as staff counsel views it, Penn Water and Safe Harbor are not engaged in rendering joint service and staff counsel is asserting no claims with respect to the Pennsylvania Railroad contract.

Question number 13: "Is it contended under Part II that the rates or charges of Pennsylvania Water and Power Company by itself or jointly with Safe Harbor Water Power Corporation for any of the capacity, energy or special services to Metropolitan Edison Company, Pennsylvania Power and Light Company, Philadelphia Electric Company, or Pennsylvania Railroad Company, all in the state of Pennsylvania, are subject to the jurisdiction of the Commission in this proceeding? If so, which of the rates or charges for such services to which of such customer companies?"

Staff counsel contends that Penn Water is engaged in the sale of electric energy for resale in interstate commerce to Metropolitan Edison Company, Pennsylvania Power and Light [1343] Company, and Philadelphia Electric Company, and that Penn Water and Safe Harbor do not render any services jointly to these companies.

Staff counsel also contends that the sales of electric energy described are subject to the Commission's jurisdiction under Part II of the Act.

Staff counsel is not asserting any claims with respect to Exhibit 10, which is the Pennsylvania Railroad contract, but that is not to be construed as meaning that the Commission is without jurisdiction over this contract.

Question number 14: "Is it contended under Part II that the rates and charges of Pennsylvania Water and Power Company, jointly with Safe Harbor Water Power Corporation, Consolidated Gas Electric Light and Power Company of Baltimore, and Potomac Electric Power Company, for services to Pennsylvania Railroad Company, are sales of electric energy at wholesale within the meaning of Sections 201 (b) and 201 (d), and are thereby subject to the jurisdiction of the Commission in this proceeding?"

This question is irrelevant for staff counsel is asserting no claims with respect to the Pennsylvania Railroad contract.

Question number 15: "Which of the rates, charges or classifications for services, which it may be contended are subject to the jurisdiction of the Commission in this proceeding under Part II, or which of the rules, regulations, practices or contracts affecting such rates, charges, or classifications, is [1344] it contended are unjust, unreasonable, unduly discriminatory or preferential?"

Staff counsel contends that the rates involved in the sale of electric energy at wholesale in interstate commerce by Penn Water to Consolidated of Baltimore, Metropolitan Edison Company, Pennsylvania Power and Light Company and Philadelphia Electric Company are unjust and unreasonable. Staff counsel further contends that the Commission's authority relates not only to the rates involved but to all of the provisions of the contract and all terms and conditions thereof which the Commission in the exercise of the authority may order revised in accordance with the facts in this case.

MR. SPARKS: Of course, Mr. Examiner, I have not had an opportunity to analyze the answers which Mr. Goldberg has given. Obviously he has not answered all of the questions directly or specifically, so I should like some time to study the answers after we have had an opportunity to read them in the record, and take such position and make such representations here as we deem advisable at that time.

* * *

[1348] JOHN A. WALLS.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[1362] Q. Isn't it a fact, Mr. Walls, that construction work on the McCall Ferry project ceased in November, 1907? A. I do not believe that is the case, but I am not competent to testify on that. There are others in the company who have investigated the matter who may be called upon to give you that information.

Q. I am interested in your statement that you do not believe it is the case. Why do you say that? A. I believe that some construction work was done in 1908.

[1363] Q. Such as? A. Work on Cully's Cut.

Q. Tailrace excavation? A. Yes. Some concrete placement, building of a ramp, design of the plant details, etc.

Q. And those matters which you have just enumerated are matters which came to your attention when you first went to the project in 1909, or since 1909? A. Both.

Q. Did you in connection with the company's original cost determination review the matter of cessation of construction work on the McCall Ferry project? A. Not in detail at all.

* * *

[1364] Q. Did you express an opinion at the time you talked to him that there had been no cessation of construction work in November, 1907? A. I don't think I did because that would be subject to definition as to what is cessation of construction, whether it is temporary or for a limited period such as for the season or because of a flood. I do not believe I discussed those things in detail to a degree that I remember.

[1365] Q. What did you think Mr. Gunn was discussing with you when he was talking about cessation of construction work in November of 1907? A. I think that was a general term for the interruption which took place in the normal, or we might say steady, progress of construction work due, in the case of 1907, to the failure of the Knickerbocker Trust Company.

Q. You say "Interruption which took place." What do you mean by interruption? A stopping of the work for a limited period of time and then resumption at a later date? A. No, not necessarily.

Q. What do you mean? A. Interference with the steady progress of the work. I do not believe that at that time all of the people were discharged from the work. Some work may have gone on at very slow pace. That I don't remember.

Q. You say not all of the people were discharged. Do you know how many people they had before November 1907, working on the project? A. I don't remember.

Q. Do you know how many people they retained? A. A few.

Q. How many? A. I don't remember.

Q. Very few? [1366] A. I judge a few.

Q. You wouldn't call the few that remained, a construction crew, would you? A. It depends on what they were doing.

Q. What were they doing? A. I don't know. I don't recall.

• • •

[1368] Q. At least describing the work generally as you have, your impression of what was carried on, isn't it fair to describe the work during the period which I refer to as the period of cessation, and you as the period of interruption to construction, as consisting of necessary maintenance, clean up, tailrace excavation, and the placing of a small amount of concrete required to protect the existing plant.

• • •

[1369] THE WITNESS: That was important work, and it is my impression that it consisted generally of that, but the Tailrace work was an especially important construction job.

By MR. GOLDBERG:

Q. It was the type of work which could be carried on independently of the cessation. Isn't that so? A. I don't understand what is meant, "Independently of the cessation."

Q. It was a special job which could be carried on, even though no other construction work was going on at the project. [1370] Isn't that so? A. It could be, but it was not carried on for that reason. I judge it was carried on

because it was such an essential portion of the work to get completed so as to be out of the way when the powerhouse construction would start.

* * *

Q. The work was continued, as you understand it, to secure the benefit of progress which had already been made in completing the tailrace excavation. Is that right? A. No, sir. This was work that it was desirable to do if possible with the least interference with the powerhouse construction. It was because of this situation that the tailrace was below, in other words, south of the powerhouse, and the excavated rock from the tailrace had to be carried across the construction area to the north of the powerhouse and there deposited in a ramp. Had the powerhouse construction work [1371] and the tailrace construction work gone on together there would have been a certain amount of confusion in bringing the cars of rock from the south to the north and in bringing the machinery in from the east to the west and in bringing concrete materials in from east to west crossing over this very limited construction area. So it seems to me it was a great advantage to get that tailrace work out of the way before the powerhouse construction started, and I should think as an engineer that it would make the cost of the construction cheaper in the end to have done it that way.

Q. Doesn't your explanation bear out what I said some moments ago, that it was a special type of job? A. Any type of job in connection with a power plant might be said to be special.

Q. It was the type of job which you had said it was beneficial to carry on when other construction work, particularly of the powerhouse, was not going on. Isn't that so? A. That is true.

* * *

[1491] Q. * * * Mr. Walls, just how did the failure of Knickerbocker Trust Company make it impossible for McCall Ferry Power Company to secure necessary funds to continue construction? A. I can't answer that. That can be answered by somebody who has gone through the record and studied it.

Q. But you have testified it was the failure of the Knickerbocker Trust Company that made it impossible for McCall Ferry Power Company to secure the necessary funds for continuing construction of its plant. As a result they had to curtail their work. A. That is right. That is a matter of general knowledge at the time, but I don't have in mind the details.

Q. I want to know what your general knowledge is based on. I want to know how much substance your opinion has. A. I know there was the Knickerbocker Trust failure. I am aware from the records that the work was curtailed as a consequence of lack of money, attributed to the Knickerbocker Trust failure. I can't go into any further detail without examining the records, but you can get all of that information from witnesses who will be available.

Q. I am trying to find out what you know about it. How much money was on deposit with the Knickerbocker Trust [1492] Company when it failed? A. I don't know.

Q. If it hadn't failed was there sufficient money in the bank to complete the project? A. I don't know.

Q. Do you know whether in the initial financing sufficient funds were secured to complete the project as planned? A. Of the McCall Ferry Company?

Q. Yes. A. I do not know.

Q. If it were the fact that when the project was initially financed by McCall Ferry Power Company they had not secured sufficient funds to complete the project, would you say that the failure to complete the project was due to the bankruptcy of the Knickerbocker Trust Company? A. Yes.

Q. Why? A. Because I have had too much experience in constructing power plants where money was not available at the beginning in sufficient amounts, and where it was necessary to scrape it together from time to time, often under considerable hardship, but nevertheless work was carried on. I refer now to the Shawinigan Power plant.

Q. But assuming further that there wasn't enough money [1493] in the Knickerbocker Trust Company to complete the project, and enough funds could not have been secured from Knickerbocker Trust Company on loan, using the initial financing as collateral, would you still say that the failure of the Knickerbocker Trust Company caused the cessation of the work in November of 1907? A. Yes, in this sense: That the Company might have secured funds from some other source.

Q. Why didn't it go to another source? A. It wasn't practicable at that time. There was a panic.

Q. When was the initial financing done? A. I don't know.

Q. You know it was in 1905, don't you? A. No, I don't remember.

Q. Let's assume it was in 1905. When did the Knickerbocker Trust Company fail? A. I think in November of 1907. I am not sure of the month.

Q. So if my assumption as to the completion of the initial financing is correct there was a period of two years during which time the McCall Ferry Power Company knew they did not have enough funds to complete the project. Isn't that so? A. That I judge is so.

[1494] Q. And during those two years they had the opportunity of securing the additional funds, didn't they? A. I assume so.

Q. There was no panic in those two years? A. Not that I know of.

Q. There had been no failure of the Knickerbocker Trust Company? A. True.

Q. So, despite the fact the opportunity was available to them, they made no effort to secure those funds. Isn't that so? A. That is true, but I assume there was no necessity in the absence of fore-knowledge of the panic. It would perhaps be better to get the money later on if it was going to be available and pay less interest on it.

* * *

[1515] Q. What work other than that performed by Empire was carried on by the receiver, Mr. Aldred, during the receivership? [1516] A. Designing work, contracting for equipment, organization of the personnel to be expanded later into the force required for later design, construction and operation.

I judge that there were property matters that came up for consideration, but I was not familiar with them.

Q. Did you mention the letting of construction contracts?

I think you mentioned contracts for equipment. I was wondering whether you had intended to include, in contracts for equipment, contract with Empire Engineering? A. I had omitted to mention that. It is true that that is one of the things the receiver did.

Q. Who was carrying on the design work? A. It was being carried on under my direction.

Q. Under your direction? A. Yes.

Q. So that began not earlier than November 1, 1909? A. The additions or changes to the previous plans were started then under my direction. But there were pretty complete detailed plans for much of the work in existence at that time.

* * *

[1517] Q. What contracts for equipment were made during the receivership? A. I cannot be too sure about that, but I think in connection with the generators and turbines, possibly other electrical equipment, but I do not recall definitely the dates when those contracts were entered into.

Negotiations started during the receivership, but whether they were terminated then or later on in 1910, I do not recall.

[1518] Q. Who undertook the organization of personnel during the receivership? A. The Empire Engineering Corporation had its own organized personnel, and when I came in November 1, I started to organize the company's personnel.

Q. What were these property matters that you refer to? A. I wasn't familiar with the property matters at that time, but I think that there was some disagreement over property matters with a man named Heine, at Pequea. I think also matters were taken up with the Pennsylvania Railroad, but I am not sure of that as to date.

Q. Relocation of tracks? A. Not the relocation itself but some property matters growing out of the relocation of the tracks.

Q. Who was carrying on the property matters? A. Mr. Clarke.

* * *

[1687] Q. Glancing down the balance of page 2 and page 3 of that report [Exhibit 79], do you find any statements in there to which you find you cannot subscribe now? A. With the exception of the interpretation which I have placed upon the first sentence of the fourth paragraph I see nothing to which I would object greatly other than the statement that there has recently been installed a system of flash boards at the top of the dam whereby we obtain an increased head of four feet with resultant increase in the storage capacity above the dam. I take no exception to that.

> "This device should give the plant an increased efficiency of about 25 per cent at the low stage of the river."

[1688] I think that statement is one which really requires amplification because the device actually produced greater

pondage and greater head. I do not know how you would apply a percentage figure to those two things.

* * *

[1752] Q. You have told us that Safe Harbor makes its service available under the three-party contract, Items "E", "F" and "G", Exhibit No. 71 up to the end of December 31, 1945, that is for Exhibit 71 to Edison Light and Power, Exhibit 73, Philadelphia [1753] Electric, and Exhibit 76 to Penn Power and Light Company. Right? A. Yes, sir.

Q. What do you mean when you say, "Safe Harbor makes its services available" under those contracts, taking up each one separately, if you will? A. In general I mean by making its services available that Safe Harbor, by contract, is supposed to stand ready to supply the entitlements of the customers as the customers may draw on those entitlements.

The entitlements differ under the four contracts. They are very different as to details and each contract, of course, would have to be considered by itself in all its details in connection with any explanation.

Q. Perhaps I can simplify it by asking the direct question: Does Safe Harbor under the contracts known as "E", "F" and "G" in this proceeding sell electric energy to Consolidated and to Penn Water?

MR. SPARKS: I object, if Your Honor please, on the ground that the contracts speak for themselves.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: "Sell electric energy" is perhaps a very loose and inaccurate way of specifying. There is billing on the basis of energy but energy is only one of the attributes of the service which the customer is entitled to draw, others being, [1754] for example, power, power factor and voltage and frequency and perhaps other characteristics.

By Mr. Goldberg:

Q. Aren't power factor and voltage conditions of service? A. I would say that they are all conditions of service. Voltage and energy is a condition of service, also.

[1755] Q. In other words, you sell electric energy of certain characteristics. That is when you say "Power factor and voltage". Isn't that so? A. No, sir. I don't think it is quite that. I think we sell service. It is up to the customer to draw under his entitlement as much of that as he wishes at such times.

Now, then, it is the duty of the supplier to provide that the draft of energy be in accordance with the terms of the contract, for instance, within a certain voltage range and that there should be a certain amount of power available, if that is what you mean.

Q. You are telling us that in connection with the sale of electric energy when you say that a company sells electric energy the term covers many conditions of service involved in that sale. Right? A. I would say that selling electric energy is a loose way of speaking. It sells electric service and billing is based partly on energy. I think that is the better way to speak of it.

Q. Can the customers utilize the service without the electric energy? A. No, sir, no more than it can utilize the service without the power or without the frequency or the voltage or the phases and so forth.

Q. So the electric energy they receive is a [1756] consideration to the payment they make. Right? A. Is one of the attributes of the service. I don't know how to interpret it otherwise.

Q. Is it inaccurate for me to say that Safe Harbor sells electric energy under items E, F, and G, to Consolidated and Penn Water? A. If you mean by that what I mean, that actually what is sold is service, if that is a short way of saying that and perhaps an imperfect way then it is all right.

Q. And part of that service is the electric energy—right? A. Part of that service is having available electric energy and power under various stipulated conditions.

Q. Right, such as power factor, voltage— A. But not energy alone or power alone or phase alone.

Q. The power factor is determined by the customer's load, isn't it? A. In part, but also determined by the relative excitation of the fields of the supplier and customer.

Q. You are saying that a part of the service rendered under items E, F, and G is the electric energy delivered to Consolidated and Holtwood under the conditions prescribed in that contract—right?

* * *

[1757] THE WITNESS: I wouldn't say it is a separable part. I might say it is one component mixed in with others, all of which are required to be available by the supplier to the customer.

By MR. GOLDBERG:

Q. All right. You name all of the components of service to Penn Water and Consolidated by Safe Harbor under items E, F, and G. A. Energy.

Q. Electric energy? A. Electric energy, electric power.

Q. What's that second one? A. Electric power, frequency, voltage, power factor cooperation, proper number of phases, and a supply naturally is subject to variation from time to time as to the quantity of energy, and there are certain tolerances with respect to voltage, frequency and power factor.

Q. Will you say there are certain—when you say there are certain tolerances you mean there is a certain leeway from the power factor designated in the contract, voltage and frequency designated in the contract—is that right? A. Yes, sir, from the normal.

Q. Will you describe now all of the components of service under Exhibit 71 by Safe Harbor? [1758] A. They would be the same as to the characteristics and service but would differ as respects the amounts as perhaps in some other respects, too.

Q. You mean may differ in the amount of kilowatt hours and the demands? A. And perhaps the voltage and some other things.

Q. But Exhibit 71 would involve, would it not, electric energy, electric power, frequency, voltage, power factor, proper number of phases, and the supply subject to variation from time to time with respect to the quantity of energy and would involve certain tolerances with respect to the voltage, frequency and power factor—right? A. Yes, sir.

Q. In other words, all of the components of service that are in items E, F, and G, are also in Exhibit 71, with the qualification that in Exhibit 71 there may be variations in the detail in degree—right? A. I think that is right.

Q. Is that true of Exhibit 72? A. I think so.

Q. Exhibit 73? A. I think so.

Q. Exhibit 76? A. Yes, sir.

Q. Do you know of any contracts that do not involve [1759] these components of service which you have described? A. I don't recall any now.

Q. In other words, it may be said that in all contracts the disposition, the output of generating units to customers involve these components of service you have described—right? A. Yes, sir; • • •

• • •

[1763] Q. What you have told us about the rendering of this electric service amounts to this, does it not: Someone decides to buy his water in bottles, spring water, for instance. He just does not buy water. He wants such water to have a certain bacterial content and so forth; isn't that so? A. Yes.

Q. And that is what you have in mind when you break up the kilowatt hours in these components, the same way that I just broke up the water into its components, bacterial content, and so forth? A. It is a little different from that because the customer couldn't be satisfied merely with energy which he might draw, let us say, over 24 hours a day at low power, because his load might be peaked, which would require him to have that energy available during certain hours at a very high rate, in other words, a high power.

Q. In other words, it is like this man I am talking about that buys water. He is not satisfied with just any water. He wants water of certain characteristics at the times he needs it and wants it. Right? A. Yes. I think the example would be a little more apt if you would refer to flowing water where the customer can [1764] open his spigot at his wish and draw the amount of water which he wishes at the pressure which he wishes and have the characteristics which he wishes.

* * *

[1765] Q. The commodity that you generate, transmit, sell to your customer, that is the electric energy or kilowatt hour component—right?

* * *

THE WITNESS: No, sir. I should say the commodity is the electric service which consists of energy and these other attributes.

By MR. GOLDBERG:

Q. But the commodity that you generate is the electric energy or kilowatt hours—right? A. We generate energy at a certain rate and under certain conditions, but that does not make energy the commodity in my opinion.

Q. To get that ultimate commodity there are other factors that are involved such as rate of delivery that you

mentioned and voltage and frequency—right? A. No. I should say when you look at electric supply as a whole, energy is just one characteristic of it, and energy is not the only thing that is sold. Ordinarily the billing is on the basis of energy, plus, of course, charges for other services which might be rendered.

* * *

[1766] Q. Is it your statement that Safe Harbor does not sell electric energy under Items "E", "F" and "G" to Consolidated and Penn Water? A. I believe that is the case, that it does not sell energy itself to Consolidated. Consolidated draws energy.

Q. You say it does not sell electric energy to Consolidated itself? A. It does not sell electric energy itself to Consolidated.

Q. By that you mean that the electric energy that is sold to Consolidated and Holtwood is the result of the other characteristics or conditions of service that you mentioned, [1767] such as frequency, voltage, power factor, proper number of phases, electric power, and so forth—right? A. Not quite that. It is more this way: that the supplier holds itself ready to supply the draft of energy which may be drawn at the customer's volition, and the billing in the case of Consolidated is not related to energy as it is with the other customers, including the railroad, Lancaster, Coatesville, Metropolitan.

* * *

[1769] Q. Now to get back to my question: Does Safe Harbor sell electric energy to Consolidated and to Holtwood under [1770] Items "E", "F" and "G"?

* * *

THE WITNESS: I don't think that it does. It sells service.

By MR. GOLDBERG:

Q. It does not sell electric energy? A. As such, no. It sells service.

Q. What does that "as such" mean? A. Energy is one attribute of the service, but one among many. I don't want to exclude the thought that energy comes into the supply that is taken by Consolidated, but it is not the billing basis and it is not what Safe Harbor, to my mind, sells.

• • •

[1771] Q. The energy that you conceive of as being transmitted over those lines at Baltimore are measured in terms of kilowatt hours at the customer's premises—right? A. Yes, sir.

Q. Nevertheless, you say Safe Harbor does not sell electric energy under their contract, right? A. That is my interpretation of it, yes, sir.

TRIAL EXAMINER: May I test one of your answers you gave previously by reversing the language a bit? Would you say as an attribute of service that Safe Harbor sells energy?

[1772] THE WITNESS: No, sir, I don't think Safe Harbor sells energy to Consolidated. It makes energy available to Consolidated and Consolidated draws that energy but does not pay for that energy on the basis of the amount of energy it receives.

TRIAL EXAMINER: Not even as an attribute of service?

THE WITNESS: Not even as an attribute of service to Consolidated Company, although I would prefer my explanation to an assertion that energy was not an attribute of service. That is a little difficult for me to decide at the moment.

By Mr. Goldberg:

Q. Are you saying in that answer to the Trial Examiner, Mr. Walls, that Safe Harbor does not sell electric energy to Consolidated because the contract does not provide a rate per kilowatt hour like some contracts do? A. Yes, in the sense that Consolidated pays the same amount, you might say, whether the energy is great or little so that the billing is not dependent upon the amount of energy, as, for example, in cases where in the old times electric lighting was sold on a flat rate. You paid so much and used the lamps in your house as much as you pleased.

Q. You say, then, that there is no sale of electric energy because the payments under the contract are not arranged in terms of a rate per kilowatt hour—right? A. Yes, sir, I would say then that sale is not attached to energy.

[1773] Q. But that is not the fact, is it, with respect to the contracts which are numbered 71, 73 and 76. Is that right? A. I would say in all cases we ought to use the words "sell service" and not "sell energy." But actually energy is billed along with demand charge for power in contracts 71, 73 and 76.

Q. Would you say that electric energy is not sold under Exhibits 71, 73 and 76? A. Strictly speaking energy is not sold. It is service that is sold.

Q. Is it your statement that strictly speaking electric energy is never sold, that it is service that is sold? A. I would think that would be a more accurate way of speaking, but it is not the usual way and very often I do not speak of it in that accurate way.

Q. In the usual sense you would say electric energy is sold under Exhibits 71, 73 and 76—right? A. Yes, sir.

Q. But you would not say that in the usual sense with respect to Items "E", "F" and "G"—right? A. Yes, sir.

Q. And you would not say it in the usual sense with respect to Items "H" and "I", which is the contract be-

tween Holtwood and Consolidated—is that right? A. Yes, sir.

[1774] Q. You consider the contracts "E", "F" and "G" and "H" and "I" of the same character and on the same footing—right? A. In general, yes, sir.

• • •

Q. I mean what is the difference between what is delivered at Lancaster, York, Coatesville, Holtwood and Baltimore? A. They are all the same in that they are electric supply .

Q. All kilowatt hours? A. All kilowatt hours with the other attributes.

• • •

[1775] Q. • • • Let me start over again. Let me first mention the contracts under which Penn Water sells. Those contracts in 1939 are Items "H" and "I", Exhibit 71, Exhibit 73, and Exhibit 76—right? A. Pennsylvania Railroad should be included.

• • •

[1776] Q. I mentioned "H" and "I", the two-party agreement. A. Yes.

Q. Exhibit 71, which is the York supply, Exhibit 73, Coatesville supply, Exhibit 76, Lancaster supply, and you have added Pennsylvania Railroad contract. Right? A. Yes, sir.

Q. Then the only contract they had in 1939 to purchase were items "E", "F" and "G"—right? A. I think that is right.

Q. I am not talking about the interchange agreements. A. Yes.

Q. And the situation was the same in 1940, wasn't it? A. Yes, sir.

Q. And the same in 1941? A. Yes, sir.
Q. And the same in 1942? A. Yes, sir.
Q. And 1943? A. Yes, sir.
Q. The same in 1944? A. Yes, sir.
Q. The same in 1945—right? [1777] A. Yes, sir.
Q. But in 1946 Exhibit 71 was superseded and replaced by Exhibit 72, which is the agreement between Penn Water and Metropolitan Edison—is that right? A. Yes, sir.
Q. In 1932 what contracts did Safe Harbor have? I can help you on one of them, "E", "F" and "G"—— A. I don't remember.
Q. Which is the three-party contract. That certainly was in existence in 1932, right? A. Yes, sir. I would have to look up the others. I don't recall at the moment.
Q. If you find that they had any other contracts in 1932 I wish you would let me know. A. Very well.
Q. In 1933, and for every year up to and including today, Safe Harbor had the contract identified as Items "E", "F" and "G"—right? A. Yes, sir.
Q. Do you say that Safe Harbor had any other contracts between 1933 and today for the sale of electric energy? A. Other contracts than what?
Q. "E", "F" and "G".
A. It had contracts, omitting for the moment consideration for the sale of electric energy.
[1778] Q. All right. A. It had other contracts.
Q. Had what? A. It had other contracts, but I don't recall the dates of them.
Q. Are you referring to the Lancaster power supply contract which is dated May 1, 1933? A. Yes, sir.
Q. Are you referring to the Coatesville power supply contract dated August 1, 1933? A. I think so, yes, sir.
Q. You would say, then, that Safe Harbor had contracts with those companies named in Exhibit 73 and 76 in 1933 and for every year thereafter including today—right? A. Yes, sir.

Q. And you would say that beginning with 1935 Safe Harbor had an agreement known as the York power supply contract beginning with that date down to and including December 31, 1945. Is that right? A. Yes, sir.

Q. Would you say that Safe Harbor has an agreement with Metropolitan Edison Company known as the Metropolitan Edison power supply contract of November 15, 1945?

• • •

[1779] THE WITNESS: No, sir.

• • •

Q. Now, is it your statement that Safe Harbor sells, first, to use your term, electric service under Exhibits 71, 73 and 76? A. Yes, sir.

Q. Now, will you say, accepting my phrase, that it sells electric energy under those contracts? A. Excepting?

Q. No, not excepting but accepting my phrase that it sells electric energy under those contracts. A. No, I would say that it sells only electric service.

Q. Electric service? A. Yes.

Q. And you say that Safe Harbor sells electric service under Items "E", "F" and "G"—right? A. Yes, sir.

Q. Isn't it a fact that Safe Harbor sells all of its electric service, to use your terms, under Items "E", "F" and "G"? [1780] A. I don't know how that would be interpreted. As I look at it, being a party to these three contracts, Safe Harbor may be said to be in position to sell and may be selling service. It is a legal matter and I can't decide it.

• • •

Q. • • • is it your statement that Safe Harbor does not render all of its electric service under Items "E", "F"

and "G"? A. I think that it does render all of its service under Items "E", "F" and "G", but it renders that service to a pool, which service is extended to other customers.

Q. And that is the case with respect to Exhibit 72, is it not?

• • •

THE WITNESS: Except for the legal implications I think that is true.

• • •

[1781] By MR. GOLDBERG:

Q. Your engineering and layman's concept—right? You were not giving me a legal answer when you said "That is true"—right? A. No, sir, an engineering answer.

• • •

Q. Now, then, in view of the fact that the electric service is fed into a pool, the condition of service was the same under the superseded contract, Exhibit 71, as it is under Exhibit 72—right? A. Legally, or engineering viewpoint?

Q. Engineering viewpoint. [1782] A. I see no difference.

• • •

[1783] MR. GOLDBERG: I think I can dissipate any confusion which may exist.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: If I were to say this: Exhibit 71 is the York Power Supply contract under which service was rendered to Edison Light and Power Company.

Penn Water and Safe Harbor were named parties in that agreement.

That contract was superseded by Exhibit 72, beginning January 1, 1946, and in the new contract only Penn Water is a named party, Safe Harbor is not.

Now, then, Mr. Walls has stated that with respect to the superseded agreement, Exhibit 71, service was rendered by Safe Harbor by reason of the fact that it fed its service into a pool which pool was drawn upon, perhaps, to meet the [1784] requirements of Edison Light and Power and Metropolitan Edison, and he has further agreed that under the new agreement, Exhibit 72, Safe Harbor still feeds its service into a pool and that pool is drawn upon to serve Metropolitan Edison.

By Mr. Goldberg:

Q. Have I correctly stated it, Mr. Walls? A. I think so.

• • •

[1786] Q. Why was Safe Harbor included in Exhibit 71, and left out of Exhibit 72, even though in both cases its service is rendered by feeding into a pool? A. I don't know.

Q. You signed the contract which is known as Exhibit 71 in behalf of Penn Water and Safe Harbor as president of both companies, didn't you? A. Yes, sir.

Q. When you signed it in behalf of Safe Harbor as its president were you of the opinion that Safe Harbor was going to render service directly to the purchasing companies in Exhibit 71? A. I can't remember fully, but it seems to me that it [1787] was desirable to have Safe Harbor a party to the contract partly for tax reasons and perhaps partly for assurance to the customer that the customer would be protected by Safe Harbor's intervention, and perhaps for other reasons. I don't remember them now.

Q. How could the customer be assured of service by having Safe Harbor included in the agreement then if Safe Harbor had been left out of the agreement? A. The customer would have been dependent upon Penn Water only had Safe Harbor been left out, and I suppose the customer might have felt that he had an extra assurance by having Safe Harbor as a party.

Q. How could he have extra assurance by having Safe Harbor's name in the contract if Safe Harbor sells all of its service under items E, F, and G? A. I can't explain it.

Q. In other words, if it sells all of its service under items E, F, and G, it has nothing left to sell to the customer under Exhibit 71, isn't that so? A. There may be a legal element involved there that I am not competent to speak of.

* * *

[1788] THE WITNESS: If Safe Harbor is a party to the contract with York Edison with the consent of the other parties, Penn Water and Consolidated, I should think that Metropolitan would have more assurance of supply than if it relied upon a contract with Penn Water alone.

By MR. GOLDBERG:

Q. Isn't it a fact that the provisions of the items E, F, and G require the sale of all of Safe Harbor's service to Consolidated and Penn Water? Right?

* * *

THE WITNESS: Safe Harbor contract, as I recall it, gives a contractual entitlement to Penn Water and Consolidated on a ratio of one-third and two-thirds, but that contractual entitlement I think must be construed in the light of the contract between Consolidated and Penn Water, so there is an involvement there that prevents me from answering that question.

* * *

[1791] Q. I mean did Safe Harbor under the provisions of Exhibit 71 sell any electric service to the customer companies in that contract? A. All I can say is that it didn't bill it. What was meant by selling it I don't know from your sentence.

Q. If they had sold it wouldn't they have billed it? You mean they give it away? A. Well, I think if selling and billing are to be considered together then Safe Harbor didn't sell.

Q. As a matter of fact, every penny of revenues that Safe Harbor has ever received it received under the electric service rendered in connection with items E, F, and G. Isn't that so? A. So far as I remember at the moment.

* * *

[1792] Q. Mr. Walls, entirely from the viewpoint of your familiarity with the operations of the company as its chief executive officer and as its chief engineer for many years, can you tell us which of the contracts of Pennsylvania Water and Power Company involve the transmission or sale of electric energy in interstate commerce? A. The Penn Water Consolidated contract.

Q. Items H and I? A. Yes, sir.

* * *

[1793] Q. And speaking again from your knowledge of the company, that is of Safe Harbor Water Power Corporation this time, having been associated with that company as its chief executive officer and in other responsible positions since its incorporation, which of the contracts of Safe Harbor involve the transmission or sale of electric energy in interstate commerce in your opinion?

MR. SPARKS: I will object to the question, if your Honor please, on the ground that although Mr. Goldberg may be willing to state that he is asking the question in order to elicit an answer not legal in its implications that the answer necessarily does involve legal implications.

The reason I say that is this: If it were not for the language in the Act referring to transmission and sale of energy in interstate commerce, I am quite sure

Mr. Goldberg would not ask the question. That means that there must be some effort here to have the witness testify with regard to the meaning of those terms in the Federal Power Act.

• • •

[1794] TRIAL EXAMINER: The previous question involved Penn Water?

MR. GOLDBERG: Yes, the same question except this involves Safe Harbor.

TRIAL EXAMINER: Let the Examiner state this: That as far as legal concepts are concerned he understands what Respondent's counsel's objection amounts to and why he makes it.

If this question had been asked at the very outset of the cross-examination the Examiner would be willing to invoke a more stringent or stricter rule in the consideration of whether he would sustain that objection or not. But this witness has been cross-examined this morning at some length on this very subject, and there has been a great deal of difficulty on the part of the cross-examining attorney and the witness to get their ideology or ideas in line.

Now, then, in view of the difficulties encountered this morning in connection with this witness' engineering opinion as to whether energy was involved under these contracts, the Examiner will permit the present question to be [1795] put as a necessary culmination, or as a last resort, to counsel in getting answers concerning the transmission of energy, or the sale of energy.

• • •

[1796] TRIAL EXAMINER: Involved in this question is some conception of what interstate commerce is.

MR. SPARKS: That is right.

TRIAL EXAMINER: To that extent counsel's objection is well taken.

But in view of the whole discussion which has been had with regard to the operations of these two companies the Examiner believes the witness is capable of answering the question without injustice to himself or Respondent.

The objection is overruled.

MR. SPARKS: May it be understood, if your Honor please, that the witness is not giving a legal answer to the question?

TRIAL EXAMINER: That is correct.

• • •

[1797] THE WITNESS: From an engineering viewpoint I should say the three party contract——

By MR. GOLDBERG:

Q. Items E, F, and G. A. Items E, F, [redacted] G. I can't trace any particular kilowatt in interstate commerce.

Q. We know, for instance, that the kilowatt hours that go over the 220 K. V. lines from Safe Harbor to Baltimore which originate at Safe Harbor originate in Pennsylvania and are transmitted into Maryland. Right? A. Yes, sir.

Q. When I said "interstate commerce", that is what you understood me to mean, origin in one state and transmission into another state—right? A. Yes, sir.

• • •

[1799] Q. As an engineer, and as a man familiar with the operations of Pennsylvania Water and Power Company, is it your statement that the York Power Supply contract, the Coatesville Power Supply contract and the Lancaster Power Supply contract do not involve the transmission

of electric energy which originated outside of the State of Pennsylvania? A. No, I should say that electric service is sometimes backfed from Maryland to these customers, and that perhaps sometimes interchanged power from some of them may cross the line into Maryland?

Q. Yes, and that the amounts of electric energy which are transmitted up to the supply centers of Coatesville, York, and Lancaster under those agreements we have discussed this morning are in substantial amounts which originated in Maryland, isn't that so? A. Amounts of electric supply are substantial at times.

Q. And as a matter of fact the York power, the Lancaster power and Coatesville power supply contracts actually have a rate per kilowatt hour, haven't they? A. Yes, sir.

Q. And substantial amounts of the energy at times which are sold at the rates shown in those contracts come from Maryland—right? A. Yes, sir; I think that is so. [1800] Q. Let me show you those excerpts from the complaint for injunction and declaratory judgment which were marked this morning as Exhibit 85.

It is the fact, is it not, that you stated to the Court in that complaint that, "For many years plaintiff has sold electric energy so developed at wholesale in interstate commerce."

Isn't that so? A. Yes, sir.

Q. And when you made that representation to the Court you believed it to be in accordance with the facts. Isn't that so? A. Yes, except that I was not particular for this purpose about the significance of the word "sold electric energy."

Q. You thought it was an accurate way to say it to the Court under oath, didn't you? A. Sufficiently accurate for these purposes; yes, sir.

Q. Did you in any way qualify that statement when you made it? A. No.

Q. What agreements that Pennsylvania Water and Power Company had at that time, in 1940, did you consider

represented agreements under which sales of electric energy in interstate commerce were made? [1801] A. I suppose under the Penn Water and Consolidated contract.

Q. Items H and I? A. Items H and I.

Q. And also the York, Lancaster and Coatesville power supply contracts. Isn't that so? A. Yes, they should be included, too.

Q. And the electric energy to which you were referring that was sold in interstate commerce was the electric energy which Holtwood purchases from Safe Harbor under items E, F, and G, and itself generates. Isn't that so? A. A portion of that.

Q. Yes, as well as the energy which comes up at times from Maryland which you refer to as backfeed. Right? A. Yes, sir.

Q. When you said that "For many years", plaintiff has been selling electric energy in interstate commerce, what period of time does that "For many years" have reference? A. I suppose since October 1910.

Q. Showing you Exhibit 86, the excerpts from the amended complaint, it's a fact, is it not, that the same statement was made in the amended complaint? A. Yes, sir.

Q. What you have told us about the statement as made in the complaint when first given applies to the statements as made in the amended [1802] complaint? A. Yes.

Q. May I show you Exhibit 87, excerpts from the petition of review which we discussed this morning?

It is a fact, is it not, that the same statement as was made in the original complaint and the amended complaint were made in the petition for review—right? A. Yes.

Q. And what you have told us about the statements in the petition, in the amended complaint and the original complaint, apply to the statement as made in the petition for review—right? A. Yes, sir.

Q. And those statements, if made today, would be accurate statements, isn't that so? A. Yes, sir, if made with the same thought in mind.

* * *

[1812] Q. I am saying that the basis for the statements appearing in Exhibits 88 and 89 is the statements appearing in Exhibit 85 and Exhibit 86 and our discussion relating to those statements—right? A. I assume that is so.

* * *

By Mr. Goldberg:

Q. Mr. Walls, do you agree with this statement: "All of the capacity and energy available from Respondent's power development is sold under a contract dated June 1, 1931, and supplements thereto dated August 1, 1932, and November 22, 1939, between the Safe Harbor Water Power Corporation, Consolidated Gas Electric Light and Power Company of Baltimore, and Pennsylvania Water and Power Company"? By "Respondent's" in [1813] that quotation I meant Safe Harbor Water Power Corporation.

* * *

The Witness: I think that is the case, except as may be modified by any of the other agreements in which Safe Harbor has entered with other customers.

By Mr. Goldberg:

Q. You mean the York power supply, the Coatesville power supply, and Lancaster power supply contracts which have been marked in this case? A. Yes, sir, and including the Pennsylvania Railroad contract, perhaps, too.

Q. What modifications do you have in mind? A. That some of the service of Safe Harbor may be considered as furnished or furnishable to Coatesville, Lancaster, Pennsylvania Railroad, and so forth.

* * *

[1814] Q. Has Safe Harbor rendered any service in the past under the Coatesville, Lancaster and York contracts that you know of? A. In the sense of furnishing supply to the pool of Penn Water and Safe Harbor that might be considered to be the case. I am speaking now not contractually but from the viewpoint of the energy which comes from Safe Harbor and the other services.

Q. But that energy which is supplied to the pool by Safe Harbor is supplied in accordance with the provisions of items "E", "F" and "G". Isn't that so? A. As perhaps modified by Safe Harbor's commitments under the contracts 73, 76, and so forth.

Q. All you mean by that is that Penn Water's necessities [1815] of meeting the requirements under the Coatesville, York and Lancaster contracts have a bearing on the manner in which, and the amounts of energy, it takes under items "E", "F" and "G"—right? A. I was looking at this from the viewpoint of the energy that is contributed, you might say, to the pool by Penn Water and Safe Harbor, being available to Coatesville, Lancaster, and so forth, without giving consideration to the contractual elements. I am speaking only now of the flow of service. Do I get your point?

Q. You are talking in terms of the pool operating to supply the lowest cost energy at all times wherever needed. Is that it? A. That is it, yes.

Q. In other words, for the purpose of securing the maximum overall economy? A. Yes.

Q. In that sense you say that electric energy generated by Safe Harbor may be the cheapest energy at any particular time, and in accordance with the arrangements between the companies that energy will be used by Penn Water to meet the requirements at York, Lancaster and Coatesville—right? A. Well, that brings in a question of contractual relations. No, I was thinking of this solely from the viewpoint of the electric service itself, not considering it as received by Penn Water and dealt out by Penn Water.

* * *

[1816] Q. Well, if I understand what you mean by considering that Safe Harbor at times renders service to Pennsylvania Power and Light, Philadelphia Electric, Edison Light and Power up to the end of 1945 and Metropolitan Edison, when Safe Harbor is down and the energy is steam-

generated energy coming up from Maryland, it may be said under those circumstances that Consolidated is rendering service to the Pennsylvania customers, too, isn't that so? A. Yes, sir.

* * *

[1817] Q. Do you know why Consolidated is not a party to the Coatesville, York, and Lancaster contracts?

* * *

[1818] TRIAL EXAMINER: The witness may answer the question limiting his answer to what he knows about that from an operating standpoint.

THE WITNESS: Actually service from Consolidated gets to Coatesville and the other customers as a general operating procedure. I suppose that that service would be covered by the "H" and "I" contracts.

* * *

[1819] Q. You just said that from an operating procedure the electric energy which is fed into the pool by Consolidated gets up there and is covered by the provisions of Items "H" and "I"—right? A. That I assume it would be covered.

Q. Yes. When Safe Harbor feeds the energy into the pool isn't it fair to assume that that is covered by the provisions of Items "E", "F" and "G"? A. That may be so, but not necessarily exclusively so. It is possible that the other contracts to which Safe Harbor is a party may have to be considered. That is a contract matter which I do not feel I am competent to pass upon at the moment.

Q. Do you know whether Safe Harbor ever has rendered any electric service under the Coatesville, Pennsylvania and York contracts? A. If the sense of rendering service is that some service from Safe Harbor mixed in with Penn Water's service or not has been received by Coatesville, then I should say that there has been service rendered.

Q. Otherwise not—is that right? That is the only [1820] sense in which you can conceive of Safe Harbor rendering service? A. I think so.

Q. To York, Coatesville and Lancaster—right? A. I think so.

Q. And what you are saying would apply to Potomac Electric Power Company when it feeds energy into the integrated pool—right? A. Will you make the question a little more definite?

Q. Potomac Electric Power Company is tied in to the regional transmission system of which Consolidated, Safe Harbor and Holtwood are members. Right? A. Yes.

Q. There are times when Potomac feeds electric energy into the pool which goes up toward Baltimore—right? A. Yes.

Q. When it does that, and if that energy moves on up to the Pennsylvania customers, it can be said that they render service, too—right? A. Yes, sir.

* * *

[1822] Q. Would you say that the contracts I have just described, which are items "E", "F" and "G" in this proceeding, provide for two distinct services, that is: (a) sale of electric power and energy available from the Safe Harbor development to its two customer utility companies, Consolidated and Holtwood—and (b) construction, operation and maintenance by Holtwood Company of certain transmission lines from Safe Harbor to Baltimore and Washington and certain other transmission facilities.

* * *

THE WITNESS: Using the word "service" there in place of "energy" I think that would be correct.

By MR. GOLDBERG:

Q. You mean instead of "sale of electric power and energy" you want to say "sale of electric power and service"? A. "Sale of electric service" involving readiness to [1823] supply the power and energy, among other things.

Q. The two statements I have asked you to agree with I read from pages 11 and 12 of the main brief filed by George T. Hambright, Arthur H. Hull, George Ross Hull, and Hull, Leiby and Metzger, counsel for Safe Harbor in the Commission's investigation of rates and charges of that company in Docket No. IT-5914. I want you to look at those two statements as they appear in the brief beginning on page 11 and ending on page 12 as I point them out to you and ask you if you can categorically agree with the statements as made in the brief. A. That being a statement of counsel of company, I would agree with it as a statement made on a contractual matter by counsel in which I would have confidence.

Q. In other words, you agree with those two statements because you have confidence in the counsel that made the statements. Is that right? A. Yes, sir.

Q. But is it your statement that you do not agree with it in the light of your knowledge of the operations of Safe Harbor Water Power Corporation? A. No, I don't say that.

Q. Do you agree with it in the light of your knowledge of those statements, in the light of your knowledge of the operations of Safe Harbor Water Power Corporation? A. If this is a statement intended to cover contractual [1824] obligations and operations I would think that the operational effects on the supply from Safe Harbor might result in not all of the supply of Safe Harbor going directly to Consolidated and Penn Water but some of it perhaps going directly to the customers.

Q. That disposition would depend on Penn Water, wouldn't it? A. I think so.

* * *

[1831] MR. GOLDBERG: May it be stipulated, Mr. Examiner, that page 17 of the main brief filed by Messrs. Hambright, Arthur and George Hull and Hull, Leiby and Metzger in the Safe Harbor case, IT-5914, con-

tains this statement: "Although Respondent"—meaning Safe Harbor—"is a party with Holtwood Company to many of the latter's firm power contracts, Respondent's entire output is sold contractually to Baltimore and Holtwood Companies"?

MR. SPARKS: I will stipulate to that but not to the relevancy of the statement in these proceedings. I object to it on that ground.

TRIAL EXAMINER: Very well. The objection is overruled.

By MR. GOLDBERG:

Q. Holtwood's firm power customers are Pennsylvania Power and Light Company, Metropolitan Edison Company and Philadelphia Electric Company—is that right? [1832] A. And Pennsylvania Railroad Company.

* * *

Q. The effect of Items "H" and "I" is that Consolidated is entitled to all of the steam and hydroelectric energy which Holtwood generates and purchases from Safe Harbor, less that amount which Holtwood must use to supply the requirements of the Pennsylvania firm customers. Is that a fair statement? A. May I have that read, please?

(Question read.)

THE WITNESS: Well, in general. I wouldn't say that is a closely accurate statement. I would have to think it over.

* * *

[1833] Q. Holtwood does generate electric energy at its steam and hydro plants—right? A. That is right.

Q. And it also purchases from Safe Harbor. Is that right? A. Yes, sir.

Q. Consolidated under its agreement with Holtwood, Items "H" and "I", is entitled to all that less the amount which Penn Water uses to supply the requirements of its

firm customers of Pennsylvania. Isn't that so? A. That seems to be right.

Q. Isn't it true that the contractual arrangements that exist between Consolidated, Safe Harbor, Holtwood and their respective customers were so arranged to permit the maximum coordination for overall economy of service and operations? A. Yes, sir.

Q. And that end could not have been achieved if allocations of rates, charges and revenues were required. Isn't that so? A. It certainly could have been achieved only with great difficulty and perhaps not at all.

Q. In other words, one of the advantages of the type of arrangements that exist between Safe Harbor, Consolidated and Holtwood and their respective customers is the avoidance of the need of allocations of rates, charges and revenues. Isn't that so? A. Yes.

[1834] Q. I want to show you Safe Harbor's counsel's request for findings in the Safe Harbor case, Docket No. IT-5914, as contained in their main brief. I refer more particularly to Finding No. 20, which is as follows:

> "The rates and charges made and received by Respondent"—meaning Safe Harbor—"for the sale of electric energy under the contract dated June 1, 1931, are just and reasonable."
>
> Do you agree with that statement?

* * *

[1836] A. I would have to change the wording a little bit and say that rates and charges made and received by Respondent for the sale of electric service under the contract dated June 1931, are just and reasonable from the economic viewpoint—though I cannot say that they are just and reasonable from the regulatory viewpoint because I am not competent.

Q. You find you cannot agree with the finding as it stands in the request to the Commission by your counsel. Is that right? A. As a layman I would word it differ-

ently, but I, of course, cannot take exception to the way counsel has written it.

Q. You retained them to express a legal view of the matter and you are not in a position to say their legal view is not the correct one. Is that right? A. Yes, sir.

Q. I direct your attention to the request for findings in the same document I described, more particularly number 21, and ask you if you agree with that one which is as follows: "The rates and charges made and received by Respondent"—meaning Safe Harbor—"for the sale of electric energy under the contract dated June 1, 1931"—meaning items E, F, and G—"and the rules, regulations and practices pertaining to such charges are not unjust, unreasonable, unduly discriminatory, nor preferential."

[1837] MR. SPARKS: I object to that, if your Honor please, on the ground it has no materiality.

TRIAL EXAMINER: Read the question, please?

(Question read.)

MR. SPARKS: Do you have it before you, Mr. Walls?

THE WITNESS: Yes, sir.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: Taking exception again to the phrase "Sale of electric energy".

By MR. GOLDBERG:

Q. You agree? A. I would not feel that I am competent to disagree with counsel in an expression concerning this regulatory aspect of discrimination, preferentiality, and so forth.

Q. How about with respect to their reference to the contract as a sale of electric energy involving the sale of electric energy? Are you competent to disagree with them on that? A. As an engineer I would refer not to the sale of energy but to the sale of electric service.

Q. This is not the first time you have seen findings 20 and 21, is it, Mr. Walls? A. No, sir.

Q. Have you ever taken exception to the way it was phrased before this? [1838] A. No, sir.

Q. Did you see it before it was filed with the Commission? A. I think so.

Q. Before it was printed? A. Possibly.

Q. You took no exception to it? A. No, sir.

MR. GOLDBERG: May it be stipulated that Findings 20 and 21, which I have just been discussing with the witness, were requested findings that the Commission has been asked to make in the Safe Harbor proceeding known as Docket No. IT-5914?

MR. SPARKS: I stipulate to that effect, if your Honor please, but I object on the ground they are not material to this proceeding.

TRIAL EXAMINER: Objection is overruled.

• • •

Q. You are thoroughly familiar, are you not, Mr. Walls, with that Safe Harbor case in which proceedings the brief from which I have been reading was filed. Isn't that so? A. I am not thoroughly familiar. I know in general about it.

Q. You attended all the sessions of the hearing, didn't [1839] you? A. Yes, sir.

Q. You testified in that case? A. Yes, sir.

Q. And you testified rather fully about the contractual arrangements of Safe Harbor, didn't you? A. I think so.

Q. So you certainly are familiar with those aspects of the case, anyway, aren't you? A. To an extent; yes, sir.

Q. Do you know of any contention in the Safe Harbor case that Safe Harbor does not sell electric energy under items E, F, and G?

MR. SPARKS: Objection on the ground it is not material here what contentions were made in the Safe Harbor case.

TRIAL EXAMINER: Let me have the question, please?

(Question read.)

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: No, I don't remember any.

By MR. GOLDBERG:

Q. Do you know of any contention that was made in that case that the rates, charges or services under items E, F, and G, are joint rates, charges and services?

MR. SPARKS: Objection.

TRIAL EXAMINER: Objection overruled.

[1840] THE WITNESS: No, I don't remember.

By MR. GOLDBERG:

Q. Do you know of any contention in that case that Safe Harbor sells electric energy under items H and I?

• • •

MR. SPARKS: Same objection.

MR. GOLDBERG: That is H and I in this proceeding, Mr. Examiner.

TRIAL EXAMINER: Objection overruled.

• • •

Q. You don't remember any such contention? A. I don't remember any.

Q. Do you know of any contention in that Safe Harbor case that the services rendered to Consolidated under items H and I are rendered jointly by Safe Harbor and Holtwood?

MR. SPARKS: Objection—same objection.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: I don't remember any.

By MR. GOLDBERG:

Q. Do you know of any contention in that case that the services rendered to Pennsylvania Power and Light Com-

pany, [1841] Philadelphia Electric Company, and Metropolitan Edison Company are rendered jointly by Safe Harbor and Holtwood?

MR. SPARKS: Same objection.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: I don't remember any.

By MR. GOLDBERG:

Q. Do you know of any contention in that case with respect to the rates and charges or services of Safe Harbor other than those involved in items E, F, and G?

• • •

MR. SPARKS: Same objection.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: I don't remember any.

• • •

[1842] Q. Do you know of any contract that it was contended in the Safe Harbor case did involve rates, charges or services by Safe Harbor and should be passed on by the Commission in that case?

MR. SPARKS: Same objection on the ground it has no materiality in this proceeding.

TRIAL EXAMINER: Objection overruled.

• • •

THE WITNESS: I don't remember any.

By MR. GOLDBERG:

Q. Do you know of any contention in the Safe Harbor case that the Federal Power Commission is without jurisdiction over the rates, charges or services of Safe Harbor because they are joint rates, charges or services?

MR. SPARKS: Same objection.

• • •

[1843] THE WITNESS: I don't remember.

• • •

TRIAL EXAMINER: Objection is overruled. The answer may stand.

By MR. GOLDBERG:

Q. You say you don't know of any? A. That is right.

Q. Do you know of any contention in the Safe Harbor case that the Commission is without jurisdiction over any of Safe Harbor's contracts because they involve the sale of capacity and not sale of electric energy?

MR. SPARKS: Same objection.

TRIAL EXAMINER: Just a minute, please.

Objection is overruled.

THE WITNESS: I don't know of any.

* * *

[1844] MR. SPARKS: Of course, we take the position they are not appropriate, none of these questions, based on contentions made in Safe Harbor are material. I insist that is correct, if your Honor please.

What was contended in the Safe Harbor case has no bearing here whatever. Other contentions may still be made in Safe Harbor. It is not too late.

* * *

[1852] TRIAL EXAMINER: The Examiner feels this way: You are not going to be able to prove basic jurisdiction by proving [1853] inconsistent statements. That goes to the weight to be given to expert opinion on the theory a good deal you have to establish with respect to jurisdiction will have to be derived from expert opinion. There will have to be a limit to this inconsistent statement business.

* * *

[1859] Q. Mr. Walls, in 1944 Safe Harbor had its contract with Consolidated and Holtwood, known as Items "E", "F" and "G" in this case—right? A. Yes, sir.

Q. And that was true in 1945—right? A. Yes, sir.

Q. And it is true in 1946, right? A. Yes, sir.

Q. And in 1944 Safe Harbor was also named in the contracts which have been marked for identification as Exhibits 71, 73 and 76—right? A. Yes, sir.

Q. And that was also true all through the year 1945—right? A. Yes, sir.

Q. And from January 1, 1946, up to and including today, Safe Harbor still had its contracts which have been marked for identification as Exhibits 71 and 76—right? A. Yes, sir.

[1860] Q. But 73 was superseded. Is that correct? A. Yes, sir.

Q. I am sorry. I should say that it still had in 1946 up until today its contracts which have been identified as Exhibits 73 and 76—right? A. That is right.

Q. And 71 was superseded at the end of 1945—right? A. Yes, sir.

Q. And it was not a party to the contract which is identified as Exhibit 72. Is that correct? A. That is correct.

Q. And when we referred to the year 1944, the contracts that Safe Harbor had, we meant the entire year 1944, didn't we? A. Yes, sir.

Q. And in 1944 and 1945, and that part of 1946 which has expired, Safe Harbor sold its entire output under Items "E", "F" and "G"—right?

* * *

[1861] Mr. Goldberg: If the word "sold" offends counsel for the Respondents I am willing to substitute "disposed." Disposed of its entire output to Holtwood and Consolidated.

* * *

A. No, I believe from an engineering viewpoint that Safe Harbor's supply was at times and in part supplied to others than Holtwood and Consolidated; namely, some of the Pennsylvania customers and including the Pennsylvania Railroad.

Q. Did Safe Harbor supply that or did Holtwood supply that? A. I am speaking of the flow of supply from Safe Harbor is an engineering sense and not speaking of the legal concept [1863] growing out of any contractual arrangement.

Q. In other words, you are saying that Safe Harbor generated the electric energy, generated electric energy which in part was used to supply the requirements of the Pennsylvania Railroad and the Pennsylvania customers. Is that it? A. Yes, sir, using energy in the sense that I have used it.

* * *

[1863] Q. You are saying Safe Harbor generated a supply which in part was delivered to Consolidated and in part was delivered to Holtwood, and the part delivered to Holtwood was in turn delivered by Holtwood to the Pennsylvania customers and the Pennsylvania Railroad—right? A. No, sir, I am not saying that at all. I am speaking not of delivery in the contractual sense. I am speaking of the flow of supply. That supply would flow directly over transmission lines to various customers other than Consolidated [1864] and Safe Harbor.

Q. I was not speaking of the delivery in a contractual sense. I understand you prefer not to discuss it in that sense. I was speaking of it in terms of flow. In those terms Safe Harbor generated a certain supply. Is that right so far? A. Yes, sir.

Q. Part of that supply was transmitted to Consolidated—right? A. At times, yes, sir.

Q. Over the facilities of Safe Harbor, Penn Water and Susquehanna Transmission Company of Maryland—right? A. Yes, sir.

Q. The part which was not so transmitted was transmitted to Holtwood—right? A. No, sir. For example, a portion of it would go pretty directly into the Pennsylvania Railroad system at Safe Harbor. A portion of it might go at times directly to Lancaster over transmission

lines owned by the Lancaster Company. A portion might go down to Holtwood and thence go to Lancaster or York or Baltimore.

Q. In other words, there is a path of flow to the railroad directly from Safe Harbor. Is that right? A. Yes, sir.

Q. And to Pennsylvania Power and Light Company for its Lancaster Division there are two paths of flow—one directly [1865] to Safe Harbor and the other by way of Holtwood. Is that right? A. Yes, sir.

Q. And you are saying that the flow to the Lancaster Division could have gone at times directly and at times through Holtwood. Is that it? A. Yes.

Q. And the supply to the railroad that went directly from Safe Harbor, that was for the account of what company? A. That I don't know. I am speaking now only of the flow of supply technically and not legally.

Q. Isn't it a fact that Safe Harbor's facilities do not connect directly with the railroad? A. Yes, sir.

* * * *

[1867] Q. In 1939 would it be fair to say that you were fully equipped, based upon your experience and qualifications, to express a factual opinion as to what Pennsylvania Water and Power Company was engaged in doing? A. I think so, in general.

[1868] Q. It was with that knowledge and information that you reviewed that application from a factual viewpoint, not intending to review it from a legal viewpoint. Is that right? A. Yes, sir.

Q. And in reviewing it from a factual viewpoint you found nothing in it which would cause you to take any exception to the statements in the application—right? A. I don't recall that I found any.

Q. In 1939 Holtwood had the contract known as Items "E", "F" and "G"—right? A. Yes, sir.

Q. Same one it has today—right? A. Yes, sir.

Q. It had the contract known as Items "H" and "I"—right? A. Yes, sir.

Q. The same one it has today? A. Right.

Q. It had in 1939 all of the contracts that it had up to the end of 1945, namely, the Lancaster, Coatesville, and York Edison supply contracts—right? A. Yes, sir.

Q. The only change which has taken place since that time is the supersession of the York contract by the new one between Penn Water and Metropolitan Edison—is that right? [1869] A. Yes, and a new one, Pennsylvania Railroad.

Q. I am sorry. I keep forgetting that one, because I have said in this case I am making no assertions with respect to that agreement. But it had that one in 1939? A. Yes, sir.

Q. And it has it today? A. Yes, sir.

[1870] Q. Reviewing the statements in the application entirely from a factual viewpoint, based upon your knowledge of the operations of Pennsylvania Water and Power Company at that time, you found no reason to take exception to the statement in the application that applicant, meaning Penn Water, does no "retail distribution business"—right? A. Yes, sir.

Q. And you found no reason to take exception to the statement that "With one exception all of applicant's power and energy is sold at wholesale to public utility companies who resell and distribute the same." Is that right?

THE WITNESS: The first part of the question, please?

(Question read.)

THE WITNESS: No, sir, remembering, of course, my qualifications as to energy and sales.

By MR. GOLDBERG:

Q. Yes. How could I forget that, Mr. Walls?

Incidentally, that paragraph went on to name the companies that were referred to as the companies to whom

the sales were made, and they were named as Pennsylvania Power and Light Company, Edison Light and Power, Philadelphia Electric Company, and Consolidated of Baltimore—right? A. Yes, sir.

Q. And also reference was made to the fact that the company at that time had certain interchange agreements [1871] relating to economy, power and energy flow with Pennsylvania Power and Light and Philadelphia Electric Company and Metropolitan Edison Company. A. Yes, sir.

Q. Just to make it complete, not overlooking our friend the Pennsylvania Railroad Company, it went on to say that Pennsylvania Water sells power and energy to the Pennsylvania Railroad at Safe Harbor—right? A. That includes Pennsylvania Railroad; yes, sir.

Q. In that application the company undertook to describe for the Commission the facilities which it referred to as facilities owned and/or operated by Pennsylvania Water and Power Company for transmission of electric energy in interstate commerce and for the sale of electric energy at wholesale energy in interstate commerce. Is that so? A. It does show that.

Q. It undertook to describe the facilities in those terms—right? A. Yes.

Q. On the page following are shown the facilities referred to in that description—right? A. Yes, sir.

Q. The line number is shown, the voltage, the number of circuits, and the ownership by Pennsylvania Water, Susquehanna Transmission Company of Pennsylvania, Pennsylvania [1872] Transmission Company, and Susquehanna Transmission Company of Maryland—right? A. Yes, sir.

Q. Susquehanna Transmission Company of Pennsylvania and the Pennsylvania Transmission Company are the two companies that were merged in 1939 with and into Pennsylvania Water and Power Company. Is that right? A. Yes, sir.

Q. This application we are discussing bore on the merger of those facilities into the company? A. Yes, sir.

Q. Line Number 1 is a 66 K. V. line, and that is the line that is described as running from Holtwood, Pennsylvania to Baltimore, Maryland—is that right? A. Yes, sir.

Q. And Line number 2 is also a 66 K. V. line and is also described as running from Holtwood, Pennsylvania to Baltimore, Maryland—is that right? A. Yes, sir.

Q. Those lines at times carry Safe Harbor's output down to Baltimore for delivery. Is that right? A. At times, but those two lines are most frequently used for service from Holtwood.

Q. To Baltimore. A. To Paltimore, because those are 25 cycle, three phase lines.

[1873] Q. Those two lines are tied in directly to Holtwood. They are not tied into Safe Harbor. Is that right? A. That is right.

Q. In other words, Penn Water utilizes those lines to deliver at times energy which it receives from Safe Harbor and transmits on down to Consolidated in Baltimore and also to transmit energy which Holtwood itself produces from its project. Is that right? A. Without any contractual implications, that is correct.

Q. I wanted to stay away from that.

You meant you don't know whether those lines are used in connection with items H and I. Is that it? A. I don't pretend to be able to say whether those lines are used in connection with some specific contractual arrangement, but they are used to transmit service, part of which may come from Safe Harbor and part of which may be from Holtwood and part of which may be from other sources.

Q. Such as the interchange from the Pennsylvania customers. A. Yes.

Q. Line No. 3 is shown in the application as a 66 K. V. line which is described as running from Holtwood, Penn-

sylvania to Coatesville, Pennsylvania. Is that right? A. Yes, sir.

[1874] Q. That line is the line that is used to provide the supply to the Edison Light and Power Company under that agreement which was superseded November 1, 1945—right? A. Yes, sir. As you speaking of Coatesville?

Q. Yes. A. No.

Q. Instead of referring to the Edison Light and Power at Coatesville, we should have referred to the Philadelphia Electric Company—is that right? A. Yes.

Q. That is the line that is used to supply the requirements of the Philadelphia Electric Company for its Coatesville division under that agreement which already has been marked. Is that right? A. That is correct.

Q. And line No. 4 is described as a 66 K. V. line running from Holtwood, Pennsylvania to York, Pennsylvania—right? A. Yes, sir.

Q. And that is the line that up to the end of 1945 was used to supply the requirements of Edison Light and Power at York. Is that right? A. That is correct.

Q. And the next line, Number 5, is the 66 K. V. line running from Holtwood, Pennsylvania to Lehman Farm, [1875] Pennsylvania. Right? A. Yes, sir.

Q. And that is the line that is utilized to supply the Lancaster division requirements of Pennsylvania Power and Light Company under that contract which has been marked in this proceeding—right? A. I would say rather that is a line used to connect Safe Harbor and Holtwood over which at times energy flows, which, having reached Holtwood, may go back over a line from Holtwood to Lancaster.

Q. To meet the requirements—— A. Of the Lancaster Company.

Q. To meet the requirements of the Company in its Lancaster division under the contract which already has been marked—right? A. Yes, sir.

Q. Then there is a line which is designated Number 6, 66 K. V. line which is shown as running from Holtwood, Pennsylvania to Piney Island, Pennsylvania. That is an entirely strange line to me. A. That is a little stub line running from the powerhouse to other transmission lines which take off from the island.

Q. Near the middle of the river—is that it? A. Near the middle of the river.

[1876] Q. Then there is line No. 7, 66 K. V. Line shown as running from Safe Harbor, Pennsylvania, to Lehman Farm, Pennsylvania. Is that right? A. Yes, sir.

Q. Does that line, like the other Lehman Farm line that we described, serve the same purposes we mentioned in connection with the first Lehman Farm line? A. Yes, sir.

Q. Then line No. 8 is a transmission line 110 k. v. from Baltimore, Maryland to Gunpowder, Maryland. Is that right? A. Yes, sir.

Q. What is the function of that line? A. That line carries the service of Consolidated Company from its substation in Highlandtown out to Gunpowder where it connects with a belt line owned by Consolidated running for quite a distance around Baltimore.

Q. Then we have several lines designated as running from Safe Harbor, Pennsylvania to Perryville, Maryland, of 132 K. V. In what connection are those lines used? A. Those lines are used for the 25 cycle service used by the Pennsylvania Railroad Company.

Q. That is the line to which you recently had reference which runs from Safe Harbor but is owned and operated by Pennsylvania Water and Power Company—right? [1877] A. Yes, sir.

To make it clear I think we spoke before of an extension of this line to the Safe Harbor, or near to the Safe Harbor, powerhouse. That is just a technical matter.

Q. I see.

Then, as line No. 12, a 220 k. v. line from Safe Harbor, Pennsylvania to Westport, Maryland, that line is owned and operated by Pennsylvania Water and Power Company to the extent that it is in Pennsylvania, and by Susquehanna Transmission Company of Maryland to the extent that it is in Maryland—is that right? A. Yes, sir.

Q. And that is one of those lines that is used to carry electric energy directly from Safe Harbor down to Baltimore—right? A. Yes, sir.

Q. In connection with items E, F, and G in this proceeding—right? That is the three-party contract—tripartite contract. A. Yes, sir, and in connection with any interchange, etc.

Q. That backfeed you were talking about sometimes comes up on that line. Is that right? A. Yes, sir.

Q. Then the next line is a line shown as running from [1878] Ellicott City, Maryland to Takoma Park, Maryland. That is owned and operated by Pennsylvania Water and Power Company. Is that right? A. Through the Susquehanna Transmission Company of Maryland.

Q. Is that the line that is used when deliveries are requested at Takoma Park, Maryland by Consolidated under the provisions of that three-party agreement? A. That is one of the lines. There is another circuit, also, on the railroad.

TRIAL EXAMINER: What is the K. V. in that line?

MR. GOLDBERG: 220.

By MR. GOLDBERG:

Q. Then there is a final line shown of 220 K. V. from Safe Harbor, Pennsylvania to Dundalk, Maryland. Is that right? A. Yes, sir.

Q. Is that operated by Penn Water in part and Susquehanna Transmission Company in part? A. Yes, sir.

Q. In connection with the three-party agreement, items E, F, and G—is that right? A. Yes, together with the interchange, etc.

Q. Mr. John E. Malone was one of your counsel in that case. Is that right? A. Yes, sir.

[1879] Q. And Mr. Hambright was the other? A. Yes, sir.

Q. Isn't it a fact that no mention is made in that application of joint service by any one? A. I don't see any.

Q. You don't recall taking any exception to the application at that time because no such reference was made, do you? A. No, sir.

Q. Directing your attention to paragraph "K" of the application in Docket No. 5582, was it factually correct to say that the facilities of the Susquehanna Transmission Company of Pennsylvania which are to be merged with the applicant's facilities, that is Penn Water, consist of the Pennsylvania portion of two double-circuit steel tower transmission lines extending from Holtwood, Pennsylvania, to points in the State of Maryland? A. Yes, sir.

Q. It is indicated in the next sentence, isn't it, that further particulars about those lines, lines 1 and 2, are shown on that table which you and I have just finished discussing as part of paragraph "F". Is that right? A. Yes, sir.

Q. Then continuing, was it factually correct to say, based upon your knowledge of the operations of the company, [1880] that those lines, "are at present used in the transmission of electrical energy generated by applicant and sold to Consolidated Gas Electric Light and Power Company of Baltimore and will be so used after the proposed merged is consummated." Was it factually correct to say that at that time? A. I can't say as respects the legal implications.

Q. I don't want you to. A. But otherwise that is true. However, it must be understood, naturally, that service might come back over those lines.

Q. Go back in both directions, the backfeed from Consolidated at times of low water would come up through those lines. Is that right? A. Yes, sir.

Q. When you say that you can't say legally, you relied entirely upon your lawyers analysis of the legal conclusion based upon the operating facts. Is that right? A. I think so, sir.

MR. SPARKS: Were you relating that question to what was stated in the application, Mr. Goldberg?

MR. GOLDBERG: That is right.

By MR. GOLDBERG:

Q. Since 1939 up to and including today those lines have been used in the operating manner described in that application—right? In other words, they have been used to transmit [1881] electrical energy which is sold by Penn Water to Consolidated from Holtwood to Baltimore and have also been used to carry the backfeed. Is that right? A. They have been used for the transmission of energy back and forth.

Q. In connection with Holtwood sales to Consolidated—right? If you don't like "sales", in connection with Holtwood's business transactions with Consolidated. A. That is so in part; yes, sir.

Q. I was wondering about that "in part". It disturbs me a little bit. What does that implication imply, that "in part"? A. That has reference to the legal aspect of the thing.

• • •

[1885] Q. Mr. Walls, I would like to show you your direct testimony in the Safe Harbor case on November 1, 1944, Docket No. IT-5914, at page 36. You testified in that case, did you not, talking about the McCall Ferry project, that "It was not until 1905 that construction work on any of these schemes was actually initiated. In that year the McCall Ferry Power Company was formed and work was started on the so-called [1886] McCall Ferry (now Holtwood) Dam at Piney Island. However, the McCall Ferry Power Company ran into financial difficulties in 1907 with

the dam and powerhouse only partly constructed and had to suspend work."

You so testified, did you not? A. Yes, sir.

• • •

Q. In connection with your testimony on cross-examination about the Tailrace excavation work that was carried on in 1908, was it? A. Yes, sir.

Q. You also testified at Transcript 1371 that it was a great advantage to get that Tailrace work out of the way before the powerhouse construction started.

Do you recall when the powerhouse construction resumed?

MR. SPARKS: Excuse me just one minute. Your reference to cross-examination, Mr. Goldberg, is in this proceeding?

MR. GOLDBERG: Yes.

By MR. GOLDBERG:

[1887] Q. Do you recall when the construction started on the powerhouse? A. Started before this time. That was an ill-advised way of speaking of this matter. I should have said, "Get that Tailrace work out of the way before there was a concentration of work around the powerhouse." Actually the powerhouse construction started before 1908.

Q. You are talking about started by McCall Ferry before 1908? A. Yes.

Q. I was talking about that period of suspension when the Tailrace work was carried on. You said it was desirable because it was a good idea to get it out of the way before construction of the powerhouse started. By "started" in that instance you meant construction resumed. Right? A. Yes.

Q. I was trying to get at this: When was it resumed? Do you recall? A. It was resumed, as far as I know, in August of 1909.

• • •

[1896] Q. Was there ever any doubt about the engineering feasibility of the project? A. I don't know that there was doubt by competent engineers, but there was a great deal of public doubt, particularly in the minds of those who had been living along the river and had seen it in flood and during ice runs, and furthermore in Baltimore there was doubt expressed as to whether the dam would stand up under the impact of the river forces. That doubt, however, was largely in the minds of the lay public and also in the minds of some investors.

Q. You say the public in the vicinity of the dam had some doubts about its engineering feasibility and some investors may have had similar doubts? A. Yes, the people who lived along the river and knew its wildness would say frequently that "Wait until the next flood comes and this dam will not be here."

* * *

[1911] Q. You say Empire Engineering was engaged in performing its work when you arrived? A. Yes, sir.

Q. Was it proceeding on the basis of the old Cooper plans? A. Yes, sir.

Q. And did it continue the entire time it was on the project on the basis of the old Cooper plans? A. With such modifications as were introduced by us into those plans that were found necessary as a consequence of the development of the work.

Q. What was that? A. The design of the transformer house was one of [the] big jobs that we had very near the outset.

Q. You mean a new design or consideration of the old one? A. I think it was rather a redesign.

[1912] Q. Are are sure it was not merely a revision of the old design that had been prepared? A. Well, it was a revision of the old design in certain respects, particularly the interior of the transformer house, for I recall that we decided on a different high-tension bus arrangement, and

the employment of a different type of disconnector or high-tension circuit breaker. I think at that early date, also, I was concerned with the design of the transmission line and preparing for ordering insulators, towers, cable, and determining upon a route for the transmission line so that I might advise those concerned with acquisition of property where they should work, and what property they should acquire, which latter work was under the charge of Mr. Clarke. It was a rather hectic first few months on the job.

Q. Well, modification of design of the transformer house, concerned with the design of the transmission house, ordering insulators. That doesn't sound very hectic to me. What else was going on that involved modification? A. Auxiliary equipment.

Q. You were redesigning the auxiliary equipment, you say? A. Yes. That was in connection with the oil lubricating and purification system, the cable and wire control layouts, circuit breaker layouts, governor pump installations and piping, together with the accumulator tank arrangements. [1913] Sometime along in there, of course, there was the head and tail gate situation to be struggled with.

I can't recall now all of the many things we had to deal with promptly.

Q. I think you have done a pretty fair job of doing some recalling at that point. I wonder now if you can look at that Exhibit 90 and recall what faulty designs you were referring to at that time in the light of your reaching back into your memory a few minutes ago. A. I remember, though I don't recall at what time I gave consideration to the matter, the deflection wall, the boom piers, the track layouts to give access to the powerhouse for the bringing in of machinery at the different levels required during the construction operations. My memory indicates that I was very busy, both at Holtwood and in traveling around to the manufacturers, going over the designs to incorporate

the improvements in the art as far as it was possible, and negotiating, or helping to negotiate, additional equipment contracts.

Q. You say you undertook as one of the first things you did when you arrived in November of 1909 to study the plans that had been prepared when McCall Ferry Power Company was carrying on the work. Is that right? A. Yes, sir.

Q. What did those plans cover? A. Those plans covered the dam with its appurtenant [1914] wing walls and abutments, covered the powerhouse, I think the gatehouse and the transformer house, with machinery layout, and some layout of auxiliary equipment, but I recall that the switchboard layout was changed very materially.

Q. McCall Ferry had plans for the switchboard layout? A. Had plans, but they were changed materially.

Q. You named the dam and appurtenant works, powerhouse, gatehouse, transformer house, machinery layout, layout of auxiliary equipment and switchboard layout. Any other plans they had? A. The equipment layout would include, of course, the auxiliary equipment of which there was a great amount.

Q. That is all you can remember right now? A. All I can remember at the moment. I may be able to recall a lot more later.

Q. The plans covering the dam and appurtenant structures were the plans being followed by Empire Engineering when you arrived. Is that right? A. Yes, sir.

Q. And the plans with respect to the powerhouse were also being followed by Empire Engineering at the time you arrived. Is that right? A. Yes, sir, but they had not gotten very far ahead with those beyond putting in concrete preparatory to receiving some of the turbine parts that had to be placed first in the [1915] concrete. I refer now to draft tube parts and so forth.

* * *

[1918] A. The machinery had been ordered but there were many changes in machinery in connection with the develop-

ment of the art, among them being the thrust bearings for the generating units.

Q. That change was not made until you arrived on the scene? A. That change was not decided upon until I arrived on the scene and had consultations with the turbine manufacturer as respects the details. Now, I don't know how long before the turbine people had been trying to work out something better than the pressure type thrust bearing, but I do remember that we gave thought to the substitution of a roller bearing and made investigations as to where roller bearings had previously been used with success.

• • •

[1931] Q. Isn't it a fact, Mr. Walls, that Penn Water's generating facilities consist of the Holtwood hydro electric plant and the adjacent steam electric plant?

• • •

THE WITNESS: • • • I think that its owned facilities consist of those two generating plants together with transmission lines and other property.

• • •

Q. In addition to those sources of supply of electric energy to Penn Water, Penn Water's other sources are Safe Harbor and the interchange agreements it has with its Pennsylvania customers and Baltimore? A. That depends upon what it meant by sources.

Q. Sources of supply to Penn Water.

• • •

[1932] Q. Yes. When I say Consolidated I had in mind that that might include electric energy coming up from Potomac Electric Power Company. With that addition is my statement a correct statement?

• • •

THE WITNESS: Sources of supply to Penn Water's system, I think that is correct.

• • •

[1933] Q. But so far as Consolidated's payment is concerned, to Holtwood it is independent of the amount of energy delivered to Consolidated, the provision being that the payment made by Consolidated is to represent the difference between the revenues received by Penn Water from its Pennsylvania customers and a stipulated return over and above Penn Water's operating costs?

• • •

THE WITNESS: I would have to answer that yes and no—yes, to the first part, no to the second. The second part omits consideration of operating expenses.

• • •

[1934] Q. By "operating costs", I meant to include operating expenses? A. I think that is right. It is, of course, a very brief resume of a very voluminous contract so that there may be exceptions.

Q. Of course, the bills that are already in evidence show the steps by which you arrive at all that. A. Yes, sir.

• • •

[1955] TRIAL EXAMINER: Just a minute. I don't think it makes any difference what this witness knows or thinks about sales. It is the underlying fact to which it will be applied in the interpretation of the statute.

• • •

[1956] Q. There has be [been] no change in the operations of Safe Harbor and Penn Water since 1932. Isn't that right? A. You mean as respects the——

Q. Physical operations? A. —flow of service?

Q. That is right. A. No, I think the flow of service has been the same in general.

Q. Yes, and it is still the same today. A. Yes, in general.

• • •

[1957] Q. But based upon your knowledge of the company's operations you never had reason to take exception

to the use of those words "sales of electric energy." Isn't that so? A. I don't remember that I did.

• • •

[1980] Q. Having examined those pages it appears, does it not, that Mr. Thomas testified in 1939 that he carried on the negotiations with respect to the agreement which has been identified in this proceeding as Items "E", "F" and "G". [1981] Isn't that right? A. Yes, sir.

• • •

MR. SPARKS: I object to the question on the ground such evidence is not material and relevant to this proceeding, and I move the answer of the witness be stricken.

TRIAL EXAMINER: Objection overruled.

By MR. GOLDBERG:

Q. Copies of that agreement had been filed with the Commission—is that right—Mr. Thomas so states.

[1982] MR. SPARKS: Objection.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: Yes, sir.

By MR. GOLDBERG:

Q. And Mr. Hambright asked Mr. Thomas this question, did he not: "I believe later the Commission or somebody else asked for additional copies." Is that right? A. Yes, sir.

Q. And in response to that question Mr. Thomas testified as follows, did he not, "Yes. In November 1932, the Federal Power Commission issued its order No. 31 which called for filing the contract, and on December 20, 1932, Mr. Walls signed a letter which I addressed to the Federal Power Commission acknowledging receipt of orders—order No. 31, report on rates and services, and stating this: 'This company sells electric power and energy to only two customers, namely, the Consolidated Gas Electric Light and Power Company of Baltimore and the Pennsyl-

vania Water and Power Corporation [Company] under a three-party contract dated June 1, 1931, a printed copy of which was sent to you on July 14, 1931. This agreement has been modified by a supplemental agreement dated August 1, 1932, a copy of which is enclosed. The company has no other rate schedules, tariffs or contracts.' "

He so testified, did he not?

MR. SPARKS: Objection.

[1983] TRIAL EXAMINER: Objection overruled.

THE WITNESS: Yes, sir.

By MR. GOLDBERG:

Q. Was that an accurate statement in Mr. Thomas's answer? A. I do not know that it was accurate from the legal viewpoint, and as respects technical accuracy I don't know that it was not intended that service from Safe Harbor would not flow to other customers.

• • •

[1990] Q. As far as 1939 was concerned the statements made in that letter were still correct. Isn't that so? A. I judge they were correct legally and I judge they were correct from a technical viewpoint for the purposes intended.

• • •

Q. In other words, you never felt this need for that exactitude in relation to the 1939 and 1944 rate proceedings of the Federal Power Commission with respect to Safe Harbor. Isn't that so? A. I think that is so.

Q. But you feel that need in this proceeding. Isn't that [1991] right? A. I feel that desire on my part to express the matter as accurately as I reasonably can for the purposes at issue.

• • •

[1994] Q. I am not worried about that. I want to know why it would be inaccurate to refer to sales of power and energy under items E, F, and G from your own viewpoint as an engineer familiar with all of the company's operations. A. It is not an accurate statement.

Q. It is not an inaccurate statement, is it? A. It may be considered an inaccurate statement because of the omission of qualifications. That I don't know. It would [1995] depend upon the use to which the statement will be put.

Q. But everybody knows that when you speak of sales of electric energy from an engineering viewpoint there are necessarily voltage, phases, frequency, power factor, power factor cooperation involved. Isn't that so? A. I don't know as everybody does.

Q. Every qualified engineer? A. That term is loosely employed.

Q. You have employed it—right? A. I have employed it and I may expect to employ it that way again.

Q. Though a qualified engineer, you have employed it —right? A. Yes, sir.

Q. And when you employed if you had in mind that the sale of electric energy has certain characteristics and attributes involved, such as phases, voltage, frequency, and the other things you mentioned. Isn't that so? A. Yes, sir, unless there is some reason in my mind to make a distinction and a more accurate statement.

Q. But the statement that is made when engineers speak of sales of electric energy is an accurate one. A. For the purposes probably for which the statement is made when it is not necessary to have extreme accuracy or it is sufficient to use a phrase connoting a lot of different [1996] things.

Q. What you are saying is that it is accurate from an engineering viewpoint to speak of sales of electric energy, but to be very technical about it we should break it down into the components such as you have. Is that right? A. If there is necessity for such technical accuracy, and generally there is not.

Q. And up to this proceeding you have seen no need for this technical accuracy? A. I don't recall that I have used it before especially in any other case.

Q. Do you sell voltage? A. Not except in a very loose way of speaking.

Q. Does a customer buy voltage? A. To the extent that voltage is a component of energy, power, and the other services rendered, he may be said to buy it, but not buy voltage alone.

Q. Voltage alone is just no good to him. You can't do anything with it. Is that right? A. Generally not.

Q. It has no independent standing from an engineering viewpoint—isn't that so? There is no significance to say "voltage-period." Isn't that so?

• • •

[1997] A. A person might want voltage for a certain purpose regardless of the energy involved.

Q. That might be so, but he would have that energy in that voltage. Right? A. I am thinking somebody might buy voltage for a precipitator, for instance.

• • •

Q. I have no objection to your going ahead, even though you may think it is too technical. I would like to hear about it. A. A person may wish to secure voltage for certain experimental or other purposes, disassociated with any energy, but I would take the position that what is generally supplied is energy together with the current, voltage, and other characteristics and services, not voltage alone, not perhaps energy alone.

• • •

[2092] Q. Some of the service being supplied to Holtwood and Consolidated as described in the excerpts that are before you [2093] you say were going to the Pennsylvania Railroad? Is that right? A. No, sir. I meant that some of the electric supply derived from Safe Harbor itself, and I refer to the 25 cycle supply, was intended to go to the Pennsylvania Railroad.

Q. That supply Safe Harbor was paid for. Is that right? A. I assume so.

Q. And it was paid for that supply by whom? A. I assume by Penn Water and Consolidated.

Q. Pursuant to bills rendered by Safe Harbor to them. Is that right? A. I believe so.

Q. Which bills were prepared in accordance with items E, F, and G—is that right?

* * *

THE WITNESS: As far as I know.

* * *

[2095] Q. * * * There is a new agreement today between Pennsylvania Water and Metropolitan Edison which supersedes the old York supply agreement—right? A. Yes, sir.

Q. Today does any of the electric energy generated by Safe Harbor go up to York? A. I assume that it would at times.

Q. In other words, no change in the operations has occurred. You have had a change in the names of the contract, though. Is that right?

* * *

THE WITNESS: There has been no change in the operations in general so far as I know.

* * *

[2101] Q. Safe Harbor supply as it was under the old contract is today still available under the pool. Is that right? A. Yes, sir.

Q. I want to direct your attention to Section 3 of Article 4 of that contract, which is Exhibit 72 in this proceeding, and I want to read to you a portion of Section 3 as follows: "Holtwood shall supply to Metropolitan, and Metropolitan shall receive, hourly amounts of firm energy equal to the hourly integrated generation of Holtwood and Safe Harbor in excess of 50,000 k. w. h. per hour multiplied by the ratio of Holtwood's firm power obligation to Metropolitan as specified in Section 1 hereof." That is as far as I am going to read, Mr. Walls.

From an engineering standpoint what does that mean? A. It is difficult to make a resume of it, but I would say in part that it means that there shall be held available a [2102] supply of electric service to Metropolitan to be limited in certain numerical fashion, as indicated here.

Q. How did Safe Harbor get into that picture? I don't understand that. From an engineering viewpoint how does Safe Harbor fit into it? A. Did I say Safe Harbor?

Q. No, but Safe Harbor is mentioned in there. The formula apparently is dependent upon the generating facilities of Holtwood and Safe Harbor. Is that it? A. That is true.

Q. That is the reason for the reference to Safe Harbor. Is that right? A. I don't think I mentioned either company.

Q. I know you didn't, but I am trying to find out why is there the reference to Safe Harbor and Holtwood? From an engineering viewpoint where does Safe Harbor fit into that picture? A. It was necessary to bring Safe Harbor into the picture in order to determine the limitations of service which Metropolitan could call for.

• • •

[2103] Q. In other words, Holtwood at times utilizes the supply available from generating facilities of Safe Harbor to meet its firm power commitments under the new contract with Metropolitan Edison, and that is why the reference is there in Section 3 of Article 4, to Safe Harbor and Holtwood—right? A. That may be.

Q. That is the fact, isn't it, Mr. Walls? [2104] A. I would have to give that further thought to make sure of that.

Q. Isn't that what you just told us before, just preceding this last question of mine? Perhaps we had better have my question read. A. I think it would be better.

(Previous question read.)

By MR. GOLDBERG:

Q. Do you wish to expand on that answer, Mr. Walls? Isn't the answer to my question "Yes"? A. I think it is.

• • •

[2126] Q. When Consolidated's entitlement of two-thirds does not flow to Consolidated, it does not do so because in accordance with a desire to obtain the maximum economy from the operation of the pool it may be dispatched to other load centers to meet the requirements of Consolidated and Holtwood's customers. Is that it?

• • •

MR. SPARKS: May I ask a question, Mr. Goldberg? When you say, "It does not do so", do you mean there the reason it does not do so is, and so forth?

MR. GOLDBERG: Yes.

MR. SPARKS: Thank you.

THE WITNESS: I would say that is true, adding, however, the words "and Safe Harbor's customers, including the Pennsylvania Railroad."

By MR. GOLDBERG:

Q. Has Safe Harbor derived any revenue from sales by it to the Pennsylvania Railroad? A. Not directly, no, sir.

Q. Has it ever derived any revenues from sales to Metropolitan Edison Company, Philadelphia Electric Company, and Pennsylvania Power and Light Company?

• • •

[2127] THE WITNESS: I don't think so.

By MR. GOLDBERG:

Q. Did it render any supply of energy to the Pennsylvania Railroad in 1935? A. I think it furnished supply to the Pennsylvania Railroad in 1935, at least during a portion of that year.

• • •

[2167] Q. Mr. Walls, did you ever see the term "Flow of electric [2168] service" in a contract? A. No, sir, I don't think I have.

Q. Did you ever use that term prior to this case? A. I think I have given thought prior to this case as to distinction between electric service and electric energy, but I do not recall using it formally.

Q. What do you mean by "Formal"? A. In any contracts or statements that would be more than communications between myself and my associates.

Q. In speaking of the operations of the company in the past isn't it a fact you have spoken of it in terms of sales of electric energy? A. Yes, sir, I used the expressions that I thought would be understood by those to whom I was addressing my remarks.

Q. Did you use that phraseology when you talked to lawyers? Is that it? A. Which phraseology?

Q. "Sales of electric energy". A. Yes, I do at times.

Q. Did you use it when you talked to your engineering associates in the company? A. I have often done that.

Q. Used it when you spoke to your accounting associates in the company? [2169] A. I have often done so when there was no necessity of being particularly accurate as I wish to be in this case.

Q. You did not think you were being inaccurate when you spoke to them about sales of electric energy, did you? A. No, sir.

* * *

[2188] Q. * * * Did you consider that the tailrace excavation work that was carried on by McCall Ferry Power Company and Pennsylvania Water and Power Company was necessary? A. It was necessary in the sense of being desirable in order to increase the effectiveness of the Holtwood plant by increasing the head available at that plant.

Q. In other words, as you cut a deeper tailrace you

add a certain amount of head to the plant. Is that it? A. Yes, sir.

Q. And the amount of head available to a hydroelectric plant has a bearing on the economy of operations of a hydro [2189] plant. Is that right? A. It has a bearing upon the total amount of power and energy that can be derived from the plant, for instance, in a 50 foot head plant one foot of additional head would increase the energy and power by two per cent, but furthermore the capacity that would be obtainable from the same sized turbine would be greater than two per cent.

Q. Is my information correct about this: Tailrace excavation work was started by McCall Ferry Power Company, was carried on to some extent in 1908, and was completed by Penn Water after November 1, 1909. Is that right? A. I wouldn't say it was completed. Rather this way: That the bulk of the work was done before 1909. Considerable additional amount of work, but small relatively to the earlier work, was done about 1913 or 1914. Then a little additional work was done at a later period, with still a possibility of doing some more.

* * *

[2192] Q. Was the work which was carried on in the early days on tailrace excavation in 1908 and 1909 successful? A. Yes, sir.

* * *

[2198] Q. What does the flashboard add? A. Flashboards are about 4 feet 6 inches or 4 feet 9 inches high. The water is not always carried up to the top of the flashboards or sometimes we allow it to overflow the flashboards a little to get additional head rather than to save the water. So conditions vary there.

Then if there is a prospect of a freshet coming down the river and we know in advance, or are able to estimate in advance when that discharge will arrive at Holtwood, we

may draw down the water in advance of the freshet even though that would not be in accordance with the usual weekly draw down. So the head is constantly varied.

Q. You usually up there speak about 52 to 56 feet with the flashboards? A. That is a good range.

* * *

[2199] Q. Isn't [it] a fact that the available head of the Holtwood plant has decreased since 1916? A. No, I wouldn't say that as a general thing. I would rather be inclined to say that it has decreased some by reason of Conowingo backwater.

Q. It has decreased some? A. Has decreased some by reason of Conowingo backwater, but it has increased some after the construction of Safe Harbor because Safe Harbor and Holtwood are endeavored to be operated as a unit for the best utilization of the river discharge and the heads available at the two plants, so that sometimes it is found desirable to increase the head at Holtwood by proper manipulation of discharge through Safe Harbor and sometimes water is stored above the Safe Harbor Dam perhaps decreasing the head at Holtwood more than would have been the case had Safe Harbor not been constructed.
[2200] But on the whole I think that the effective head at Holtwood has been increased.

There is another reason for that deriving from the fact that by manipulating the discharge from Safe Harbor we are able to restore flashboards on the crest of the Holtwood dam more promptly and so extend the useful period of those flashboards.

Q. You mentioned the decrease of the head in connection with construction of the Conowingo project below Holtwood. Because of that decrease in the head available at Holtwood through construction of the Conowingo project I am correct, am I not, in stating that certain payments are made by Conowingo to Holtwood, for loss of the benefits of that head; is that right? A. Yes, sir, certain payments

are made by Conowingo which have to do with permission to Conowingo to flood back, and an effect of such flooding back is to decrease it, you might say, effective head at Holtwood, • • •

• • •

[2223] Q. Did you have any trouble with the design of the transmission line? A. I don't recall any trouble with design; no, sir.

Q. Were the plans for the transmission line prepared after November, 1909? A. Yes, I am sure of that because I, myself, made up the original design and I think we were taking up the matter of insulators at least early in 1911, and the design of the tower would have had to be determined upon in general before we could have determined upon the types of insulators to be used.

Q. You said early in 1911. You meant early in 1910? A. 1910. Thank you.

• • •

[2224] Q. When you said that you, yourself, had designed that transmission line I remembered the other day you had said that was one of the things they were in a hurry for and that is why you put your attention on that? A. Yes, sir.

Q. Had any designs at all been prepared for that transmission line by McCall Ferry Power Company that you remember? A. I don't remember of any.

• • •

[2227] Q. Did you also design the substation at Baltimore? A. The general design, yes, but of course not the details.

Q. Were there detailed designs available from McCall Ferry Power Company or was that also done by your force? A. That was done entirely by our force.

Q. I suppose because of its association with the transmission line the design of the substation was one of the things that was gotten to pretty promptly after November, 1909, after November 1, 1909? A. I think that a general

design would have had to be determined upon pretty early, and I think that we tried to design that station so that it would be somewhat similar to the transformer house at Holtwood. But I think we were delayed in getting the property and then could not complete the designs in all detail until we got the property.

Then, as I say, after we got the property we found the quicksand situation.

• • •

[2232] Q. This morning, Mr. Walls, we spoke about the flashboards on the dam which increased the head. Are those flashboards generally of the same type which you had there at the dam in 1911? A. No, sir. We did a lot of experimenting with flashboards. Flashboards had been in use for quite a number of years, but in our situation we had to be very particular to have flashboards installed that would release quite accurately at a pre-determined water flow because we thought we should be sure that we would not flood back beyond our riparian rights. So we experimented with a number of different types as opportunity afforded, and finally developed the type of flashboard now in use.

Q. You say a pre-determined water flow was necessary, rather that the flashboards would go out at a pre-determined [2233] water flow. That was true in 1911. Is that right? A. Yes, sir.

Q. Are we to understand that in 1911 the type of flashboard you were using would not go out at the pre-determined water flow? A. They were irregular in their action and therefore we feared that such irregularity might cause us to flood back upon the property over which we didn't have releases, and at that time we were threatened with suits in connection with encroachments upon property by our backwater.

Q. What was there about the flashboards you were using in 1911 which made them irregular in their action? A. We didn't know how the pins would act.

I recall that some of the pins would bend very slowly, whereas for reliability of action pins that will either break or release quickly would be desirable.

For instance, a pin might bend to a 45 degree angle and then hold up there. It would take a considerably greater head of water than we had estimated or we desired to bend the pin over flat. So we tried different kinds of steel. We tried notched pins, and we tried also various devices other than pins. Wicket or butterfly gates and quite a number of devices were evolved, some of which were tried on the dam and some of which were tried elsewhere, I think in a little channel between Piney Island and Holly Island.

[2234] Q. So it was the reaction of the pin to the pressure of the water which was the drawback in 1911. Is that it? A. That and of course we made improvements in the panels themselves. We also had to learn how to handle the flashboards sometimes to be able to remove them, but more particularly to be able to reinstall them at the earliest possible moment with water flowing over the crest of the dam.

We don't have to be that particular now because we can hold back water for a little while at Safe Harbor and get a dry dam crest to work on.

Q. With respect to handling of the flashboards, that was a matter of operation—right? A. That was a matter of operation, but it was also a question of design.

Q. You mean the type of design of the panel determined the method of operation of the flashboard? A. Yes, for instance, I think we had strap irons fastened vertically to the boards. The strap iron formed a loop at the top of the boards for handling.

It is my impression we tried out a number of different kinds of strap iron arrangements. We tried using sills, wooden sills on the crest of the dam in order to make the flashboards more easily seated so that they wouldn't leak so much.

Q. What were the panels of the flashboard being used [2235] in 1911 made of? A. I think either 1 inch or 1½ inch boards fastened together.

My impression is that they were fastened together with wooden vertical pieces, but that I am not quite sure of. I believe they were wired to the pins and we used manure and sawdust for tightening them.

Q. When you said you made improvements in the panelling what did you have in mind? A. I don't remember the various steps we went through but I think it was a question of the length of the panels which had to be determined with the view of being able to handle them more readily.

The shorter the panel the easier it would be to handle when water was going over the dam, that is to say it would be easier to install it. On the other hand shorter panels meant more vertical joints that would have to be caulked. If the panels were not rigid enough they would bend under water pressure and leak.

Q. These improvements of which you speak came about as a matter of your operating experience with the panels you were using. Is that it? A. I would say it was this way: The panels weren't accurate enough in their operation to suit us so we designed this and that alternative and tried these out under operating [2236] conditions. Also we tried them out under test conditions as I have indicated before.

Q. When you say that the panels you were using in 1911 were not accurate enough in their operation to suit you, does that mean that they actually failed to perform their function? A. No, I meant by that both panels and pins together. But they were not accurate in their point of release as respects the height of the water and there was question, also of getting the kind of flashboard that would be cheapest to handle that would be capable of being tightened with the least trouble and expense and that would release uniformly.

One of the troubles we had was that the panels might release, say, over a thousand fleet of the length of the dam and leave the panels standing on the balance of the dam, whereby the water would discharge over the section where the flashboards had released and would be retarded over the other section, giving backwater that was undesirable.

Q. Had that actually happened at times? A. Yes, sir.

[2237] Q. All right. A. Then there was one type we experimented with which was very satisfactory in certain respects. We found difficulty with it because the operation of these flashboards would at times be interfered with by trash floating in the river. This was the type that we called the butterfly flashboard where we could release a long line of flashboards by releasing the end one and the other flashboards would drop out consecutively like cards falling one after another. But the difficulty was that the openings would be clogged up. These flashboards were also satisfactory with regards to easy replacement but we had to abandon them finally because of the trash consideration.

Q. But generally speaking isn't it fair to say that the flashboards in use today are of the same type that were in use in 1911? A. Of the same general type, yes.

* * *

[2292] Q. Before the 1931 agreement between Consolidated and Holtwood was entered into which we know in this proceeding as Items "H" and "I", what did Holtwood sell to Consolidated? A. Holtwood sold electric service.

Q. Just as they do today. Is that right? A. Holtwood also sells electric service today.

Q. You have mentioned earlier in this proceeding that it was your recollection that Safe Harbor was named in the agreements which are identified in this proceeding as 71, 73 and 76, for tax purposes. Do you recall that? A. Yes, sir.

Q. Naming Safe Harbor in those agreements for tax purposes had no bearing on the question of service being

rendered by Safe Harbor. Isn't that so? A. I think that it did not have any bearing.

Q. Is it you recollection that there was some advantage to be gained in lower income taxes if Safe Harbor were named in those contracts?

MR. SPARKS: Did you say income taxes, Mr. Goldberg?

MR. GOLDBERG: Or other types of taxes.

THE WITNESS: I think that it was thought that advantage would be gained perhaps at the time or perhaps later on—that [2293] I don't recall.

By MR. GOLDBERG:

Q. Was the advantage solely in relation to income taxes or other types of taxes? A. I think gross receipts tax was an element taken into consideration.

Q. Is that a federal gross receipts tax or state? A. I think it was a state tax.

* * * *

Q. Yes. What state did you have in mind—was it Maryland or Pennsylvania, or both? A. I think it was Pennsylvania.

* * * *

Q. If Safe Harbor were not named in Exhibits 71, 73 and 76, which I place before you, would that have any bearing upon the operations of Safe Harbor?

* * *

[2294] THE WITNESS: I don't know whether it would have any contractual bearing but I don't believe it would have any bearing upon the furnishing of service from a technical viewpoint.

By MR. GOLDBERG:

Q. Yes. That is what I had in mind. In other words, physical operations? A. Yes, sir.

* * *

[2300] Q. Who schedules the generation of Safe Harbor?

A. That is the result of a number of decisions, deriving in part from the desires for service of, let us say, Consolidated, Pennsylvania Railroad, Washington, and electric groups to the north.

As a consequence of such demand for service the load dispatchers at Baltimore in the employ of Consolidated and Holtwood determine upon that allocation of service that it is [2301] hoped will be most advantageous from the viewpoint of coordination of the facilities of Safe Harbor with the other facilities available through interconnection, etc.

Q. Those load dispatchers that you referred to, they schedule the operations of all other plants on the interconnected system, including the hydro at Holtwood and the steam at Holtwood and the steam at Consolidated. Isn't that so?

A. They control more precisely the operations at Safe Harbor and Holtwood, while Consolidated, a little more precisely, controls its own steam operations. But these three sources with others must be coordinated so that the load dispatchers actually consider the situation as a whole.

Q. In other words, when there is a demand from the electric groups to the north—and by that I take it you mean the Pennsylvania firm customers we have talked about in this case——

A. Or the interconnected customers.

Q. When there is a demand from them the load dispatchers look at the integrated system as a whole, and in view of the operations to derive the maximum economy schedule for generation to supply that demand for the north the cheapest source of generation at that time. Is that right?

A. It is not only economy. For instance, of particular importance during the war time was the maintenance of the [2302] maximum amount possible of stored water so that at times it would have been more economical to draw on that stored water with the prospect of replacing it later from a freshet or over the week end. But consider-

ations such as that sometimes enter to cause deviation from mere economy considerations.

Q. Ultimately, however, it is a long range economy consideration which brings it about. A. I think that is a fair statement.

Q. Rather than a shorter range economy program? A. Yes, sir.

• • •

[2304] Q. We do know, don't we, that Safe Harbor has no direct connection with the facilities of Consolidated or Pennsylvania Power and Light Company and Philadelphia Electric Company, Edison Light and Power Company and [2305] Metropolitan Edison Company. Is that right? A. I think that is true as respects physical connection.

Q. Or with the Pennsylvania Railroad? A. Yes, sir.

Q. The only direct connection, direct physical connection, that Safe Harbor has is with the facilities of Holtwood. Isn't that so? A. Yes, sir.

Q. When Safe Harbor's generation passes off Safe Harbor's facilities on to the facilities of Holtwood, Safe Harbor no longer has anything to do with the disposition of that energy. Isn't that so? A. That is a little difficult to say. Technically that transmission is practically instantaneous.

Q. I realize that when there is a load at one end there is generation at the other. A. Yes, sir.

Q. But nevertheless the flow of the supply from Safe Harbor on Penn Water's facilities is controlled by Penn Water. Isn't that so? A. You mean controlled contractually or from an operating standpoint?

Q. From an operating standpoint. A. I would say that it is controlled by all of the equipment that is physically connected, not only Safe Harbor and Holtwood's equipment, but the equipment of such companies [2306] as Metropolitan Edison and perhaps Philadelphia Electric, because the path over which the service flows depends not upon the generating source alone but upon the inter-action

of the equipment of the receivers. For example, supply intended for the North might flow in part over the circuit to York and in part over the circuit running north towards Harrisburg on the east side of the river. That division isn't in the hands or control of either Safe Harbor or Holtwood alone, but depends upon phase relations, voltages and so forth, a part of which are in the control of all of those connected physically to the system.

• • •

[2315] Q. For purposes of this question I want you to assume, and not to pass upon the legal interpretation, that the Federal Power Commission in this case will have the power and authority not only to direct what rates are to be charged but will have the authority to require rewriting of any contracts in accordance with what it deems to be the facts.

Now, then, with that in mind, suppose the Federal Power Commission at the end of this proceeding orders Exhibits 73 and 76 to be rewritten to eliminate Safe Harbor from those agreements, would you say that such elimination of Safe Harbor would prevent Penn Water from rendering the service required under Exhibits 73 and 76?

• • •

MR. SPARKS: I assume you are speaking from an operating standpoint, Mr. Goldberg?

MR. GOLDBERG: Yes, physical operations.

THE WITNESS: As respects reliability of service, I don't believe there would be any loss.

• • •

[2316] Q. In other words, the operation of Penn Water and Safe Harbor would continue just as they are today?

• • •

A. Yes, sir.

• • •

Q. Can you make energy available to customers without voltage? A. No, sir.

Q. Can you make it available to them without phase? A. Not except in the sense of direct current.

Q. Can you make it available to them without frequency? A. Not except in the sense of direct current.

Q. Can you make it available to them without power factor? A. Not except in the sense of direct current.

Q. Can you make it available to them without proper [2317] number of phases? A. Not except in the sense of direct current.

Q. Can you make it available to them without electric power? A. No, sir.

Q. Do Safe Harbor and Holtwood have any direct current sales? A. No, sir.

Q. When we were talking about scheduling of operations by the load dispatchers, they schedule those operations looking at the total system load; don't they? A. Looking at the total system load and the details, also.

* * *

[2320-A] Q. Did Pennsylvania Water and Power Company at one time investigate the possibility of building a roller dam at Holtwood? A. Yes, sir.

Q. Will you, for my sake and for the sake of the record, tell us what a roller dam is? A. A roller dam is a contrivance designed to be placed on the top or crest of an overflow dam for the purpose of raising the level of the water above the dam. The roller dam rolls on inclined guides so that it may be rolled up out of the way to permit flood water and ice and trash to pass underneath it, or it may be raised up a few feet to let water pass in limited amount.

It was investigated with the thought that it would give a greater head than would be safely obtainable from the use of flash boards, but the idea was not carried out and later on, when Safe Harbor was planned, the back water from the Holtwood dam was designed to extend up to the tailrace of Safe Harbor.

A roller dam, you might say, would look something like a huge rolling pin that would roll up out of the way.

Q. Did I understand you to say that the idea was abandoned after investigation had been made of it? A. It was abandoned after it was decided to locate Safe Harbor, as was done, but for a number of years prior to that [2321] the thought of eventually installing a roller dam remained with us. It is not entirely out of the question that it might not be desirable to install later on a roller dam at Holtwood, but of a less height than originally was contemplated so that we might do away with the flash boards which are difficult to manipulate.

Q. This investigation of roller dams was started by Allner as early as 1912. Isn't that so? A. Yes, sir, that was at the time when we were considering different types of flash boards and different sorts of devices. It has merits even today.

Q. All right. A. That grew out of the lack of head gates, or flood gates, on the Holtwood dam such as have been installed at Safe Harbor and as were installed at our suggestion at Conowingo Dam.

Q. Did Pennsylvania Water and Power Company make an investigation for storage reservoir sites at Holtwood Dam during early years of operation? A. Yes, sir.

Q. Do you remember when those studies were made? A. I think they were started, or at least were in operation, in 1911. I think we thought of it nearly from the beginning because we had been doing similar work in Canada, and naturally our attention would be drawn to the possibilities of doing something of that sort in Pennsylvania.

Q. The idea, however, was given up. Is that right? [2322] A. It was given up temporarily. Investigations were made and later on we acquired some property suitable for a dam site on the Raystown branch of the Juniata River, but eventually, at the request of one of our then customers, we turned that property over to that customer for eventual use by their customers. A development at Raystown is still being considered by the Federal Government.

Q. But as far as Penn Water is concerned the idea was abandoned a long time ago, that is the idea of storage reservoir sites which were investigated in the early days? A. No, I wouldn't say that, because even in recent years it was with some regret that I look back to our turning over that dam site to a company which did not develop it. I think there is still a possibility there.

Q. Nothing definite? A. No, but computations have been made of the type of construction that might be suitable there and estimates of cost were made and also estimates of the possible beneficial effects to plants further down the stream. That has been done even in recent years.

* * *

[2379] Q. Wasn't that because Safe Harbor renders no service under Exhibits 71, 73 and 76? A. I don't know because Safe Harbor does render service to the other companies.

Q. Does it have any rates or charges for those services? A. Not rates and charges, no, but it render service.

Q. Does it render such services free of charge? A. I judge not.

Q. Where are the rates or charges for the services Safe Harbor renders? A. I don't know.

Q. Has it ever received any payment for those services? A. Payment from whom?

[2380] Q. Pennsylvania customers under Exhibits 71, 73 and 76? A. No. I am speaking of services here in the technical sense.

Q. To include electric energy. A. To electric service which has such attributes as electric energy, etc.

* * *

Vol. II

TRANSCRIPT OF RECORD

(Pages 535 to 1050)

Supreme Court of the United States

OCTOBER TERM, 1951

No. 428

[2388] GEORGE W. SPAULDING.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[2391] Q. Did I understand you to say that Exhibit 72 in this proceeding, which I now hand you, provides for the delivery of electric energy to Penn Water by Metropolitan Edison? A. Provides for the interchange arrangements whereby Penn Water has and does and is receiving energy and other interchange services, frequently of a capacity nature, from Metropolitan Edison—yes, sir.

Q. Would you say Penn Water and Safe Harbor receive that electric energy? A. Safe Harbor is not a named party to this contract.

Q. Aside from the fact it is not a named party would you say that it receives electric energy from Metropolitan Edison under Exhibit 72? A. No, I would not say it did.

Q. Suppose it were a named party? Would you say that it did? A. I would; yes.

Q. Did I understand you correctly? Did you say that Pennsylvania Power and Light Company, under Exhibits 76 and 77 furnishes electric energy to Safe Harbor and Penn Water? A. I think so.

Q. Will you point out the provisions? A. Article Roman numeral VIII of Exhibit 76 being the Lancaster Power Supply contract of May 1, 1933, between [2392] Pennsylvania Power and Light and Penn Water and Safe Harbor provides that interconnection and parallel operation will be undertaken as promptly as possible and that arrangements will then be made for an equitable division of the cost of any changes in the facilities, etc.

Exhibit 77, which is a letter agreement of April 28, 1939, between Pennsylvania Power and Light and Penn Water and Safe Harbor, is a supplement, or an amendment, to Exhibit 76 and provides in paragraph 11 thereof for economy interchange, in paragraph 12 for emergency

interchange, and in paragraph 14 for the joint use of transmission facilities for those purposes.

Q. In other words, the provisions for firm power supply and interchange are part of the same agreements. Is that right? A. They are incorporated in the same contracts; yes.

Q. You just referred to the joint use of transmission facilities.

What transmission facilities of Safe Harbor are jointly used in connection with Exhibits 76 and 77? A. Paragraph 14 reads in part as follows:

> "In order to secure the greatest practical benefit"——

Q. Let me interrupt. Paragraph 14 from what exhibit? A. Exhibit 77, which is the letter agreement of April, 1939.

> "In order to secure the greatest practical benefit in [2393] the utilization of those tie-in facilities in the Harrisburg and Lancaster areas which may be available to either party providing a path between Generating Companies and Receiving Company in parallel with the path owned by or available to third parties with whom both parties are interconnected."
> —I will not read the rest unless it later becomes necessary.

Those are the facilities providing a path between generating companies and receiving companies, some of them, of conrse, owned by Safe Harbor and some by Penn Water and some by Pennsylvania Power and Light, and reference is here made to other facilities owned by third parties outside of th s contract which are neither owned or operated by any of the parties to the agreement.

Q. Who are the third parties not named in that agreement? A. Metropolitan Edison Company, Edison Light and Power of York, and I believe the Philadelphia Electric Company and the Pennsylvania Railroad.

Q. What facilities of the Pennsylvania Railroad?
A. As I explained a few minutes ago, the interchange of energy and capacity over the facilities of the railroad are of a little different nature in operation from those in any other interconnection agreement. It frequently occurs that Penn Water and Safe Harbor will supply to the Pennsylvania [2394] Railroad Company at Safe Harbor energy and capacity in excess of its "Contractual requirements" which I am using here in a technical sense and not a legal sense, and at such times such electric services are used by the Pennsylvania Railroad to meet its requirements on other sections of its electrified system.

Meters have been installed at several points on the Pennsylvania Railroad's electrified system for the purpose of determining the amount of such excess energy used by the railroad on its other sections and such capacity and energy and other services are accounted for as though sold to the Philadelphia Electric.

When electric services are furnished by the Philadelphia Electric to Penn Water and Safe Harbor in the reverse direction, the principle is just the reverse.

Electric services are furnished by the Philadelphia Electric and used by the railroad to meet its requirements in what we refer to as the contractual load area of Penn Water, Safe Harbor, Consolidated Gas Electric Light and Power Company of Baltimore, and when such services are received and so used by the railroad in that section of their system which is normally supplied from Safe Harbor it is accounted for as being energy and other electrical services delivered by Philadelphia Electric to Pennsylvania Water and Power Company under the interconnection agreement which I indicated [2395] a few minutes ago had not been so far identified in these proceedings.

Q. I didn't hear the description of the facilities of the Pennsylvania Railroad. You spoke about the operations but I didn't hear you describe the precise transmission facilities of the Pennsylvania Railroad. A. I en-

deavored to point out that it is a matter on the one hand of Penn Water and Safe Harbor supplying services to the railroad's transmission system and these being then transmitted or carried by the railroad to whatever part of their system they may desire, and, on the other hand, when Philadelphia Electric Company may supply the railroad services in excess of their contractual requirements the railroad transmits that capacity and energy and other services to the section of the railroad system which is normally supplied from Safe Harbor.

It is in that way that the railroad's facilities are used really by themselves rather than by us, but it forms a parallel path over which, at least for accounting purposes, we directly consider that power flows, energy flows, and other electrical services flow from Penn Water on the one hand to Philadelphia Electric on the other hand.

• • •

[2396] Q. I am trying to understand your answer.

You said by "Us", and then you said it was not exact, you were referring to the joint use of facilities in Exhibit 77. I say by whom? A. There are several paths, and by paths, I refer to electric transmission lines, over which electric power, energy and other services are transmitted as interchange between Penn Water and Safe Harbor on the one hand and between their Pennsylvania customers on the other. It becomes necessary for operating purposes to account for the power flows on each of those parallel paths separately. Recognition frequently is given to that fact, that energy and capacity, reactive and other services, may actually be transmitted over one path though finally received by or used by a third party with whom Penn Water and Safe Harbor may have a direct path, but because of electric operations of the integrated systems it is not possible to control the flow of capacity, energy, reactive and other services over the single path between Penn Water and Safe Harbor on the one [2397] hand, for instance, and Pennsylvania Power and Light on the other

but rather some of those services may flow over one or more of the other parallel paths.

* * *

[2398] THE WITNESS: I will refer to Exhibit 37. The parallel path you first asked me to describe which includes certain of the railroad's facilities are in part shown on Exhibit 37. Between the main generator bus at Safe Harbor and the railroad's facilities there is, first, a 25,000 K. W. frequency changer which permits conversion of three-phase sixty cycle electric services to 25-cycle single-phase electric services.

In parallel electrically with that frequency changer are two water-wheel generators of approximately 30,000 kilowatt [2399] capacity each, providing for the supply of 25-cycle single phase service.

These three machines are connected by an electric cable system owned by Safe Harbor through the hill to a sub-station owned by Pennsylvania Water and Power Company adjacent to the project boundary of Safe Harbor, and there the service is transformed to 132 K. V. And there are then two paths over which such electric service may flow, the first being toward Thorndale, Pennsylvania, near Coatesville, shown on the upper right-hand portion of Exhibit 37, over facilities owned by the Railroad, and the other path being over transmission lines owned by Pennsylvania Water and Power Company and S. T. Co. of Maryland, toward Perryville, Maryland, shown at the head of Chesapeake Bay about the middle and toward the right-hand side of Exhibit 37.

At that point the transmission lines of Penn Water and the subsidiary interconnect with the transmission network of the Pennsylvania Railroad Company and power may flow to the right or toward Philadelphia and New York.

At the points indicated as Thorndale, Pennsylvania, and Perryville, Maryland, there are installed electric meters for the purpose of determining the amount of

electric energy and other services which flow to that portion of the Pennsylvania Railroad's system not normally supplied by Penn Water and Safe Harbor, and, on the other hand, will meter that power and [2400] energy which flows from the Northern Portion of the Pennsylvania Railroad's transmission system toward that portion of the railroad's system normally supplied by Holtwoood and Safe Harbor.

It is the metering of the power and energy at Thorndale and Perryville that is used for accounting purposes under the Philadelphia Electric-Penn Water interchange contract which has not yet been identified in these proceedings.

• • •

[2407] Q. With respect to the transaction that you described under which Penn Water, you said, furnishes or stands ready to furnish electric services to Baltimore, will you point to the provisions in Items "H" and "I" covering the rates or charges? A. For such service?

Q. Yes. A. Well, I have just described or endeavored to describe that there are two transactions, and the dollar payments made [2408] or collected by Penn Water are the net dollar result of the two transactions.

Q. You mean by that last statement that in Items "H" and "I" there is not shown a separate rate covering the backfeed transactions? A. Not as such, Mr. Goldberg. You have to go back to the 1927 agreement which I think is Item "H".

Q. Yes. A. And there you find in Article 6 of that 1927 agreement the provisions for the services to be rendered by Electric, as it is referred to in here, meaning Baltimore Company, to Power, and therein meaning Penn Water, under this contract.

Q. Is that still in effect today? A. Yes, sir.

Q. And that is the provision that covers the backfeed by Consolidated to Penn Water? A. Yes, sir.

Q. Where is the rate shown for that? A. There is no rate shown other than the statement, "For all such

energy Power will be billed for the daily net amount of such backfeed at actual costs plus ten per cent."

MR. MYSE: Will you read the entire paragraph? It is very short.

THE WITNESS: Article 6. Heading, Steam Energy Purchased.

> "Upon request of Power, Electric will supply to Power steam [2409] generated energy in excess of Electric's own requirements up to the limit of its available generating capacity, provided, however, that Electric is not obligated to start up a station which would not otherwise be operated. For all such energy Power will be billed for the daily net amount of such backfeed at actual costs plus ten per cent, (10%). The costs to be used are those reported on Electric's monthly production statement covering the month during which steam energy was furnished to Power."

By MR. GOLDBERG:

Q. So that the rate, if we may speak of it as such, for the backfeed energy from Consolidated steam electric plants is covered in the provision you just read—right? A. Yes, sir.

Q. Where are the rates and charges for the transaction whereby in a technical and operating sense Penn Water sells, in your terms, electric service to Consolidated? A. There are no rates in the usual sense of a rate for capacity, a rate for energy, a rate for reactive, a rate for certain specified facilities, but there is a formula incorporated in the contract of June 1, 1931, which is the basis for the payments made for the services rendered, for the net services rendered, by Penn Water to Baltimore on the one hand and by Baltimore to Penn Water on the other.

Q. What article is that in in Item "H"? A. Article III.

[2410] Q. All right. A. I should include or add to that, or at least indicate, that the Article III of the 1931 contract was amended by a contract between the same two parties dated September 29, 1939, which amendment affects the payments to be made under Article III.

Q. Now, you say the Article III of Item "H" and the amendment contained in Item "I" cover the backfeed by Consolidated to Penn Water? A. I think that requires a little additional explanation.

Q. All right. A. The contract of June 1, 1931, set out a method for computing the payments for the services to be rendered by Penn Water to Baltimore Company, and then stated that any matters not specifically covered or contrary to the matters incorporated in the 1927 contract would be continued, with the result that the parties have always considered for accounting and billing purposes that the section referring to steam generated energy to be made available by Baltimore Company to Penn Water was a separate item to be considered in connection with the 1931 contract, and for several years accounting under that separate article, referring to the purchased energy, was continued.

There then was a span of years, particularly after the Safe Harbor plant of the Safe Harbor Water Power Corporation was fully available, when there was no "daily net backfeed". Again, in the late 30's, with the increasing requirements of the [2411] Pennsylvania customers of Penn Water and Safe Harbor requiring more and more of the output of the Safe Harbor and Holtwood developments there was necessarily less energy available to Baltimore Company. As a corollary during extreme low flow periods, and particularly on Sundays, there was a daily net backfeed from Baltimore Company to Penn Water to supplement the services provided by Penn Water and Safe Harbor to their Pennsylvania customers.

The operating committee, set up under provisions of Item "H", of which I am the member for Penn Water

and Safe Harbor, considered the question of accounting for "daily net backfeed", and, with advice of counsel, concluded that inasmuch as the accounting for such backfeed did not affect the operating incomes of either Baltimore Company on the one hand or Penn Water on the other, and as I recall it, because no other party was involved or interested—and this is from memory—it was concluded that we need not account for that energy for billing purposes, and I think no accounting of such backfeed on the bills of the companies has been carried on at least in the last five or six years, and I do not believe there has been any since the early 30's. But there has still been full recognition that that Article 6 in the 1927 contract was applicable.

* * *

[2420] Q. In connection with Exhibit 77, and more particularly the paragraph numbered 14 which is entitled, "Joint use of transmission facilities", will you describe the transmission facilities of Safe Harbor that are jointly used in connection with Exhibit 77?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: I will refer to Exhibit 41.

Generally in the upper left-hand portion of Exhibit 41, there is shown the station layout of the Safe Harbor hydro plant, or station as it is called here, and designated in blue ink is the term Donegal Tap.

The facilities owned by Safe Harbor and operated by Safe Harbor are those between that 13 K. V. bus of the hydro station in heavy black through the transformers owned by Safe Harbor transforming the electric services from 13 K. V. to 66 K. V. and from those transformers up to the top of the hill above the [2421] plant, at which point they interconnect with the transmission facilities owned and operated by Penn Water.

When I refer to facilities I am, of course, referring only to the transformers, oil circuit breakers, and associated equipment and I have not included such things as meters and control, which are rather extensive and which are owned and operated by Safe Harbor in manipulating or controlling facilities owned by Penn Water.

Q. Have you finished your answer? A. Yes, sir.

MR. GOLDBERG: May I have the answer read, please?

(Answer read.)

By MR. GOLDBERG:

Q. When you say "facilities on top of the hill" you mean Manor sub-station, do you? A. Manor sub-station is at the top of the hill, but Safe Harbor owns what we refer to as the river span of the transmission line, including the first tower on top of the hill at which point interconnection is made with the facilities of Penn Water.

Q. Those spans are 220 K. V. spans? A. No, the ones I am referring to are 66 K. V. spans.

Q. There are several 220 K. V. spans? A. And Safe Harbor owns them, also, but they are not——

[2422] Q. Involved? A. —the transmission facilities referred to in paragraph 14 of Exhibit 77.

Q. In other words, the transmission facilities referred to in paragraph 14 of Exhibit 77 are the facilities you have described, including the 66 K. V. spans from the transformer pockets up to Tower No. 1, up to and including Tower No. 1, which is adjacent to the Manor sub-station. Is that right? A. I have forgotten about the Tower number, but it is including the first tower on the hill.

Q. Otherwise my statement is correct—is that right? A. That is correct.

Q. Other than the transmission facilities that you have described of Safe Harbor in connection with Exhibit 77 what are the other transmission facilities of Safe Harbor?

We have already mentioned the 220 K. V. spans. A. Yes.

Q. Are there others besides that? A. You mean other than those referred to in Exhibit 77?

Q. That is right. A. There are the 220 K. V. transformers stepping up from 13 K. V. to 220 K. V. We usually refer to those technically as transmission facilities. I don't know what the legal connotation may be. Safe Harbor also owns and operates the 13 K. V. single phase 25-cycle cable system from the frequency [2423] changer and single phase generator terminals in the Safe Harbor Powerhouse in the tunnel through the hill to the Conestoga sub-station of Penn Water where connection is made to the single phase railroad bus of Penn Water.

I would consider those transmission facilities, again speaking from a technical sense.

I don't know whether the tremendous amount of cable, control cable, switches, metering, relays, etc. which are associated with the transmission facilities of Penn Water but which are owned and operated by Safe Harbor in the main control room at Safe Harbor, would be considered a portion of the transmission facilities. I think from a technical point of view I would say they were, because the Safe Harbor control room has two large control boards, a 25-cycle board and a 60-cycle board.

The 60-cycle board controls all of the transmission facilities of Safe Harbor to which I have just referred, including both the 220 K. V. and the 66 K. V. facilities, and the 25-cycle—I want to go back to 60-cycle facilities. They also control the transmission line facilities at Manor substation, and on the tap circuit, previously referred to as the Donegal Tap circuits owned by Penn Water, but which is used to control the tie-in facilities with Pennsylvania Power and Light, and again referred to in paragraph 14 of Exhibit 77.

[2424] Referring now to the 25-cycle control board, the entire board, with the exception of the two generators and

the one frequency changer panels, which make up perhaps less than 20 per cent of the control board, are devoted to the control of the transmission circuits of Penn Water and of the Pennsylvania Railroad Company at Conestoga substation, jointly owned by Penn Water and Pennsylvania Railroad. In addition there are several metering circuits provided by Safe Harbor in order that the Safe Harbor operating force may actually control the flow of power between the plants of Safe Harbor and Penn Water and those [of] Metropolitan Edison Company, Pennsylvania Power and Light Company and Philadelphia Electric Company over the railroad circuits, and it is the operating force at Safe Harbor which very largely controls the flow of power over these interconnected tie-lines.

The facilities were provided at Safe Harbor because of the large installation of capacity there and the fact that that capacity is frequently operated as the only reserve capacity on the system, which I referred to in my direct examination in connection with Exhibit 8, I believe, so that that operating group has a large part of the responsibility for the division of load between the Safe Harbor plant, which is to be furnished to the customers of Penn Water and Safe Harbor, and the load from Holtwood or from the other generating sources on the system, all of which I believe, [2425] might be considered as transmission facilities.

* * *

[2430] Q. Is voltage a part of the electric service? A. I would say the voltage was an attribute of electric [2431] service, yes.

Q. Is it required in connection with the electric service? A. Most certainly is, and if the voltage is not there, then the service is not there.

* * *

[2448] Q. And sometimes when special facilities are provided there is a special charge for it and sometimes it is

part of the demand and energy charge, isn't it? A. That is correct.

Q. Do you know of any contracts where frequency, voltage, phases and power factors are not mentioned? A. Offhand I don't recall except in the interchange agreements they are not always specified because reference is made in them to the furnishing of the services at a specified point that is usually referred to in some other firm power agreement, and therefore the repetition may not have been necessary.

Q. May not have been necessary? A. That is right, but it is implied just the same.

• • •

[2450] Q. So that when the contract speaks about the supply of power and energy or capacity and energy, necessarily included in those phrases are the other attributes you mentioned—voltage, point of delivery, phase, frequency, and the like—right? A. They may be assumed, but usually the contract at some point will specify what those other attributes must be.

Q. That is right. It will specify that the electric energy and capacity to be interchanged and supplied, is to have certain characteristics. Right? A. That is correct.

• • •

[2452] Q. Does Safe Harbor receive interchange energy under Exhibit 72 from Metropolitan Edison? A. Not directly.

Q. Does it do so indirectly? A. Well, when interchange energy is received by Penn Water alone as results from operations under Exhibit 72, or when such energy, capacity and other interchange services are received by Penn Water and Safe Harbor under the operations of [2453] Exhibits 76 and 77, such energy is available to those two companies in meeting their operating performances under its other contracts, and as I have testified in my direct we must and do consider Holtwood and Safe Harbor

not only as a single operating development but we must consider their operations together. That is why I referred to the energy being received by Holtwood and Safe Harbor directly under the operations of Exhibits 76 and 77, but being received by Safe Harbor indirectly under the operations of Exhibit 72.

• • •

[2458] Q. Does Safe Harbor make any payments for the Interchange energy it receives under Exhibit 72?

• • •

THE WITNESS: No.

By MR. GOLDBERG:

Q. Does Penn Water? A. Yes.

Q. Does Safe Harbor make any payments for the interchange energy it receives under Exhibits 76 and 77?

• • •

THE WITNESS: No.

By MR. GOLDBERG:

Q. Does Penn Water? A. Yes.

Q. Penn Water makes the payments under Exhibits 72, 76 and 77 to Metropolitan Edison and Pennsylvania Power and Light Company respectively—right? [2459] A. That is correct. The bills rendered to Pennsylvania Power and Light and Metropolitan and the payments made by Penn Water to Metropolitan Edison and Lancaster are made only by Penn Water.

Q. Does Safe Harbor reimburse Penn Water for any of those payments under Exhibits 72, 76 and 77?

• • • •

THE WITNESS: There are no bills rendered or payments made between Safe Harbor and Penn Water for such transactions.

By MR. GOLDBERG:

Q. The fact of the matter is that the only payment between Penn Water and Safe Harbor are the payments made

by Penn Water under items E, F, and G—right? A. Those are the only payments made; yes, sir,—in dollars, of course.

Q. What do you mean when you tack on that last phrase, "In dollars"? A. We are speaking of bills. I am stating that when we are talking of bills we are talking about dollar transactions.

Q. Are payments made in any other form? A. Well, Penn Water receives energy and capacity from Safe Harbor, yes.

Q. Under items E, F, and G. A. Yes.

[2460] Q. And pays for it? A. Payments are rendered for it, yes, but not in proportion to the services received.

Q. All you mean by that is that Penn Water pays for one-third of Safe Harbor's capacity and energy output—right? A. Under "E", "F" and "G" Penn Water pays one-third of the revenues Safe Harbor expects to receive under "E", "F" and "G" in exchange for its entitlements.

Q. And you are saying that though it pays for one-third of its entitlements it does not necessarily receive that one-third. Is that right? A. That is right.

Q. That one-third may go to the Pennsylvania firm customers—is that right? A. Yes, sir.

Q. And when it goes to the Pennsylvania firm customers—— A. Of Penn Water and Safe Harbor.

Q. I am not adding that. When it goes to the Pennsylvania firm customers, Philadelphia Electric, Pennsylvania Power and Light Company and Metropolitan Edison, those companies reimburse Penn Water for the energy they received—right? A. Those companies reimburse Penn Water for the electrical services rendered to them by Penn Water direct or by Penn Water and Safe Harbor, as the case may be.

Q. They pay only Penn Water—right?

[2461] The accounting and billing is all done by Penn Water. Is that right? A. That is right.

Q. They pay only Penn Water. Is that right? A. Payments are made only to Penn Water.

Q. And Penn Water pays Safe Harbor only under the provisions of Items "E", "F" and "G"—right? A. All payments made by Penn Water to Safe Harbor are made under the provisions of Items "E", "F" and "G".

Q. And if Penn Water were not to receive any part of that one-third but instead three-thirds went down to Consolidated, Penn Water would nevertheless pay Safe Harbor for the one-third of its entitlements under Items "E", "F" and "G"—right? A. You are assuming no contractual changes, of course, but merely that under some conditions three-thirds might go to Baltimore?

Q. That is right. That is an assumption, three-thirds may not go. Let's assume that it does. A. Under those conditions Penn Water still makes payments to Safe Harbor equal to one-third of the total revenues to be received by Safe Harbor under "E", "F" and "G".

Q. Yes, and Consolidated reimburses Penn Water for all of that three-thirds under Items "H" and "I"—right? A. Under that assumption that would be correct.

* * *

[2463] Q. This is the fact, isn't it—that what Penn Water pays to Safe Harbor under Items "E", "F" and "G" is wholly independent of what Penn Water receives from Metropolitan Edison, Philadelphia Electric and Pennsylvania Power and Light Company—isn't that so? A. That is correct.

* * *

[2467] Q. What did you understand kilowatt-hour sales to mean when you were using that on Exhibit No. 9? A. I made it very clear from the footnote on Exhibit No. 9 that the revenues were the total revenues received including charges for all services rendered, and perhaps I should have said both electrical services and other transmission services rendered.

Q. Perhaps you should have said kilowatt-hour sales and other electric services? A. The kilowatt-hour sales, as shown there, was the accounting designation used in the Federal Power Commission reports wherein we do account for the energy, both the energy generated ourselves and the energy received from others. That is the energy recorded as being delivered to the firm power customers of Penn Water and Safe Harbor.

[2468] Q. Isn't it a fact that you prepared Exhibit No. 9 and thought it was perfectly proper to refer to it as kilowatt-hours sales because it represented delivery by Penn Water to the Pennsylvania customers of kilowatt-hours for compensation? A. Yes.

Q. And you thought it was perfectly proper to use that designation in connection with your technical explanation of electric services. Is that right?

• • •

THE WITNESS: Apparently that is a part of the transaction. I saw nothing wrong with it then. I don't think I see anything wrong with it now.

By MR. GOLDBERG:

Q. I don't, either.

Now, then, will you describe for us the sales of power and energy with all of those attributes that you have mentioned, voltage, frequency, and so forth, that are made by Penn Water on a firm power basis and on an exchange basis? A. May I have the question again, please?

[2469] (Question read.)

THE WITNESS: Under contracts identified as Exhibits 73, 74, 75, Penn Water and Safe Harbor provide services, some electrical services, some special facility services, to Philadelphia Electric Company at Coatesville. Some of those services originate in the hydroelectric plant of Holtwood. Some originate in the steam electric generating station at Holtwood. Some originate in the hydroelectric plant of Safe Harbor Water Power Corporation.

Those services are provided for Philadelphia Electric Company at Coatesville on the one hand directly over the transmission facilities from Holtwood and on the other hand over the generating and transmission facilities of Safe Harbor and the transmission facilities of Penn Water. Hence, to Coatesville.

The metering of the energy, the metering of the demand under those agreements is provided for at the Newlinville sub-station of the Philadelphia Electric Company at Coatesville. Although the services rendered under these contracts, Exhibits 73, 74, and 75, are rendered jointly by Penn Water and Safe Harbor, the accounting for the energy and the billing for the energy, demand and special facilities services are carried out by Penn Water acting for itself and for Safe Harbor. Under these contracts there are no interchange services. They are strictly firm power services.

There is provision for interchange in emergency services [2470] but to my recollection there has not been any accounting or billing for such services under those contracts since 1933.

* * *

Q. I wanted to interpose. When you were discussing the origin of the source of supply to the Philadelphia Electric Company, I recall that you mentioned the Safe Harbor hydro plant, the Holtwood hydro plant, and the steam electric plant. You overlooked mentioning steam electric plants of Pepco and Consolidated. Is that right? A. I suppose I also overlooked the generating facilities of Pennsylvania Power and Light and Metropolitan Edison Company from whom we also purchase interchange energy, and I guess I should have included those because from time to time we receive energy over our northern interconnections as well as from Baltimore, and they in turn from Washington, and to the extent that is received that is mixed with the services of the Safe Harbor and Holtwood supply.

Q. Does Penn Water submit a bill to Philadelphia Electric Company on behalf of Safe Harbor and itself? A. The bill is rendered by Penn Water for itself and for Safe Harbor, but Safe Harbor's name does not appear on the bill, I think. I am not certain of that.

• • •

[2475] Q. What you are telling me amounts to this: That although Consolidated at times furnishes substantial amounts which are used to supply the requirements of Philadelphia Electric by Penn Water, it is not fair to state that Consolidated renders service to Philadelphia Electric Company or that Penn Water renders a bill to Philadelphia Electric Company on behalf of itself and Consolidated because there is an agreement between Holtwood and Consolidated known as Items H and I whereunder Consolidated is reimbursed for that supply. Is that it?

• • •

THE WITNESS: I would like to make about five replies to that because I don't agree with the whole thing.

• • •

THE WITNESS: You referred to substantial amounts being furnished by Baltimore Company. If you refer to substantial in the sense that at some particular hour it is a large proportion, then I would agree. But if you are referring to substantial as being large in kilowatt-hours or large in percentage taken over a period of a week or a month or a year, I would not agree.

[2476] By MR. GOLDBERG:

Q. All right. Go on from there. A. You referred to the supply by Baltimore Company of large amounts used by Penn Water for its services to Philadelphia Electric Company.

Of course, I don't think I could agree with that inasmuch as when the energy is received by Penn Water it is impossible to earmark where that energy goes, or to say it

goes to Philadelphia Electric at Coatesville or to P. P. and L. or to the Pennsylvania Railroad. It is true that the services rendered by Baltimore to Penn Water are mixed with Penn Water and Safe Harbor's own services and the mixture after conversion perhaps in phase, perhaps in voltage, perhaps in frequency, then is used with Penn Water and Safe Harbor's own services in rendering service to the Philadelphia Electric Company at Coatesville.

Q. Go on from there.

Have you done this tracing job which enables you to say you cannot trace it? A. I have attempted to do a tracing job and cannot.

Q. You have not succeeded? A. I could make some hypothetical assumptions and take some proportionate figures, yes, but I don't know what energy goes to Philadelphia Electric because I cannot, to use an expression we frequently use, paint the [2477] kilowatt-hours.

Q. Or put bells on them? A. Or ribbons.

* * *

TRIAL EXAMINER: Read that last question again, please.

(Question read.)

THE WITNESS: I cannot answer that question because I don't believe I understand it.

Baltimore Company does not render any service, if I understand that question, to the Philadelphia Electric Company at [2478] Coatesville.

* * *

Q. As I understand it, you say that Safe Harbor and Penn Water jointly render electric service to Philadelphia Electric Company? A. Yes, sir.

Q. Do you say that because Safe Harbor happens to be named in the contract or do you say that because part of Safe Harbor's supp generation, find its way to Coatesville? A. I say it because it is a party to the contract,

[2479] furnishing of a service under a contract in a technical sense.

Q. Suppose Safe Harbor did not produce any electric energy which was used to meet the demands of Philadelphia Electric under the contracts which we have discussed as Exhibits 73, 74 and 75. Would you still say that the supply to the Philadelphia Electric Company is a joint supply by Penn Water and Safe Harbor? A. Technically it would not be a joint supply if Safe Harbor did not provide any of the services. I don't know what the legal connotations are.

Q. I see. You are not talking about the significance of naming them? A. Naming what?

Q. Naming Safe Harbor in the contract. When you spoke of joint supply you had in mind that Safe Harbor actually generates a certain amount of kilowatt-hours which are used to supply the requirements of Philadelphia Electric Company at Coatesville—is that right? A. Yes, I was.

* * *

[2481] Q. Isn't all of the supply that Safe Harbor furnishes under Items E, F, and G, isn't it furnished under Items E, F and G and paid for under that agreement?

THE WITNESS: May I have the question again, please?

(Question read.)

THE WITNESS: There are four questions there. All electrical services of Safe Harbor are not furnished under E, F, and G although all of the payments made to Safe Harbor for all of the services rendered to its several customers are paid for, the payments are computed and made in relation to and under the provisions of contract identified as items E, F, and G.

* * *

Q. You said that items E, F, and G do not cover all of the services rendered by Safe Harbor. What do they not cover? A. Do not cover the services rendered to the

Pennsylvania Railroad Company at Safe Harbor, services rendered to Pennsylvania Power and Light Company, jointly of course in [2482] the latter case with Penn Water and in the former case jointly with Baltimore, Potomac Electric Power Company, Penn Water and Safe Harbor.

It renders service to Philadelphia Electric Company at Coatesville under contract identified as Exhibits 73, 74 and 75.

Q. Are you finished? A. I think so. I think I covered them all. As well, of course, as the services rendered to Baltimore under E, F, and G.

Q. What is the Safe Harbor Company required to furnish the railroad that is not—specifically—that is not covered in items E, F, and G? A. Electric services.

Q. Such as? A. Capacity, energy, wattless, frequency, phase, voltage, special facilities.

Q. What special facilities? A. Railroad frequency changer, two single phase generators, cables to Conestoga Substation.

Q. You say those things are not covered under items E, F, and G. A. Not specifically, no. Payments are made under E, F, and G, but the services are not rendered under E, F, and G, are not supplied or provided under E, F, and G.

[2483] Q. Do you mean to tell me that the reimbursement for the railroad frequency changer, the cables, and the other facilities that you have mentioned are not involved in the computation of the payments to be made by Holtwood and Consolidated to Safe Harbor? A. Not at all. I said the services were not rendered all under E, F, and G. But I specifically stated in addition that all the payments Safe Harbor receives for services rendered, to whomever it may render, are made under the provisions of contracts E, F, and G.

Q. In other words, the provisions of E, F, and G are broad enough to include compensation for all services rendered by Safe Harbor.

MR. SPARKS: I think that is a legal question, if your Honor please, and calls for a legal conclusion.

MR. GOLDBERG: I want his understanding of it.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: The contract is broad enough to cover the payments but it is not broad enough to cover the services, nor did it intend to.

• • •

[2491] Q. In view of the fact that Consolidated at times may be rendering joint service to Coatesville with Penn Water, do you know why it is not a named party to the agreement? A. I do not consider Baltimore ever renders joint service to the Pennsylvania customers of Penn Water and Safe Harbor. They are not named parties to the contract and they are not operated, they do not have an operating responsibility [2492] to those Pennsylvania customers as distinct from the legal obligation.

• • •

[2493] Q. From an operating point of view what does it mean, then, to say Baltimore Company is entitled to two-thirds and Holtwood Company is entitled to one-third. A. Just what it says, it has entitlement but not the services.

Q. You mean to tell me that from an operating viewpoint under Items "E", "F" and "G" Consolidated cannot demand that Safe Harbor supply it with two-thirds of its output? [2494] A. When you say "cannot demand" it seems to me that is a legal question, whether they can demand it or not. From an operating point of view it seems we ignore the question of whether or not they would or should or could get the entitlements. They are interested only in where the energy and the services go from a most economical operational viewpoint, and we are not interested from an operating point of view in what the obligations are, because entitlements from an operating point of view, and

not from a legal point of view, does not mean services. It may mean revenues instead of services.

Q. No, it means entitlements of capacity and energy, doesn't it? A. Entitlements, yes.

Q. It does not mean revenues, it means entitlements of capacity and energy. A. Entitlements from an engineering point of view can be either two-thirds—speaking of Baltimore Company because that was your question, I think—Baltimore is entitled to two-thirds of the capacity and energy, and, of course, other services of Safe Harbor. Now, that entitlement may be in the form of services or it may be in the form of revenues received for those services provided to others which Baltimore does not get, but to which they are entitled.

* * *

[2495] Q. Let me see. If Consolidated is entitled to two-thirds, but its two-thirds go to Holtwood, which company uses it in turn to supply its Pennsylvania customers, Consolidated nevertheless pays Safe Harbor for that two-thirds, and under Items "H" and "I" receives the benefit of the revenues derived by Holtwood in the use of that electric supply. Is that right? A. From an accounting point of view that is right, from a billing point of view. You are speaking now of the energy and capacity and other services of Safe Harbor going to Penn Water for its sole use with its Pennsylvania customers, which I believe would only be Metropolitan Edison, because to all of the other customers, Safe Harbor and Penn Water, have joint responsibilities.

Q. I know what your view is on that. We have already [2496] discussed that partly this morning and partly this afternoon. And the reason why Consolidated might not at times receive that two-thirds is solely in connection with the operation of the pool to supply electric energy from the cheapest possible sources to the various points of deliveries? A. Not entirely, but that is the way the operations are carried out. You have on the one hand the opera-

tions of all the resources of Safe Harbor, Penn Water and Baltimore which are coordinated for maximum economy and utilization of resources.

You have, secondly, the requirements of Penn Water's and Safe Harbor's joint customers for which Safe Harbor and Penn Water have certain operating responsibilities.

You have also Penn Water's customer, Metropolitan Edison, to which Metropolitan has the sole operating responsibility.

* * *

And you have to consider them from an operating point of view of hour-by-hour and day-by-day and week-by-week planning and dispatching of services. You have to consider them from the operating responsibilities of the respective parties between Penn Water and Safe Harbor with the Pennsylvania customers on the one hand, Penn Water and Baltimore on the other hand. You have to consider the entitlements of Baltimore and Penn Water under "E", "F" and "G". So you have the operating [2497] responsibilities, you have the accounting for the flow of energy, and, of course, you have the legal responsibilities which we have not talked about.

By Mr. Goldberg:

Q. Isn't it a fact that Consolidated controls the disposition of its entitlements so that it may derive from the disposition of its entitlements the greatest amount of revenues, and necessarily benefit? A. What do you mean by the first part of your question?

Q. Consolidated directs where its entitlements are to be utilized if it is not going to Consolidated? A. When do you mean it directs? When it approves contracts or when it jointly with Penn Water plans on the operation of the system from day to day and hour by hour?

Q. When the operations of the system are planned. A. That is not the sole responsibility of Baltimore by any means. That is a joint responsibility of Baltimore and

Penn Water. That is the reason the operating committee was set up, to provide for that very thing.

• • •

[2498] Q. With respect to the entitlement of Consolidated under Items "E", "F" and "G", and under Items "H" and "I", are you saying that Consolidated does not determine the disposition of those entitlements? A. I am afraid we are confusing the entitlements on a contractual basis and the entitlements on an hour-by-hour dispatching basis. I thought we were talking about entitlements up until a few minutes ago on a contractual basis. By "contractual" I mean the operating responsibilities.

As far as those entitlements are concerned, Baltimore is entitled, under "E", "F" and "G", to two-thirds of the power and energy and other services of Safe Harbor, but it does not always, in fact it very seldom, gets those two-thirds in the form of services, but in lieu thereof does receive the revenues paid for those services to which Baltimore is entitled.

[2499] Q. And when the electric energy to which Baltimore would otherwise be entitled is used to supply other customers on the system, the customers of Penn Water, for instance, Consolidated's interest lies in the disposition of that electric energy at the sources where it derives the greatest amount of revenues? A. It is a joint responsibility for that, Penn Water and Baltimore Company having a joint responsibility and equal joint responsibility for that, although the ultimate dollar benefit does flow under H and I and E, F and G, which you have to take together, to the Baltimore Company.

Q. The Baltimore Company does not alone decide on the disposition of that energy—is that correct? A. That is correct.

Q. You say that from an operational standpoint. A. That is right.

• • •

[2500] By MR. GOLDBERG:

Q. The discussion we have been having flowed from your description of the sales of firm power and energy under Exhibits 73, 74 and 75, to Philadelphia Electric Company at Coatesville. What other sales of firm power and energy are made by Penn Water? A. Well, again we have the word "sales" to consider, but Penn Water and Safe Harbor furnish firm power services to the Pennsylvania Power and Light under contracts identified as Exhibits 76 and 77, and it is evident from knowledge of the operations and the flow of power in the general sense in which we speak of it that a large part, if not the preponderance of the services rendered to Lancaster under these P. P. and L. contracts, 76 and 77, are rendered by Safe Harbor, but both companies, from an operating point of view, are responsible for the firm power services. By "both companies" I mean Safe Harbor and Penn Water.

Q. If Safe Harbor were not named in the contract could you still say from an operating viewpoint they are joint services? A. Yes, I wouldn't say they were rendering joint services but I would say the services were of a joint nature because it is necessary to take the two hydro plants and the Holtwood steam plant and consider them as a single project. They are operated that way. They were conceived that way, and [2501] the services are rendered as though they were one.

Q. May we in this case include the Consolidated Steam Electric plants, too, as rendering joint services to Lancaster? A. No.

Q. Is that because you do not believe that the electric energy at times comes up from Consolidated and flows to Lancaster? A. No.

Q. Is it because there are no operating responsibilities of Consolidated? A. That is one reason.

Q. Where do you derive these operating responsibilities? A. From the contracts on the one hand and from the method of operation on the other.

Q. Suppose there are none in the contract? Could there be a rendering of joint service from an operating standpoint? A. There could be; there wouldn't necessarily have to be.

Q. Suppose Safe Harbor were not named in Exhibits 76 and 77? Would you say they were joint services from an operating standpoint? A. I would.

Q. Would you say that with respect to Consolidated? A. No.

[2502] Q. They both would be on an equal footing then, wouldn't they? A. No.

Q. Why not? A. Because the operating responsibilities of the two hydro companies have to be taken together.

Q. But you wouldn't—— A. Speaking now of the operating responsibilities as distinct from the contractual responsibilities, legal responsibilities.

Q. We don't have any contractual responsibilities so you must speak of operating responsibilities that are not derived from the contract. Right? A. That is right.

Q. Where, from what source do you impose an operating responsibility upon Safe Harbor in the absence of an agreement? A. Because a lot of the switching equipment relating to the supply of Pennsylvania Power and Light is operated and controlled by the Safe Harbor operating personnel.

Q. Is that operated and controlled by the Safe Harbor personnel in connection with any contractual provisions you know of? A. No, I don't think so. The fact is they are.

Q. Suppose Safe Harbor tomorrow said, "We are not going [2503] to operate the switching equipment for you any more." Is there anything Holtwood could do about it? A. Safe Harbor is a party to the P. P. and L contracts, items 76 and 77 right now.

Q. I want to eliminate that from our discussion. Assuming that tomorrow they are not named in the contract, Safe Harbor says, "We are tired of working the switching

equipment for you. We are just not going to do it any more."

Is there anything Holtwood could do about it? A. Holtwood would have to approve their being eliminated from the contract. I assume that is a legal matter, though.

Q. Holtwood would have to approve Safe Harbor's being eliminated from Exhibits 76 and 77? A. I would think so.

Q. You mean Holtwood has no freedom of action?

MR. SPARKS: You mean Safe Harbor?

By MR. GOLDBERG:

Q. You mean Safe Harbor has no freedom of action with respect to that contract? A. We are not getting into a legal field, but companies do not take their responsibilities under a contract lightly.

Q. Let's assume that Safe Harbor is eliminated from the contract. A. In what manner?

Q. They are removed. [2504] A. How?

Q. The same way you removed them from the Metropolitan Edison contract. A. By writing a new contract?

Q. If you wish. A. All right.

Q. Or by amending the existing contract? A. With the consent of all parties.

Q. I will let you assume that for the time being. A. All right.

Q. Where would Safe Harbor have any operating responsibilities for the operations of any of Holtwood's equipment? A. Their operating responsibilities are there, and if Safe Harbor said, "We will not operate them any longer", it would be up to Holtwood to make other provisions, electrically, mechanically, to do that work themselves.

Q. In other words, you say that there are no provisions that you know of which would require Safe Harbor to continue working that equipment. Is that right? A. You have assumed that they no longer are parties to contracts 76 and 77.

Q. That is right, are no longer parties. A. I don't recall any other obligations. There may be some.

[2505] Q. Referring to Exhibits 76 and 77, where are these obligations that Safe Harbor has for the operation of Holtwood equipment? A. I didn't say there were any. I said they were a named party to the contract.

Q. I was under the impression that the obligations they had for the operation of the equipment were in Exhibits 76 and 77. A. I am sorry. I didn't intend to give you that impression.

Q. So we cannot look to Exhibits 76 and 77, even though they are named parties, for any obligations which require Safe Harbor to operate Holtwood's equipment. Is that right? A. It isn't Holtwood's equipment. It is its own equipment. It may be P. P. and L.'s equipment. We are talking about the controls I talked about a while ago.

Q. Switching equipment? A. In part they are Holtwood's equipment operated from the Safe Harbor plant by the Safe Harbor personnel. That is right.

Q. Now, does Safe Harbor operate Holtwood's equipment because of anything in Exhibits 76 and 77? A. I don't recall any specific provisions. I am looking to see if there are. There may be. There is certainly a very definite implication in Article Roman numeral VIII of [2506] the contract marked for identification as Exhibit 76.

Q. What is that statement you refer to from which you derive some sort of an implication? A. The various provisions of this renewal agreement are agreed to between the parties, to which Safe Harbor is a party, with the understanding that receiving companies Lancaster system will be so connected, and will be operated in parallel with other systems, and that each of the parties hereto will arrange and operate its facilities in such manner as may be necessary for such parallel operation.

Q. Now, then, under what agreement has that arrangement been made between Holtwood and Consolidated? A. I don't understand.

Q. You just indicated that Holtwood and Safe Harbor have to make arrangements about the operation of facilities to carry out the requirements of the agreement. A. It is a mutual matter. All three parties agree to that.

Q. Where is the agreement between Safe Harbor and Holtwood for the operation by Safe Harbor of Holtwood's equipment? A. I don't know of any. I don't think there needs be as long as Safe Harbor is a party to the contract.

Q. Is it items E, F, and G?

THE WITNESS: May I have the question again?

[2507] (Question read.)

THE WITNESS: I don't think so. Of course, under items E, F, and G, Safe Harbor receives revenue to cover its expenses in such operation and its return on the investments provided for such matters. But that is not what we were talking about. We were talking about the operating responsibilities and not the revenues therefor.

* * *

Q. And we were hunting for some contract that you could refer to which shows the operating responsibilities. Isn't that so? A. I think that is right.

Q. We have not been able to find one yet. A. I don't think there needs to be.

Q. At least we have not been able to find one? A. So long as Safe Harbor is a party I don't think we need one. But, again, from a legal point of view of course I am not considering that matter.

Q. In connection with Exhibit 71, did Safe Harbor operate any of Holtwood's equipment? A. No.

Q. It didn't have to? It had no operating responsibilities? A. It had certain operating responsibilities; yes.

Q. Doesn't have them any more today, does it?

[2508] A. Yes.

Q. It has them today even though they are not a named party in Exhibit 72? A. That is right.

Q. Have the same ones they had under Exhibit 71. Isn't that right? A. No, I wouldn't say they are the same ones.

Q. How do they differ? First tell us the operating responsibilities under Exhibit 71 and then tell us the operating responsibilities under Exhibit 72. A. Under Exhibit 71 Safe Harbor had operating responsibilities for power and energy as well as for the operation of certain facilities, or for the manipulation of certain of Safe Harbor's facilities in connection with the operating responsibilities of Exhibit 71.

As respects Exhibit 72, Safe Harbor is not a named party, but the contract, Exhibit 72, between Penn Water and Metropolitan Edison Company very specifically referred to the services that must in part be provided by Safe Harbor. They are not quite the same in some respects, but they are still operating responsibilities.

As for the operation of facilities or the manipulation of facilities in connection with contracts Exhibits 71 and 72, I don't think there is any difference.

Q. Now you say that Safe Harbor still has responsibilities [2509] under Exhibit 72. Yet we know they were not named. Is that right? A. That is correct.

Q. How do they get paid for carrying out those responsibilities? A. Under E, F, and G.

Q. How did they get paid for those operating responsibilities when Exhibit 71 was in existence? A. Under E, F, and G.

* * *

[2517] Q. Does Safe Harbor receive any revenues for the sale of electric energy capacity and use of facilities, whether special facilities or otherwise, other than the amounts paid to it by Penn Water and Consolidated under items E, F, and G? A. No.

Q. Isn't it correct to say that the investments made by Safe Harbor in all facilities owned by it, and the operating expenses incurred by Safe Harbor in connection with the operations of those facilities, are included as a basis for

[2518] the bills rendered by Safe Harbor to Consolidated and Penn Water under items E, F, and G, copies of which bills are in this proceeding as Exhibit 17? A. I think you may have two questions in there, Mr. Goldberg. I should like to consider them separately if I may have the reporter read them back.

MR. GOLDBERG: Yes.

(Question read.)

THE WITNESS: As we discussed yesterday, Safe Harbor may make, and has made, investments for facilities under contracts other than those identified as items E, F, and G, but the specified return on such investments, as well as the operating expenses incurred in connection with such facilities, are a part of the computations used to derive the total revenues receivable by Safe Harbor under its contract identified as items E, F, and G.

By MR. GOLDBERG:

Q. Now, with reference to your statement that Safe Harbor may make and has made investments for facilities under contracts other than the contracts identified as items E, F, and G in this proceeding, you there had reference, did you not, to your testimony of yesterday relating to the installation of the additional 25-cycle single phase unit which was required to meet the increased loads of the Pennsylvania Railroad. Is that right? [2519] A. In part. But I also have reference to the installation by Safe Harbor of the frequency changer units for the conversion of three-phase 60-cycle electric services to single phase 25-cycle electric services in conjunction with its services rendered to the Pennsylvania Railroad Company jointly with others, and I also had reference to the other investments made in connection with such services to the railroad, such as the cable system, tunnel, structures, etc., that would not otherwise have been required.

I also think I should refer to those investments in facilities made by Safe Harbor Company as necessary in

connection with the services rendered to Pennsylvania Power and Light Company under contracts identified as 76 and 77, such services being rendered jointly by Safe Harbor and Penn Water.

Q. Any others? A. Not of any material nature that I think of at the moment.

Q. What facilities did you have reference to in connection with Exhibits 76 and 77 which Safe Harbor has installed for purposes of that agreement? A. Consisting largely of 66 K. V. switching equipment and oil circuit breaker, disconnect switches and the like; also the control equipment including relays, meters and the like required in connection with the operation of the transmission system of Penn Water under the exhibits identified as [2520] 76 and 77.

Q. Is it your statement that the equipment you have described in connection with Exhibits 76 and 77 were not installed by Safe Harbor until Exhibit 76 was consummated? The date of the agreement is May 1, 1933, for your information. A. I think that is correct.

Q. Is there any provision in that agreement for the installation of the equipment you have described by Safe Harbor? A. Which agreement are you referring to?

Q. Exhibit 76. A. I don't think they are set out specifically there.

Q. Can you point out where there are any references made to them? A. May I see Exhibit 77, please?

Q. Yes. A. Article Roman numeral III of Exhibit 76, Section 4, "All power and energy delivered hereunder shall be metered at or in cases not practicable shall be corrected to the low tension terminals of the stepdown transformers at Engleside Substation. Necessary billing meters shall be installed and maintained by and at the expense of Generating Companies."

Q. Stopping right there——

Mr. Myse: May he finish his answer, Mr. Goldberg?

The Witness: I have not looked further.

[2521] By Mr. Goldberg:

Q. Go ahead and look further. A. I think I referred yesterday to Article Roman numeral VIII of Exhibit 76 relating to the interconnection and parallel operation, in which reference is made to "arrangements for an equitable division of the cost of any changes in or additions to the facilities or equipment of either party necessary to accomplish these results."

By "these results" reference is made to interconnection and parallel operation of the Lancaster division of P. P. and L. with its other divisions.

Then as respects Exhibit 77 reference is made in paragraph Arabic 7, "Manor Substation and Transmission Line." It there provides that "On or before November 1, 1941, (unless development of a new type of circuit breaker will require a longer time in which event a date not later than May 1, 1943, shall be agreed upon between the parties) Generating Companies will construct and thereafter will operate and maintain at a location near the Safe Harbor plant, a high tension bus and switching station (to be known as Manor Substation) shown schematically on attached diagram Exhibit —M—."

I will not read any more unless it becomes necessary.

Q. I want you to look through the entire agreement and point out everything in that connection because I propose [2522] asking you some more questions about it. A. Perhaps I should stop here and refer to this paragraph because the dates I have mentioned for having Manor Substation available, of course, are behind us.

Q. And it is not available? A. It is not yet available but other facilities have been provided in lieu of it which I want to refer to.

Q. All right. A. Letters were exchanged between Safe Harbor on the one hand and Pennsylvania Power and Light on the other, agreeing that the installation of Manor Substation as herein proposed might be deferred.

Q. Was that letter solely between Safe Harbor on the one hand and Pennsylvania Power and Light on the other?

A. That is my recollection. Safe Harbor at that time was writing to explain why certain facilities were not available, but I believe that although it was written by Safe Harbor reference was made to the fact that it was writing for both parties.

Q. Will you check that? I would like to know who wrote the letter. A. Yes, sir.

Q. If you can find a copy of it bring it in to the hearing room with you. A. Yes, sir.

[2523] Although the substation installation was not completed on the dates herein specified, Pennsylvania Power and Light came to Penn Water and Safe Harbor in about 1942 for the purpose of discussing the service problems arising because Manor Substation had not been built.

The outgrowth of those discussions was that Safe Harbor installed a 66 K. V. oil circuit breaker on the intake deck of the power house together with 66 K. V. buses and disconnect switches, including of course, control, metering and relaying equipment.

The purpose of this oil circuit breaker was to tie electrically together the 66 K. V. circuits of Safe Harbor known as 692 and 693 in order to equalize the loading on these two circuits which had become unbalanced due to the increasing amounts of power and energy flowing at times north and at times south on the 66 K. V. line of Pennsylvania Power and Light between its Harrisburg Substation and the Manor Substation of Penn Water.

It was further understood, and I believe in writing, that the installation of this 66 K. V. oil circuit breaker and related equipment was not considered a substitute for Manor Substation but would defer Manor Substation until such times as the parties found that the Manor Substation facilities were required to provide the reliability of service to which both companies agreed was desirable and necessary.

[2524] Q. You say that you made reference to another letter. Is that another letter or the same letter? A. No, it would be another letter if it is in writing. I am not

sure whether or not it is in writing. My recollection is that it was.

Q. Will you check that and bring a copy of that along with you? A. I will.

Under paragraph 8, "Method of operation", reference is made to certain metering facilities that would be provided by Generating Companies to permit the control or regulation of the amounts of power and energy otherwise referred to.

Then paragraph 14, "Joint use of transmission facilities", which we referred to yesterday, which involves in part the joint use of Safe Harbor's facilities.

Q. Those transmission facilities of Safe Harbor that you described yesterday in connection with paragraph 14 of Exhibit 77, are we to understand that those facilities would not have been installed if Exhibit 77 had not been consummated? A. No, I didn't intend to give that impression.

There may be other references or implications that I didn't notice as I read through the two contracts.

Q. Now with respect to Articles III and VIII of Exhibit 76, were the facilities which you described as having been installed by Safe Harbor in connection with Exhibits 76 and 77 [2525] installed pursuant to Articles III and VIII of Exhibit 76? I have reference to your description of 66 K. V. switching equipment and oil circuit breaker, disconnect switches, control equipment including relays and meters and the like, in connection with the operation of the transmission system of Penn Water under Exhibits 76 and 77. A. Most of the facilities that I referred to, or at least that portion of the facilities I referred to as being installed on the intake deck of Safe Harbor, were installed in lieu of Manor Substation covered by paragraph Arabic 7 of Exhibit 77.

Q. Let me see if I—— A. The other facilities, the controls, meters, etc., were in part provided for Penn Water in connection with the flow of electric services between the

hydro developments of Safe Harbor and Penn Water, and would have been provided irrespective of Exhibits 76 and 77, but others were provided in order to carry out the intent and purpose, and specifically for that intent and purpose, of Exhibits 76 and 77.

• • •

[2530] MR. GOLDBERG: Yes. I want you to define electric operations and then electric services and tell me what is the difference between the two.

THE WITNESS: Electric services, as Mr. Walls has used [2531] that term and as I have referred to it yesterday, include each and all of the attributes referred to by Mr. Walls and which we discussed a few minutes ago. It may be necessary, and in most cases it is necessary, to provide special facilities of a transmission nature in order that the electric services may be rendered, and, of course, as we are using it here such electric services are rendered under contracts, most of which have been identified in these proceedings.

There are also other special facilities from time to time provided by Penn Water and referred to in my direct testimony that had no relation to the supply of electric services by Penn Water and Safe Harbor, and a specific example of that is the 110 k. v. transmission line constructed by S. T. Co. of Maryland, a subsidiary of Penn Water, between the Philadelphia road substation of Baltimore Company and a second transmission and distribution substation of Baltimore Company in Baltimore County, I believe known as the Gunpowder switching station.

Such transmission facilities were provided for the sole and exclusive use of Baltimore Company and have no relation to, nor are they involved in, the rendering of electric services with its attributes which we have been discussing.

Q. What is electric operations? A. Of what?

Q. You said there is a difference between electric operations and electric services. Define electric operations. [2532] A. Electric operations would include the supply or

rendering of electric service, the operating of the special facilities provided for the exclusive or joint use of one or more of the customers, together with the operations of the general facilities of Penn Water and Safe Harbor, including the generators, turbines, the concatenated group of facilities within the powerhouse referred to by Mr. Walls, and its many auxiliaries.

Q. So that when you speak of electric services you have in mind the attributes of the electric service which you and Mr. Walls have mentioned in this proceeding. But when you speak of electric operations you have in mind the physical operations of the facilities which are utilized in rendering the electric service. Is that it? A. That is correct.

Q. Now, when you mentioned other special facilities in connection with your definition of electric services you said, if I recall correctly, that such facilities have no relation to the supply of electric services. Do I understand by your statement "have no relation" you had in mind that you do not conceive of such facilities as attributes of electric service? A. I am lost. I will have to have it read back.

(Question read.)

THE WITNESS: I would like to have that clarified, if I may, use of "other special facilities."

[2533] Q. You said, "Of the 110 k. v. line of S. T. Co." A. Yes. Under the contract identified as "H" and "I", and by agreement of the parties, Penn Water through its subsidiary, S. T. Co. of Maryland, provided certain 110 k. v. transmission facilities. Those electric facilities are not required nor used in the supply of electric services by Penn Water to Baltimore, and the electric services would be just as complete in every respect whether the Gunpowder line had been provided or not.

Q. In other words, you do not conceive of the Gunpowder line as an attribute of the electric service being rendered? A. I do not conceive of any facility being

an attribute of electric service, nor do I conceive that this Gunpowder line is a required, necessary or useful electric facility in connection with the rendering of electric services by Penn Water to Baltimore.

Q. By that statement, however, you are not passing on the question of whether the facilities are to be included in the rate base? A. No. We were talking about operations.

• • •

[2536] Q. Do you know that any rendering of electric services to Penn Water by Safe Harbor are made under Items "E", "F" and "G"? A. That is right, any that are made are made under "E", "F" and "G".

Q. And that is the fact without regard to Exhibits 76 and 77. Isn't that so? A. The fact that what services are rendered are rendered under "E", "F" and "G"?

Q. That is right? A. That is true.

Q. And that would continue even if Safe Harbor were not a named party in Exhibits 76 and 77. Isn't that so? A. The fact that all services rendered to Penn Water are rendered by Safe Harbor under Items "E", "F" and "G"?

Q. Yes. A. That is right.

Q. And isn't it those services rendered under Items "E", "F" and "G" which Penn Water relies on in part to meet the requirements of Philadelphia Electric, Pennsylvania Power and [2537] Light Company, and Metropolitan Edison Company?

• • •

A. • • • If I understand your question the answer is "yes." I want to be sure that I do. The services, the electric services, rendered by Safe Harbor to Penn Water may be used by Penn Water together with its own electric services to meet whatever obligations Penn Water has toward the service requirements of its customers, meaning Metropolitan Edison, Pennsylvania Power and Light, Philadelphia Electric Company at Coatesville, and the

Pennsylvania Railroad, and Baltimore Company.

Q. Now, in view of that fact does it not follow that even if Safe Harbor would not be a named party under Exhibits 76 and 77 the electric operations of Safe Harbor in rendering electric service to Penn Water and Consolidated would have been unaltered?

• • •

[2538] THE WITNESS: No, I think they would have been materially altered.

• • •

[2539] Q. All right, now. If its one-third entitlement under Items "E", "F" and "G" were all that were required by Holtwood to meet the requirements of Pennsylvania Power and Light Company, it was able to do so when Safe Harbor was named and it is still able to do so when Safe Harbor is not named. Is that right? A. Perhaps.

Q. Why is there any "perhaps" about it? A. I don't understand for certain just what your premise is, but I think it may be.

Q. Well, I want to be absolutely certain that you understand.

[2540] If, to meet the requirements of Pennsylvania Power and Light Company when Safe Harbor was a party to Exhibits 76 and 77, Penn Water was able to meet it by reason of the reecipt of electric energy it is entitled to receive under Items "E", "F", and "G" from Safe Harbor, it will still be able to meet it by reason of that entitlement under Items "E", "F" and "G", even if Safe Harbor were to be removed from that agreement? A. Well, under the first instance when Safe Harbor and Penn Water render service jointly to Pennsylvania Power and Light Company, and to use your example of a million kilowatt hours I believe it was, I don't know what portion of that million kilowatt hours was rendered by Penn Water and what portion was rendered by Safe Harbor under contracts identified as Exhibits 76 and 77. But whatever amount Safe Harbor may have rendered to Pennsylvania Power and

Light Company, when Safe Harbor is removed Safe Harbor must increase the services rendered to Penn Water by that amount in order that Penn Water may meet the full obligations now of the million kilowatt hours to Pennsylvania Power and Light under Exhibits 76 and 77.

• • •

[2542] Q. Penn Water is obligated to serve Pennsylvania Power and Light, isn't it? A. Jointly with Safe Harbor.

Q. When Safe Harbor can't serve it does Penn Water just turn its back on its obligation?

• • •

A. Penn Water and Safe Harbor have a joint obligation. If Safe Harbor at any one time does not have any electric services available, then Penn Water must supply them itself.

Q. And it would supply it at least in part? A. What?

Q. It would supply it at least in part? [2543] A. When?

Q. Through this drawing under Items E, F, and G. Right? A. Entitlements have no relation to the services rendered. I thought we cleared that up last night.

• • •

Q. Now, then, if Holtwood received its one-third—— A. If Holtwood did receive one-third of the electric services?

Q. Yes. A. As specified by the entitlement?

Q. Yes, it would use that one-third to meet its obligations to Pennsylvania Power and Light Company under Exhibits 76 and 77. Right? A. And all of its other obligations; yes.

Q. And if the one-third was not sufficient to enable it to meet its other obligations it would try to meet it through generation at its steam electric and hydroelectric plants and perhaps through backfeed from Consolidated. Right? A. Or from its other Pennsylvania customers, yes.

[2544] Q. And that is the fact even if Safe Harbor is not named in Exhibits 76 and 77? A. That is right.

• • •

Q. Aren't the electric operations under Exhibit 72 today of Safe Harbor the same as they were under Exhibit 71? A. But under 72 those electric—you said electric operations?

Q. Electric operations? A. Electric operations are quite different under 72 than under 71.

[2546] Q. Go ahead. A. Because of the very nature of the two contracts. They require quite different operations. Procedures, the methods are the same, but the operations are different.

Q. What do you mean by "procedures and methods"? A. Well, the fact that they operate the plant today is the same as it was before but the way the plant is operated, the way Safe Harbor is operated today, is different from the way it was operated before as respects the contracts for power supply to the York area.

Q. What are the differences? How was it operated under Exhibit 71 and how is it operated today? A. Under Exhibit 71 Safe Harbor and Holtwood and the other facilities were operated in a manner to provide the electric services required equal to forty per cent each hour in the year of the service requirements, electric service requirements, of the Edison Light and Power Company of York.

Under Exhibit 72 the electric services rendered to the York area are no longer a flat and constant percentage of the electric service requirements of the York area but vary generally in proportion to the river flow.

• • •

[2547] Q. And that is what changes have taken place in the electric operations of Safe Harbor other than the generation of quantity that you have mentioned in the rendering of service under Exhibit 72 as distinguished from the rendering of service under Exhibit 71? A. Rendering of electric service?

Q. Yes. A. Under Exhibit 71 Safe Harbor rendered electric services to Edison Light and Power Company jointly with Penn Water.

Under Exhibit 72 Safe Harbor Water Power Corporation does not render any electric service to Metropolitan Edison Company but rather, in part at least, to Pennsylvania Water and Power Company.

Q. Has that affected the electric operations of Safe Harbor other than the quantity of generation required? A. The operating responsibilities have changed but the actual rendering of service in the way I understand you to mean, that the methods of operations, procedures of operations have not changed on the part of Safe Harbor Company, but the operating responsibilities have changed. [2548] Q. By "operating responsibilities" you have reference to the responsibilities of Safe Harbor under provisions of Exhibit 71 and the provisions of Exhibit 72. Is that right? A. I do.

Q. You have reference to contractual responsibilities. Is that right? A. That is right.

• • •

Q. You mentioned certain facilities installed by Safe Harbor in connection with electric energy that is ultimately delivered to the Pennsylvania Railroad Company. Among other things named was the frequency changer unit for conversion of 3-phase, 60-cycle energy to 25-cycle single phase, and the cable system and other things you mentioned. Would those facilities have been installed by Safe Harbor if there were no requirements of delivery of electric energy to Pennsylvania Railroad? A. I don't know.

Q. You do know, however, that Safe Harbor installed them by reason of the requirements of delivering electric energy to Pennsylvania Railroad at certain characteristics. [2549] Is that right? A. That is right.

Q. Can you point to the provisions of any contract that has been identified or received in evidence in this proceeding whereunder those installations were made by Safe Harbor?

THE WITNESS: May I have that question read?

(Question read.)

THE WITNESS: What do you mean by "whereunder"?

By MR. GOLDBERG:

Q. You have Exhibits 76 and 77? A. Yes, I can do that from the Pennsylvania Railroad contract, which is Exhibit 10?

MR. SPARKS: Yes. Here it is.

THE WITNESS: I am referring to Exhibit No. 10, being the composite form of the several contracts with the Pennsylvania Railroad Company for the supply of electric service to the Pennsylvania Railroad by the "Supplying companies", which refer to the Pennsylvania Water and Power Company, Safe Harbor Water Power Corporation, the Consolidated Gas Electric Light and Power Company, and the Potomac Electric Power Company, and passing over the several preambles to the original contract which do refer to services and special facilities Article II, Section 2, states in part, "Electric Companies shall supply such additional power and energy when called upon [2550] under this Section, under the terms and conditions of this contract, and such additional power and energy, which may be furnished in part by additional single phase hydro generation", which of course, was to be installed at Safe Harbor.

Article Roman numeral III, Facilities, "Facilities to be provided and points of Supply."

"Electric Companies shall install, operate and maintain all generating, transmission and switching equipment, except"—and then it refers to the 60 cycle 110 K. V. circuit to be provided by the railroad between a point south of Baltimore and the Benning plant of Potomac Electric Power Company.

It also refers in that Article to the fact that Electric companies shall install, operate and maintain "such special equipment and facilities provided for the use of and at the request of Railroad Company, as may be called for from

time to time under the provisions of Articles VIII and IX."

Article Roman IV, "Characteristics of Supply." It includes the provision that: "The fields of the generators shall be designed and equipped with suitable voltage regulators", and so forth, indicating a characteristic of the facilities to be provided.

As I understand it, Mr. Goldberg, you want reference to the facilities provided by Safe Harbor.

[2551] By Mr. Goldberg:

Q. Safe Harbor, yes. A. Only?

Q. Yes. A. Article Roman VIII, "Annual charges for specified equipment and facilities." Therein Section 1 states: "At the written request of and upon reasonable notice by Railroad Company, Electric Companies shall install, operate and maintain single phase water wheel generators, converting equipment, cables, special 25-cycle bus for single phase supply to Railroad Company and switching equipment, step-up transformers and transmission lines under terms and conditions as herein specified. Railroad Company shall call on Electric Companies to provide additional single phase generating or converting capacity when the maximum"—and then it goes on to indicate conditions under which railroad may call for such additional capacity.

It also provides in that article that "Railroad Company shall endeavor to request the single phase waterwheel generators and transmission lines not less than eighteen (18) months, and other equipment and facilities not less than fifteen (15) months in advance of the date when such equipment shall be required."

That is not the whole of that section but enough to indicate the nature of railroad's request.

[2552] It further states in that article, "All such equipment shall be complete and adequate for the purpose intended regardless of whether all necessary details and parts are specifically mentioned in the tables."

I might mention that this article also refers to tables which are attached and made a part of that contract which

specify in more complete detail the special facilities to be provided thereunder.

Section 2 of Article VIII specifies the annual charges to be paid by the railroad on the equipment to be provided by the supplying companies which are referred to in two general sections.

The first section refers to the initial equipment, including reference to equipment to be installed at Safe Harbor, and at or near Benning, and the second section referring to the additional equipment to be provided as required.

The first item under this group includes the first additional 25,000 K. W. frequency changer set at Safe Harbor, and additional frequency changer sets at Safe Harbor in addition to the first addition.

I might say that the initial equipment to be provided, as I will refer to later, included one waterwheel generator to be installed in the Safe Harbor plant and one frequency changer to be installed at the Safe Harbor plant, and then specified payments were to be made for those facilities and [2553] others, and when additional facilities were to be provided specified payments were again stated in the contract subject to adjustment for commodity prices.

Reference is then made to an additional waterwheel generator, to additional switching facilities at Safe Harbor in the Conestoga Substation, and then in Section 5 of Article VIII it states the payments to be made to cover the first hydro unit at Safe Harbor, the first frequency changer unit, the 25-cycle single phase bus to be owned by Penn Water, the connecting cables between Safe Harbor plant and this substation bus, the step-up transformer substation, and the transmission line from Safe Harbor to Perryville.

Then in Section 8 of Article VIII it provides that at such time as the railroad company shall call on "Electric Companies" to provide an additional single phase capacity at Safe Harbor under the provisions of this Article VIII, the "Electric Companies" will have the option to provide

either an additional frequency changer or an additional water-wheel generator.

Then in article Roman numeral IX provision is made for "Electric Companies" to provide additional facilities not specified in the contract, and that the annual charges shall be a percentage of the cost of such facilities plus cost of operation and maintenance.

It also refers to certain joint use of facilities [2554] including communication and metering circuits, and I should add that special facilities have been provided by Safe Harbor and by Penn Water under the provisions of Article IX, and payments are being made currently in accord with such provisions.

Q. Which facilities are those? A. Facilities in Conestoga Substation owned and operated by Penn Water in part, and in part occupied by the Pennsylvania Railroad.

Certain facilities were provided with the extension of the railroad's electrification in Pennsylvania in 1937 and 1938.

Q. By Safe Harbor? A. Such facilities in part being provided by Penn Water and in part being provided by Safe Harbor.

Q. Is that part of this cable system which you mentioned? You mentioned provisions of cable systems by Safe Harbor. A. No, this is something else. When the railroad provided on its own behalf for certain transformers and high tension switching equipment, and it is quite an elaborate layout, the controls, including relays, meters, etc., were provided in the Safe Harbor plant control room for the operation of these railroad facilities. That involved certain cable facilities between the control point at Safe Harbor on [2555] the one hand and the switches, etc., in Conestoga Substation on the other, and Safe Harbor does own and operate such control cables and receives payment therefor in accordance with these pro-

visions, but they were not the cable systems referred to under preceding articles.

Although there are other minor references to facilities, coordinated uses, etc., I shall pass to the tables of the contract where a more specific description is given of the larger special facilities.

Table Roman I-A, covers the initial converting equipment at Benning and the initial generating and converting equipment at Safe Harbor, and it therein states that "Electric Companies will provide, operate and maintain in and adjacent to the Safe Harbor Hydro-Electric Plant at Safe Harbor, Pa., one—25-cycle waterwheel generator", with certain specified characteristics, and "cable connection between the 60-cycle side of this machine and the main station——"

I think I had better read in the entire part.

"Electric Companies will provide, operate and maintain in and adjacent to the Safe Harbor Hydro-Electric Plant at Safe Harbor, Pa., one—25-cycle waterwheel generator, 28,000 K. W., 80 per cent P. F." That means power factor—"single phase rating; one 60/25-cycle frequency changer, 25,000 K. W. 80 per cent P. F., single phase rating on 25-cycle side, with cable connection between the 60-cycle side of this machine and the main station 60-cycle bus; single [2556] phase cables together with oil circuit breakers, disconnecting switches, control and other appurtenant equipment for connecting both 25-cycle machines to a 13 K. W. outdoor, 25-cycle single phase bus located in a substation near the mouth of Conestoga Creek at an annual charge of"—and so on.

I might indicate there a moment which facilities were to be provided, were provided, irrespective of what may be said in here, what facilities were provided by Safe Harbor and what facilities were provided by Penn Water.

It states here the "Waterwheel generator and frequency changer unit were provided in or immediately ad-

jacent to the Safe Harbor hydro-electric plant", and were so provided by Safe Harbor.

Safe Harbor also provided the single phase cables, 25-cycle cables, between these machines and the 25-cycle railroad bus which was located in the Conestoga Substation of Penn Water.

The oil circuit breakers on that bus and the disconnecting switches were installed, owned and operated by Penn Water, but the controls for such facilities are again carried back to the main control room of Safe Harbor.

Then turning to Table II-A, initial substation at Safe Harbor, there again provision is made for this outdoor substation, 25-cycle single phase bus, etc., all of which was [2557] provided by Penn Water, but the controls, including certain relaying and metering equipment, were carried back to the control room at Safe Harbor.

TRIAL EXAMINER: What do you mean by "carried back"?

THE WITNESS: The operating mechanism for an oil circuit breaker for opening and closing the breaker is ordinarily located on the oil circuit breaker structure. The mechanism is electrically controlled. That control may be adjacent, or it may be a long distance away, sometimes miles away.

[2558] TRIAL EXAMINER: Were those controls controls which were already installed and in use by Safe Harbor or were they controls installed for this particular purpose?

THE WITNESS: They were installed for this particular purpose.

TRIAL EXAMINER: By Safe Harbor?

THE WITNESS: By Safe Harbor, that is the controls themselves, including the cable circuits from the equipment running back through the tunnel and the powerhouse to the control room.

TRIAL EXAMINER: All right.

Where is Conestoga Substation?

THE WITNESS: Conestoga Substation is adjacent to the Safe Harbor plant, and perhaps a quarter of a mile away from the nearest part of the plant, there is a hill intervening, and a tunnel has been drilled through that hill through which the power cables and control cables are run.

The substation itself lies on the bank of Conestoga Creek and is adjacent to, immediately adjacent to, the project boundary but outside of the project boundary of Safe Harbor.

TRIAL EXAMINER: You may continue.

THE WITNESS: Table III-A provides for additional converting equipment at Safe Harbor, none of which has as yet been requested by the railroad.

Table IV-A, additional water wheel generator at Safe [2559] Harbor covers the second water wheel generator which was requested by the railroad, or, rather, when the railroad requested additional capacity in accord with the provision I read a few moments ago Safe Harbor and the other electric companies had the option of installing either a second water wheel generator or a second frequency changer, and chose to install the water wheel generator under the provisions of Table IV-A. Those facilities were installed in 1941 or 1942.

Table V-A includes provisions for additional transformer and switching equipment at Safe Harbor. Again, a large amount of facilities have been installed and payments are being made under provisions of Article V-A. A portion of the investment is owned by Penn Water and a portion by Safe Harbor.

Table XI-A covers facilities for communication and in part for metering, and in part for supervisory control which involve controls, meters, and so forth, some of which, as

those tables clearly indicate, are located in the Safe Harbor control room, and some at other places.

* * *

[2560] Q. Are the facilities which are referred to in Item "G" as having been requested by Baltimore Company and Holtwood Company for installation by Safe Harbor pursuant to Article III of Item "E" covered in Exhibit 10? A. Yes, they are. Do you want me to designate it?

Q. If you wish to designate it. It is not necessary. A. Those facilities are specifically designated in Table IV-A.

Q. So that even though the facilities are designated in Exhibit 10, before the facilities were installed by Safe Harbor requests for their installation were made pursuant to the provisions of Item "E"? Right? A. No.

Q. Referring you to the second "whereas" clause of the first page of Item "G", doesn't that clearly show that Safe Harbor was requested by Baltimore Company and Holtwood Company to install additional machinery and equipment provided for in Exhibit 10 pursuant to Article III of Exhibit "E"? A. I don't read it that way, Mr. Goldberg.

Q. How do you read Article III of the Original Agreement, referred to on the first page of Exhibit "E"?

* * *

[2561] THE WITNESS: I understand this supplement agreement identified as Item "G" that we are referring to to provide for the entitlements of the services to be rendered in connection with a seventh water wheel generator known as No. 1 unit which was installed by Safe Harbor Company under the provisions of the railroad contract we have just been referring to as Exhibit No. 10.

By MR. GOLDBERG:

Q. Isn't it a fact that though the facilities you have just referred to are included in Exhibit 10, that nevertheless Penn Water and Consolidated, pursuant to Article III

of Item "E" in this proceeding, requested Safe Harbor to install those facilities? A. May I have that question read, please?

(Question read.)

THE WITNESS: No.

By MR. GOLDBERG:

Q. Now we agree, don't we, by referring to the second "whereas" clause of the first page of Item "G" that Baltimore Company and Holtwood Company requested Safe Harbor to install the facilities you have described to provide for increased power and energy requirements of Pennsylvania Railroad Company. Do [2562] we agree on that?

* * *

A. No.

* * *

Q. Do you agree that Baltimore Company and Holtwood Company are referred to in the second "whereas" clause on the first page of Item "G"? A. Their names appear there.

Q. Do you agree that it there states that Baltimore Company and Holtwood Company have requested Safe Harbor Company to install additional machinery and equipment in order to provide for increased power and energy requirements of the Pennsylvania Railroad Company? A. Those words appear in there.

[2563] Q. You agree that it says that? A. I agree the words you read are there.

Q. Do you agree it says that, Mr. Spaulding?

TRIAL EXAMINER: Answer the question yes or no.

MR. SPARKS: If Your Honor please, he said he agrees it appears in the document.

TRIAL EXAMINER: There seems to be some difference. The witness is making a difference in words.

MR. SPARKS: Apparently Mr. Goldberg is, too.

TRIAL EXAMINER: I am going to instruct the witness to give a categorical answer yes or no.

THE WITNESS: I would like to have the question again, please.

TRIAL EXAMINER: Very well.

(Question read.)

THE WITNESS: It so states.

By MR. GOLDBERG:

Q. And those facilities are described in Exhibit 10? A. They are.

Q. And it also states on the first page of Item "G" in the second "whereas" clause that the request was made by Holtwood Company and Baltimore Company pursuant to Article III of "The Original Agreement." Is that right? A. It so states.

Q. What is the Original Agreement? [2564] A. It states in the first "whereas" clause it is the agreement of June 1, 1931.

Q. That is Item "E" in this proceeding. Is that right? A. Yes.

Q. So the reference is to Item "E"—right? A. It is.

• • •

[2572] Q. Nevertheless, Safe Harbor energy was still being utilized under Exhibit 71 as it had been under the Exhibit superseded by 71 to supply the requirements of Edison Light and Power Company?

• • •

[2573] A. Using "utilization" in the physical and operating sense and not the legal sense, because there may have been a legal change, and there certainly was a change in the operating obligations as a result of the contract identified as Exhibit 71, physical operations, and leaving out the additional interconnection path which was established at

about that time, the physical operations of Holtwood and Safe Harbor as respects its services to Edison Light and Power were not different except, perhaps, in magnitude and other characteristics of time and so on.

Q. In all my questions to you along these lines it has been my intention to confine myself to physical operations and not to worry about the legal implications of contractual provisions or the legal implications of including somebody's name in a contract. I have been a little bit concerned that where you have at first blush disagreed with me you were thinking of legal implications. I want to disabuse your mind of that. A. I don't know whether I can entirely eliminate the terms of the contract, and again I am not speaking of the legal terms of the contract but the operating obligations of the contract.

Q. You mean your understanding of what the contract means from an engineering viewpoint? A. That is right.

[2574] They certainly were different under Exhibit 71 from what they were prior to that.

• • •

[2578] Q. When the flow of energy from Safe Harbor passes off Safe Harbor's facilities and on to the facilities of Penn Water, from then on Penn Water controls the flow of that energy. Is that right?

In the sense that Penn Water then owns and operates the facilities on which the electric energy flows. A. Penn Water owns and operates the facilities but one cannot, by holding up one's hand, control the flow of power.

Q. I realize that. In other words, neither can Safe Harbor do anything about it when that generator starts going, when the load is put on—right? A. Oh, yes. Safe Harbor in control of the generator can do just that.

Q. You mean it can stop the generator from generating? A. That is right.

Q. I didn't mean that. I mean when the load is on the generator starts generating, from then on Safe Harbor

cannot control the flow. Is that right? A. I am afraid that is not right because it is really Safe Harbor, through the control of its generator, together with the control of its railroad frequency changer used largely for the supply of electric services to Pennsylvania Railroad, is in perhaps the one position on the interconnected position where it can control the division of flow itself, [2579] under the instructions, of course, of the load dispatching office in Baltimore which again is jointly operated by, and the expenses are paid by, Holtwood and Safe Harbor, each paying one-half.

Q. But that control, if it exists at all, exists only so long as the energy remains on Safe Harbor's system—right? A. No, I cannot agree with that.

Q. When the energy passes off Safe Harbor's system on to the facilities of Penn Water is Safe Harbor then in a position to control the flow of that energy? A. I am afraid you are getting into a legal field rather than a technical field. Technically Safe Harbor is the one who can control it. Whether or not it flows over its own system, over the electric facilities of Penn Water, or of any one of the other interconnected electric systems, Safe Harbor can control the flow where perhaps the owner of those facilities cannot.

Q. Are you basing that last answer on any legal concepts? A. None at all.

Q. I want to stay with the technical aspects of it solely. I do not want to get into any legal aspects of it. A. That is the reason I have not agreed with you, because I am sticking to the technical aspects. I have [2580] endeavored to say I am not considering the legal aspects.

Q. You say that when the generation takes place at Safe Harbor and the flow of energy moves on to Holtwood's facilities, Safe Harbor still may control and can control the flow of that electric energy. Is that right? A. That is right, physically they can and do.

Q. How? A. I will endeavor to use a mechanical analogy.

Q. What is that? A. I will endeavor to use a mechanical or hydraulic analogy.

[2581] Q. All right. A. If we have a reservoir with three pipe lines leading to some three different basins, but we also have a pipe connection between two of those lines some distance from the reservoir, the operator of that reservoir is the only one who can control the flow of water in those pipes, including the lateral connections, unless someone may install a valve in one of those pipes where he shuts the water off.

Perhaps my analogy is none too perfect, because actually Holtwood is situated like the man with the valve except that Holtwood cannot, as my analogy might indicate, slow up or turn off only part of the water. Holtwood can only stop the flow of water by opening up or breaking the pipe. Holtwood is not in a position to open up the valve and thereby control the amount of flow in that pipeline.

Reverting to our actual physical operation: Safe Harbor, under normal conditions, has as was shown by Exhibit 8 in this proceeding very frequently the only or at least a portion of the spinning reserve capacity on the system, except perhaps in very high flow when all of its resources are being utilized. Therefore Safe Harbor is the logical operating plant to change its generation.

If at a given time there is a definite amount of power flow from Safe Harbor to Holtwood and, hence, to York, and at the same time there is a definite amount of power flow between Safe Harbor over the railroad circuits to Philadelphia, and thirdly, [2582] from Safe Harbor over the facilities of Pennsylvania Power and Light to Harrisburg, Safe Harbor has the greatest opportunity, and under normal operating conditions the only opportunity, of changing the flow of power on those three parallel paths to the northern system. By changing the total amount of generation they change not only the flow on all three of those paths simultaneously but having control as with a valve, being the railroad frequency changer at Safe Har-

bor, of the amount of flow over one of those they are therefore able largely to control the flow over all three of those parallel paths.

Q. As I understand it, the control extends to the amount and quantity? A. Oh, yes.

Q. That will pass on to those three lines radiating from Safe Harbor. Is that it? A. Yes.

Q. But once the quantity passes on to those three facilities and enters the system of Penn Water, Safe Harbor's control is at an end. Isn't that right? A. Physically?

Q. Yes. A. I don't see it.

Q. Take the analogy of the reservoir. The man at the reservoir can control the amount of water entering each of those paths. Right? [2583] A. That is right.

Q. That is where his control ends. Isn't that so? A. Technically that is not correct.

Q. Well, what other control does your man at the reservoir have? A. He doesn't need any other.

Q. Well, what else did he have aside from what he might need? He opens up the pipes and lets a certain amount of water go into each one of them? A. That is right.

Q. Then he closes the pipes. What other control does he have once he has done that? A. That is all. But that is all he needs to control the flow of power over these three parallel paths.

Q. Not at all. I think you said there was a connection between one of the lines radiating from the reservoir and another one some distance from that. Is that right? A. That is right.

Q. Now, then, that connection between lines A and B, shall we call them, presents another opportunity for altering the flows in lines A and B—right? A. No.

Q. Well, you can transfer a certain amount from A to B by reason of that connection or from B to A. Isn't that so? A. You can, but as long as the flow in the three paths [2584] are the same the flow in the lateral pipe is

going to be the same by the laws of nature, and other physical facts.

Q. Did you call it the basement? Did you say the basement? A. Basin.

Q. The connection of the basin to line B does not mean that that basin is going to receive all of the water that the man at the reservoir put into line B if part of that water is diverted from B over to A. Isn't that so? A. But who is going to divert it?

Q. Not the man at the reservoir—right? A. But the man at the reservoir is the only one who has any control over the amount.

Q. Let's hire somebody for the purpose of making use of that connection between A and B. A. Oh, if you change the size of the pipe, if you change the size of the outlet, you change the relations.

Q. What is the purpose of the connection with A and B if it is not for the purpose of diverting part from A to B or B to A as may be desired? A. That was not part of my assumption, as to what the purpose was. I was just saying they were there.

Q. But in your assumption you put in a connection between two of the radiating lines, and I have named them A and B. [2585] A. Yes.

Q. Having put that connection in there what did you put it in there for? A. Because it more readily simulates the many interconnecting lines that exist on the electric power system of Penn Water and Safe Harbor.

Q. And the interconnections are for the purpose of diverting the flows on to different lines as required? A. That is correct. Once the size of the transformers and the constants for circuits are fixed, the flow of the power on the three main lines and the radial line will not change unless another factor takes place we have not considered, unless the needs of the customers or persons at the three water basins at the end of the line should change. Then all the relations are changed.

Q. Holtwood under such circumstances might be in a position to bring about the changes but Safe Harbor would not be. Isn't that so? A. I don't agree with that. Changes might come about because of the change in the load requirements of the customers on Penn Water—Safe Harbor system on the one hand or at the three basins in our hydraulic analogy. The reason Holtwood Company is not in a position to do very much about the division of load is because its steam plant is normally operated at base load and does not vary its output. Furthermore, its frequency [2586] changers between its three-phase 60-cycle system and its three-phase 25-cycle system are seldom used, and when used have no manual control. Thirdly, because the only remaining 60-cycle capacity that Holtwood has of its own at Holtwood are two water wheel generators of very minor size compared to the installed hydroelectric capacity at Safe Harbor. It is for that reason that I felt confident in assuming that Holtwood could not control the flow on our water pipes, because it did not have any amount of additional water to inject into these pipes to change the division of flow.

Q. You have said in your answer that Holtwood is not in a position to do very much about the division of flows. When you say "isn't in a position to do very much" about it, that means to me that they can do something about it. Is that right? A. I don't think I ever said that Holtwood, in our earlier discussions, did not have any available capacity to control those loads. I think I carefully stated that under normal conditions Safe Harbor was the one major factor in the control of the flow of loads. I am quite sure I made that qualification.

Q. You were just speaking in terms of division of flows which Holtwood could control in relation to capacity. Did you mean generating capacity? A. I did.

Q. How about control in relation to switching and the like on the lines? [2587] A. I am endeavoring not to get too technical because the usual way of controlling power

flow over a network where you have three parallel paths is by the installation of a transformer bank with a phase angle control. There are no phase angle control transformers in our network. The only other way, therefore, that the division of load could be changed would be to open up a transmission circuit, and that would, of course, change the flow but it would usually give some concern to the customer whose circuit you open.

Q. Once the flow passes off Safe Harbor's facilities onto the facility of Holtwood it is only Holtwood that can exercise the latter control you have just named? A. That is correct. By "latter control" you mean opening up a circuit?

Q. Yes, changing flows by opening up a circuit. A. Yes.

* * *

[2637] Q. Taking the component parts of the contract you do not know from a technical and operating sense what the preamble means when it says that "York Company is engaged in the generation, distribution and sale of electrical power and energy." Is that right?

* * *

THE WITNESS: That is a different question. I think I can answer that one. From a technical and operating sense that gives me a very good picture of what the general operations of [2638] the York Company were expected to be.

By MR. GOLDBERG:

Q. Go ahead and tell us what that is. A. York Company is engaged in the generation, distribution, and sale of electric power and energy. I don't know what constitutes a sale, but to my mind that means that the York Company had certain operating responsibilities under that contract, or that had to be referred to and considered in connection with this contract from an operating point of view.

Q. What were the operating responsibilities it had? A. It had to generate, transmit and provide electric services, as I view it from a technical point of view.

Q. All right. Now, what did you cover by the electric services? The words "power and energy"? A. Yes, to my mind that would include all of the attributes that we have been talking about relating to electric services.

Q. And the words "power and energy" were used to cover those attributes. Is that right? A. In this particular instance; yes.

Q. Yes. That is right, isn't it? A. In this particular instance.

Q. Yes. Now, go on to the next place where you find reference to "power and energy". [2639] A. I find it in the next paragraph of the recitation.

Q. Of Exhibit 71? A. That is right.

Q. What does it state there? A. "Metropolitan now supplies electrical power and energy to York Company at 2300 volts, at a point adjacent to York Company's Central Substation."

Q. What was your understanding of the words that you have read?

Mr. Myse: You mean from an operating standpoint again or general understanding?

Mr. Goldberg: Technical and operating sense.

The Witness: From an operating standpoint Metropolitan here only supplies electric power and energy. I take that to mean, and have taken that to mean, for the purposes in which I have used this contract in a technical and operating sense, that Metropolitan was going to supply certain electric services with all the attributes we have been discussing.

By Mr. Goldberg:

Q. There, again—— A. To a point near York Company's Central sub-station.

Q. And there, again, the electric services, with all of the attributes you have named in connection with that phrase, are covered by the words "power and energy". Is that right? [2640] A. Yes, from an operating point of view they were.

Q. And from a technical point of view? A. Well, for the only technical reason that I would have any occasion to refer to this contract, yes.

Q. You referred to that contract for technical reasons —didn't you? A. Yes.

• • •

[2662] A. Energy is the result of voltage and current.

Q. How about frequency? Do we get that in there? A. Energy could be made available at a frequency. They are all closely interrelated, Mr. Goldberg. To say one can be present without the others is ignoring the practical aspects of the components themselves.

Q. You surprise me, Mr. Spaulding. You just have been telling us all of them are not present. A. They all don't have to be but they all have an interrelation.

Q. Now let's see if we can establish that interrelation firmly in my mind. You said that power is the result of energy and time? A. That is right.

Q. Is it correct to say that energy is the result of voltage and current, and to stop there? A. No.

Q. What else do I need? A. You have to take into consideration time there as well.

Q. I see. So is it correct for me to say energy is the result of voltage, current and time? A. Of course, there must be frequency present. There must be phase present.

• • •

[2697] Q. Is it a fact that under items H and I Consolidated is entitled to all savings effected by Penn Water's contracts with its Pennsylvania customers?

• • •

[2698] THE WITNESS: What do you mean by the "savings resulting from its Pennsylvania customers"?

By Mr. Goldberg:

Q. Savings you referred to at transcript 183 and 184 in your direct testimony. A. May I see that, please?

Q. Yes. I was just going to furnish the references. I think also at 196 of your direct testimony and 209 of your direct testimony.

• • •

The Witness: That is correct.

By Mr. Goldberg:

Q. In other words, such savings as are secured through coordinated system planning and through interchange transactions are applied in reduction of the amounts Consolidated has to pay to Penn Water to make up the return Penn Water is assured of under items H and I—right? A. In part. The other savings result from operating savings of Baltimore Company themselves so that they result from the contracts taken as a whole.

Q. Am I correct in my understanding about the operations that Penn Water makes interchange sales and purchases of power and energy when the generation of energy at a lower [2699] cost plant on one system can be used to replace generation at a higher cost plant on another system?

• • •

The Witness: Where we refer to interchange sales we are referring to the operating transactions between Penn Water on the one hand and Metropolitan on the other under the interchange provisions of Exhibit 72; and between Penn Water and Safe Harbor on the one hand and Pennsylvania Power and Light on the other, with respect to the interchange provisions of Exhibits 76 and 77; and between Penn Water on the one hand and Philadelphia Electric on the other, as respects the provisions of the interchange arrangement which has not yet been identified in this proceeding between Penn Water and Philadelphia Electric. The savings resulting from such interchange transactions were

referred to in the pages you mentioned or adjacent thereto in my direct testimony.

* * *

[2700] Q. That is interchange transactions take place when the generation of energy at a lower cost plant on one system can be used to replace generation at a higher cost plant on another system? A. That is correct.

* * *

[2717] Q. Will you explain what you meant at transcript 127 beginning at line 16 when you said, "The contractual arrangements for such interchange provide for an equitable division of the savings in operation expense between the buying and selling companies in such transactions"? A. It is a little involved, but speaking generally first if you have a transaction of an interchange nature between two companies, as I have described here on page 127, line 16, and above that on the same page, such transactions are arranged whenever one company can generate a small increment of capacity and energy and other electric services at less additional cost than the other company can provide the same services.

TRIAL EXAMINER: How is that determined? How do you know when you can get it on that basis?

THE WITNESS: We have a load dispatcher in an office in Baltimore responsible for the operations of the two hydro companies. Expense of that office is divided between Penn Water on the one hand and Safe Harbor on the other.

That load dispatcher has before him at all times figures showing what it would cost to generate 20,000 kwh. or other increments of energy and to provide 20,000 k. w. or other increments of capacity on each of the several systems with which we are interconnected.

He also has before him, or can readily obtain, the corresponding costs for providing the same electric services from [2718] Consolidated Gas Electric Light and Power

Company of Baltimore and perhaps of the Potomac Electric Power Company in Washington.

He then can determine, and does determine, subject to supervision, of course, whether there would be a saving by having one of the several alternate sources provide an increment of electric service the next hour or the next day. Usually they don't try to schedule it further ahead than that.

If he finds that there is a saving in having one company provide such service over having another company provide the service, he is authorized to make the arrangements to obtain that electric service from the company having the lowest cost. By "lowest cost" I mean the cost of producing that increment of additional energy and capacity or other services.

Now, after he has authorized the transaction and it is carried out, the load dispatcher, together with the power economy group who has responsibility for the accounting of the dollars of cost in such transactions, will determine, first, how much of those services were actually received. And he would determine from the company providing those services what their costs were in providing that increment of service. He will also determine from the company receiving those services what their cost would have been if they had provided themselves that increment of service.

Now, it may be that on the one hand those services would have cost $100 in one company and $150 by the other company. [2719] Having gotten all those figures together, and as I testified in my direct testimony you divide the savings, the customer or the party who did provide the facilities will receive $125 and those dollars will be accounted for as coming from, being debited to the company who did not spend any of the dollars but got the service.

• • •

[2720] By MR. GOLDBERG:

Q. By third or fourth party transactions you mean nonmember companies of the integrated system. Is that it?

A. No, I wouldn't say that, because I don't know what you mean by "integrated" system. But if it were a company other than the named party to one of the interchange transactions we have been referring to this afternoon.

Q. When you mentioned this load dispatcher who directs who is to supply the increment of service at various times, does he limit his concern solely to Safe Harbor, Penn Water and Consolidated, or does he extend his directions for supplying the increments of service to Philadelphia Electric, Pennsylvania Power and Light Company, Metropolitan Edison, and Potomac Electric Power Company? A. The load dispatcher I was referring to as being responsible for the operations of Penn Water and Safe Harbor system contacts directly, and makes arrangements with, the corresponding load dispatcher of the Philadelphia Electric [2721] system, the Pennsylvania Power and Light system, and the Metropolitan Edison system.

If third-party transactions are to be provided or arranged for with another company to the north of one of the three I mentioned, then those arrangements are made between the Penn Water-Safe Harbor load dispatcher on the one hand and perhaps, as an example, the Philadelphia Electric load dispatcher on the other, and he in turn will make arrangements with the third party.

Q. The third party to the north are those New Jersey companies you mentioned yesterday. Is that it? A. That is right.

Q. How about Potomac Electric Power Company? Where do they fit into the picture? A. The Baltimore Company, Consolidated Gas Electric Light and Power Company of Baltimore, also has a load dispatcher, and it is his responsibility to know what the costs are on his own system, meaning Baltimore's system, and on the system of Potomac Electric Power Company. He makes whatever arrangements are to be made between Baltimore and Potomac Electric Power Company, because Penn Water and

Safe Harbor have no operating arrangements for such transactions with Potomac Electric Power Company.

TRIAL EXAMINER: This will not interrupt your cross-examination?

[2722] MR. GOLDBERG: No.

TRIAL EXAMINER: How does Holtwood-Safe Harbor load dispatcher in Baltimore know what the cost of energy would be if supplied by Consolidated if he doesn't know where Consolidated will get it?

THE WITNESS: He has to get that from Baltimore's load dispatcher and Baltimore's load dispatcher has to know that first.

TRIAL EXAMINER: He sits there and tries to figure out where he will get his energy for the next hour, or his services for the next hour?

THE WITNESS: That is right.

TRIAL EXAMINER: Now, then, if he does not know where Consolidated will get it, in other words, he has to use approximation, then talk with Consolidated's dispatcher to find out whether that approximation is correct or not. Is that right?

THE WITNESS: That is about right, sir. They are sitting at a desk with a telephone in front of them and using it almost continually. By "continually" I mean the very large part of each hour. They have before them figures which show right along what the costs are this minute, the next hour and the next hour and so on for at least 24 hours ahead.

TRIAL EXAMINER: Those cost figures, then are made up as they go along each day?

THE WITNESS: They are, and they are continually being exchanged. Probability is that right now all of these load [2723] dispatchers, and seven or eight may be involved, can tell you this minute what the costs are now

on each one of these systems, and they may change the costs in the middle of an hour if the load suddenly comes up by a thunderstorm.

TRIAL EXAMINER: They do not use a standard price good for that day all through the year?

THE WITNESS: No, it is an elaborate table filled in hour by hour. Of course, there are basic figures. I hesitate to complicate it, but let me take the Philadelphia Electric Company's system, for example. The system operator, or the load dispatcher, as I have termed him, of the Philadelphia Electric system knows tomorrow morning what generating units he expects to have running, and if those generating units are all running and loaded as he had expected them to be he knows what the cost of each unit would be.

Now, he also estimates what units, and how many units, he will need to meet an estimated load requirement for an hour or for a day.

If, due to weather conditions, or other unforeseen conditions, the load is higher or lower he could tell you now what the effect of an increment change would be on his system tomorrow at any hour you might ask him. To that extent there are some basic figures that do not change. But as to what the actual costs are, and they will depend on how many units are running and how much load you have on a unit, that is something [2724] he has to figure out as he goes along.

* * *

[2725] Q. Now, then, before the Penn Water and Safe Harbor load dispatcher calls up the Metropolitan Edison load dispatcher to request the delivery of a certain supply, does he communicate with Consolidated to get the Consolidated dispatcher's views on that? A. He will naturally communicate with the dispatchers of all these systems with which he has interchange arrangements [2726] in order to find out from what source it can be obtained most economically.

Q. Suppose the interchange supply were to be used for furnishing Consolidated's needs? Would the Penn Water load dispatcher communicate with the Consolidated load dispatcher to ascertain, or determine, the source from which he was going to secure the supplies? A. May I have the question again, please?

(Question read.)

THE WITNESS: Not necessarily. If the Penn Water-Safe Harbor load dispatcher advised Baltimore Company that he was in a position to obtain a specified amount of electric services the next hour, and knew from the information before him that the cost of such service would be less than Baltimore would have to expend in providing the same service, inasmuch as the service was going to Baltimore, and I presume we are still talking about interchange transactions, Baltimore would have naturally the right to say they didn't want it on the one hand, but they wouldn't be concerned with the name of the party from whom Penn Water might be going to get it on the other.

Q. In supplying Consolidated's requirements under Items "H" and "I" is Penn Water obligated to secure the supply from the cheapest possible source at all times? A. It has a joint obligation with Baltimore Company to plan and operate the system in such a way that the result will be [2727] the minimum of cost to the system.

Q. Well—— A. And it is therefore a joint obligation of Baltimore and Penn Water and Safe Harbor to do so, and therefore I think it is an obligation of Penn Water to assure itself, as well as assure Baltimore, that it did carry out the transactions in such a manner as the costs would be a minimum.

Q. And the interchange agreements then are part of the means of securing the maximum economy from the operations of the system and are so utilized. A. The interchange agreements make possible economies in the operation of the system which would not be possible without them.

Q. When you refer to the joint responsibility of Safe Harbor, Penn Water and Consolidated to operate the system to secure the greatest amount of benefits cost-wise and perhaps operation-wise as well, you are referring to the operating committee which is set up. Is that right? A. The operating committee is the group who carries out the operations to do that, yes.

Q. Is the operating committee in session every day? A. No, indeed.

Q. But if they are not in session every day, how is it carried on during that period of time when the operating committee is not in session? [2728] A. The operating committee have assistants who devote a larger part of their time to such matters, and the operating committee has also delegated a certain amount of such duties to a group known as the power economy group. That power economy group is made up of perhaps six or eight people, including certain clerical assistants, and the expenses of that office are borne one-third by Baltimore Company, one-third by Penn Water, and one-third by Safe Harbor, and the functions and duties and responsibilities of that group, the power economy group, are derived only from the operating committee so far as those duties relate to the contracts we have been discussing. And that power economy group in turn instructs at times, and informs at other times, the load dispatchers of the facts that they may need and have before them to actually perform the things that I have been discussing with you and the Examiner.

Q. Sooner or later, then, the functions of the operating committee and its assistants and the functions of the load dispatchers are correlated, and there is an exchange of information to carry out the operations of the system for maximum—— A. For maximum overall economy and maximum utilization of resources.

Q. And that applies to the operations in respect to Items "E", "F", and "G", "H" and "I", Exhibits 72, 73, 74, 75, 76, and 77, and the unidentified interchange

agreements you and I [2729] have discussed today. Is that right? A. I don't know whether that is taking in too much territory or not, but as long as it is limited to the joint responsibilities of the operating committee to provide the maximum economy it is naturally necessary to give consideration to all of the necessary operations required in connection with these contracts you have mentioned, and others, of Baltimore Company—with the Bethlehem Steel, with Potomac Electric Power Company, and many other contracts. But that does not mean that I, as a member of that operating committee, have any particular working knowledge or operating knowledge of the requirements under those contracts of Baltimore Company.

Q. However, you have a knowledge, or general knowledge, at least, of the operations and of the costs involved? A. Yes. It is necessary to have that in order to know whether it is possible to carry out these interchange arrangements, to obtain the minimum of operating costs, or maximum of economy, within the limits of the provisions of those other contracts. Otherwise, I have no interest in them——

Q. Yes. A. —as a member of the operating committee.

Q. Yes, naturally it has to be within the provisions of the existing contracts—right? A. Yes.

• • •

[2735] Q. When you speak of Items H and I, and E, F, and G being interdependent, in what sense do you use the word "interdependent"? A. That they have to be taken together.

Q. In what sense do they have to be taken together—legally? A. That I don't know. I was speaking of it from an operating sense.

Q. From a physical sense. A. I think so, if by "physical" you mean from the operating point of view.

Q. Well, from an operating point of view how are they interdependent? A. The operations are carried out, and

can be carried out, as they are carried out, only because both of them are [2736] there, and we seldom, and by "we" I mean the operating people, think of one contract or the other contract, but think of them together in our operating practices, carried out as though, and only because, both of them are there. We make no distinction between one or the other except for the accounting of energy on the one hand and the preparation of the bills on the other as distinct from the operations under the two contracts.

Q. Would you say that they are interdependent in the sense that when Penn Water and Consolidated contracted under Items E, F, and G with Safe Harbor for Safe Harbor's entire output that Penn Water and Consolidated were then able to contract under Items H and I in such manner as to effect the complete coordinated utilization of the facilities of Penn Water, facilities and resources of Penn Water and Safe Harbor? A. I think you have to take them together in order to be able to obtain the operating benefits that are obtained. I don't know what the parties had in mind.

Q. I am interested in what you had in mind when you said "interdependent". A. I had in mind that you have to consider them together from an operating point of view. You cannot consider one separately from the other.

Q. Because you do not get complete coordination of the [2737] facilities and resources of Safe Harbor and Penn Water without consideration of Items H and I, and E, F, and G—is that it? A. In part, but also because you cannot determine whether electric services are coming from one or the other, under one of the other contracts or from one of the other plants and other facilities.

• • •

[2757] JOHN A. WALLS.

* * *

CROSS-EXAMINATION.

By MR. GOLDBERG:

* * *

[2776] Q. Mr. Walls, isn't it a fact that as a result of the review you have made of the exhibits described in your statement [2777] that in each of the years 1935 to 1945 inclusive, without exception, Safe Harbor represented to the SEC that Safe Harbor sells electric energy? A. Yes, sir.

Q. And isn't it a fact that it represented that such sales of electric energy are made to only two customers, namely, Consolidated and Penn Water under the agreements we know of in this proceeding as Items "E", "F" and "G"? A. Yes, sir.

Q. Isn't it a fact that in each of the years 1935 to 1945 inclusive, without exception, Safe Harbor represented to the Securities and Exchange Commission that its revenues are derived solely from the sale of electric energy which are made to Consolidated and Penn Water? A. I think so.

Q. Revenues from sales of electric energy, not these other operating revenues?

MR. SPARKS: Yes, but your question, I think, stated "Isn't it a fact that Safe Harbor represented that its revenues were solely from the sale of electric energy?"

By MR. GOLDBERG:

Q. Let me amend the statement to say that its revenues from the sales of electric energy were derived solely from sales of electric energy to Consolidated and Penn Water? A. That is a more correct statement.

[2778] Q. Isn't it a fact that throughout that period of time, 1935 to 1945, inclusive, Safe Harbor never suggested to the Securities and Exchange Commission that it sells

electric energy under any other contracts? A. That is the case so far as I know.

Q. Isn't it a fact that at no time from 1935 to 1945, inclusive, had Safe Harbor ever suggested that it sells electric energy jointly with Penn Water or any other Company?

• • •

THE WITNESS: I do not know of any unless there be an implication to that effect in the legal language in these exhibits.

By MR. GOLDBERG.

Q. From an engineering viewpoint you found no such implications, did you? A. I did not find any such.

• • •

[2797] Q. Now, as a result of your examination of the exhibits which you have referred to in your statement this morning, you know, do you not, that in each of the years 1935 to 1945, inclusive, without exception, Penn Water represented that it sells electric energy to Consolidated under Items H and I? A. Yes, sir, in these statements.

Q. And that it represented at all times during that period that it purchases electric energy from Safe Harbor under [2798] Items E, F, and G? A. Yes.

Q. And that at all times during that period Penn Water represented that it sells electric energy to Philadelphia Electric Company, Pennsylvania Power and Light Company, Metropolitan Edison Company, and Edison Light and Power Company?

• • •

THE WITNESS: I think so, but I don't recall at the moment whether that was for every year.

By MR. GOLDBERG:

Q. At least the exhibits will speak for themselves? A. Yes, sir.

Q. And as a result of your examination of the exhibits referred to in your statement this morning you know, do

you not, that it was never represented by Penn Water that jointly with Safe Harbor it sells electric energy to any customers. Is that right? A. Unless there was some legal implication to that effect.

Q. Otherwise you saw nothing to that effect? A. Correct.

• • •

[2799] Q. And in your examination of the exhibits you saw no representations by Penn Water that it sells capacity and not electric energy to Consolidated under Items H and I. Isn't that right? A. As far as I remember, yes, sir.

Q. And you do not know of any statements filed by Penn Water with the S. E. C. in which it made contrary representations. Isn't that right? A. I don't recall them.

Q. And as in the case of Safe Harbor, Penn Water's representations were also representations to the Public and to prospective investors and present investors—right? A. I think that that is so.

• • •

[2816] Q. I show you Exhibit 73, Mr. Walls. Is that exhibit framed in accepted nomenclature among engineers? A. Yes, sir, that would be understood by engineers, but it is not an accurate representation of the operating situation.

Q. Is it accepted expression when they speak about sale of electric power and energy in that agreement? A. It is accepted in the sense of being usual and there being no necessity to be more explicit, yes, sir.

Q. And it is accurate when used in Exhibit 73, isn't it? A. Sufficiently accurate for the purposes of the contract.

Q. It is sufficiently accurate in connection with any disputes which might arise under the contract—isn't that so? A. I don't know about that. I often find in contracts that the intent does not appear later on after investigation by lawyers to be the intent that I thought the contract was founded upon, so that disputes arise. What

disputes arise in connection with that contract I don't know.

Q. When it states, at page 3 of Exhibit 73 that PX, meaning Philadelphia Electric Company, may obtain electrical energy, what does it mean? A. It means electric supply if interpreted in the fashion [2817] I would interpret it.

Q. It means electric services? A. Yes, sir.

Q. And that is accepted nomenclature for describing electrical services, isn't it? A. That is accepted nomenclature for the purposes of a contract like this but it is not a fully accurate description.

Q. Mr. Walls, you know, as an engineer of many years' experience, that it is accepted nomenclature not only for purposes of contracts but for any other purposes you have ever heard engineers discuss the subject. Isn't that so? A. No, sir, I wouldn't say that.

* * *

Q. And you have used them as synonymously with "electric services"—right? A. I think that "power and energy" have often and even generally been used in contracts as synonymous with electric service, but not always. In the old days they generally referred to "power" without the word "energy."

Q. They were using them as encompassing the word "energy"—[2818] right? A. Yes, sir.

Q. Back there in 1920? A. Well, and earlier than that.

Q. Along in 1920 as well? A. Yes, sir. But I do not believe that electric service itself is synonymous with "power and energy." In other words, it may sound queer, but "power and energy" may be used sometimes as a substitute for electric service but "electric service" may convey a meaning that is more than that conveyed by "power and energy."

Q. Engineers use them interchangeably, power and energy used as synonymous with electric services by engi-

neers. Isn't that so? A. Yes, but very loosely. When used that way it may be incorrect.

Q. You use it that way yourself? A. Often, and expect to do so in the future.

Q. Other engineering associates in your company do that? A. Yes, sir, where there is no need to be more accurate.

Q. And in contracts there is need to be careful, isn't there? A. There is need to be careful, but there is not always need to be fully explicit.

Q. Although there is not need to be fully explicit, [2819] "power and energy" has been carefully used in the contracts of the company to cover what you are today referring to as electric services. Isn't that so? A. I think it has not been carefully used. I think it has been loosely used because it is a convention.

Q. Would you say that it is now necessary to revise your contracts? A. I shouldn't think so.

• • •

[2834] Q. In other words, you were negotiating for electric services, for example, under Exhibit 72, is that right? A. Yes, sir.

Q. And the electric services were described in the [2835] terms used in that agreement? A. Yes, sir.

Q. And that is the case in the other agreements which I have shown you; is that right? A. Yes, sir.

• • •

[2840] GEORGE W. SPAULDING.

• • •

CROSS-EXAMINATION (Continued).

By MR. GOLDBERG:

• • •

[2877] Q. Have you had an opportunity to check any of the matters I requested you to check, Mr. Spaulding, one of them being—did Penn Water submit a bill to Philadelphia Electric Company in behalf of Penn Water and Safe

Harbor? A. I find no evidence that a bill has been rendered to the Philadelphia Electric Company for firm power services at Coatesville which was rendered both by Penn Water and Safe Harbor.

I don't say there aren't any, but I have not been able to find any.

Q. The bills you are able to find appear to have been rendered in the name of Penn Water only to Philadelphia Electric Company. Is that right? A. That is correct.

• • •

[2880] Q. In other words, the terms of the agreements for firm power supply and interchange supply among the several systems that you have just mentioned are such as to permit the shifting of supply in the network to various load centers so that the cheapest possible source of generation is being used to meet the load requirements of the systems you have named—is that right? A. That is right.

• • •

Q. In other words, provision has been made for coordination of the operations of the systems you have named, namely, Safe Harbor system, the Consolidated system, the Penn Water system, Philadelphia Electric system, Pennsylvania Power and Light system, Metropolitan Edison system, and Pepco system. Is that right?

• • •

THE WITNESS: The several agreements which we have been referring to in the last several days, together with other [2881] agreements which have not been identified in these proceedings, permit coordinated operations of and between the parties you have named to the extent that transmission facilities permit.

• • •

[2893] Q. Well, do you know of any provisions in any of the agreements which have been identified in this proceeding, or received in evidence, which authorizes Penn Water to take Safe Harbor's share of the savings under Exhibits

76 and 77 and credit them wholly to Consolidated in connection with provisions [2894] of Items "H" and "I"? A. I don't think I do, but when Baltimore Company undertook, under "E", "F" and "G" and "H" and "I", to provide a specified return dollarwise with certain adjustments to Safe Harbor on the one hand and Penn Water on the other, those companies at that time gave up any opportunities to increase their earnings as the result of any economies within the company, or any economies of coordinated operation with others. As a result of those agreements, therefore, any savings that should properly result, and do result, from the equitable division of savings resulting from coordinated operations go to reduce the payments made by Baltimore Company to Safe Harbor on the one hand and to Penn Water on the other. Under "E", "F" and "G" Baltimore Company pays a specified dollar payment for the entitlements it receives under that contract. Baltimore does not get those entitlements, never expected to get those entitlements as such, namely, as electric services. In lieu of its entitlements of electric services it does receive the revenues obtained from the sale of electric services to which Baltimore Company is entitled under "E", "F" and "G".

A further accounting, and all further accounting, of savings or economies resulting from the operations of Safe Harbor on the one hand and Penn Water on the other, all go, accountingwise, to reduce the net revenues paid by Baltimore Company to Holtwood Company, that is, Penn Water, under the contract identified as [2895] "H" and "I".

Q. In other words, whatever savings there may be as a result of the coordinated operations go to reduce Consolidated's payments to Penn Water under Items "H" and "I", a contract to which Safe Harbor is not a party. Right? A. It is not a named party, no, sir.

Q. And my statement is right? A. That is right.

Q. And part of these economies you say belong to Safe Harbor—right? A. I think they do.

Q. And though they belong to Safe Harbor they are used by Penn Water in an agreement to which Safe Harbor is not a party—right? A. They are so accounted for.

Q. They are so used—right? A. They are so accounted for.

Q. Do you make some distinction between them? A. I don't know whether there is a distinction.

Q. But none of these savings are in any way involved in the payments made under Items "E", "F" and "G" by Consolidated and Penn Water. Is that right? A. Payments by Consolidated and Penn Water are entirely independent of services rendered.

• • •

[2896] These savings do not affect in any way the payments made by Baltimore and Penn Water to Safe Harbor under contract identified as "E", "F" and "G".

• • •

[2897] Q. The objective of the coordinated operations, as I understand it, is to use the cheapest source of supply to meet the requirements at various load centers—right? A. Generally, yes.

Q. And is that practice followed with respect to Exhibit 73, for example, the Coatesville power supply contract? A. Generally.

Q. And that—— A. Yes, but let us be sure there is no misunderstanding about that. That has to do only with the total generation on the system and not the responsibilities of the respective parties to this overall interconnected system we have been talking about. The coordinated operations are one thing. The operating responsibilities are quite something else. So that when we talk about the savings resulting from coordinated operation we are talking about the savings resulting from the scheduled operations and not the savings resulting from the operating responsibilities under any single contract.

• • •

[2904] Q. When Exhibit 71 was entered into were Items E, F, and G changed in any way? A. I don't know, Mr. Goldberg, whether or not it was.

Q. Well, you know it is marked in this case. Look at it and tell me what was changed, if anything? A. I don't mean that anything in writing was changed, but I don't know whether the provisions of E, F, and G, or the operating responsibilities under E, F, and G, were changed when contract identified as 71 was entered into or not, with [2905] the approval of all parties.

Q. Exhibit 71 was entered into—do you know of any amendments entered into with respect to Items E, F, and G at that time? A. No, I am pretty sure there were none.

• • •

Q. What was done to Items E, F, and G, when Exhibit 73 was entered into? Amended, supplemented, revised? A. There were no changes made when 73 was entered into.

Q. Or when 74 was entered into—right? A. That is correct, no changes in E, F, and G in writing as such.

Q. What does that—no changes in E, F, and G in writing as such mean? A. That is right.

Q. You mean there were no changes in writing that you know of? A. I don't know whether there was any change in the responsibilities of the parties or not. I think there must have been, without being a lawyer. E, F, and G was entered into in 1931, and there were certain entitlements to which Baltimore was entitled to on one hand and Penn Water entitled [2906] to on the other.

Then subsequent to that time, and as I recall it after the charter rights of Safe Harbor were extended by the Pennsylvania Commission in 1932, subsequent to that time the contract between Penn Water, Safe Harbor, and Edison Light and Power Company was entered into with the approval of Baltimore Company and Penn Water. I don't know from the legal point of view what changes took place in the contracts identified as E, F, and G, but certainly something took place right at that time. And again

when the contracts were entered into in 1933, I believe it was, with Coatesville, the contract identified as Exhibit 73, Safe Harbor was made a party to that contract, made a party to that contract with the written consent and approval of Baltimore Company.

Penn Water, of course, likewise, was a party. Certainly some change took place in the obligations and responsibilities of Safe Harbor under E, F, and G when it entered into those contracts.

Now, as an engineer, I don't know what the changes were, but it certainly changed the entitlements of the services as distinct from dollars under E, F, and G. Baltimore and Penn Water still were entitled to two-thirds and one-third, but certainly Baltimore did not expect to get, and did not get, as much services from Safe Harbor under E, F, and G, after Safe Harbor entered into the contracts identified as Exhibits [2907] 71, 73, and 76, and the Pennsylvania Railroad contract.

TRIAL EXAMINER: Where did Safe Harbor get that written consent from Consolidated entered as Exhibit 73?

THE WITNESS: Before——

TRIAL EXAMINER: Have we marked it for identification?

THE WITNESS: No.

TRIAL EXAMINER: This is something new, then? You are testifying to something which has not been testified to before? I do not recall it.

THE WITNESS: I think it has been referred to, Mr. Examiner, but the letters have not been identified.

MR. GOLDBERG: You took the words right out of my mouth, Mr. Examiner. I was about to request that written consent be brought in here.

TRIAL EXAMINER: Very well.

MR. GOLDBERG: Mr. Spaulding, will you provide us with Consolidated's consent, if it exists, to Exhibits 71, 72, 73, 74, 75, 134, 76 and 77?

THE WITNESS: How about the railroad contract. Of course, Safe Harbor was a party to the railroad contract. My recollection is that no written approval was necessary from Baltimore Company for Safe Harbor to enter into the railroad contract because Baltimore Company itself was a party thereto.

By MR. GOLDBERG:

Q. Do you have something in writing on Exhibit 10? [2908] A. No, there is nothing in writing, I mention that because——

Q. Is it your interpretation as to why there is nothing in writing? Is that right? A. I don't attempt to make an interpretation as to why there is nothing in writing. I explained that there was no letter because counsel for Baltimore Company and Penn Water felt that the fact that Baltimore Company and Penn Water were already a party to the contract, any formal approval was unnecessary. I remember that because I participated in those discussions.

Q. You have nothing in writing on that? A. No, it was agreed nothing in writing was necessary.

* * *

[2921] Q. Well, are the operations of Safe Harbor and Consolidated physically inseparable in the same way that you testified at transcript 195, that the operation of Penn Water and Safe Harbor to Baltimore Company are physically inseparable? A. No, there is a distinction between them.

Q. What is the distinction? A. The two hydro plants and the steam plant of Penn Water are operated as a single combined source of electric services, and it is impossible to distinguish between the services from one plant and the services from the other plant. By "plants" I

mean the hydro and steam plants of Penn Water on the one hand and Safe Harbor on the other.

You cannot determine whether the kilowatt comes from one [2922] plant or the other, or a kilowatt hour, or a K. V. A. comes from one plant or the other.

You can tell how much of each the two plants provide, but their operations are closely coordinated in order that full utilization may be made of the river flow and of the storage available largely above the Safe Harbor dam, but including such storage as is available below the Safe Harbor dam in the Holtwood pond.

• • •

[2923] Q. You say the operations of Consolidated are not as closely coordinated with those of Safe Harbor and Penn Water as are the operations of Safe Harbor and Penn Water—right? A. That is right.

Q. You say there is some difference of degree—right? A. That is right.

Q. Where does that difference of degree begin to take effect? A. It takes effect all through the operating responsibilities.

Q. You say that it is impossible to distinguish between the services being rendered by Safe Harbor hydro and the services from Penn Water's hydro and steam plant—right? A. Generally.

Q. Is it possible for you to distinguish between the services being rendered by Consolidated's steam plant and [2924] those being rendered by Penn Water and Safe Harbor hydro? A. Yes.

Q. How can you make that distinction? A. Well, it can be done and it is done.

Q. Can it be done at the time you have power coming up from Baltimore and generation at Safe Harbor? A. Yes.

Q. How do you do it? A. You know how much capacity and energy and other services are being generated from the two hydro plants on the combined system, and

you know what is being generated by the power resources of Baltimore on the other hand.

Q. You know that with respect to the coordination of the two hydros up there on the Susquehanna and steam plant at Holtwood—right?

THE WITNESS: May I have that question?

(Question read.)

THE WITNESS: Yes.

By MR. GOLDBERG:

Q. What is there which enables you to distinguish what is being rendered by Consolidated when there is generation at Safe Harbor but does not enable you to make the same distinction where there is generation at the Safe Harbor and Holtwood hydros and at the Holtwood steam plant? A. May we refer to Exhibit No. 8?

[2925] Q. Yes. A. And looking at the upper right-hand diagram we see the electrical services provided by hydro, which includes the services provided from the Holtwood hydro plant to Penn Water and at Safe Harbor hydro plant at Safe Harbor. They are operated in the upper part of that curve, shown colored in green, in a manner to obtain the maximum use of the hydro capacity and the hydro energy. It is impossible to say what kilowatt, or what kilowatt hour of that green area, comes from Holtwood and what comes from Safe Harbor. In any hour it is easy to determine how much comes from each, but the way in which the river flow is used in the two plants, and the two plants operate in service, you have to take the operation of the two plants together in order to obtain the maximum utilization of the river flow.

If you take the section below the green area you find a portion of the curve which is indicated comes from steam source No. 3.

My testimony in connection with that exhibit indicated that that steam source is used to provide electric services required in that area.

Now, in that instance, although there may have been several combinations of boilers and turbo generators, and in fact there may have been such units in several plants, they are not inter-dependent on each other, and although it is not [2926] shown here as to which steam plant or steam source is fitted into each imaginary square of that area it could readily be done by knowing the relative incremental costs of those several combinations of boilers and turbo generators. So there is no inter-relation of the steam sources in that group although there is a very close inter-relation resulting from the very close operation and operating responsibilities of the two hydro plants in the green area.

• • •

[2945] Q. I show you now, Mr. Spaulding, the annual report of Pennsylvania Water and Power Company for the year ended December 31, 1945, to the Federal Power Commission on F. P. C. Form No. 1 and direct your attention to pages 512 and 513 of that report. At those pages does Penn Water report the sales of electric energy to anybody? A. In column (p) of page 513, Schedule 530, "Sales to Other Electric Utilities," there is reported according to the instructions of the Federal Power Commission certain kilowatt hour figures.

Q. To whom is it reported by Penn Water that they sell electric energy on pages 512 and 513? A. Well, there is a recording of kilowatt hours in this schedule of energy, as indicated by the items reported in column (p) to the Consolidated Gas Electric Light and Power Company of Baltimore to the Pennsylvania Power and Light Company to the Philadelphia Electric Company at Coatesville and [2946] to the Edison Power and Light Company at York. I don't know that it indicates an energy sale. It is a recording of energy in connection with this statement.

• • •

[2947] Q. And the sales to the other electric utilities are [2948] shown as being made to Consolidated of Baltimore,

Pennsylvania Power and Light Company, Philadelphia Electric Company, and Edison Light and Power Company —right? A. Yes. The entries on pages 512 and 513 are made in relation to the sales to those companies as an accounting matter.

Q. You mean an accountant made up pages 512 and 513? A. I think an accountant prepared the framework within which certain figures were entered.

Q. You mean an accountant for the Federal Power Commission? A. I don't know.

Q. Who is this accountant you referred to who prepared the framework? A. May I refer to instruction No. 4?

Q. On page what? A. 513. "The number of kilowatt hours sold should be the quantities shown by the bills rendered to the purchasers."

I want to point out that although kilowatt hour figures are shown for each of the four companies, they are not figures that appear on all of the bills rendered, and the figures entered in column (p), "Kilowatt hours", is merely an accounting by the companies of the energies produced, purchased, and so forth, in order to have a complete accounting on these pages and other subsequent and preceding pages of all of the energies which the companies must report.

Q. In other words, you are saying that the items are there [2949] reported at pages 512 and 513 in that form because the schedule requires the company to follow that form and it had no choice. Is that right? A. That is right.

Q. Now, then, it did exercise its choice, however, of explaining to the Commission, didn't it, that though it was including in column (p) certain amounts of kilowatt hours that they had certain meanings other than those which might be carried away from reading the schedule alone—isn't that so? A. Yes.

• • •

Q. Now, though Penn Water felt free to indicate how the schedule should be read at pages 512 and 513, did it say that it does not sell electric energy to the companies shown at page 512, namely, Consolidated of Baltimore, Pennsylvania Power and Light Company, Philadelphia Electric Company, and Edison Light [2950] and Power Company?

• • •

THE WITNESS: As respects Pennsylvania Power and Light Company, Philadelphia Electric Company and Edison Light and Power Company it does not say it did not sell electric energy. There certainly is the implication they did not sell electric energy to Baltimore Company.

• • •

[2952] Q. Now, then, it does appear, doesn't it, from the first note on page 513-a that Pennsylvania Water and Power Company describes its customers in Pennsylvania, namely Pennsylvania Power and Light Company, Philadelphia Electric Company and Edison Light and Power Company as "its other (firm) customers"?

• • •

THE WITNESS: I think that is a general statement of what is recorded here.

• • •

[2953] Q. Well, look at it, Mr. Spaulding. Look at those pages and tell me if you see anything there and what it is about a representation that the customers I have named are the joint customers of Safe Harbor and Penn Water? A. I don't know whether there are any implications in that or not. I don't see any.

Q. You see nothing expressed there to that effect, isn't that so? A. There is no specific reference to it here.

Q. As a matter of fact, there is an express reference there that Pennsylvania Power and Light Company, Philadelphia Electric Company, and Edison Light and Power Company are Penn Water's firm customers. Isn't that so? A. Perhaps.

Q. No "perhaps" about it, Mr. Spaulding. That is the case, isn't it? A. I don't know what the implication of that is.

[2954] Q. I am not talking about implications. I am talking about express representations.

You just look at the first page of 513-a and tell me if you find anything in there which enables you to disagree with my statement? I will have my statement read to you.

TRIAL EXAMINER: Read the statement, please?

(Statement read.)

THE WITNESS: Yes.

By MR. GOLDBERG:

Q. Now, if they were the joint customers of Penn Water and Safe Harbor, don't you think Penn Water would have said so? A. I don't know.

Q. You participated in the preparation of that report, didn't you? A. I did.

Q. Why didn't you say so? A. Because this statement is not all mine.

Q. Who wrote that statement? A. It is the combination of my suggestions and lawyers'.

Q. And you didn't suggest, did you, that it should be represented that the Pennsylvania customers were the joint customers of Penn Water and Safe Harbor—isn't that so? A. I wouldn't say that.

Q. Did you represent they should be so described? [2955] A. I don't remember.

Q. If you had suggested that would your suggestions have been rejected? A. I don't know.

Q. Did you make the suggestion? A. I don't recall.

Q. How long ago was that? A. About six months.

Q. Six months ago did you conceive of Pennsylvania Power and Light Company, Philadelphia Electric Company, and Edison Light and Power Company as the joint customers of Safe Harbor and Penn Water? A. Certainly.

Q. Yet you didn't so state, did you? A. I did not so state.

Q. In a report which you were signing as representing the accurate facts. Is that right?

• • •

A. I think so.

Q. And in representing that they were the facts you [2956] did not represent that the Pennsylvania customers were the joint customers of Safe Harbor and Penn Water —right? A. It doesn't state here that they were joint customers.

Q. And that means you did not make such a representation. A. That is right.

Q. Even though at the time you were preparing the report you state you conceived of them as the joint customers of Safe Harbor and Penn Water—right? A. When you say, "Conceived of them", the idea is that——

Q. You looked upon them. A. Right.

Q. You do know that you signed that report, don't you? A. I do.

Q. And in signing that report, Mr. Spaulding, you said to the Federal Power Commission that you were making an oath as the vice-president of Pennsylvania Water and Power Company that you had examined the report, that you believed all statements of fact contained in the report are true and that the report is a correct statement of the business and affairs of Penn Water with respect to each and every matter set forth in the report during the period from and including January 1, 1945 to December 31, 1945—right? A. That is right.

• • •

[2962] Q. • • • Now, then, we know, don't we, Mr. Spaulding, that Safe Harbor did not report that it had made any sales of electric energy to Pennsylvania Power and Light Company, Philadelphia Electric Company, and Edison Light and Power Company during the year 1945. Isn't that so? [2963] A. The Safe Harbor report to the Federal Power Commission for the year ending December 31, 1945, does not record any sales to other electric utilities, other than to Baltimore and Penn Water.

Q. Directing your attention to page 524 of Penn Water's report on F. P. C. No. 1 for the year ended December 31, 1945, do we find the report by Penn Water of interchange transactions? A. There are recorded transactions in the schedule "interchange power" appearing on page 524, of Penn Water's report to the Federal Power Commission for the year 1945.

Q. And the interchange transactions are reported as having taken place with what companies? A. Philadelphia Electric Company, Pennsylvania Power and Light Company, Metropolitan Edison Company.

Q. Are they shown as interchange transactions in any way with Safe Harbor? A. No.

Q. As a matter of fact, if you turn to page 524, Safe Harbor's report for 1945, you find they report no interchange power transactions—right? A. That is correct.

Q. So we can tie this into discussions we had at an earlier date, firm power sales reported at pages 512 and 513 to the Pennsylvania customers in 1945 were made under Exhibits [2964] 71, 73, and 76. Is that right? A. Yes, if you include the amendments and supplements to those contracts you just referred to.

Q. You mean Exhibits 74, 75 and 76. Is that right? A. That is correct.

[2965] Q. And the interchange transactions reported by Penn Water, which we have just referred to, were made under Exhibits 77, 71 and 134—is that right? A. No, they were not made under 71 with Edison Light and Power. They were made under agreement between Metropolitan Edison and Penn Water dated March 11, 1931.

Q. That is the one we have not yet identified in the record as an exhibit—right? A. That is right.

We have not, of course, referred to the railroad contract but such accounting in connection with the railroad contract is recorded in the annual reports.

Q. With reference to the sales to the railroad, that is shown on page 514 of the report, isn't it? By "report" I

mean Penn Water's report to the FPC for the year ended December 31, 1945, on form No. 1. A. That is correct. Such accounting is shown on Schedule 532 "Sales to Railroads and Railways."

Q. And in this report Safe Harbor shows that Schedule with nothing in it—right? A. That is right.

Q. Penn Water reports at pages 522 and 523 of its 1945 report, "Purchases", and it reports those purchases as being made from Safe Harbor—right? A. It does.

• • •

[3061] Q. Referring to Exhibit No. 9, what portion of the $3,531,520, shown for the year 1944, was paid to Safe Harbor as its share of what you have referred to as the joint services rendered to the firm power customers in Pennsylvania? A. None of it directly.

Q. What portion was paid indirectly? A. I don't know.

Q. Do you know whether any portion was paid indirectly? A. Yes, I know that some of it was. I don't know just how much.

[3062] Q. Was it paid to Safe Harbor as a share of its revenues resulting from the joint services to the Pennsylvania customers?

• • •

THE WITNESS: Not as such.

By MR. GOLDBERG:

Q. As a matter of fact, it was paid to Safe Harbor under Items "E", "F" and "G", wasn't it, by Penn Water? A. Either by Penn Water or by Baltimore Company.

Q. Referring to Exhibit No. 17, which is the Safe Harbor bill to Holtwood for the year 1944, and to Baltimore Company, what amount is shown as the amount Holtwood Company is to pay to Safe Harbor? A. For the year 1944 Penn Water paid Safe Harbor under "E", "F" and "G" $1,214,553.53.

Q. Was that amount part of the $3,531,520 shown on Exhibit No. 9? A. It was not earmarked as such.

Q. In other words, if this $1,214,553 was a part of the $3,531,520 it was not paid to Safe Harbor as a share in the revenues resulting from services rendered to the Pennsylvania customers? A. I don't know whether it was or not, but not as such.

Q. But was used by Penn Water to meet its obligations to Safe Harbor under Items "E", "F" and "G", isn't that so? [3063] A. Possibly so.

Q. So that if the $1,214,553 were a part of the $3,531,520, the utilization of the $1,214,000 by Penn Water to meet its obligations to Safe Harbor is in the same category as the utilization by Penn Water of the revenues it received from Conowingo to pay any other obligations that Penn Water may have. Isn't that so? A. I don't know whether one is a prior payment of the other or not, prior obligation for payment or not.

Q. Well, the $3,531,520 and the payments received from Conowingo constitute revenues to Penn Water—right? A. Among others, yes.

Q. Now, then, if the payment made by Conowingo—incidentally, what is the payment in dollars made by Conowingo to Penn Water—do you know?

* * *

MR. GOLDBERG: $133,750. I see it on Exhibit 18.

By MR. GOLDBERG:

Q. Is that right? A. That is right.

Q. If we added the $133,750 to the $3,531,520 shown on Exhibit 9 we would have a total of $3,665,270. Does that sound right to you? A. Sounds about right.

Q. Now, then, that would represent revenues available to [3064] Penn Water to meet its obligations—right? A. Those revenues with others, yes.

Q. And it could use the $133,750 to meet its obligation to Safe Harbor under Items "E", "F" and "G", couldn't it? A. So far as I know.

Q. And that is what you mean by Safe Harbor receiving indirectly revenues—— A. I don't know whether any other obligations or legal responsibilities are involved, but generally that is what I had in mind.

Q. That is what you had in mind when you said that Safe Harbor was receiving indirectly part of the revenues from the Pennsylvania customers, because it is used in the manner, it may be used in the manner, we have discussed. Is that right? A. That is right.

Q. In other words, it can be said that I receive part of my salary from you indirectly. Isn't that so? A. That is so.

Q. You pay taxes to the United States Government, don't you? A. Yes.

Q. And the United States Government pays my salary? A. I don't know. I assume so.

Q. I assume so, too. But it may be said that indirectly you pay my salary, in part at least. Isn't that so? [3065] A. Is that a question?

Q. Yes. A. It might be so said.

Q. Nevertheless, you and I are not rendering any joint services that you know of, is that right? A. It hasn't appeared so.

Q. Does Safe Harbor render services for which it receives no reimbursement? A. It renders service for which it receives no reimbursement as such.

Q. Those services it renders to the Pennsylvania customers, Philadelphia Electric, Pennsylvania Power and Light Comapny, and Metropolitan Edison Company? A. I don't think it renders any service to Metropolitan Edison Company but it renders service to Pennsylvania Railroad. Of course, we have that.

• • •

[3067] Q. When you say Safe Harbor can only perform its obligations to the Pennsylvania customers jointly with Penn Water, do you mean by that statement that Safe Harbor can't make delivery without utilizing Penn Water's

facilities? A. Under the present contract they could not unless some other arrangements were made.

Q. In other words, you see joint service because Safe Harbor must rely on Penn Water's facilities to make delivery. Is that it? A. That is one element of joint service, yes.

* * *

[3092] Q. At transcript 193, beginning with line 4, you testified that Consolidated "Has the assurance for a long period, extending to 1980, of the advantages and certainty of a large source of hydro service which is closely coordinated with its own steam resources, and offering the opportunity to achieve the maximum economy of system operations." You so testified, did you not? A. I did.

Q. And, conversely, Penn Water has the assurance for a long period, extending to 1980, of the advantages and certainty of guaranteed earnings? A. I assume so, as long as the contract remains in effect.

* * *

[3101] Q. Consolidated has a contract obligation under items H and I to supply that steam backup—is that right? A. That is correct, and at the request of Penn Water.

Q. During such times as Holtwood would have to resort to Baltimore for a supply to meet the Pennsylvania requirements I have named in the preceding questions, and Baltimore was entitled to receive part of Safe Harbor's hydro-electric output under items E, F, and G, to avoid the necessity of having the electric energy from Safe Harbor go down to Baltimore and then back up to Holtwood it is merely diverted from Safe Harbor to Holtwood. Isn't that the way it works?

MR. SPARKS: May we have the question, please?

THE WITNESS: Before the question is read may I ask what these Pennsylvania customers are?

By MR. GOLDBERG:

Q. Philadelphia Electric, Metropolitan Edison, Pennsylvania Power and Light, and the State of Pennsylvania

load of the Pennsylvania Railroad? A. You included Pennsylvania Power and Light?

[3102] Q. Yes.

• • •

THE WITNESS: That is not the whole story.

By MR. GOLDBERG:

Q. Is that part of the story? A. I don't know. First of all, the requirements of these Pennsylvania customers to which you referred are in part the joint responsibility of Penn Water and Safe Harbor. I do not know what part of those responsibilities are Safe Harbor's or what part are Penn Water's so that I cannot determine how much Penn Water must obtain from Baltimore under your assumption that it would receive such services from Baltimore only in order that it might meet its responsibilities in part alone and in part joint to these Pennsylvania customers.

• • •

[3104] Q. All right. Are there times when Consolidated's entitlement under items E, F, and G is used to supply the requirements of the Pennsylvania customers?

• • •

[3105] THE WITNESS: The entitlements were arbitrarily determined where it was recognized they would have no significance as such in relation to the actual services rendered, and I don't believe I can answer your question categorically except to say that at times Safe Harbor does have an operating responsibility to the Pennsylvania Railroad, in your example, and as a result of that operating responsibility does not have left available for delivery to Baltimore as much as it would otherwise have.

Q. What it would otherwise have delivered to Baltimore is diverted to take care of the requirements of the Pennsylvania Railroad, for example. Is that right? A. It isn't diverted.

Q. It isn't sent down—— A. It is used for that purpose by Safe Harbor and Penn Water jointly.

Q. It isn't delivered down to Consolidated? A. That is right.

Q. If it were delivered down to Consolidated, had Safe Harbor and Penn Water needed it to meet the Pennsylvania requirements, that would only mean Baltimore would have to send [3106] it right back again. Isn't that so? A. Perhaps.

Q. So instead of going through all that they just don't send it down to Baltimore and use it up there in Pennsylvania. Isn't that it? A. I don't know.

Q. You just told us that there are times when instead of sending the electric energy to Consolidated in Baltimore it is used to meet the requirements of the Pennsylvania customers. Right? A. No, I don't think I said that.

Q. I just don't hear; then. A. Safe Harbor has a certain amount of electric services. Baltimore, under the contract, is entitled to two-thirds of those services. Safe Harbor has other operating responsibilities other than those referred to and covered by Exhibits "E", "F" and "G". To the extent that Safe Harbor uses electric services to meet its obligations to the Pennsylvania Railroad or other Pennsylvania customers there is that much less electric services available to Baltimore Company.

* * *

[3108] Q. And they never have existed because under the operating arrangements when Safe Harbor or Penn Water need Consolidated's entitlements to meet the Pennsylvania requirements, instead of the electric energy being delivered to Consolidated it is utilized up in Pennsylvania? A. No, that is not right, because Baltimore doesn't have available to it anywhere near the same electric services, [3109] measured in services, that it had in 1931. It hasn't as many services because of the operating responsibilities assumed by Safe Harbor in entering into these other contracts.

Baltimore's entitlement under "E", "F" and "G" ha been converted from services into dollars which it receives under contract identified as "H" and "I", or rather as accounted for under the contract identified as "H" and "I", being those revenues received for the electric services to which Baltimore Company was originally entitled but to which it does not now receive and cannot receive so long as Safe Harbor meets its contractual obligations, and by that I mean its operating responsibilities.

Q. You mean that when Consolidated gave its consent to the agreements which were made with the Pennsylvania customers—— A. Including the Pennsylvania Railroad.

Q. —it thereby authorized the diversion of its entitlements to Pennsylvania? A. Not from a contractual responsibility point of view. I don't know what it did contractually from a legal point of view.

Q. What did it do from an operating point of view? A. From an operating point of view Safe Harbor undertook additional operating responsibilities not theretofore assumed by it, and thereby had less electric services available to Baltimore Company under the contract identified as "E", "F" and "G".

[3110] Q. When Baltimore approved the consummation of the contracts with the Pennsylvania customers it thereby, from an operating point of view, permitted the utilization of its electric service entitlements in Pennsylvania to meet the requirements of the Pennsylvania customers. Isn't that so? A. I don't know what you mean by "permitted." It authorized it.

Q. You say it authorized it? A. Yes.

Q. With that substitution for my "permitted" you would say "Yes"? A. Let me go back to the question before I answer.

MR. GOLDBERG: All right.

(Question read.)

THE WITNESS: Well, it authorized Safe Harbor to undertake these additional operating responsibilities know-

ing full well that that included an authorization for the use by Safe Harbor in meeting those responsibilities of services which theretofore had been available to Baltimore Company either under "E", "F" and "G" or under "H" and "I".

• • •

[3133] Q. And have you always considered that those operating responsibilities that Safe Harbor had were joint operating responsibilities? A. That is right, I have considered them joint operating responsibilities.

Q. And when you have considered them as joint operating responsibilities you mean joint operating responsibilities of Penn Water and Safe Harbor—right? A. That is correct.

Q. And when you have considered them as the joint [3134] operating responsibilities of Penn Water and Safe Harbor, has it been your thought, your opinion, that Safe Harbor is responsible for supplying all of the requirements in the event Penn Water does not supply them? A. I don't think I ever had a definite opinion on that, and probably because there has only been one situation that I can think of when Penn Water was unable to furnish electric services to anyone. That was during the 1936 flood when Penn Water had to shut down, or rather when the elements shut down Penn Water's hydro and steam plants, and at that time Safe Harbor was the only company in a position to supply or to render electric services to these Pennsylvania customers, but I don't think even then that in retrospect I had any opinion as to whether they did then or would now have any particular portion of the operating responsibilities.

• • •

[3206] Q. As an engineer fully informed as to the operations of Safe Harbor under its contracts, fully aware, as you have stated, of the distinction between selling electric energy and selling electric services, you nevertheless found it entirely appropriate in the Safe Harbor proceeding to

describe the revenues received by Safe Harbor under the contract we know in this proceeding as items E, F, and G as "Revenue from energy sales". Isn't that right?

* * *

THE WITNESS: I did so state it, and I did not qualify it, although I was fully aware of the distinction between energy and electric services.

* * *

Q. Did you mean "Yes"? A. I don't know.

* * *

[3207] Q. Is the answer "Yes"? A. I think so.

Q. I want you to be sure, Mr. Spaulding. I don't want you to say that you testified "Yes" when you did not intend to. You seem to have some doubt. Is it correct to say that you can answer that question "Yes"? [3208] A. Let me have it again, please?

(Question read.)

THE WITNESS: Apparently I did at that time.

By MR. GOLDBERG:

Q. Then your answer is "Yes"? A. Yes, it is.

* * *

[3225] Q. Did Safe Harbor provide special facilities in connection with the operation of the Exhibits 76 and 77? A. Yes.

Q. Are they jointly used? A. I think they are jointly used by all three parties to those contracts.

Q. Can it be said any of them were provided for the specific use of Pennsylvania Power and Light Company? [3226] A. No, I do not think so, but they were provided specifically in connection with the services and operating responsibilities to the Pennsylvania Power and Light Company.

Q. Had those facilities been provided in connection with Exhibit 136? A. I do not think they were.

Q. Generally what kinds of facilities were they? A. Transmission facilities in a broad sense.

Q. What is that? A. In a broad sense, switches, breakers, high tension equipment and controls, transmission lines and the like.

Q. Weren't they required in connection with the operation of Exhibit 136? A. I don't think there were any provided by Safe Harbor until after the execution of Exhibit 76 and after 76 went into effect.

Q. Would they have been required in connection with Exhibits 76 and 77, even if Safe Harbor were not a party to the agreement? A. I don't know.

Q. Could the electric services be rendered to Pennsylvania Power and Light Company that are called for under Exhibits 76 and 77 without the facilities installed by Safe Harbor? A. I don't know. I don't think so.

[3227] Q. Because those facilities are required in connection with the supply of energy which originates in Safe Harbor that is used to render the electric services to Pennsylvania Power and Light—is that right? A. In connection with electric services rendered by Safe Harbor and supplied by Safe Harbor in that connection that is right.

Q. That is in connection with electric services which have to go through the Safe Harbor facilities, whether they originate at Safe Harbor or originate at Baltimore or Potomac Electric Power Company?

* * *

THE WITNESS: I am sorry. What facilities are we talking about here now?

By MR. GOLDBERG:

Q. The ones you said were provided after Exhibit 76 was consummated? A. Then that is correct.

* * *

[3229] By MR. GOLDBERG:

Q. Based upon the discussion we have been having so far this morning would it be fair to say that when you said that the special facilities were in part for joint use

that your use of the word "joint" did not depend upon Safe Harbor having any operating obligations or responsibilities in connection with the rendering or supplying of electric services?

• • •

THE WITNESS: That is correct.

• • •

[3255] Q. No, I am talking about Safe Harbor agreeing to the adjustments shown in Exhibits 18 and 19 for 1944 and 1945.

MR. SPARKS: Relating to the $9,000 odd dollar item now?

MR. GOLDBERG: That is right. Item "X".

THE WITNESS: No, Safe Harbor was not consulted in the matter.

By MR. GOLDBERG:

Q. They don't have to be consulted? A. Not as respects——

Q. Items H and I? A. H and I under normal conditions.

• • • •

[3257] Q. Referring to Exhibit 17 you have stated, however, that it does not show a breakdown of costs of service rendered by Safe Harbor to the various persons you say received service from Safe Harbor. Is that right? A. That is right, and, of course, in referring to the expenses on the one hand and the "return" on the other, these exhibits show such items in relation only to the investments made by the respective companies.

Q. You mean Exhibit 17, for instance, shows the investments of Safe Harbor, 18 or 19 show the investments of Penn Water involved? A. They don't show the investment but the expenses and return relating to those investments.

Q. Right. Those are all the investments involved in rendering electric service? A. No, that is not right.

Q. What investments are left out? A. In 18 and 19 the investments are not shown under paragraphs A and B, but only the contractual returns, in a general sense, for those investments. But again we are only referring to revenues, and there are other investments that have been made by Penn Water which were excluded in the determination of the amounts shown in paragraphs A and B.

Q. Were they excluded from paragraphs C, D, E, F, H and [3258] X? A. The expenses incurred in connection with those facilities, to the extent there may be expenses incurred, are included in paragraph "C". They do not affect the items shown in paragraphs "D" and "E", but they do have an effect on paragraph "F".

Q. What investments of Penn Water did you have reference to when you said "certain investments of Penn Water are not included in the Exhibits 18 and 19"? A. There are quite a few of them. I will endeavor to refer to a few. Certain investments in property held for future use, certain investments made following the 1936 flood which were made to strengthen certain structures as protection against the elements more severe than were experienced in 1936, and there were several other major items that I don't recall right now, but I remember there were such.

Q. With respect to the investments which were made to strengthen structures in connection with the 1936 flood, were those capital investments or were they non-capital investments? A. They were capital investments.

Q. When you say that they are excluded, are they the types of investments upon which Penn Water, you feel, is entitled to earn a return? [3259] A. Definitely.

Q. And you say it is not earning a return on the investments it made in 1936 to strengthen the structures? A. I do not care to characterize it that way. I will say that it is not included in the basis on which a specified return is computed for the purpose of deriving the amounts shown in paragraphs A and B of Exhibits 18 and 19.

Q. Why aren't they included? Is somebody preventing Penn Water from including them? A. I didn't understand.

Q. Why aren't they included? Is somebody preventing Penn Water from including them? A. They were the results of negotiations between Baltimore Company and Penn Water.

[3260] Q. You mean as a result of negotiations between Baltimore Company and Penn Water it was decided not to include the investments made in strengthening structures as a result of the 1936 flood? A. That is correct.

Q. How about this investment in property held for future use. Is that excluded because of an agreement between Penn Water and Consolidated? A. No, sir. Penn Water has never included it in the computation of these amounts, have not included those items that I referred to as not being included. That decision was not arrived at because of any disagreement. Penn Water never to date has urged their inclusion.

Q. I see. But Penn Water is urging their inclusion now, if I understand your testimony. A. No, sir. I say that in my opinion they should be included in the determination of costs, but that I believe Penn Water has been proper in not including them as a basis for the revenues in connection with the formula set out in the contract identified as H and I.

Q. But if they are included as costs of service, that changes the revenues, does it not? A. It would.

Q. Yes.

Are these other investments that you cannot recall right [3261] now in the same category, Penn Water has of its own volition never insisted upon their inclusion? A. No, I think that those decisions were made as a result of compromise. One I do recall now, an investment made by Penn Water in connection with the installation of Cottrell Dust Precipitators at the Holtwood steam plant. In Penn Water's judgment the installation of those facilities were most essential.

Q. But as a result—— A. Baltimore Company disagreed. A compromise was arrived at whereby Baltimore is now paying, or rather that one-half of such investment has been included in the basis for deriving the figures shown under paragraph (b) of Exhibits 18 and 19.

Q. So that it is your statement that with respect to the bill that Holtwood renders to Consolidated, the revenues there shown are not computed on all investments that Penn Water has made, meaning those investments you have described? A. And others of similar nature which I don't remember.

• • •

[3313] Q. Well, you said that the original reason for making Safe Harbor a party to Exhibit 71 was to provide that the capacity and energy of Safe Harbor, to which the Holtwood Company was entitled on the one hand and received and used on the other hand, would be available in that contract to Edison Light and Power Company. What I am unable to fathom is why it was necessary to make Safe Harbor a party to accomplish that feature. A. I don't know why Safe Harbor had to be a party. I [3314] know that it was made a party.

• • •

Q. I want to know if what was sought to be accomplished by including Safe Harbor could not as well have been accomplished even if Safe Harbor had been omitted? A. I think it might have been accomplished practically but the operating responsibilities would not necessarily have been the same.

Q. You mean this: That although it could have been accomplished there would not have been, in your view of it, any responsibility on Safe Harbor to Edison Light and Power Company? [3315] A. That is right, and I think that that has to be predicated on the assumption that Penn Water could have had sufficient electric services available to meet the requirements of Edison.

• • •

[3317] Q. Now, then, how did making Safe Harbor a party to Exhibit 71 make it any more certain that the capacity and energy of Safe Harbor which Holtwood receives and uses would be available under Exhibit 71? A. Well, by making Safe Harbor a party to Exhibit 71 Edison Light and Power Company has the assurance that Safe Harbor will perform these services jointly with Penn Water, and if Safe Harbor were not a party York wouldn't know whether it was going to or not.

Q. Well, if Safe Harbor were not a party—withdraw that.

By making Safe Harbor a party does that enable Safe Harbor to assure Edison Light and Power Company that the energy which Holtwood Company receives from Safe Harbor will be available under Exhibit 71? A. I think it does.

Q. How? What control does Safe Harbor have over what Holtwood does with the electric energy received by Holtwood? A. I don't think it has any control over what Holtwood does, but it undertakes an operating responsibility with Penn [3318] Water to provide electric services to York. York can now look to both companies.

TRIAL EXAMINER: Do you know whether York insisted that Safe Harbor be made a party to the contract?

THE WITNESS: I do not know whether they insisted or not, sir.

By MR. GOLDBERG:

Q. Whose idea was it that Safe Harbor be included? A. I do not know that.

* * *

[3323] Q. Why should there be any difference simply because you take somebody's name out of a contract? A. But you change the operating responsibilities.

* * *

Q. You say that Safe Harbor right now has an operating responsibility to Philadelphia Electric and Pennsylvania Power and Light Company. Right? A. They do, and by "they" I mean Safe Harbor does have operating responsibilities to those parties.

[3324] Q. Now, then, with respect to your second reason on page 239, which was with respect to Safe Harbor's right to sell and distribute electric energy at wholesale in York County, did you mean by that that it was believed that Safe Harbor did not have the authority to sell electric energy in York County? [3325] A. That is getting into a legal matter.

Q. I want just your understanding of it. A. All right. If I may give my understanding in non-technical language. In 1931 it is my understanding that Safe Harbor had been limited by the Pennsylvania Commission, the Pennsylvania Public Service Commission, to the extent that it might sell—and I use the word "sell" as I understand it was used—electric services to Penn Water and to Baltimore Company, and further limited the extent that such services could be resold by Penn Water only to its then existing customers. At that time its only existing customers were the Edison Light and Power Company of York, Pennsylvania Power and Light Company at Lancaster, and I think by that time the Company at Coatesville was owned and operated by Philadelphia Electric. I am not sure of that.

Subsequent to 1932, or possibly during the latter part of that year, a request was made to have the latter restriction, namely that electric services could only be resold by Penn Water to its then existing customers, extended or expanded in order that Safe Harbor might sell direct to customers other than Baltimore and Penn Water, and I don't recall there was any limitation on the customers. Yes, there was. However, I don't recall what that limitation was. I know that it specifically was permitted to sell

directly to the Pennsylvania Railroad in Manor Township, and I am not sure it was [3326] limited to that township but I know the permission extended to that township. Permission was also granted to sell directly to the companies operating in Lancaster, York and Chester counties, and I don't remember whether the names of the companies were specified or not.

I was referring to that action in my answer on page 239.

I think I should conclude that where I said "approvals were granted" they were granted by the Pennsylvania Utility Commission.

Q. Somebody wanted Safe Harbor included in those contracts, Exhibits 71, 73 and 75—right? A. More specifically Exhibit identified as No. 10.

Q. Somebody wanted Safe Harbor included in Exhibit 10—right? A. I think that is right.

Q. Who was that somebody? A. The Pennsylvania Railroad Company.

Q. Who wanted Safe Harbor included in Exhibit 71? A. I don't recall whether anybody wanted it, but I suppose they did. I don't recall.

Q. How about Exhibit 73 and Exhibit 76? A. At the time the permission was granted to extend its rights, if that is the proper expression, I know that the hearings before the Pennsylvania Commission were largely relating to Exhibit 10 and to Exhibit No. 139. There may have [3327] been other matters discussed, but they related largely to that, and it was around Exhibit 10 or the Pennsylvania Railroad contract that most of the testimony related, but the advantages of being able to sell electric services by Safe Harbor directly to others was fully recognized, first, as it would permit a reduction in total taxes paid, as is referred to also on page 239, and further it was recognized that by permitting electric services of Safe Harbor to be sold directly by Safe Harbor or resold by Penn Water to others, and I am referring now to Exhibit 139, there would result additional savings from economy operations

or interchange operations as I have referred to them and of course to the general public.

Q. Wasn't the tax reason the real reason for naming Safe Harbor in Exhibits 71, 73 and 76?

• • •

[3328] THE WITNESS: I have no reason to believe it was the "real reason" or the principal reason. I know that it was one material reason.

• • •

[3330] Q. When Safe Harbor secured the right to sell electric energy to others than Consolidated and Holtwood in that proceeding you described before the Pennsylvania Commission in 1932, that merely removed a barrier to naming Safe Harbor to Exhibits 71, 73, 76 and Exhibit 10. Isn't that so? A. It did remove a barrier.

Q. All right. A. I don't want to qualify it.

Q. That wasn't the reason why it was named in those agreements? A. Then I don't understand what you mean.

Q. You stated that one of the reasons for naming Safe Harbor was to save taxes—right? A. That is correct.

Q. Having in mind that that was a reason for naming Safe Harbor, was the removal of a legal restriction a reason for naming Safe Harbor in its contracts? [3331] A. Not if I understand your question, but I don't think I said that here.

Q. Look at page 239. "There were also two other reasons. One was a legal reason having to do with the right of Safe Harbor to sell".

That wasn't a reason for naming them, was it? A. I think I understand your point now, and again I am getting into legal grounds. I will have to apologize for my lack of legal knowledge because it is strictly legal, but my understanding is that Safe Harbor was named a party to Exhibit 71, that is one of the reasons and there were several, to assure—and that is not the right word to use but I hope it will be understood—that Safe Harbor might establish

the legal right to sell either directly o: with others in York County in the future.

Now, Mr. Examiner, that is the best explanation I can give.

Q. In other words, there was a barrier to naming Safe Harbor? A. Pardon?

Q. There was a barrier to naming Safe Harbor in the agreements? A. In all of the agreements; yes, sir.

Q. And that barrier was removed in 1932 by reason of the proceedings before the Pennsylvania Commission that you [3332] mentioned—right? A. That is right.

Q. Then after that barrier was removed it was possible to name Safe Harbor in the agreements—right? A. In any and almost all agreements as far as I know.

Q. Now, why was it desirable to remove the barrier? A. In order that Safe Harbor could undertake certain specific and joint operating responsibilities in connection with Exhibit 10 and other contracts of Penn Water.

Q. It was to save taxes? A. Among other reasons, yes.

Q. Wasn't that the only reason?

* * *

[3333] THE WITNESS: What's the only reason? I thought we were talking about reasons all afternoon.

[3334] By MR. GOLDBERG:

Q. Savings of taxes. A. I gave three reasons on page 239.

Q. I know what you gave.

Wasn't the tax reason the only reason for seeking to eliminate the barrier and naming Safe Harbor? A. No, sir. I had stated very recently that one of the reasons, if not the initial impelling reason—and I underscore initial,—that Safe Harbor's rights were extended, or that a request was made to extend them, was in order that Safe Harbor could undertake its responsibilities under the railroad contract identified as Exhibit 10.

Q. But that reason didn't have anything to do with naming them in Exhibits 71, 73 and 76—right? A. That is right.

Q. Was tax savings the only reason for naming them in Exhibits 71, 73 and 76? A. I don't understand so.

Q. Did the tax reason have anything to do with assurance of supply? A. I don't think so.

* * *

[3385] Q. When I asked you this question, which I am about to repeat, you said you could not answer it unless you left Pennsylvania Railroad out of consideration.

Leaving them out of consideration I would like to have you answer the question:

When stream flow gets down that low—and by "that low" I mean around 2500 C. F. S.—is it your statement that any deficiencies which may exist, exist only because of a method of operations that is intended to achieve maximum overall economy and maximum overall utilization of resources? A. I think that is right.

Q. In other words, there are never any deficiencies that exist solely because of the lowness, if I may put it that way, of stream flow? A. Of course, I have to take into consideration in my answer, and I did take into consideration, the fact that there is storage in the Holtwood and Safe Harbor ponds sufficient to carry all of the firm power obligations of Penn Water and Safe Harbor to Metropolitan Edison, Pennsylvania Power and Light and to Coatesville for over a week and perhaps several weeks depending just on what the variations in flow may be. You realize, of course, we seldom have flows in the vicinity of 2500 C. F. S. for any length of time. We can, of course, call on pondage or water storage for such very low periods, but [3386] normally we do not use the pondage in that manner, that is, solely for the firm power consumers, but rather use it for the overall maximum economy considering the other contracts of Penn Water and Safe Harbor and the use of natural resources.

Q. Have you in your last answer considered what is available to Penn Water under the interchange agreements as backfeed from Consolidated or have you intended to eliminate that from your answer? A. I did eliminate it in my answer.

Q. You intended not to give that any consideration? A. I thought that was your question.

Q. In saying that there is never a time when a deficiency in supply is the result of low flows?

* * *

THE WITNESS: And by "deficiency" as you are using it, you mean those occasions when Penn Water and Safe Harbor either obtain supplemental energy and other services from others or use their pondage for the short periods. Of course, the latter method is not the one normally used. Rather we do supplement the services in order that we may obtain maximum overall economy and maximum utilization of natural resources.

* * *

[3387] Q. In other words, at all times Penn Water and Safe Harbor, as you look upon the situation are self-sufficient when it comes to meeting the requirements of the Pennsylvania customers. By "self-sufficient", I mean they don't need the interchange and they don't need the backfeed. A. No, I don't mean that at all. We don't ordinarily look at operations in that manner.

You have asked me to look at it in that manner and I have given you an answer accordingly. Actually, of course, we do operate the system giving consideration to all of the contracts and the operating responsibilities under each and every one of them. And it is for that reason that we do procure, and by "We" I am speaking of Penn Water and Safe Harbor, backfeed energy from Baltimore in part and interchange from the northern companies in part in order that the maximum utilization of natural resources and the maximum economy can be obtained in consideration of the

expressed intent to do so under E, F, and G and H and I.

Q. As I understand your answer, you are saying from a practical standpoint, from a practical operating standpoint, there is available these supplies from Metropolitan Edison, Philadelphia Electric, and Pennsylvania Power and Light and Consolidated which enables Penn Water to meet the [3388] requirements of the Pennsylvania customers. Is that right? A. That is right.

Q. But looking at it from the standpoint of the provisions of the contract, is it your statement that Penn Water is at all times self-sufficient? A. May we add Safe Harbor to Penn Water?

Q. All right. A. Under normal operations Penn Water and Safe Harbor do require supplemental services in order that they may operate to obtain maximum overall economy and fullest utilization of natural resources.

Q. And from a practical viewpoint you say they have always been able to get supplemental supply? A. That is correct, there always has been ample supplemental services available to it.

Q. And they have been able to get it without a firm obligation on the part of any of the suppliers to Penn Water or Safe Harbor or both—right?

* * *

THE WITNESS: What do you mean by "firm obligations"?

By MR. GOLDBERG:

Q. Intended to be available at all times. A. That is correct, there is no firm obligation on the part of any customer to Penn Water and Safe Harbor.

[3389] Q. On the part of the supplier to Penn Water and Safe Harbor. You said "customer", didn't you? A. On the part of the suppliers of such supplemental energy.

* * *

[3392] Q. Has there ever been a time during the existence of Exhibit 72 that you were of the opinion that Safe Harbor

was rendering electric services under Exhibit 72? A. To whom?

Q. Either Penn Water or Metropolitan Edison? A. It certainly is true that Safe Harbor in my opinion has not and is not rendering electric services to Metropolitan Edison Company under Exhibit 72, but Safe Harbor does have an operating responsibility to Penn Water in connection with the latter's operating responsibility to Metropolitan Edison under Exhibit 72.

Q. And Safe Harbor's operating responsibility to Penn Water in connection with Exhibit 72 originates under Items E, F, and G, does it not? A. I think it does.

Q. Has there ever been a time during the existence of Exhibit 72 that you were of the opinion that Safe Harbor [3393] was supplying electric services under that agreement? A. Yes, it has continually since the contract has been in force and effect, that is since January 1, 1946.

Q. In other words, since January 1, 1946, Penn Water has continuously used electric energy generated by Safe Harbor to meet its obligations to Metropolitan Edison under Exhibit 72? A. And by "electric energy", I am referring to electric services of which energy is one of the attributes.

Q. Has there ever been a time during the existence of Exhibit 72 that you were of the opinion that Safe Harbor had operating responsibilities under that contract? A. Isn't that the same question you just asked me?

Q. No, no. I was talking about supplying electric services and rendering electric services before that. Now we are talking about operating responsibilities, which is another one of your phrases. A. Safe Harbor has not an operating responsibility to Metropolitan Edison under Exhibit 72, but it has an operating responsibility to Penn Water in connection with the latter's operating responsibility to Metropolitan Edison under Exhibit 72.

• • •

[3410] Q. In Article IX of Exhibit 72 this statement appears: "Holtwood represents that for the purposes of this article it is in a position to include the energy and/or capacity of Safe Harbor and for such purposes the same shall be treated as though it were owned and controlled by Holtwood."

How was Holtwood able to state that it is in a position to include the energy and/or capacity of Safe Harbor in connection with Article IX and to further state that the energy and/or capacity of Safe Harbor shall be treated as though it were owned and controlled by Holtwood?

• • •

THE WITNESS: I don't know.

• • •

[3411] Q. What does it mean when Holtwood states that it is in a position to include the energy and/or capacity of Safe [3412] Harbor for the purposes of Article IX and that for such purposes the same shall be treated as though it were owned and controlled by Holtwood?

• • •

THE WITNESS: To me as an operating man my understanding is that Penn Water was in a position to arrange for the interchange sales of certain energy and capacity from the Safe Harbor plant as though Holtwood and Safe Harbor were rendering those services jointly so far as Article IX is concerned.

• • •

Q. How did it get into that position? What are the facts and circumstances that enable it to make such an arrangement?

• • •

THE WITNESS: First, Penn Water and Safe Harbor operate [3413] their respective hydro plants for a maximum overall economy and for maximum utilization of natural resources. They have been doing that for some time.

Secondly, this contract was entered into by Penn Water with the knowledge and consent of Baltimore Company who was the other party with Penn Water that had whatever entitlements were due them from Safe Harbor Company.

By Mr. Goldberg:

Q. Under Items E, F and G? A. I think so, after taking into consideration the other contracts.

Q. Have you completed your answer? A. Yes.

Q. This reason that you gave, that Penn Water and Safe Harbor operate their respective hydro plants for maximum overall economy and maximum utilization of natural resources, and have been doing it for some time, that applies throughout the period 1932 to date—right? A. That is correct.

Q. And the reason you gave that Exhibit 72 was entered into by Penn Water with the knowledge and consent of Baltimore Company, who was the other party with Penn Water who had entitlements under E, F, and G, that applies to all contracts which Penn Water ever has entered into since Items [3414] H and I were entered into—right? A. I think that is correct.

Q. And that has been the case since 1931, then, the date of Item "H"? A. The early part or middle of 1931—that is correct.

Q. So that the reasons that you gave as enabling Penn Water to assure the availability of the energy and/or capacity of Safe Harbor in connection with the interchange arrangements under Exhibit 72, are reasons that have existed since 1931 and were available to Penn Water throughout the period 1931 to 1946. Right?

* * *

The Witness: I think so.

By Mr. Goldberg:

Q. In other words, without naming Safe Harbor in Exhibit 72, Penn Water was able to make an assurance to

Metropolitan Edison with respect to the energy and/or capacity of Safe Harbor. Right? A. For interchange purposes only, and that means with a limited responsibility on a time to time basis.

• • •

[3427] Q. Now, if they can do it with respect to interchange why can't they do it with respect to firm power obligations? A. I don't know. Perhaps they can.

Q. And they probably can do it without even asking Safe Harbor, can't they? A. I don't know.

Q. They did it with respect to interchange, didn't they? A. Apparently so.

Q. You know that is so, don't you? A. Subject to the discussion we have just had, yes.

Q. You know that is so because you were intimately associated with those negotiations. A. I have endeavored to recite what happened.

Q. As a matter of fact, there is reliance upon Safe Harbor's capacity and energy for the purpose of meeting the firm power requirements in Exhibit 72, isn't there? A. Very definitely.

Q. And there is that reliance again without Safe [3428] Harbor's inclusion in Exhibit 72, isn't there? A. Safe Harbor is not a named party, nor does it have any operating responsibilities directly to Metropolitan Edison under Exhibit 72.

Q. But there is an assurance of supply to Metropolitan Edison under Exhibit 72 which involves the capacity and energy of Safe Harbor? A. I think that is right.

• • •

[3433] Q. Had there been a change in the tax laws in Pennsylvania between the time Exhibit 71 was entered into and Exhibit 72 was consummated? A. I think so, but I am not too familiar with the tax laws.

Q. And it was because of that change in tax laws that you said "The third reason no longer appeared to exist." Is that right? A. I think that was part of it.

Q. Was there any other part of it? A. Not except that I understood that the tax situation, whatever it was then, or is now, and it has not been changed since this contract was entered into or negotiated, did not appear to be important.

• • •

[3436] Q. When electric energy is not sold to Consolidated under Items H and I, what electric services does it receive? A. It may receive a lot of electric service without there being any energy present—capacity services, power factor cooperation or reactive, voltage, current, frequency.

Q. Are you finished, Mr. Spaulding? A. I think so.

Q. When you mentioned voltage and current did you have in mind wattless energy? A. I did.

Q. Wattless power, I should say. A. I think that is right. Of course, there could be the capacity service where there was no current or reactive [3437] present, merely a readiness to serve.

Q. In connection with Article 6 of Item "H" does Consolidated provide any such services such as a readiness to serve? A. At times there may be on an interchange basis when there have been arrangements made for the interchange of capacity without any energy and Baltimore may make that service available on its own system without any change in the current energy or power flowing.

Q. When no energy is flowing to Consolidated you stated that such services as capacity, power factor cooperation, reactive, voltage, current and frequency were being furnished Consolidated by Penn Water? A. There can be, and may be.

• • •

[3443] Q. You say revenues received by Penn Water are used to reduce Consolidated's payment under Items H and I to Penn Water—right?

• • •

THE WITNESS: May we be a little more specific? The revenues which are actually collected by Penn Water from the firm power customers of Pennsylvania, in part for services rendered alone by Penn Water and in part for services rendered jointly by Penn Water and Safe Harbor, may reduce the payments made by Baltimore to Penn Water under H and I in the sense that the formula for computing the revenues receivable by Penn Water under H and I take such revenues from Pennsylvania customers into consideration.

• • •

[3445] Q. Now, then, do you say that Safe Harbor receives revenues from the supply of power and energy to persons or corporations other than Consolidated and Holtwood that should be credited by Safe Harbor in computing the power bill to Consolidated and Holtwood? A. I don't know. It is not so accounted for today, and has not been for the duration of the contract.

Q. If there were such revenues there is the provision under which the credits could be made in the power bill computations—right? A. I think so.

Q. But there are no such credits being made today—right? A. Not currently, no.

• • •

[3454] MR. SPARKS: That is correct.

Mr. Examiner, upon review of the record we find there is one matter which Mr. Goldberg requested of Mr. Spaulding, which has not yet been reported upon. Mr. Spaulding is ready at this time to report on it, and it involves a reference to the Pennsylvania proceedings in 1932.

MR. GOLDBERG: If you will identify that proceeding, Mr. Spaulding, I would appreciate it.

THE WITNESS: At transcript page 3334, you asked me to identify the proceeding before the Public Service Com-

mission of the Commonwealth of Pennsylvania relating to the modification of that Commission's order, fixing the companies to which Safe Harbor Company was allowed to sell directly or indirectly.

The petition to the Commission for permission to sell its service to others than originally determined was dated March 29, 1932.

The report and order of the Commission is dated January 10, 1933, in re "Application of Safe Harbor Water Power Corporation for modification of the certificate of public convenience approving the beginning of the exercise of the rights, power or privilege of the supply, storage or transportation of water and water power for commercial and manufacturing purposes in Manor township, Lancaster County, and Chanceford township, York County, by amending the [3455] restriction which limits service to certain customers named therein."

The application docket shown on that order is No. 21579 (folder No. 2).

• • •

[3479] Q. What do you mean when you say that the electric services from Consolidated are co-mingled with the electric services at Safe Harbor or at Holtwood? A. I mean that those electric services such as kilowatt-hours, kilowatts and reactive, which involves current and voltage, of course, when those are mixed with similar services, or other electric services of the Safe Harbor Company or of another company or another source, there is a co-mingling of those electric service attributes.

Q. Are you using "mixed" and "co-mingling" synonymously? A. I think so, except that I am using it in an electrical sense.

Q. You are using it in an electrical sense? A. Yes, and I have no high, scientific implications in that use, either, Mr. Goldberg.

Q. You can be sure I haven't either, because I don't know what they are.

I am interested in finding out how these electric services from Consolidated mix with electric services from other sources of supply. A. Well, I don't want to be too technical. Perhaps you will forgive me if I used an expression that the Examiner used [3480] not long ago. There is a vector relation between them which results in a new vector, and that is the type of co-mingling I am talking about.

TRIAL EXAMINER: I used it correctly, didn't I? It was about three weeks ago.

THE WITNESS: Yes, you used it very properly, Mr. Examiner. It is a simple way of expressing what is being described on the stand.

* * *

[3502] By MR. GOLDBERG:

Q. From the time Safe Harbor began operating in 1932, it is the fact, is it not, that Penn Water in connection with its commitments under Exhibits numbered 136, 137, 138, and 139 relied at times upon the supply from Safe Harbor, right?

THE WITNESS: May I have that question again, please?

(Question read.)

THE WITNESS: No, that is not strictly correct. Safe Harbor electric services could not be used by Penn Water in respect to the contract identified as 139 until after the Pennsylvania Commission had authorized Safe Harbor to permit [3503] its energy so to be used.

By MR. GOLDBERG:

Q. Let me see if I understand you? A. I think that as respects the other three contracts, namely, 136, 137, 138, that Safe Harbor's electric services were available to Penn Water for the latter's use in rendering services to the named companies in those three contracts, customer companies in those three contracts.

Q. I don't understand why Safe Harbor's electric services were not available for use to Penn Water in connection with Exhibit 139. A. Because until the Pennsylvania Commission authorized such use by Penn Water, Penn Water could not use Safe Harbor's services in connection with Exhibit 139. So there was a period from the execution of 139 up until the final order of the Pennsylvania Commission permitting such use that Safe Harbor's services could not be used by Penn Water in connection with that contract.

Q. Let's see. The electric services would be available to Penn Water under Items E, F, and G—right?

THE WITNESS: May I have that question?

(Question read.)

THE WITNESS: I assume so.

By MR. GOLDBERG:

Q. Having been made available to Penn Water under Items [3504] E, F, and G, what restriction was there on Penn Water which would have prevented it from using the electric services and supplying Metropolitan Edison under Exhibit 139? A. It was a restriction which went with the certificate of public convenience and necessity issued by the Public Service Commission of Pennsylvania to Safe Harbor Water Power Corporation which limited such use.

Q. Wasn't that restriction that Safe Harbor could only sell to Consolidated and Penn Water? A. No, it went further than that. It provided that Penn Water could only use such services for resale to its then named customers, and as I recall those named customers they were Chester Valley Electric, Edison Light and Power Company of York and Pennsylvania Power and Light Company. It did not include Metropolitan Edison.

Q. So there was a restriction upon Penn Water's use of the electric energy received under Items E, F, and G from Safe Harbor. Is that it? A. That is correct.

Q. When Penn Water was undertaking to supply Metropolitan Edison during that period of restriction did

it have to make some sort of an identification of the electric energy it received from Safe Harbor and somehow or other keep it from getting into Metropolitan Edison's system? A. It had to establish an electrical barrier to prevent that flow.

[3505] Q. Did it? A. It did.

* * *

[3520] Q. Mr. Spaulding, why did you limit your determination in Exhibit 35 to firm power services?

* * *

THE WITNESS: I did not limit it to firm power services. I made adjustments for interchange services as well.

By MR. GOLDBERG:

Q. The title of your exhibit is "Costs of Penn Water's and Safe Harbor's firm power services rendered to Baltimore Company, 1945 and 1946." Shall we change that title? A. No, but in that study, and in connection with my testimony relating thereto, the operating savings resulting from all interchange transactions become a credit or are passed on to Baltimore Company, and therefore in determining costs of services of Penn Water and Safe Harbor to Baltimore Company, proper adjustments were made in order that all of those benefits from operating savings resulting from [3521] interchange were credited to Baltimore Company in accordance with the provisions of the actual operations and the contracts relating thereto.

Q. In firm power services you included backfeed from Baltimore and interchange services to the Pennsylvania customers. Is that right? A. That is right.

Q. And backfeed and interchange sales do not involve a continuing operating obligation. Isn't that so?

* * *

THE WITNESS: That is right.

By MR. GOLDBERG:

Q. Well, then, in what way are they firm power services? A. The resultant effects, or the resultant services

of Penn Water and Safe Harbor are firm power services, and the operating economies resulting from interchange become a credit, in effect at least, to the Baltimore Company, and they were so treated.

Q. Even though they may become a credit to the Baltimore Company, you may not treat them as firm power services. Isn't that so? A. And I didn't treat them as firm power services.

Q. Even though you included them in your study of the [3522] costs of firm power services rendered to Baltimore Company. Is that right? A. The interchange operations involving the purchase or procurement of interchange services from Baltimore Company on the one hand and from the Pennsylvania customers on the other are in part used by Penn Water and Safe Harbor in connection with the rendering of firm power services, but the operating savings from the interchange transactions between Baltimore Company and Penn Water on the one hand and between Penn Water and Safe Harbor and another company on the other hand were credited to Baltimore Company in Exhibit 35.

• • •

Q. You say that the supply from Consolidated was used by Penn Water and Safe Harbor in connection with rendering firm power services. Did I understand you correctly? A. Frequently, yes.

Q. You mean firm power services to Metropolitan Edison and Pennsylvania Power and Light Company, Philadelphia Electric Company? A. Yes, among others, and that is the energy that we have been talking about the last few days as the supplemental [3523] energy that Penn Water and Safe Harbor use in connection with their firm power obligations.

Q. Do they use it in connection with their obligations under Exhibit 10? A. It may be.

Q. Do you know whether they do? A. I can't earmark the kilowatt hours.

Q. You mean you don't know? A. I cannot paint the kilowatt hours. I have accounted for them that way.

Q. You mean you have accounted for them on the theory that they are so used? A. That is right, together with other services.

Q. In determining the costs of Penn Water's and Safe Harbor's firm power services rendered to Baltimore Company—and please understand I am using your title, not accepting that as the fact—have you included the costs of all these attributes of electric services that you have been discussing throughout your cross-examination?

* * *

THE WITNESS: I think so.

* * *

[3524] Q. In the third paragraph of that general statement on Page 2 of Exhibit 35 you stated that schedules 3, 4 and 5 of Exhibit 35 provide the basis for the determination of the capacity and energy service components of Penn Water's and Safe Harbor's combined firm power services to Baltimore Company. Is that right? A. It so states.

Q. Did you by that statement intend to cover all of the attributes of electric services you have been discussing? A. I did.

Q. So that in the phrase "capacity and energy" you covered voltage, power, phase, capacity, power factor, current, frequency and every other attribute you have ever mentioned in this proceeding as an attribute of electric service. Isn't that so? A. I don't think there are any other attributes, but I [3525] did so include them.

Q. You thought it appropriate to include them that way, did you?

* * *

THE WITNESS: I presume so, because my allocations were limited to the allocations of capacity and allocations of energy. I had no basis for making an allocation of the other attributes of electric service because no records of sufficient completeness are available for the purpose.

I did give careful consideration to them and concluded that by the allocation that was used for capacity and energy that I had properly included the allocation of all of the other attributes of electric service.

* * *

THE WITNESS: And I would like to add that I did [3526] recognize that I was making a very conservative assumption with respect to the services rendered to Baltimore Company, because, in my opinion, and based on the meager records that are available, Baltimore is provided with a very much higher percentage of power factor cooperation than any of the otner customers of Penn Water and Safe Harbor.

By MR. GOLDBERG:

Q. Do I understand by your last statement that you have been very liberal to Consolidated—— A. I think I was liberal to Consolidated in that respect, that is correct; generous, may I say.

Q. That is what I meant. Now, then, you say you don't keep adequate records to enable you to make an allocation of the costs of voltage, of power, of phase, of power factor cooperation, of current and of frequency. Is that right? A. I didn't say that. I said I did not have sufficiently accurate records to make an allocation of the cost of power factor cooperation between the customers.

Q. Why doesn't the company keep adequate records for that? A. Because it has not heretofore used them in connection with the computation of the bills rendered, and this is the first time that it has had to make a cost allocation of this nature.

Q. Is it your statement that costs are incurred by Penn [3527] Water and Safe Harbor in connection with the furnishing of voltage, power, phase, power factor, current and frequency? A. Let's take them one at a time if we may.

Q. All right. Voltage. A. Costs are incurred in maintaining constant voltage, yes.

Q. Power. A. That is part of the other services rendered, including energy and capacity.

Q. In other words, the costs of power are in the capacity and energy. A. I think so.

Q. Why do you call it a separate attribute? A. I don't know that I would call it a separate attribute. It is treated separately under certain circumstances and referred to in some instances as power and in some instances as capacity and energy, and I have used it because it has been so used.

Q. And even in your technical distinctions which you have been making it is all right to do that, isn't it? A. I think so.

Q. Any costs incurred in connection with phase? A. Yes, it costs considerably more to provide single phase power than three-phase power.

Q. Are those costs in the capacity and energy? [3528] A. No, usually related to the special facilities installed.

Q. How about power factor cooperation? Any costs incurred? A. Very definitely.

Q. How about current? A. I think that that is one of the attributes that is allocated in connection with capacity and energy.

Q. And it is all right to say that current is not really a separate attribute, isn't it? A. No, I don't think I would say that. I would say that I could not determine the separate costs for current by itself.

Q. How about frequency? Any costs incurred? A. Costs are incurred in order to maintain frequency tolerance desirable, and frequently very high costs are incurred.

Q. Have you left out of your Exhibit 35 the costs incurred in rendering firm power services to Baltimore for voltage, phase, power factor and frequency? A. I have by the method used assumed that with an allocation of special facilities on the one hand, of capacity on the other hand, and of energy on the third hand, that the other at-

tributes of electric service were in the resultant proportion. I did not attempt to make a separate allocation [3529] of costs for power factor cooperation, a separate determination of the costs incurred for frequency, that is for the maintenance of frequency within close tolerances, nor for the costs incurred in maintaining voltage within close tolerances.

There are costs incurred, but in my opinion they could not readily be segregated separately.

Q. And you think you have gotten them in, anyway, as part of capacity and energy. Is that it? A. I think I have gotten them in in connection with all of the costs I have used and that I have allocated them to Baltimore on a very conservative basis.

Q. Well, if you do not have the records which enable you to determine what the costs are in connection with the rendering of voltage services, could you fix a rate for the voltage services rendered to Consolidated? A. If it appeared to be of sufficient importance a special charge could be made for maintaining that service, yes.

Q. Do you think it is of sufficient importance? A. It has not been so considered to date.

Q. Do you consider it now of sufficient importance? A. I do not think it is of sufficient importance to segregate from the other costs, no.

Q. From the capacity and energy; right? A. I think that those costs are properly allocated to Baltimore as I have done.

[3530] Q. In other words, you think it will be all right just to fix a rate for capacity and energy. Is that right? A. I didn't say that at all, Mr. Goldberg.

Q. You think you will have to fix a rate for voltage? A. No, I don't think so.

* * *

[3531] Q. Up to the present time the company has never kept adequate records so that you could determine the costs of rendering voltage, phase, power factor and frequency by

[3532] Penn Water and Safe Harbor to Baltimore Company—right? A. As separate components I think that is correct. I emphasize "separate components", as distinct from electric services as such.

Q. Do you know why they have not kept records to enable them to make that segregation? A. Because it has not been necessary to segregate them in connection with the determination of the charges to be made under the contracts.

Q. And it is not necessary today, is it? A. Not in a determination of the charges to be rendered under the contracts.

Q. The determination of the charges to be rendered under the contracts are based upon investments of Penn Water and Safe Harbor, all of their operating expenses and all of their costs, with the exception of those investments and those costs you and I discussed the other day wherein you indicated that certain investments and certain costs are not included by reason of negotiations between Consolidated and Penn Water. Isn't that so?

* * *

THE WITNESS: That is my understanding, and such payments or charges are independent of the actual services rendered or the proportion of the attributes that may or may not be [3533] present in those electric services.

* * *

[3544] Q. So that with respect to the question of costs incurred by Penn Water alone for service rendered to Consolidated, or for service to any of Penn Water's customers, it follows, does it not, that Exhibit 35 does not supply the data required to make a proper allocation of excess revenues among the various customers served, and in my use "excess revenues" I want you to assume that may be the result.

* * *

THE WITNESS: Of course, I don't agree with that assumption.

• • •

[3545] THE WITNESS: I will have to qualify the answer, Mr. Examiner. It does in my opinion supply all the data necessary to compare the revenues with the costs incurred in connection with the firm power services rendered by Penn Water and Safe Harbor to Baltimore.

• • •

Q. How about Penn Water alone? A. No, it does not do that and it cannot do that.

• • •

[3598] Q. Under what operating conditions are those capacity services we are talking about furnished to Consolidated?

MR. SPARKS: May we have the question, please?

(Question read.)

THE WITNESS: Perhaps we can refer to Exhibit 8.

[3599] By MR. GOLDBERG:

Q. All right. A. The capacity available to the system, and therefore in part available to Baltimore Company, in high-flow as shown by the lower left-hand chart is available 24 hours during the day. During what I may term "intermediate flows" or a flow approaching average flow, that is shown in the lower middle chart, the hydro capacity may in part be operated as spinning reserve or may in part be available to Baltimore Company, and in low flow generally shown by the lower right-hand chart a large part of the hydro capacity operated is being operated as spinning reserve. It can not be shown, of course, from those charts on Exhibit 8 how much of that capacity is being furnished to Baltimore, but it does show the nature of the operations, and various manners of operations.

Q. You say you can not determine how much of the capacity is being furnished to Baltimore from Exhibit 8?

A. No, sir, but you asked me under what operating conditions. I endeavored to explain it from reference to Exhibit 8.

Q. Yes, I appreciate that. Have you determined how much is being furnished, how much capacity is being furnished, to Baltimore under the three operating conditions you show on Exhibit 8? A. Well, of course, the three typical or different conditions that are shown when you look at them from the [3690] yearly operation tend to merge one into the other. There is no sharp distinction except, perhaps, for high-flow between something just below high-flow and there is a gradual change down to the lower flows. It requires consideration of the operating records of the companies in order to determine what the capacity services were and how frequently they were rendered.

Q. Have you determined that? A. I have analyzed those operating records, as I have said several times. My answer was not a mathematical answer. I did not add up any figures and arrive at a conclusion by dividing by so many hours.

Q. But as a result of your analysis you reached the one conclusion, 50 per cent? A. No, indeed. I reached the conclusion that the capacity services to Baltimore were considerably more than 50 per cent of the time. I should say that capacity service is being rendered more than 50 per cent of the time. It may be in varying amounts and in varying times during any day.

I also considered the time or the hours or the amounts of energy that are being delivered to Baltimore Company and where reactive records were available, the amount of such services rendered, but they are of a more limited nature. From an analysis of those records I concluded that a 50-50 allocation was a reasonable one to use.

[3601] Q. Did you conclude it was the only reasonable one? A. No. I have stated that ratio might vary one way or the other. I cannot state how much it would vary. It was for that reason I made some check figures to see

whether the resulting answer would have been materially different had I used some figure other than 50 per cent, and when I found that a reasonable range in the vicinity of 50-50 did not materially change the answer I was satisfied to use the exact figure of 50-50.

Q. Did you feel that the 50-50 basis was appropriate for the Pennsylvania customers as a group? A. I did not consider the Pennsylvania customers alone as a group. As I explained yesterday, I gave consideration to the use and usefulness of these services to each, as well as to groups of these customers, and it was because the use and usefulness of the services did vary materially both in amounts and in the variation of those amounts during the year that I concluded that a 50-50 allocation was reasonable.

* * *

[3618] TRIAL EXAMINER: Very well.

Counsel for the Pennsylvania Public Service Commission.

By MR. MILLER:

Q. Mr. Spaulding, will you define the term "backfeed" for the record? A. I think I have used the term "backfeed" in only one instance, and that relating to the electric services supplied by Baltimore Company under Article 6 of the 1927 agreement.

On occasions, and I may in this record have so used it, we have referred to "backfeed" from our Pennsylvania customers over the inter-connected transmission lines we have with them in connection with interchange transactions. I think both uses are correct because backfeed takes place when these interchange services are flowing in the opposite direction from that in which the electric services are flowing for which those facilities were provided.

Q. Using backfeed in the sense that you have stated, [3619] is it always possible for Safe Harbor Water Power Corporation and Pennsylvania Water and Power Company to meet the total of their firm power obligations to Penn-

sylvania Power and Light Company, Metropolitan Edison Company, Philadelphia Electric Company and the Pennsylvania Railroad Company in Pennsylvania without any backfeed from Baltimore Company if the Safe Harbor and Holtwood ponds are operated and controlled in a manner which will best utilize the natural resources of the Susquehanna River, and will also represent or be the most economical operation of the Safe Harbor and Holtwood hydro facilities, and if the Holtwood Steam Plant is used for the purpose of supplying firm power to Pennsylvania customers in Pennsylvania?

Would you like to have that question read? A. I would like the first part of it read. I think I understand the last part.

(Question read.)

THE WITNESS: Yes, so long as Penn Water and Safe Harbor are in a position during those unusual occasions of very "low flow" to arrange for the supplemental energy from their Pennsylvania customers under the existing interchange arrangements.

• • •

Q. Are they now in such a position? A. They are.

[3620] Q. Do Penn Water and Safe Harbor have such arrangements? A. Yes, sir, in connection with the interchange provisions of contract identified as Exhibit 72 with the Metropolitan Edison Company, the contracts identified as Exhibits 76 and 77 with the Pennsylvania Power and Light Company, and the contract identified as Exhibit No. 134 with the Philadelphia Electric Company.

[3621] Q. Are the Pennsylvania firm power obligations always met without any backfeed from the Baltimore Company? A. No.

Q. Why not? A. The procurement of supplemental energy under its interchange arrangements, including Article 6 of the 1927 contract identified as Item "H", are arranged in order to obtain maximum overall economy con-

sistent with maximum utilization of natural resources and in recent years, that is the last few years, it has been more economical to procure such energy from the Baltimore Company largely because they had available generating facilities with a lower operating cost than was available at the time on the systems of these companies to the north with whom we have interconnections.

Q. Then is it accurate to say that under the existing physical and contractual situation the obligations of Safe Harbor and Penn Water to the Pennsylvania customers, including the Pennsylvania Railroad Company in Pennsylvania can be completely fulfilled without any backfeed from Baltimore Company but that by reason of economic factors some backfeed from Baltimore is used in fulfilling the obligations?

THE WITNESS: May I have the question again, please?

(Question read.)

THE WITNESS: Yes, I would say so. There are physical connections by which those services can be procured from [3622] northern companies under the interchange contracts I have just referred to, and the contract provisions provide for procuring them from the point where it is most economical, and that is the reason that a large, or a considerable, portion of the supplemental energy required by Penn Water and Safe Harbor has been obtained from Baltimore Company under Article 6 of the contract identified as Item "H".

• • •

[3640] MR. STURTEVANT: Now, Mr. Spaulding, do you have an opinion as to whether the additional capacity of No. 3 Unit at Riverside would be needed in the system if the Pennsylvania Power and Light contract was terminated in 1948 and power now sold to Pennsylvania Power and Light was not resold to any customer in Pennsylvania?

• • •

THE WITNESS: I would have an opinion if I did not know [3641] that you also were considering capacity in addition to No. 3 at Riverside, and so is the Bethlehem Steel Company. That puts me in a position where I can not specifically answer your question.

• • •

THE WITNESS: I have an opinion that if the Pennsylvania Power and Light contract were to be terminated and the services were not to be resold that somewhere on the system there would not be the need for some amount of capacity. I don't think it would be as much as No. 3 Unit, but it might approach it.

• • •

By MR. GOLDBERG:

Q. When you stated to Mr. Miller that the requirements of the Pennsylvania customers in Pennsylvania could be met, always be met, by Penn Water and Safe Harbor, in answering his question I take it that you included in the source of supply the electric energy output of Safe Harbor and such supply from Consolidated as was coming up to Pennsylvania to supply the [3642] Pennsylvania Railroad. Is that right?

• • •

A. I will try to answer it in two ways. I did take into consideration all of the electric services of Safe Harbor in making that answer. I did not take into consideration, regardless of whether I should have or not, but I did not take into consideration the operating responsibilities of Baltimore Company to the Pennsylvania Railroad for the electric services of the Pennsylvania Railroad in the state of Pennsylvania.

Q. But you did consider that there was available to you all of Safe Harbor's output?

• • •

—despite Safe Harbor's agreement to sell two-thirds of its output to Consolidated under Items E, F and G. Isn't that so?

• • •

[3643] THE WITNESS: I did consider that all of Safe Harbor's electric services, and that includes its output, were available to Penn Water and Safe Harbor to meet their respective obligations, whatever they may be, respectively, to the Pennsylvania customers. I went beyond that and assumed that all of the electric services required by the Pennsylvania Railroad in the state of Pennsylvania were to be met from the electric services available to Penn Water and Safe Harbor without any of the electric services to which Baltimore Company may have been obligated to supply in connection with the railroad supply in Pennsylvania.

* * * *

Q. You did that despite the obligations of Safe Harbor to Consolidated for two-thirds of its output to Consolidated. Is that right, under Items E, F and G? A. I did not recognize in my answer that any portion of Safe Harbor's output or electric services went to Baltimore Company.

[3644] Q. Nor did you recognize that it belonged to Baltimore, did you? A. I don't understand that question.

Q. When I said "belonged to Baltimore" I meant Consolidated had paid for it. A. Consolidated paid two-thirds of the revenues to which Safe Harbor is entitled for all of its electric services to whomever it may be rendered.

* * *

[4352] DONALD GUNN.

* * *

CROSS-EXAMINATION (Continued).

By MR. GOLDBERG:

* * *

[4379] Q. In other words, the integrity of the investment in the property resulting from depreciation is maintained when you have provided an annual allowance for the depreciation which is taking place. Is that right?

* * *

THE WITNESS: The question seems to me to be a little bit obscure, but I think that that might be true if you provided it in the right amount, of course.

By MR. GOLDBERG:

Q. Yes, with that qualification you agree? A. Oh, as I understood the question, yes.

• • •

[4384] Q. All right. Let us take a small illustration to develop your thinking. We have the original cost of an element [4385] of property at $1,000. A. Yes, sir.

Q. In providing for depreciation, let us assume zero salvage, Mr. Gunn, to simplify our problem. Now, then, would you provide depreciation for a thousand or for more than $1,000? A. For $1,000 as I understand the regulations.

Q. And you would provide it for only $1,000 even though you contemplated replacing the property when it is retired. Right? A. Yes.

Q. Now, then, let us assume further that replacement will cost $2,000. A. Yes.

Q. Though you estimate that the replacement upon retirement of the existing property will cost $2,000 you would still provide only $1,000 in depreciation. Right? A. Yes, under the Federal Power Commission's regulation.

Q. Because you are providing for the cost of the property over its service life?

• • •

THE WITNESS: Yes, that is what we are endeavoring to do.

By MR. GOLDBERG:

Q. So that your provision for depreciation of the [4386] existing property is only a provision which may be available to the company when it replaces the property. Right?

• • •

[4387] THE WITNESS: I think that is generally correct unless some of the words have some special meaning. It seems to me it is justly stated.

By MR. GOLDBERG:

Q. I was not using any special meaning in the words. A. As I understand your question that seems to be correct.

• • •

[5629] J. RHOADS FOSTER.

• • •

CROSS-EXAMINATION (Continued).

By MR. GOLDBERG:

• • •

[5659] Q. Now, these opinions as to fair return and fair rate of return expressed at transcript pages 649 and 650 were [5660] influenced, I assume, by the data in Exhibit 30, Schedule 11, which were excluded by the Trial Examiner. Is that right? A. Certainly.

• • •

[5666] Q. Now are we to understand that the data in Exhibit 29 influenced your conclusion as to fair return and fair rate of return in this proceeding? A. They did and Schedule 11 of Exhibit 30 presents a diagrammatic view of the process by which it influenced my conclusion.

Q. And the other data in Exhibit 30, as well as Schedule 11, had a bearing on your conclusions, is that right? A. That is right, and I am not aware I presented any data which were wholly irrelevant to my conclusion.

• • •

[5675] Q. No, I mean this: Could you, without a consideration of the data on Schedule 11 of Exhibit 30, have reached a conclusion as to the fair rate of return in this case? A. Without a consideration of that data or of data of [5676] similar nature I could not.

Q. In other words, you must, before you can reach a conclusion as to fair rate of return, consider the "fair value" of the property. Is that right?

* * *

[5678] A. You used the term "fair value". I, of course, do not know what meaning you attach to the term. Assuming that you mean cost of reproduction as such I think, perhaps, it is obvious that cost of reproduction does not provide the only, or even the most appropriate, bit of evidence. We are here concerned with evidence. The starting point was, and subject to the assumption of a prudent investment rate base always would be, the return expressed either gross or net, which would be obtained by applying a rate of return derived on the basis of hypothetical replacement cost or presently experienced cost of capital or some such basis, or derived by applying the original capital cost to the prudent investment. But there remains the question of the reasonableness and adequacy of that result in terms of the facts of the existing competitive society, and those facts are competitive costs.

Now, cost of reproduction is not the best evidence of present-day competitive costs. Other evidence available is the present level of wholesale commodity prices in relation [5679] to levels which existed at the time of the construction of the particular property. That evidence, however, again is general, or is particularly general.

More directly significant is the evidence of the present-day cost of constructing facilities of modern technological design which would be capable of producing the same service or equivalent goods.

Q. In other words, you would not stop with merely a consideration of reproduction cost because that is not necessarily synonymous with fair value, but you would want to go beyond that and consider other indicia of value such as, as you have stated, purchasing power of the dollar, substitute plant costs, and the like. Is that right?

* * *

THE WITNESS: It is true, Mr. Goldberg, that cost of reproduction is not necessarily synonymous with fair value. It is not correct to say, or to imply, that the process of testing to which I have referred is a process of determining fair value. In applying these tests of the reasonableness and adequacy of the return arrived at by use of a prudent investment rate base method we need not be concerned with fair value in the sense of the Smythe v. Ames rule, and it certainly is not an application of that rule or method.

[5680] By MR. GOLDBERG:

Q. Well, in reaching your conclusion in this case you did so by tests against data, against plant data, which is other than actual cost. Right?

* * *

THE WITNESS: I did so by tests involving cost of plant which were other than actual costs and by tests involving other price data, and I did so for the reasons which I have just outlined.

* * *

[5766] Q. You are saying that in companies of corresponding risks and uncertainties to Penn Water, investors in common stock of those companies are capitalizing prospective earnings at 8½ per cent. Isn't that so? A. The validity of that proposition, of course, depends upon its validity in the case of Penn Water, which is to be tested by the facts with respect to the Penn Water situation, and which is precisely what I attempted to do.

Q. You did not test it by looking at facts of companies with corresponding risks and uncertainties. Isn't that so? A. Because it would have been a complete waste of my time to resort to secondary and indirect evidence when direct and more adequate and satisfactory evidence is available.

Q. And your answer is that you didn't so test it. Right? A. I so testified.

Q. Now, then, what you did was to determine the appropriateness of your 8½ per cent conclusion by considera-

tion of earnings—price ratios of companies which were not of corresponding risks and uncertainties. Isn't that so? A. That is not true.

[5767] Q. Are they of corresponding risks and uncertainties? A. I have answered that question by saying I have made no study to determine what companies are of corresponding risks and uncertainties.

Q. Then you concluded that 8½ per cent was appropriate by a consideration of earnings-price ratios of companies as to which you made no determination of their comparability from a risk characteristic standpoint to Penn Water. Isn't that so? A. That question has been answered in the negative.

Q. Did you or did you not determine—and I must repeat this because I think that the answer should be "Yes" to my preceding question on the basis of what you told me—did you or did you not determine whether your six companies were of corresponding risk and uncertainty to Penn Water? A. I made no study for the purpose of quantitative measurement of differences in investors appraisals of risk as between the Penn Water common stock and the common stocks of the other six companies. It is true, of course, that the earnings-price ratios expressed as averages over a long period of years give some indication of the difference between investors appraisals of risks in the case of Penn Water and their composite or typical appraisals in the case of the six.

* * *

[5780] Q. Dr. Foster, do investment houses, investment service houses such as Standard and Poor's, in their published analyses of electric utilities, show earnings as reported or as adjusted for non-recurring items? A. The houses to which you refer customarily, at least, in their reports of operations show earnings as reported and compute earnings per share on the basis of the equity income as shown in the income statement in the annual reports to stockholders.

I recall in that connection, however, a paragraph from the book "Security Analyses" by Graham and Dodd, who are recognized authorities, that in situations where the amount of equity income is affected by irregularities such as non-recurring items, or charges to income which should be charges to surplus, or vice versa, the financial services might well give consideration to omitting a statement of earnings per share from their service.

Q. What edition of Graham and Dodd's? A. Second edition. I don't remember what page. Somewhere in the three-hundreds, I suspect.

* * *

[5802] Q. When did the investor first become concerned about regulatory action affecting Penn Water?

Let me limit the question to regulatory action by the Federal Power Commission. A. I believe the date of the order of the Federal Power Commission instituting the rate proceeding was early in the month of September 1944.

Q. Is it your statement that it is only the actual institution of proceedings which caused the investors concern? A. I believe that is generally a valid proposition.

Q. Doesn't the prospect of regulatory action cause him to reflect his concern in the earnings-price ratios? A. The prospect of regulatory action, or the possibility of regulatory action continually exists in the case of any enterprise which, because of its characteristics, is subject to the exercise of legislative power in the peculiar form in which that power is exercised in the case of what we know as public utilities.

That possibility exists even before a particular enterprise or enterprises of a class have been in fact designated as public utilities. When they have been so designated and the legislative power has been delegated to a regulatory Commission that prospect of regulatory action, of course, is less remote.

[5803] But investors generally do not readjust their thinking until something occurs which makes action leading to a

possible reduction of rates immediate or definitely in prospect.

* * *

[5804] Q. This is what I get out of your answers. The prospect of regulatory action exists continually. Right so far? A. In the case of enterprises of this type it does.

Q. And since it exists continually doesn't that mean that the earnings-price ratios continually reflect the investor's apprehension, if I may put it that way, of regulatory action, but that it is reflected in various degrees in the earnings-price ratios to a lesser extent when the prospect is remote, to a greater extent as the prospect becomes less remote. Right? A. That is true. I think, however, until the prospect becomes one of relative immediacy because of the implementation of regulatory power no significant consideration is in fact given to it.

* * *

[5818] A. * * * I think the point of significance in connection with your question is that it is the institution of the proceedings which raises the questions, yet to be answered by the conclusion of the proceeding, which created the uncertainties and which has the disadvantageous effect on investor appraisals.

The conclusion of a proceeding, whether a proceeding of this nature or a proceeding with respect to rates, tends to [5819] substitute certainty, however bad the prospect may be, for uncertainty.

So if the pendency of the licensing proceeding has an adverse effect on market prices because of the investor's concern with what might happen, I would expect that influence to be evident in the period following the institution of the proceeding.

The chart shows that following November, 1939 the earnings-price ratio for the Penn Water common stock rose steadily and continued to rise until I believe December of 1941. That movement was in response to general conditions. It was accompanied by a similar movement of

other earnings-price ratios and, therefore, is not to be explained by this unique situation affecting Penn Water.

One more step: It also is evident from the chart that the Penn Water earnings-ratio moved from a position below the average to a position above the average. That behavior, however, is characteristic of the earnings-price ratios for common stocks in the case of which the equity is thin and the leverage is substantial or the risk is considered by investors to be relatively larger because of any other factor, and it may be observed that from the period from 1933-1934 to 1935-1936, the same kind of behavior is observed except that the movement is from a position above at the time of relatively low prices to a position below at the time of relatively high [5820] prices.

• • •

[5821] A. I testified that in my opinion the comparative behavior of the Penn Water earnings-price ratios is accounted for as between these cyclical movement by its character as investment opportunity, referring particularly to the leverage position of the equity, and I have reached that conclusion because of my general knowledge of the behavior of earnings-price ratios of common stocks in various positions with respect to capital structure and because of my observation of the behavior of this common stock in relation to other common stocks at various times in the case of some of which the consideration to which you referred was not present.

Q. Are you saying that the 1939 proceeding did not influence the earnings-price ratios, the earnings-price ratio behavior, shown on Chart 1 of Exhibit 29 during the latter part of 1939 and through 1941? A. No. I am saying definitely and unequivocally that there is no evidence that it did influence the behavior of the earnings-price ratios significantly in relation to the influence of other factors which account for the amplitudes of variation.

Q. How can you say that there was no significant influence on the behavior of Penn Water's earnings-price ratios

subsequent to 1939 when prior to that time the [5822] fluctuations of Penn Water's earnings-price ratios had been above and below that of the six companies? A. I said there was no evidence there was any significance.

Q. How do you arrive at the conclusion there is no evidence of a significant influence? A. Because the behavior is more rationally explained by consideration of other influences.

• • •

[5833] Q. That is not the fact when you look at 1937 to 1939. Part of the time the line for the six companies is above Penn Water and part of the time it is below, and if you look over [5834] at 1922 to 1928, throughout that period of time the earnings-price ratios for the six companies is always above those of Penn Water? A. That is true with the reference to the particular periods which you have identified.

Q. Yes, and market prices were low during those periods and yet the earnings-price ratios of Penn Water were not proportionately higher than those of the six companies. Isn't that so? A. Market prices were relatively lower than at other times and during parts of the periods the Penn Water earnings-price ratios were relatively lower.

• • •

[5838] Q. Isn't this the fact: Other things being equal, the investor in common stock will pay more for that stock which pays out in dividends a larger percentage of the earnings available for common and in which the percent of gross income available for equity income is higher? A. That is a statement of two separate tendencies, each, I believe, being the typical behavior.

Q. That is why I said "other things being equal." A. I referred to it as two separate tendencies because the two variables which are identified here are independent of each other and, of course, may not operate in the same direction in any one case.

Q. The figures we have been examining, that is yours given on direct on pages 539 to 541, and those I have given you from 1939 to 1945, inclusive, indicate, do they not, that the percentage for Penn Water, the percentages for Penn Water, are at least as favorable, if not more so, than the percentages for the four of the six companies, speaking, [5839] of course, from the investor point of view? A. So far as these two factors are concerned and their influence, if indicated by reference to the typical influence, the answer is "yes."

Q. Yes. In other words, we cannot look to the factors involved in a comparison of these percentages for the differences in the earnings-price ratios from 1939 to 1945 between Penn Water and the medial four of six companies you used in Chart 1 of Exhibit 29. Isn't that so? A. That is true. In presenting these percentages it was in no way my intention to attempt to explain those differences.

Q. What other factors could explain that difference in earnings-price ratios between Penn Water and the medial four of six companies in the period 1939 to 1945? A. I can answer that kind of a question only in terms of possibilities and probabilities.

Q. If that is the only way you can answer that I will have to take your answer that way. A. The investor's appraisals of the Penn Water investment opportunity reflect, of course, all of the factors which in his opinion influence or may influence the prospective income and the stability of that prospect. Size of enterprise in relation to size of other enterprises is such a consideration.

[5840] As a typical or general proposition some advantage exists as a result of increasing size up to certain limits only.

The investor is concerned, in the appraisal of any such opportunity, with the character of the market served. The favorable market characteristics are those which include the maximum prospect of growth. Also, of course, the character of the demands are significant, demands of differ-

ent types of users having divergent relationships with business cycle and other influences.

The exposure of the facilities and, consequently, the investment to physical hazards is a factor.

We touched earlier today upon the question and comparative effect of exposure to regulatory action. The quality of the management of the enterprise is a consideration.

Those are among the factors which, as a matter of business judgment, are considered in making investment choices.

Q. In other words, we must look to these factors to find an explanation if it exists for that differential shown on Chart 1 of Exhibit 29 in the earnings-price ratios of Penn Water in the form of six companies in the period 1939 to 1945, inclusive. Is that right? A. The explanation of the differential exists in the composite investor judgment. I am merely identifying these [5841] factors which commonly enter into the formulation of that judgment.

• • •

[5846] Q. Am I correct in drawing this conclusion as to your statement on size of enterprise? While increase in size is a mixed blessing, the blessing involved in increasing size overcomes any additional hazards, responsibilities and risks which may be involved due to increases in size? A. Undoubtedly, and in overwhelming degree at the levels of size customarily experienced.

• • •

[5854] A. Proportion of gross income available as equity income, expressed as the average for the years 1939 to 1945 inclusive, is 72.1 per cent for Penn Water.

For the group of four other common stocks, consisting of Commonwealth Edison, Consolidated Edison, Consolidated Gas of Baltimore, and Detroit Edison the average is 65.6.

[5855] Referring now to the dividend earnings ratio, or per cent equity income paid out as dividends, I have an average of 83.5 for Penn Water.

The average for the group of four common stocks which you supplied to me, consisting of Boston Edison, Consolidated Gas of Baltimore, Detroit Edison, and Pacific Gas and Electric Company, is 83.3 per cent.

• • •

[5856] Q. Yesterday we discussed at some length your views with respect to the effect on earnings-price ratios for Penn Water of the Federal Power Commission proceeding which involved Penn Water's right to operate its hydroelectric project without a license, and my recollection is that you testified that you did not consider the influence of that proceeding had any significant effect on the earnings-price ratio. Is that a fair statement? A. I believe so.

• • •

THE WITNESS: I testified there is no evidence it had a significant effect and that the behavior is more rationally explained by consideration of other influences.

• • •

[5885] Q. I would like to know if you determined the reasons for the differential between the earnings-price ratios of the medial four of six companies and of Penn Water in the period 1939 to 1945, which differential appears on Chart 1 of Exhibit 29? A. The reason for the differential was stated generally at an earlier point in the testimony. The earnings-price ratios of common stocks, regarded by investors as relatively risky common stocks, fluctuate much more widely with changing securities market conditions than do the earnings-price ratios for common stocks regarded by investors as having a relatively stable prospective income.

Q. And you say that is the reason for the difference in the period 1939 to 1945 on Chart 1 of Exhibit 29. Is that it? A. I say that that behavior is a fact and that that presents the only rational explanation of the behavior during that period.

Q. It is your statement that the investor looked upon [5886] the medial four of six companies as having more

stable prospects of income than Penn Water. Is that right? A. That is correct.

Q. Which of those six companies that you studied have an assurance of a definite amount of income, whatever it may be, up to 1980? A. No one of the six companies has either definite assurance or guarantee of income stable in amount to 1980 on or to any other remote date.

Q. But Penn Water has that, hasn't it? A. It does not.

Q. Did you know that Penn Water has a contract which assures it until 1980 a fixed amount of income, even after adjustment by a regulatory commission of the extent of the rate of return? A. I am certain that in any economic or financial sense the contract to which you refer does not provide for Penn Water a guarantee or definite assurance of income to the year 1980, I am equally assured that the investors do not so regard the Penn Water contract.

[5887] Q. Your own notes to Schedule 2 on Exhibit 29 on page 8 reflect the company's statement that its contractual arrangement with Consolidated constitutes virtually a guarantee of earnings on its capital stock. Isn't that so? A. The note to which you refer is within quotation marks and is an excerpt from the annual report of the company.

Q. Yes. And your own notes, which you included as a background to your considerations, show exactly what I have just stated. Right? A. The excerpt includes the words which you have used.

Q. Which of those six companies can say that? A. No one of the six companies is either a wholesaling company supplying a limited number of customers or a company having a contract of this form.

Q. None of those six companies have that type of stability of earnings; right? A. None of the six companies has a contract of this form, nor does any one have whatever additional stability of income would be provided by such a contract.

Q. You know, don't you, that the earnings of the six companies are dependent upon economic cycles, business

cycles. Is that right? A. The earnings of the six companies in the composite are influenced by business cycle changes.

Q. You know that is not the fact with respect to Penn [5888] Water. It can sneer at depressions. Right? A. Under the form of the contract, as long as that contract remains effective and operative, the earnings available to the equity of Penn Water tend to be stabilized.

Q. The stability of the earnings of Penn Water are shown beyond doubt, aren't they, by the dividend records of the company throughout the depression?

* * *

THE WITNESS: The dividends paid per share by Penn Water were maintained without change at $3 per share from 1929 to 1934 inclusive.

By MR. GOLDBERG:

Q. How about the six companies? How many of them maintained a record like that? A. I would have to examine the facts to answer the question specifically. The dividends paid by Boston Edison, which in 1929 were $12.80, declined to $9 in 1934.

The dividends of Commonwealth Edison Company, which in 1929 were $8, declined to $4 in 1934.

Dividends of Consolidated Gas of Baltimore, which in 1929 were $3.60, remained unchanged.

[5889] MR. SPARKS: You mean non-changed through 1934?

THE WITNESS: Yes.

MR. GOLDBERG: Let me interpose here.

By MR. GOLDBERG:

Q. That is the company which has the contract which runs until 1980 with Penn Water, isn't it? A. I believe Consolidated of Baltimore is a party to the contract to which you refer.

Q. A pillar of strength, isn't it? A. Is the contract a pillar of strength to the one who receives the benefits and to the ones not benefited?

The dividend of Consolidated Edison of New York declined from $4 in 1929 to $2 in 1934.

Q. Do you have your dividend rate for 1935? Didn't it fall below $2? A. Yes, in 1935 in the case of Consolidated Edison the dividend rate was $1.

I have not checked any split of the common stock in the case of that company.

Q. I think there was a split on Boston Edison of four for one. A. At a later date?

Q. At a later date, I think, and Standard and Poor's show dividend rates of $3.10, for example, for 1929. And $2 for 1936, for example. That would indicate a split-up. [5890] A. I should have prefaced the reading of these figures by the explanation that they represent the annual rate at which dividends were being paid at the end of the year.

In the case of Detroit Edison the dividend rate was $8.

MR. SPARKS: In 1929?

THE WITNESS: Yes, in 1929. It was $4 in 1934.

In the case of Pacific Gas and Electric Company the dividend rate was $2 for 1929 and $1.50 in 1934.

I believe 1934 represents the lowest level which was reached in that decline of dividend rates and that after adjustments were made for split-ups the rate increased in subsequent years.

• • •

[5891] Q. Wouldn't you say that an investor, an informed investor, considers the reports put out by Standard and Poor's as stock guide reports and bond guide reports? A. That service is very well-known and widely used and I have no doubt that investors consider it.

Q. I want to show you the latest Standard and Poor's report on the stock and bonds of Pennsylvania Water and Power Company, which is dated August 23, 1946, and ask you if it is not a fact that under the caption "Prospects" it is stated that "The company's contract with strong Consolidated Gas of Baltimore results in fairly stable earnings." A. I read the sentence which you have quoted.

Q. Would you refer to Consolidated Gas of Baltimore as a strong company? A. Consolidated Gas of Baltimore is an electric and [5892] gas utility serving a metropolitan area and generally a strong company in the sense that it is regarded by investors as a company with better than average prospects so far as income stability is concerned.

Q. It also states under that caption I have referred to, doesn't it, that, "One uncertainty in the outlook is the possibility of regulatory pressure upon the high rate of return"? A. It does.

Q. Do you agree with that statement? A. Certainly.

• • •

[5895] Q. Under the caption "Earnings determinants", it is stated, is it not, that "A ready market for all power and fixed earnings well above debt requirements are assured by the [5896] power contracts. Most of these extend beyond the bond maturities. While regulatory pressure may result in lower power rates, since the return on property is high, fixed charges would still be earned by adequate margins."

It so states, isn't that so? A. It does.

[5897] Q. These reports from which we have been reading are available to the informed investors, aren't they? A. They are available to investors and I believe are examined by some investors.

Q. I think you would agree that the reporting service is an unbiased one? A. I have every reason to agree with that statement.

Q. And its purpose is to present information to the investor to give him pertinent facts upon which to base a decision with respect to alternative opportunities for investment. Right? A. I believe that is a purpose.

• • •

[5931] A. As a proposition standing by itself it is true that more recent experience is entitled to more consideration as a guide to the probable future than is experience remote in time.

• • •

[5966] Q. And there are statements on pages 107 and 125 which show that not only did the study proceed on the theory that the most recent reports of operations and financial management are given the greatest weight, but that the results of your studies confirm the opinion that investors give the greatest weight to the most recent operating results and that the results of previous years are given progressively less attention as they become more remote. Isn't that so? A. That is as it appears in the report and I believe is correct as a general statement.

Q. What qualifications would you put to it now? A. Investors give to the reported results of operations of recent years greater attention in considering future possibilities than they give to the results of operations as reported for more remote years.

We have expressed generally the proposition that the future is unknowable, that nevertheless the market price reflects the appraisal of the prospect of income in the future.

Therefore, I believe the statement which you quoted is valid. I would not so much qualify as to point out that it is far from, and did not purport to be, a complete statement of the manner in which past earnings for the more recent period is used by investors and by analysts in the process of estimating the future.

[5967] Q. In other words, how they use it quantitatively. A. In arriving at specific estimates, yes.

In that same connection it might be pointed out that the appraisals, of which we are now speaking, reflect the appraisal of future income and correspond to the capitalization rates. We are not speaking of the earnings-price ratios, and the conclusion that the results of recent operations are more significant to the investor in forecasting the future in no way invalidates the proposition that a full cycle must be considered.

Q. I was not implying any challenge to that, but the fact remains that in your study in this case you gave equal weight to 1939 earnings-price ratios, which were included

in your cycle, and to the earnings-price ratios of 1945, which were included in your cycle, and to the earnings-price ratios of all intermediate years in that cycle. Isn't that so?

THE WITNESS: May I ask for clarification?

MR. GOLDBERG: Yes.

THE WITNESS: You are now referring to the——

By MR. GOLDBERG:

Q. Chart 1 of Exhibit 29? A. Earnings-price ratios of Penn Water?

Q. That is right. A. I did arrive at the conclusion on the basis of an average which involved giving equal consideration to each [5968] period within the cycle, with the qualification as to the treatment of the Penn Water earnings-price ratios after September, 1944.

• • •

Q. At transcript 516, lines 20 to 24, you testified that the replacement cost concept, as you use it, includes the assumption that the enterprise is a going concern, but [5969] necessary and unavoidable costs are associated with achieving the status of a going concern in a position to obtain capital on the basis of a hypothetical capitalization.

What are these "necessary and unavoidable costs"? A. The replacement cost concept is a reflection of the competitive or present cost approach to the problem. Assuming for the purpose that regulation seeks to provide for the regulated enterprise two things: First, all the advantages which are associated with the exclusive right to serve within a given service area, which are substantial and significant advantages. Secondly, that at the same time it seeks to avoid monopoly returns.

It is a cost concept and would limit the returns to those which would be realized if the enterprise were in fact competitive and if the competition were effective.

Now, what is the actual situation as to the functioning of competition? A number of enterprises establish themselves in a particular line of endeavor. They manufacture

tin cans, for illustration. They have as going concerns certain advantages over a new enterprise which would come in and afford increased and additional competition on the basis of improved methods, or whatever other advantage may become available to such a possible competitor.

But to some extent offsetting the economies thus available which will result in a reduction in the price of the [5970] product, everything else being equal, is the fact of the costs associated with becoming a going concern.

I did not place emphasis on those costs. I, however, did call attention to the consideration in connection with Schedule 10, that is the overall capital cost rate of 4.9 per cent, defined as a hypothetical replacement cost rate, includes no cost of replacing existing capitalization. It assumes freedom to obtain capital represented by a particular capital structure of maximum economy without including any costs associated with an existing capital structure.

• • •

[6002] Q. I would like to direct your attention to a statement appearing on page 23 of the Federal Communications Commission's report on the problem of the rate of return and public utility regulation which we referred to this morning, page 23 being a part of Chapter II. The statement is as follows:

"The historical cost of fixed income capital may be calculated directly from the corporation's accounting records, and may be expressed as a ratio between the annual obligations and the proceeds realized by the company from the security issues in question.

"With respect to common stock capital, a different situation exists. When the stock was sold no contractual or fixed rate was established. The very essence of the situation of common stockholders is that they are entitled [6003] to the earnings remaining after all other items have been deducted and only to such earnings. Common stock is necessarily purchased by the investor subject to this quali-

fication, and it appears that there can be no assumption of fixed rate to be paid throughout the future. Without such a rate the historical cost of this class of capital cannot be calculated."

Do you agree with the statements I have read? A. I do generally.

Q. What qualifications do you make? A. None if it is understood that the statement which you read means that a historical cost rate cannot be calculated for equity capital in the sense that such a historical cost rate can be calculated for debt, and preferred stock capital.

Q. I understand—— A. It is true that the return expectations and cost of equity capital can be estimated at the time of commitment of equity capital.

I am making a distinction between the words "estimated" and "calculated".

Q. You agree that common stock is necessarily purchased by the investor subject to the qualification expressed in the statement that the very essence of the situation of common stockholders is that they are entitled to the earnings remaining after all other items have been deducted, and only [6004] to such earnings? A. That is right.

Q. And that it appears that there can be no assumption of the fixed rate to be paid throughout the future? A. That is right.

Q. Now I would like to direct your attention to this statement appearing on page 23 of that same report and continuing on to page 24. The statement is as follows:

"It has been contended by some investigators that a historical cost of common stock capital may somehow be computed by reference to the dividend rates prevailing at the time the stock was sold. This approach assumes that the investors purchase the stock on the basis of these dividends, and with the expectation that they would be continued indefinitely. If dividends are increased it is stated that past investors are not entitled to this increase, and that the cost of capital attributable to their shares should

be figured at a different rate from the cost of capital derived from any new shares sold.

"It appears that this approach ignores the fundamental characteristic of common stock as the claimant of residual earnings. If common stock did in fact bear fixed dividend rates, the historical cost of such capital could be computed, but when dealing with stock without such fixed costs it appears that the current cost approach must be adopted so [6005] far as this class of investment is concerned.

"This problem of the determination of proper costs in respect to common stock capital will be given detailed consideration in subsequent sections of this report."

I think we can ignore the last sentence. Ignoring that last sentence about detailed consideration do you agree with the statement I read? A. I do.

* * *

[6006] Q. I refer you to Page 28 of the FCC report. May I draw your attention to this statement: "In any event, in so far as the return on common stock capital itself is concerned, the current cost approach appears to be the better method of measurement. Indeed, as was stated previously, this approach seems to be the only logical possible one. Furthermore, it appears to be an essential characteristic of common stock that returns are variable. Investors who primarily want secure, relatively low incomes will turn to other classes of securities. Common stock investors are those most willing to bear risks, and, as a class, probably expect their incomes to vary with changing economic circumstances.

"The legal position of common stock as the claimant of all residual earnings also tends towards a fluctuating income. And, most important, it is usually possible to vary the return on common stock without adversely affecting the company's credit.

"There might not be serious disagreement that it would be desirable for the rates of return on all classes of secu-

rities to vary with changing economic conditions, if such variations did not adversely affect the company's credit position in the case of securities with fixed income rights."

Do you agree with those statements? A. I do with the qualification that I would desire to [6007] give more consideration to the meaning of the last two sentences which appear here.

I do agree generally with what is stated here, particularly because the reference is to the return on common stock capital and not to the rate of return.

Q. Were you making a distinction in your last answer between return on common and rate of return on common or between return on common and rate of return on the rate base? A. I am making a distinction between rate of return on the common stock equity represented in the rate base and return on common stock equity. In the case of a utility with only common stock equity there is no difference as a result of that distinction.

Q. What is the difference when a company is not entirely capitalized with equity capital? A. There is a tremendous difference. The return is the product of the rate of return applied to whatever may be the rate base.

Q. And your rate of return takes into consideration a return on the equity capital. Right? A. The overall rate of return includes a component which represents rate of return on equity capital. The amount of return provided for the equity capital is significantly dependent upon the rate base to which that rate of return is applied.

• • •

[6027] Q. Wouldn't you say that arithmetic averages are of doubtful validity? A. I would say that the validity of arithmetic averages [6028] depends upon the nature of the data, upon the understanding with which the averages are used and upon the purpose for which they are used. I agree that often arithmetic averages are used improperly and may be of doubtful validity for a specific purpose.

Q. Their doubtful validity arises from the fact that the average tends to obscure the variations in the individual figures from a certain "norm". Isn't that so? A. That is true. An examination of the average as such does not reveal anything that is back of the average or is represented by it.

• • •

[6036] Q. Did you know that the major portion of Penn Water's common stock was issued either as bonus stock or in exchange for bonds? A. I believe so. I am not informed as to the exact proposition.

Q. About 85,000 shares? A. Yes.

Q. Under such circumstances there would have been no underwriters' discounts and commissions. Isn't that so? A. So far as the issuance of the common stock is concerned?

Q. Yes. A. That is correct.

Q. That would indicate that the actual cost to Penn Water as financing costs is far less than .75 per cent. Isn't that right? A. So far as cost of equity capital represented by that block of common stock is concerned.

Q. Assuming 8.51 per cent is the correct equity capitalization, and adding .75 per cent to it, aren't you actually giving the common stockholder more than 8.51 per cent if the company had not incurred the cost of .75 per cent for financing?

THE WITNESS: May that question be read, please?

[6037] TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: The question is not clear to me. The 8.5 per cent is an estimate of the required yield on equity capital on a hypothetical replacement cost basis. The 9¼ per cent is an estimate of the cost of equity capital on the same basis.

Q. But Penn Water never experienced that .75 per cent insofar as the equity capital was concerned that we have discussed, so there is no occasion to increase the 8.51 per

cent by .75 per cent. Isn't that so? A. It would be necessary to recognize and allow for the cost of equity financing for the purpose of arriving at an estimate of the total cost to an enterprise of such capital.

[6038] Q. Even though such costs had never been experienced by the company? A. The definition of hypothetical replacement cost specifically excludes recognition of and measurement of past cost.

Q. You have not assumed that Penn Water would redeem its bonds and issue equity capital in lieu thereof, have you? A. I have not made any assumption as to what Penn Water may actually do.

Q. In determining the cost of the issues of bonds of Penn Water, isn't it a fact that you have carried forward as expense of the refunding issue amortized debt discount and expense incurred when the refunded issue was first plotted? A. That is correct.

Q. I think you did that with respect to Penn Water's 1940 issue of bonds. Right? A. I believe so.

Q. You know that was not in accordance with the accounting Penn Water carried out for that debt discount and expense pursuant to the requirements of the Federal Power Commission, do you? A. I do know that.

• • •

[6048] Q. What would have been the cost of the bonds of Penn Water if you had not carried forward the unamortized debt discount and expense which we were discussing at the close of yesterday's proceeding and which unamortized costs appear on Schedule 4, page 3 of Schedule 4, of Exhibit 29? A. They appear on page 3 of Schedule 4 as Item 49, I believe.

Q. Yes. A. I have in pencil on my copy of that exhibit such a computation which shows for the series due 1964, a cost of 3.21 per cent, and for the series due 1970, a cost of 3.13 per cent.

Q. Yes, we had 3.14. That is close enough.

• • •

[6049] Q. Would it be fair to say that the average of the 3.21 and the 3.13 is 3.17? A. I have not determined the average. It undoubtedly is within that range of .08.

Q. Yes, I think you probably recognized that I included the word "fair" because I recognize sometimes weighting factors are involved, but I didn't think any weighting factors here would have any significant effect. Is that right? A. I belive you are right.

* * *

[6565] DONALD GUNN,

* * *

CROSS-EXAMINATION (Continued).

By MR. HALL:

Q. Are you the same Mr. Gunn who testified in this matter previously? A. Yes.

* * *

[6566] Q. Are we to understand that you are responsible for Exhibits 25, 26 and 27? A. I am responsible in the sense that I had supervision over the preparation of them, yes, sir.

Q. When you say you had supervision do you mean that you are prepared to answer questions with respect to the determinations of the matters shown in those exhibts? A. Yes, to the extent that I can recall them at present. [6567] However, I would like to say this: That Exhibit 26 has about 125 typewritten pages in it. Exhibit 27 has nearly 500 pages in it. They were prepared seven and eight years ago. My memory of all the details may be somewhat limited but I am prepared to go as far as I can.

Q. Have you reviewed those exhibits in connection with this proceeding? A. Yes, sir, I have reviewed them but I have not had an opportunity to review them as much as I would like to have.

Q. Is anyone else responsible for a portion of these exhibits? A. I am afraid I don't understand what you

mean by "responsible." Are you using the word in the same sense as you did when you asked me if I were responsible?

Q. Even though someone else or others may have assisted in the preparation of those exhibits, you are taking the ultimate responsibility as I understand it? A. Yes, with their assistance.

Q. As of what date did you begin your original cost study?

MR. SPARKS: You are now referring to the items "K" to "N" Mr. Hall or to Exhibit 25?

MR. HALL: Total original cost study, wherever it may be reflected in the exhibits.

MR. SPARKS: Including the Items "K " to "N"?

[6568] MR. HALL: Yes.

THE WITNESS: May I have the question now, please?

(Question read.)

THE WITNESS: During the latter part of 1937 or the early part of 1938.

By MR. HALL:

Q. As of what date was your study completed? A. I believe it was completed and filed in either May or June, 1940.

Q. How many were assigned to make the original cost study? A. The force engaged on that study varied from time to time. As I recall it, it ran as high as 30 or 35 men.

Q. How many of them were accountants? A. Of the people who devoted their time exclusively to the original cost study there were either three or four accountants.

Q. Who were they? A. Mr. William H. Eichhorn, Mr. Frisch—I don't believe I recall his initials now—Mr. Frederick Stupp. Those were the ones who devoted all of their time to the study.

In addition to them there was Mr. O'Connor, who advised me on certain phases of it and devoted a part of his time.

Q. Were the four individuals that you have named, Eichhorn, Rich, [Frisch] Stupp and O'Connor employees of Penn Water? [6569] A. Yes, sir.

Q. What positions did each one of those individuals hold? A. You mean what positions did they hold at the time of the study or now?

Q. That is correct, at the time of the study. A. Mr. Eichhorn was simply assigned to work on the original cost as my assistant. I don't remember he had any specific title.

Q. Was he an officer of the company? A. He was made an officer of the company near the completion of the study. It may have been after the completion but it was about that time.

Mr. O'Connor was, I believe, Vice President and Secretary of the company at that time.

Mr. Frisch and Stupp were simply employed by the company simply for the original cost study. I don't recall they had any particular title.

Q. Was their employment terminated upon the completion of the study? A. Yes.

Q. Did Pennsylvania Water and Power Company issue a work-order providing for the original cost study? A. I believe they did, although I am not certain of that.

Q. My information, Mr. Gunn, is that the work-order is [6570] Number M-1711. Does that check with your recollection? A. Yes, I believe I recall that.

Q. According to my information, Mr. Gunn, there was a total of $229,000 which was incurred pursuant to that work-order up to December 31, 1942. Does that check with your figures? A. That sounds like about the amount.

Q. You have referred to accountants who assisted in the preparation of your original cost study. Which one of those accountants was responsible for the decisions in connection with accounting matters? A. I don't know just

how to answer that for this reason: Mr. Eichhorn gave me certain advice on accounting matters, and so from time to time did the other accountants. I also looked to Mr. O'Connor for my guidance on the treatment of accounting problems, and most of them also were discussed with company counsel. So I can not categorically state, I believe, who was generally responsible for the accounting decisions.

Q. Could you indicate one of the principal accounting problems you faced? A. I don't recall offhand any particular problem. It was just a multitude of small accounting questions which arose and upon which I had the advice of the accountants and the advice of the company counsel.

Q. Don't you recall some specific problem that required [6571] accounting consultation? A. No, I don't believe I do recall any.

Q. When you completed and submitted your report, Exhibit 26, to Mr. Walls was it accompanied by a letter of transmittal?

* * *

THE WITNESS: It seems to me it was, although I don't seem to have a copy of it in the report.

By MR. HALL:

Q. The copy of Exhibit 26 which I have, Mr. Gunn, appears to contain a copy of your letter of transmittal, which copy appears to bear your signature and is dated August 20, 1940. Is that right? A. Yes, sir, that is correct.

Q. In your letter of transmittal you state that the report, Exhibit 26, superseded a previous draft of the early history of Penn Water. Is that correct? A. Yes, sir, that is correct.

Q. As of what date was the previous draft completed? A. I don't know. The way this Exhibit 26 developed was piecemeal over a period of two years, and at all times we had parts of a draft from the very beginning, and the preparation of the report simply increased. As more facts came into our [6572] hands we incorporated them. As I

recall it, it was a loose-leaf book affair. It wound up in the form you see it here in this exhibit.

Q. Wasn't the previous draft you referred to a complete draft? A. Well, for a time prior to the date of this letter we had a complete draft. As I recall it, it was very badly marked up with numerous revisions and numerous adjustments in it.

Q. Was this previous draft you refer to the first draft prepared covering the early history of Penn Water? A. As I said, there was no category of drafts. It was simply a process of evolution by which this was developed.

Q. Who prepared the various parts comprising the total of the previous draft? A. I prepared some. Mr. Eichorn [Eichhorn] prepared some. Mr. Chase prepared some of them. We all worked on them together at various times.

Q. Will you specify what parts each one of the individuals you named were responsible for? A. I don't think either one of the individuals I named had total responsibility for any part of it.

Q. Didn't they have total responsibility except for your overall supervision? A. If that can be called total responsibility I suppose [6573] they did. However, I did, myself, devote a considerable part of my time to the development of the history of the McCall Ferry project, and the three of us worked on the thing together and simultaneously. In the end, when we had the draft of the story in substantially complete form, we took it to company counsel and went over it with company counsel.

Q. What was the purpose of taking it to company counsel? A. To advise company counsel as to what the story was so they could in turn give us legal advice on the filing of the original cost claim.

Q. Who is the counsel you refer to? A. Simpson, Thacher and Bartlett; Snyder, Hull, Leiby and Metzger; Mr. Dozier A. Devane, who was formerly General Solicitor for the Federal Power Commission. I understand he is now a Federal Judge.

MR. GOLDBERG: In Florida.

THE WITNESS: There was also Mr. Hambright, of Lancaster, who was one of company counsel who advised with us.

By MR. HALL:

Q. Did the criticisms and comments you received from company counsel cause the rewriting of the previous draft into the form embraced in Exhibit 26? A. No, I don't think so. As I recall it, the draft we had when we discussed it with company counsel was already so badly marked up and mutilated it was necessary to rewrite it [6574] for that reason as a result of my own corrections.

Q. What matters covered by the present draft incorporated in Exhibit 26 were not covered in the initial draft? A. Well, some of the things that weren't covered was the information obtained from various people who had been connected with McCall Ferry Power Company, that is the subject matter of the affidavits of Fisk, Hutchinson, Lee, and the other people who had been connected with the original development.

• • •

[6575] Q. Do you consider, and were Exhibits 26 and 27, prepared as support for Items "K" to "N"? A. Yes, I think they could be so described.

MR. KING: Excuse me, Mr. Hall. I think the record ought to show, and I believe you will agree with this, that both Exhibits 26 and 27 were furnished to the Commission staff.

MR. HALL: I think there is a statement somewhere in the record to that effect.

When were they furnished to the staff?

[6576] THE WITNESS: Within the first month or six weeks, I would say, after the Commission staff came to the company's office for the purpose of preparing for the Commission's presentation of the Safe Harbor rate case. I think that was somewhat over two years ago.

By Mr. Hall:

Q. Can you fix the date of that occasion? A. Only in my memory. I just recall they had been there some weeks before they asked for it. As I recall it, Mr. Dunn requested them. He came to me and said he was ready to start on his accounting preparation of the Pennsylvania Water and Power Company case and asked me what information I had. I gave him Exhibits 26 and 27.

Q. Are you sure you gave the Commission accountants Exhibit 27 along with Exhibit 26 at the same time, or did the Commission staff have to ask for Exhibit 27? A. It was not my intention they should have to ask for it. I don't recall.

• • •

By Mr. Hall:

Q. Mr. Gunn, why were you selected to prepare the report represented by Exhibit 26? A. I don't know.

[6577] Q. When were you initially employed by Penn Water? A. I don't recall that. I was employed by Safe Harbor in October, 1930, and from the time of my employment with Safe Harbor I performed certain duties for Penn Water. I believe in the middle thirties, probably 1934 to 1936, the company began the practice of allocating part of my salary to Penn Water. I don't know which one of those events would determine any first employment in the sense you ask the question but those are the facts.

Q. In what capacity were you initially employed by Safe Harbor? A. To assist in the construction of the Safe Harbor project. I was in charge of the field-work.

Q. What positions have you held subsequent to the date you have mentioned with Penn Water and Safe Harbor? A. I have been assistant chief engineer of both companies and I am now chief engineer of Penn Water and assistant advisory engineer of Safe Harbor Water Power Corporation.

Q. As of the date you began your original cost investigation, how many officers, directors and employees did

Penn Water have who had been with the company since 1910?

[6578] THE WITNESS: May I have the question?

(Question read.)

THE WITNESS: I don't know. That could be determined.

MR. HALL: You know some.

THE WITNESS: Yes, some, but not all that category.

By MR. HALL:

Q. Will you state the ones you do recall? A. Mr. Walls, Mr. Rintoul, Mr. Allner, and I believe Mr. O'Connor. Those men were among the officers. Of course, Mr. Aldred had been there from the beginning, and there were undoubtedly some other members of the board of directors who had been, although I don't recall [redacted] and who they were.

My difficulty is I don't recall who were on the board of directors in 1936. Among the employees there are several old employees. I don't know offhand who they all are.

Q. Were any of the six individuals you have named connected with the Holtwood project while McCall Ferry Power Company was carrying on the activities in connection therewith? A. None of them so far as I know. I think I can say none of them were. I am certain of that.

Q. Do you know whether or not the employees were canvassed to determine their early connection with McCall Ferry and Penn Water?

MR. KING: May we have a little better limitation on that [6579] question? Canvassed when?

MR. HALL: When the original cost study was undertaken.

THE WITNESS: I made an effort to determine what employees there were available either then employed by Penn Water or otherwise from whom I might be able to get in-

formation about the early history. I recall that I attempted to locate the records of Mr. Ehle, who had been connected with the McCall Ferry Company. I believe I also contacted a Mr. C. H. Anderson who had been a general foreman on the McCall construction. There were one or two other people I believe I succeeded in locating when I was making an effort to get at the technical facts relating to the history of McCall Ferry Power Company.

By Mr. Hall:

Q. Can you state why it was that one of the older employees or officers was not selected to prepare Exhibit 26? A. No, I cannot.

Q. Or the original cost studies? A. No, sir, I cannot.

Q. Wouldn't their personal knowledge of the early events place them in a better position than you to prepare the reports? A. I don't think so, because I had the benefit not only of their knowledge of it but all the people who I could [6580] find who had been connected with the McCall Ferry Power Company.

Q. I believe you testified you first became connected with Penn Water between 1930 and 1936. Is that right? A. Yes.

Q. Accordingly you have no personal knowledge of the early history of Penn Water? A. That is right.

Q. But other individuals did have personal knowledge of the early history of Penn Water. Isn't that so? A. Yes, I imagine so. I imagine they also had something else to do besides making original cost studies.

Q. That was true of you, too, wasn't it Mr. Gunn? A. I don't know. I couldn't be too sure of that. Work was rather scarce at that time.

Q. Is that why you were selected, Mr. Gunn? A. I don't know what was in the minds of the people who selected me.

Q. Because of your lack of personal knowledge, is it not fair to say that the statements which you have made

in Exhibit 26 are not based on personal knowledge but are predicated upon conclusions which you reached as a result of your study? A. Yes, sir, that is correct to say. I have no personal knowledge whatever of McCall Ferry's construction nor, indeed, [6581] with any of the events in the history of Holtwood Company prior to 1930.

Q. Were all of the essential facts relating to the early history of Penn Water available to you? A. I don't believe I quite understand that. I don't know just how to answer that. If all of the facts that are included in Exhibit 27 and Exhibit 26 and three or four filing cases full of records in Baltimore which the staff has had access to in the last two years were available to me. If there are any more facts available there then they were not available to me.

Q. Is it not a fact that in the preparation of Exhibit 26 in many instances you had necessarily to draw upon suppositions and conjectures? Isn't that so, Mr. Gunn? A. Yes. The reason you will find those suppositions—and I believe they are all indicated in Exhibit 26—is because of cases where we didn't have proof which looked positive to me. I didn't want to indicate we had proof if we didn't have it.

Q. I believe you have indicated that the report, Exhibit 26, was prepared by others under your general supervision. Is that right? A. That is not quite right. I also worked on the preparation myself as well as supervised that and other phases of the original cost study.

[6582] Q. Except for that modification my statement is correct? A. Yes, sir, that is correct.

Q. Before you set Exhibit 26 up in final form, I believe you have indicated that you had a tentative draft? A. I had a draft which was an evolution. I started off with an explanation of how I came upon the facts in Exhibit 27: A part of the facts in Exhibit 27 I found in the company's records early in my study of original cost. I then prepared a first draft, or the beginning of Exhibit 26 based upon those facts. Many of the facts in Exhibit 27 came from

sources outside of our company—from the records of others and from the exhibits supplied by people who had been connected, the affidavits supplied by people who had been connected with McCall Ferry Power Company. As more and more information came into my hands I continually revised what is now Exhibit 26, until it gradually evolved into the form you now see it.

* * *

By Mr. Hall:

Q. To whom did you submit your tentative draft for [6583] review and comment other than the attorneys you have referred to, Mr. Gunn? A. At various stages of the preparation of Exhibit 26 I submitted it to different people. I believe I submitted it to Mr. O'Connor, I believe also Mr. Higgins——

Q. Of Lee, Higginson & Company? A. No, of Pennsylvania Water and Power Company. I discussed it with Mr. Walls. I don't recall whether I actually submitted him a copy of the draft or not, but I discussed it frequently with him, reports on which I did not have complete information all during the preparation of Exhibit 26.

Q. You submitted this tentative draft to individuals outside of Penn Water's organization, didn't you, Mr. Gunn? A. Well, except the company counsel. Otherwise, no.

Q. Didn't you submit a portion of your tentative draft of Exhibit 26 to Mr. Fisk? A. Yes, a portion of it, but not the whole. I submitted a portion of Exhibit 26 to Fisk, Hutchinson, and Hopkins, I believe, as I recall it. In other words, I submitted a portion of it which was applicable to their phase, to the phase of the history to which they were concerned, to all of those people of whom I asked for statements.

Q. Why were you interested in having others review and comment upon your tentative draft? A. To verify it against their memories as to its [6584] accuracy.

Q. Did the comments cause any revisions to be made? A. Oh, yes. They made it possible for me to put the facts together so that they appeared to make a consistent story. For example, without the information given me by Fisk and Hutchinson it would have been probably impossible for me to put the whole story together, because at that stage there was vital information missing and I couldn't seem to find the complete pattern into which all of the facts I then had could fit.

Q. When you got the information you have just referred to you still didn't have all of the essential information, and for that reason you had to draw upon suppositions and so forth? A. I believe I had all the important information. I had to fill in certain more or less minor points from supposition and conjecture. I think that is correct.

Q. Are those revisions that you have referred to reflected in the present Exhibit 26? A. Yes, sir, the present Exhibit 26 is final.

Q. Would you state specifically what suggested revisions were made by those who reviewed the tentative draft but were not incorporated in Exhibit 26? A. I don't recall there were any, if I understand your question correctly. May I have it again, please?

[6585] (Question read.)

THE WITNESS: I don't recall there were any.

By MR. HALL:

Q. I take it from what you have said that you believed that those who reviewed your tentative draft had historical data which you had not examined prior to the submission of a portion of the tentative draft to them. A. Yes, I thought perhaps they did have. That is the reason I went to them for their assistance.

* * *

[6586] By MR. HALL:

Q. In the first paragraph of your letter of transmittal to Mr. Walls, Penn Water's president, you state that it was

upon the basis of the facts contained in this report, Exhibit 26, that the company's claim for parts of its original cost was predicated. Isn't that so? A. Yes, sir.

Q. Will you detail the parts of Penn Water's claim which are predicated upon the statements contained in Exhibit 26?

* * *

[6587] THE WITNESS: No, I cannot give you the details of them. The only thing I can say that Exhibits 26 and 27 were prepared for the purpose of supporting the company's original cost claim in any and every respect they might serve for that purpose. I can't go through and undertake to pick out each and every item that might be in some way supported by Exhibit 26 and Exhibit 27. I think the whole cost claim is in some way supported by it.

By MR. HALL:

Q. You certainly wouldn't have any trouble indicating the major items of claim contained in Exhibit 26?

MR. KING: May I inquire, Mr. Hall, what you mean by "major"?

MR. HALL: Any substantial item.

MR. KING: Dollarwise?

[6588] MR. HALL: Yes.

THE WITNESS: I would say interest during construction is one item that is supported by Exhibit 26 and Exhibit 27. The acquisition cost of early lands and water power rights is another, the compensation paid to various people who assisted in the early development of the project prior to the formation of the McCall Ferry Power Company. It seems to me those are the major items.

By MR. HALL:

Q. Wouldn't you also include in the major items the cash value of the stock of the McCall Ferry Power Company and Penn Water, that is so-called cash value? A. Yes, I would include the cash value of that stock given for

services. That is what I had reference to when I mentioned compensation of those who had rendered services, that compensation being largely in the cash value of this stock.

Q. In the second paragraph of your transmittal letter you state that you made a thorough investigation of the early history of Penn Water and its predecessors. Is that right? A. Yes, sir, it is as thorough as Exhibit 26 is.

Q. You also state, do you not, that you believe all of the available sources of information were examined which you thought would reveal early historical facts? [6589] A. Yes, sir.

Q. You further state in the letter of transmittal:

"We believe that all of the available sources which could be expected to reveal early historical facts have been carefully examined." Is that correct? A. Yes, sir.

Q. Did any individuals other than those you have named assist you in the preparation of Exhibit 26?

MR. SPARKS: You mean during the cross-examination, Mr. Hall?

MR. HALL: This morning.

THE WITNESS: Including everybody in the company and out of the company?

By MR. HALL:

Q. Yes. A. I don't know. I may have gotten odd bits of information contained in Exhibits 26 and 27 from other people. I think I have named the people who supplied most of it.

Q. For instance? A. Maybe I haven't, either. Some of the information in Exhibit 27 was obtained from Coudert Bros., Hutchinson's lawyers.

Q. During the course of your investigation, did you find any documentary or other evidence in conflict with the statements which you have made in Exhibit 26? [6590] A. No, sir, except to the extent it is contained in Exhibit 26. I make that reservation because of the data that is given in

Exhibit 26 on stock value. If you want to call some of that contradictory, perhaps some of it is.

* * *

[6596] Q. And did you go through the same process in arriving at other conclusions reached in your report? By that I mean the same process you went through in arriving at the date of October 1, 1911, weighing evidence and rejecting evidence? A. What process do you refer to?

Q. Weighing evidence and rejecting evidence in part. A. I am not aware of having weighed any evidence and rejecting it. I didn't consider the annual reports you referred to as evidence of the date of commercial operation.

Q. Do you mean that you didn't find any evidence which was in contravention of the conclusions that you reached in Exhibit 26? A. No, I can't quite answer that question simply. I found a considerable volume of evidence which had to be considered in arriving at the date of October 1, 1911. The [6597] evidence was not all of exactly the same sort. However, it seemed to me an impartial weighing of it all indicated October 1, 1911, was the proper date of commercial operation.

Now, to the extent that all of the evidence I had was not identical it might be said to have been somewhat in contradiction.

Q. What you are saying is that even though you had considerable evidence available to you, you did not discuss or refer to all the evidence in your report, Exhibit 26? A. No, that is not what I am saying.

Q. What are you saying? A. I am saying this—perhaps I am wrong.

Mr. Sparks: Do you want the question again, Mr. Gunn?

The Witness: Yes, I want the question. I had better have it read.

(Question read.)

THE WITNESS: The answer to that is "Yes." I obviously couldn't put all the evidence in that small report.

By MR. HALL:

Q. In other words, you weighed the evidence in your mind without discussing it in your report? A. Yes, we have a very great volume of evidence in the company's records which couldn't possibly be incorporated in Exhibit 26. For example, we have the operating log sheets of the power plants. We have a vast volume of operating records, [6598] all of which have a very vital bearing on the determination of the date of commercial operation and couldn't possibly be incorporated in Exhibit 26. All of the evidence, however, has been available to the Commission staff for the last two years.

Q. Mr. Gunn, generally what documentary and other evidence did you examine in connection with the preparation of your report? I am talking now only about the evidence in the files of Penn Water.

MR. KING: By "report" you mean Exhibit 26?

MR. HALL: Yes, I mean Exhibit 26.

• • •

THE WITNESS: I examined all of the evidence I could find in the files. That included operating records, construction diaries kept by McCall Ferry Power Company, the books of accounts, the documents and facts relating to the bankruptcy in McCall Ferry Power Company, those relating to the reorganization of the company, and the early log sheets, operating log sheets, of the company, as well as all of the general correspondence files.

By MR. HALL:

Q. Did you examine any documentary evidence not in Penn Water's possession? A. Yes.

[6599] Would you specify the other documentary evidence? A. I examined documentary evidence which was obtained from the files of Coudert Bros., that was obtained from the

files of Lee, Higginson, and I believe I also obtained some from the files of Simpson, Thacher & Bartlett.

Q. Would you identify the law firm last mentioned? A. They were the counsel who were brought into the McCall Ferry Project when Fisk's firm took control of the project. They were Fisk's lawyers that he generally used in connection with his promotion, as I understand it.

Q. What documentary evidence are you relying on when you say the Fisk Company took control of the McCall Ferry project? A. On Hutchinson's statement that they took control and also Fisk's statement that they took control, and I believe the general impression that I obtained from Mr. George C. Lee, of Lee, Higginson, that they took control.

Q. Did you examine the files of Bertron, Storrs & Griscom? A. I obtained information from their files. It is included as an item in Exhibit 27. It is information relating to the price at which they carried the securities of McCall Ferry Power Company. I think it is Part 23.

• • •

[6600] Q. Doesn't Mr. Adams state in his letter of May 27, 1938, that "We are not able to be of great assistance to you in this matter, as several months ago we had all of our correspondence files prior to 1914 destroyed to reduce storage space."? A. Yes, it does state that.

Q. What files did they have, then? A. They had some stock ledger, I believe, in which they had recorded the value of these securities.

Q. They didn't have any correspondence file, did they? A. No.

Q. The Mr. Adams I referred to is Secretary and Treasurer of Bertron, Griscom & Company. Is that right? A. That is right.

Q. Is that firm a successor to Bertron, Storrs & Griscom? A. Yes, sir.

Q. Did you attempt to secure any information from Mr. H. F. Dimock? A. I attempted to locate any papers

that were left by his estate. As I recall it, I believe Mr. Dimock was dead at the time I was making the original cost study.

Q. Did you locate any papers? A. No, I did not. I understood any records relating [6601] to McCall Ferry Power Company long-since had been destroyed.

Q. Did you attempt to secure any information from W. B. Parsons? A. No, I don't recall I did. I didn't expect Parsons would have any information particularly pertinent that I couldn't get otherwise. For example, Parsons would have been an outright duplication of Hutchinson.

Q. At least you thought that. A. Yes.

Q. But you didn't know that to be a fact? A. He was a consulting engineer and so was Hutchinson. I would expect they would both have the same information available to them, except Hutchinson would have more.

Q. Parsons prepared a more extensive report relating to the proposed Holtwood development? A. Yes, sir, and I had his report.

Q. That report is incorporated as Part 3 of Exhibit 27? A. Yes, sir.

Q. Is Mr. Parsons still alive? A. I believe he is dead.

Q. Was he alive when you were making your original cost study? A. I really don't know. In any event I made no attempt to contact him.

Q. Did you attempt to secure any information from Mr. [6602] C. A. Coffin? A. I believe I did. As I recall it, Mr. Coffin was dead.

Q. You say he was dead? A. As I recall it he was, yes.

Q. Who did you contact to get permission to examine his files? A. I think I inquired of General Electric Company if they still had his files.

Q. What was Mr. Coffin's connection with General Electric? A. I believe he was president.

Q. During the construction of the Holtwood project? A. During construction of the Holtwood project, yes.

Q. Did General Electric have any files relating to the construction and early history of the Holtwood project? A. No, not that I recall.

Q. So the files of General Electric were of no assistance to you? A. No, that is right.

• • •

[6603] Q. Are you an accountant, Mr. Gunn? A. No, sir.

Q. Have you ever studied accounting? A. No, sir.

Q. What if any accounting experience have you had? A. I don't think I have ever had any experience as an accountant. I have had some experience on the segregation of expenditures between operating expenses and capital. If you call that accounting I have had that much accounting experience. I never have laid any claim to that distinction, to the distinction of being an accountant.

Q. This experience you have referred to is in connection with single entry accounting or double entry accounting? A. I don't know. It didn't seem to me to make any difference.

Q. You are an engineer by profession, however? A. Yes, sir, I try to be.

Q. So that in preparing your studies on original cost you brought to it your engineering knowledge, is that right, and not accounting training and experience? A. Yes, I think that is correct, except that I had the assistance of several capable accountants in the preparation of this, as I have already explained.

[6604] Q. Do you mean the four individuals that you previously referred to—Eichhorn, O'Connor, Rich, and Stupp? A. Yes, I referred to those. I believe I should make a correction there. In referring to Rich, I think the man's name I had in mind was Frisch instead of Rich.

Q. F-r-i-s-c-h? A. Yes.

• • •

By Mr. Hall:

Q. What accounting problems did Mr. Eichhorn assist you with? A. As a matter of fact, the biggest accounting problem I believe was the preparation of the accounting control statement which was used in the reconciliation of the book cost with the physical inventory of the property.

Q. That assistance rendered by Mr. Eichhorn involved no accounting conclusions included in your results. Is that so? [6605] A. May I have that question, please?

(Question read.)

The Witness: I wouldn't say that is correct at all. It seems to me it did. Certainly he had to come to some accounting conclusions to prepare these control statements.

By Mr. Hall:

Q. What conclusions do you refer to now? A. Conclusions necessary to prepare the statements.

Q. What are they? A. Whatever conclusions an accountant must arrive at in order to prepare such a statement.

Q. Can you state what Mr. Eichhorn did involved reaching accounting conclusions? A. As I understand an accounting conclusion it did.

* * *

[6606] Q. Did Mr. Eichhorn make any accounting contributions to acquisition cost during the early period? A. I don't believe I understand what you mean by "acquisition costs during the early period." To what do you refer to?

Q. Lands, rights of way, and water power rights. A. He made a contribution to the extent he assisted me in the preparation of Exhibit 26, and that deals with acquisition costs.

[6607] Q. What assistance did Mr. Eichhorn give you on the cash value of the securities?

Mr. King: What securities, Mr. Hall?

MR. HALL: Of McCall Ferry Power Company and Penn Water.

THE WITNESS: His assistance on that problem was limited to his participation in assisting me in the preparation of Exhibit 26 and Exhibit 27.

By MR. HALL:

Q. What parts of those exhibits? A. The whole of those exhibits.

Q. With respect to what accounting principles did you consult Mr. Eichhorn? A. I don't have any recollection of any particular consultation. Any time I needed accounting advice I went generally to Mr. Eichhorn. On some problems I perhaps also consulted Mr. O'Connor.

Q. Do you recall any specific instances in which you consulted with him? A. No, I don't know.

Q. What accounting contributions did the other accounting individuals make to your original cost study? A. Their contribution was primarily the analysis of the company's books to derive the details of the costs as recorded there. Those other accountants worked under the supervision of Mr. D. L. Wetzel.

[6608] Q. Those were figures and not conclusions, is that right? A. Yes.

Q. Is Mr. Wetzel an accountant? A. No, sir. He has had considerable cost-keeping experience.

Q. Did he render any assistance to you? A. Oh, yes, a very considerable amount.

Q. Of an accounting nature? A. I don't believe I understand what you mean by rendering assistance of an accounting nature.

Q. Did he arrive at any accounting conclusions which assisted you in your determinations? A. That doesn't help me very much. I can tell you what he did. I don't know whether that would be——

Q. I think that would clarify it. What did he do? A. He had working under his supervision a group of people

that I believe run as high as 18 or 20 whose duty it was to first make a physical inventory, and then make an analysis of the company's cost records, and then reconcile the analysis of the cost records with the inventory of the company's property.

If that involved accounting conclusions or assistance, then he rendered it. If it didn't, he didn't.

Q. You are familiar with Electric Plant Accounts Instruction [6609] 3-D, are you? Will you refer to Page 39 of the instructions to Electric Plant accounts? A. Yes, sir, I am familiar with that.

Q. Did any accountant determine the meaning of this construction of Section 3-D? A. I wouldn't say they finally determined it.

Q. Who finally determined it? A. I would say it was a joint determination between myself and the accountants and the company's counsel.

Q. How did the accountants interpret Instruction 3-D? A. The same way that the company has treated it.

Q. You mean they were all in agreement? A. Yes, I think we were all in agreement.

Q. What was the conclusion reached by all of you as to that instruction? A. When the consideration for property is other than cash the value of such consideration shall be determined on a cash basis.

Q. What did you determine: the value of the property or the value of the securities? A. We were uncertain on that as to which one we should determine. I thought perhaps maybe we ought to determine both.

Q. What does Instruction 3-D require? A. There is also uncertainty about that.

Q. Then there was not any unanimity of opinion there? [6610] A. It was a unanimity of lack of it, then. Let us put it that way.

Q. How did you finally conclude Instruction 3-D had to be construed? A. That it had to be construed we had to estimate the value of the securities which were given in

exchange for services, and in doing that it was necessary in some cases to estimate the value of the services as a measure of the value of the securities.

[6611] Q. Do you interpret instruction 3-D to mean that you are to determine the cash value of the securities by determining the value of the property or service?

THE WITNESS: May I have that question, please?

(Question read.)

By MR. HALL:

Q. That is services which are rendered? A. No, I wouldn't necessarily interpret it that way. However, in the case of McCall Ferry Power Company, where the securities were never traded on the market, there obviously was no other way to value the securities except on the basis of the things for which they were exchanged.

* * *

Q. What you did then, Mr. Gunn, was to determine the [6612] value of the services rendered and attribute that value to the securities. In other words, the value of the services were deemed to be the cash value of the stock issued for the services? A. Generally speaking I think that is true. Of course there were other elements which entered into it but generally speaking I think that is a true statement.

Q. You assumed there was an equivalence between the two. Is that right? A. Yes, where it was based directly on that basis. For instance, in the case of Lee, Higginson service I assumed there was an equivalence between the services and the value of the stock given at the time it was exchanged.

* * *

[6615] Q. Where is the cash value of the securities of the McCall Ferry Power Company and Pennsylvania Water and Power Company which you claim, recorded on the books?

THE WITNESS: May I have the question, please?

(Question read).

THE WITNESS: I don't think I made any such claim as that, but an amount sufficient to cover the value of the securities of McCall Ferry Power Company is most certainly included in the opening entry of Pennsylvania Water and Power Company.

• • •

[6620] Q. To whom do you have reference when you say "Hutchinson interests"? A. To Hutchinson and his father-in-law, Mr. Dimock.

• • •

Q. Were those the only individuals included in the group which you referred to as the Hutchinson interests? A. So far as I know. That was a term we used to [6621] designate Hutchinson himself, and Dimock, both of whom we knew were a part of the group, and also, if you will notice, Hutchinson in his statement which he gave us in connection with the development of the history of the McCall Ferry was not very definite as to who had rendered him financial assistance and for that reason I couldn't be more definite.

If you wanted to broaden the term I think you could say that Beyer and Willson, and at one time I think Bogart, was associated with Hutchinson.

Q. How about W. B. Parsons? A. I believe I was mistaken in mentioning Bogart. I believe I had in mind Mr. George S. Morison who was a consulting engineer. I understand he was at one time associated with Hutchinson in the development of the river. Before the organization of McCall Ferry Company, Morison had died and I believe Hutchinson had bought his interest.

Q. Would you include C. A. Coffin as a member of the Hutchinson group? A. No, I didn't have in mind Coffin as a member.

Q. In other words, the persons you have named were associated with Cary T. Hutchinson for the purpose of developing a hydroelectric project on the Susquehanna River? A. That is my understanding of it.

Q. Was H. F. Dimock, Hutchinson's father-in-law? A. Yes, sir.

[6622] Q. What positions had Hutchinson held, or what activities had he engaged in, with the York Furnace partnership? A. Cary T. Hutchinson had been retained to supply advice to the partners on the possibility of using electricity in connection with the reduction of iron ore in the vicinity of York Furnace.

* * *

[6625] Q. What was the York Furnace Power Company? A. The York Furnace Power Company?

Q. Was it a partnership? A. Yes, sir, it was a partnership.

Q. Who were the members of the partnership? A. Beyer and Willson, a man by the name of Shoff, and two others formed the co-partnership. I don't know who the [6626] two others were.

Q. Holman and Franklin? A. I really don't know. But those two names sound familiar.

Q. I show you this document. A. Yes; that is correct, John W. Holman.

Q. The document which I just showed you to refresh your recollection, Mr. Gunn, was an agreement dated February 21, 1902, between the members of the partnership and Cary T. Hutchinson. Is that right? A. Yes, sir.

Q. Had you ever seen this document before? A. I don't recall. I looked at a vast number of documents. I may have or I may have not. I assume that I did.

Q. Is it a fact that Holman, Shoff and Franklin dropped out of the partnership leaving Beyer and Willson as the sole partners?

THE WITNESS: May I have the question, please?

(Question read).

THE WITNESS: It is my understanding Beyer and Willson wound up with the partnership as the sole members.

• • •

[6628] Q. What was York Furnace Power Company's connection with Hutchinson? A. I think it varied from time to time. His first connection, as I recall it, was when York Furnace Power Company employed Hutchinson as an engineer and consultant in connection with the reduction of iron ore in the locality of York Furnace through the use of electricity. Then, as I understand it later, after Beyer and Willson had taken over the interest of the other parties in the York Furnace partnership, Hutchinson bought from them an option to buy York Furnace property, and then subsequent to that it is my understanding that at least Beyer—I don't recall what became of Willson—became counsel for Hutchinson on local land matters, and in effect Hutchinson's agent in the securing of further water power rights necessary to the Hutchinson development at McCall Ferry.

[6629] I believe after the formation of McCall Ferry Power Company, Beyer was local counsel for McCall Ferry Power Company.

Q. Didn't Willson also carry on activities for Cary T. Hutchinson, such as acquisition of property, and so forth?

TRIAL EXAMINER: Can you answer the question without looking something up?

THE WITNESS: I don't recall offhand. I was just looking at Exhibit 26 to refresh my memory.

It appears Willson did continue his interest in McCall Ferry Power Company, as shown on page 40 of Exhibit 26.

By MR. HALL:

Q. It is a fact, is it not, that York Furnace Power Company had acquired properties along the Susquehanna River for the purpose of developing a hydroelectric project

in connection with its business or proposed business? A. Yes, sir.

Q. Will you turn to the map at the back of Exhibit 26 which purports to show land acquisitions by three groups, the first of which is listed as Hutchinson properties, the second as McGaw properties, and the third, McCall Ferry Power Company acquisitions? A. Yes, sir, I have that before me.

Q. The buff-colored portions include lands owned at one [6630] time by York Furnace Power Company. Is that right? A. Yes, sir, the holdings of York Furnace Power Company are included in that buff-colored section, although the buff-colored sections are not limited to the holdings of York Furnace Power Company.

* * *

[6640] By Mr. Hall:

Q. I believe you have indicated Mr. Beyer acted in Hutchinson's behalf in purchasing the land along the Susquehanna River for the Holtwood development? A. Yes, I believe he did.

Q. Did he not also act in the same capacity for McCall Ferry Power Company after its organization? [6641] A. Yes, I believe so. I think he was also counsel for McCall Ferry Power Company.

Q. Is it a fair statement to say that as a result of Beyer's business activities in connection with York Furnace Power Company and its acquisition of lands for power development that he was familiar with property acquisitions along the river and power properties? A. Will you read that one, please?

(Question read.)

The Witness: Yes, I think that is a fair assumption.

By Mr. Hall:

Q. As a result of his knowledge, don't you think it also fair to say he was acquainted with the value of such prop-

erties and with the prices that were being paid therefor? A. I will have to have that read back.

(Question read.)

MR. KING: Who is "he"?

MR. HALL: Mr. Beyer.

THE WITNESS: He was unquestionably familiar with the prices he was paying for the property. I don't know whether his knowledge would extend to the other parts of your question or not.

By MR. HALL:

Q. He was also familiar with the value of such properties, wasn't he? [6642] A. I really don't know whether or not he was.

Q. It is reasonable to assume he was. Isn't that so? A. I don't know.

Q. He was actively engaged in the acquisition of properties along the river, wasn't he? A. After he began to represent McCall Ferry Power Company he was buying them under Hutchinson's supervision. Which one had the knowledge as to the value of the property I don't know. Beyer was a lawyer and Hutchinson was an engineer. Hutchinson was the man who had knowledge of the use to which the properties would be put.

Q. What do you mean when you say Beyer was acquiring land under Hutchinson's supervision? A. I thought after Hutchinson took the option on the York Furnace, to buy the York Furnace properties from Beyer, whatever Beyer was doing after that it was as Hutchinson's agent.

Q. Beyer acquired certain properties for the York Furnace Power Company. Is that right? A. You mean prior to the time he gave the option to Hutchinson?

Q. Yes. A. That was not a conspicuously successful enterprise.

Q. He was fully aware of the prices and values and so forth in so far as acquisition of lands was concerned. Isn't

[6643] that so? A. He was aware of the prices he paid. I don't know whether or not he was aware of anything else.

Q. Don't you think it reasonable to assume that Beyer, when he paid for the land which he acquired, was aware of the values of those lands? A. Are you referring in that question to when he was buying them for York Furnace Power Company or for Hutchinson?

Q. Both. A. No, I don't know whether or not he was aware of the value.

Q. He was acquiring some of the properties in contemplation of constructing a hydroelectric project for his partnership, York Furnace Power Company, wasn't he? A. Yes, sir. As I said it was not a conspicuously successful enterprise.

Q. Had York Furnace Power Company constructed projects? A. No.

Q. Then what was not a successful enterprise? A. The acquisitions of water power rights for the purpose of building what York Furnace contemplated as a project.

Q. Why do you say that, Mr. Gunn? A. Because it was not built.

Q. Do you know why it wasn't built? A. No, I really don't. There were several factors [6644] which might have contributed to it. In the first place the advice Hutchinson gave Beyer and Willson concerning the reduction of iron ore as I recall was that it was not a feasible proposition. The next thing I know Beyer and Willson had sold an option to Hutchinson to buy the properties. Now, that is about all I know about it.

* * *

[6645] Q. Mr. Gunn, I show you a photostatic copy of a document which in the first two paragraphs reads "This agreement made this 21st day of February, 1902, between John W. Holman and Frederick Shoff, George B. Willson and William F. Beyer, all of the county of Lancaster and state of Pennsylvania, parties of the first part, and Dr. Cary T. Hutchinson of the city of New York, party of the second part, witnesseth:"

Do you recognize this document? A. Yes, sir. I believe I have seen it before. It seems to be Hutchinson's first option on the property.

Q. That is my understanding of this document, Mr. Gunn. Doesn't it refer on the first page to Hutchinson's proposed development? A. Yes, sir, but that is not the question you just asked me.

* * *

Q. If, according to this document which is Hutchinson's original option on the York Furnace Power Company properties, that is the portion covered by his original option, that the land [6646] is being acquired for the purpose of damming the river, then Beyer and Willson knew that he was acquiring the property covered by this option for the purpose of the Holtwood dam. Isn't that so? A. Well, they certainly knew that he was buying the property for the purpose of the hydroelectric development. Whether they knew the scope of the project Hutchinson had in mind for McCall Ferry Power Company at the McCall site is extremely doubtful because Hutchinson himself didn't know. I think that is obvious. As a matter of fact, if you recall from the history of McCall Ferry Power Company they financed for a dam to elevation 155 and they renegotiated an arrangement with Pennsylvania Railroad and raised the elevation to 185, and then the railroad negotiation fell through and they reduced it back to 165. So it was not until 1907 that anybody knew the scope of the project that was going to be built at McCall Ferry site.

* * *

[6647] Q. Who were the incorporators of the Hillside Water and Power Company? A. Jacob Hill Byrne, W. F. Jack, George B. Willson, Walter M. Franklin, and W. F. Beyer. They were the nominal incorporators, I guess you would call them. At least they were the first ones.

Q. They were the dummy incorporators, in other words? A. I think that is probably what you would call them.

Q. Were they also the incorporators of Susquehanna Water and Power Company? A. Yes, sir.

Q. In forming Hillside and Susquehanna were the incorporators acting in their own behalf or in behalf of Hutchinson? [6648] A. I would say they were acting in behalf of Hutchinson.

Q. Who were the incorporators of McCall Ferry Power Company? A. May I have the question?

(Question read.)

THE WITNESS: The dummy incorporators, if we may call it that, were the same five individuals.

By MR. HALL:

Q. In whose behalf were they acting at the time they formed the McCall Ferry Power Company? A. I think they were acting in behalf of the Hutchinson interest and the bankers.

Q. What was the capitalization of McCall Ferry at the outset? A. One thousand dollars.

Q. Ten shares? A. Ten shares of $100 each.

Q. Was McCall Ferry Power Company incorporated on April 14, 1905? A. That is a rather difficult question. The merger of the Hillside Water and Power Company and the Susquehanna Water and Power Company was executed on April 1, 1905, and the formal documents issued by the Secretary of State of Pennsylvania, I believe, were dated April 14. I don't know which one of those actually effects the incorporation.

[6649] Q. Who held the ten original shares, Mr. Gunn? A. The incorporators, as I understand it.

Q. Who received the ten shares from the incorporators? A. Who received them when? You mean ultimately?

Q. When the incorporators disposed of the ten shares, who got them? A. They ultimately went four shares to Hutchinson and six to Harvey Fisk and Sons.

Q. When you say that they ultimately went to Hutchinson and Fisk, were divided between them, when did that

occur? A. I suppose it occurred on June 13, 1905, or thereabouts.

Q. What makes you say that? A. Well, that was the date in which all of the agreements affecting the disposition of the stock and the transfer of the lands took place, and I assume, therefore, that these shares of stock probably were transferred at that time.

Q. I show you a copy of a letter dated June 22, 1905, written by Lorenzo Semple to Cary T. Hutchinson, Esq., No. 60 Wall Street, Manhattan, New York. This copy was copied from a copy contained in Susquehanna Contracting Company's file number 30.

MR. KING: May we see it before you submit it to the witness, please?

MR. HALL: Yes.

[6650] MR. KING: Thank you.

By MR. HALL:

Q. Have you seen that letter before today, Mr. Gunn? A. I presume I have, or at least had the information contained in it.

Q. When I said the letter was contained in file number 30 of Susquehanna Contracting Company, I believe you will agree that the files of Susquehanna Contracting Company are now in the possession of Penn Water? A. Yes, that is right.

Q. According to the second paragraph of that letter, Mr. Semple states as follows: "I also send you receipt for $155,500, signed by Beyer, Willson and the Lancaster Trust Company and Franklin and Marshall College. Also Certificates Nos. 1, 2, 3, 4 and 5, each for two shares of the capital stock of the McCall Ferry Power Company endorsed in blank. These represent the $1,000 in capital stock which you have received from Beyer and Willson."

It is so stated in that letter? A. Yes, sir, the letter so states.

Q. According to this letter, then, the ten shares of stock, that is the incorporators' shares, were delivered to Hutchinson on June 22, 1905? A. I don't know you could necessarily draw that conclusion for this reason. Lorenzo Semple was Hutchinson's [6651] lawyer. It is true that Semple transmitted the shares to Hutchinson on June 22. Now, when they may have come into Lorenzo Semple's hands I don't know from this letter. It evidently was before June 22.

Q. But according to this letter Semple was delivering the incorporators' shares to Hutchinson on June 22, 1905. Isn't that right? A. Yes, sir, the letter so states.

[6652] Q. You don't have any information to indicate to the contrary, do you? A. To the contrary of the proposition that Lorenzo Semple sent the stock to Hutchinson on the 22nd?

Q. Yes. A. No, sir, I do not.

Q. Will you identify Lorenzo Semple for the record? A. Yes, sir. I already did. He was Hutchinson's counsel.

Q. Were the incorporators also the directors of the McCall Ferry Power Company? A. Yes, sir, they were apparently incorporators, directors and stockholders.

Q. Was Beyer president and Willson secretary and treasurer of the McCall Ferry Power Company? A. Yes, sir.

Q. They were the only officers that the company had at the outset? A. Yes, sir, in this stage of the dummy incorporation.

Q. Did Hillside and Susquehanna own any property or have any assets? A. Not that I recall other than whatever they may have acquired with the proceeds of their $1,000.

Q. Were those two companies active companies? A. No, sir, I don't think they were.

[6653] Q. I believe you have indicated Hutchinson carried on property acquisitions and investigations in his own name with Beyer and Willson's assistance? A. Yes.

Q. You state, Mr. Gunn, in Exhibit 26 at pages 6 and 7, that Hutchinson formed a partnership with one George S. Morison, a consulting engineer, to investigate the possibilities of generating and selling power. Do you have a copy of the partnership arrangement? A. No. If it isn't in Exhibit 27 I don't have it.

Q. As of what date was the partnership formed? A. I don't have that fact. The only thing I know of that partnership is what is included in Hutchinson's affidavit.

Q. You don't know the terms of the partnership arrangement? A. No, sir.

• • •

[6654] Q. How did you determine that a partnership existed? A. Hutchinson stated to me that such a partnership existed, and it is also stated in Hutchinson's affidavit which is Item No. 1 in Exhibit 27.

Q. Does that affidavit constitute your sole basis for your knowledge of the arrangement between Morison and Hutchinson? A. It constitutes, as I recall, my sole knowledge it was a partnership arrangement. It doesn't constitute my sole knowledge they were associated on the river. It constitutes my only knowledge as to the character of the association, as I recall it.

• • •

[6655] By Mr. Hall:

Q. How does this partnership arrangement enter into the complete history that you referred to? A. It is a fact.

Q. Why did you leave out the details? A. Because I didn't think the details were pertinent in the first place, and I doubt if I could have gotten them in the second place.

Q. How do you know that you couldn't have gotten them, Mr. Gunn? A. I don't know I couldn't have gotten them. I just said I doubt if I could get them. Hutchinson told me that practically all of his personal records long ago had been destroyed in connection with the McCall Ferry

project, and he was relying only on his memory. I didn't expect him to remember those details for forty years.

Q. According to the last three lines in paragraph No. 1 [6656] of Exhibit 27 it is stated that Hutchinson "Reviewed and examined pertinent data and records, including the pertinent records and data of McCall Ferry Power Company and thoroughly refreshed his mind and memory in connection therewith."

What documents were used to refresh Hutchinson's mind and memory as to his partnership arrangement with Morison? A. Several of the documents included in Exhibit 27, and all of them were included in the participation which I said was made available to Hutchinson, which is in the company's files, and which are available to the Commission Staff.

Q. Will you refer to Exhibit 27 and indicate the parts thereof that you used to refresh Hutchinson's recollections as to the partnership arrangement? A. I can't remember offhand which ones we supplied to him. They are, however, in the company's files.

Q. Are any of them in Exhibit 27? A. I am sure they are, but I don't recall which ones. Of these participations there were five or six made up, and they all had different numbers and different exhibits which were included now as items in Exhibit 27. I can't recall offhand precisely which exhibits were included in each one of the participations supplied to the people who gave us their recollection on this problem.

• • •

[6659] Q. Have you found any evidence of the partnership? A. I don't recall that I have. I didn't know there was a partnership between Hutchinson and Morison until Hutchinson told me there was.

Q. If that is the case, Mr. Gunn, there are no records that you could have shown Mr. Hutchinson that could have served to refresh his recollection. Isn't that so? [6660] A. On that part?

Q. Yes. A. Yes, that is true, there are no records I could have shown him.

Q. Or about anything else relating to the partnership? A. No. As I told you before, I didn't know there was a partnership until Hutchinson told me. As I recall, there certainly was nothing I gave him to refresh his recollection on that.

Q. Did Hutchinson tell you that in his initial conference with you? A. I don't recall in which conference he told me. He told me in one of the early conferences, yes.

Q. How many conferences did you have with him? A. Seems to me like four, five or six.

Q. Can you fix the date of the earliest conference with Hutchinson? A. I don't have anything before me to fix it. I can refer to the company's records and fix it.

Q. Did you make notes and keep notes as to your conferences? A. What kinds of notes?

Q. As to what took place in the conferences? A. No.

Q. Did you keep any records of the subject matter of [6661] your conferences? A. No, sir. As I said before, Exhibit 26 was in the state of evolution, and as information came to me it was incorporated in Exhibit 26.

Q. Didn't you write that information down for the purpose of incorporating it into Exhibit 26? A. Well, it was written down and became a part of Exhibit 26.

Q. Are you saying that it became a part of Exhibit 26 only after the affidavit was prepared? A. No, I think it became a part of Exhibit 26, or certain parts of it did, as Hutchinson gave them to me.

Q. You wrote Exhibit 26, in other words, and then prepared the affidavit? A. At the time the affidavit was prepared Exhibit 26 certainly was in the process of evolution, as I described to you this morning how it was prepared.

Q. Then the affidavit in effect represented the evolution that you are talking about? A. No, I wouldn't say that.

The affidavit was prepared by Hutchinson's counsel and represented Hutchinson's recollection based upon all of the information I had given to Hutchinson. Now, he had during various conferences before the affidavit was prepared given me most of the information that ultimately went into his [6662] affidavit.

This information about the Morison partnership, as I recall it, was given to me in one of the early conferences.

Q. Did Hutchinson have any personal files not in the possession of Penn Water which covered the period from 1900 through 1910? A. He told me he did not.

Q. Then he relied solely on what you gave him plus his recollection. Is that right? A. I think that is probably true. That is my understanding of it.

Q. Did Hutchinson draw upon your deductions and analysis of the basic records that you supplied to him to refresh his recollection?

MR. KING: May we have that question?

(Question read.)

THE WITNESS: To refresh his recollection when?

By MR. HALL:

Q. When you conferred with him? A. Well, I don't know. There was perfectly free discussion which took place between Doctor Hutchinson and myself, and there were the documents before us. I told him all I knew about them. I don't know what he drew on and what he didn't.

Q. Did you give him any information which was not [6663] contained in the documents which you had in your possession at that time?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: Obviously not.

If I didn't have the information from the documents I didn't have any information and obviously couldn't give him any information.

By MR. HALL:

Q. In Exhibit 26 at page 12, Mr. Gunn, you state that Hutchinson retained Morison as a consulting engineer after the end of the partnership until Morison's death in 1903.

Whom did Hutchinson retain as consulting engineer at that time?

MR. KING: What time?

THE WITNESS: 1903?

By MR. HALL:

Q. Yes. A. After Morison's death?

Q. Yes. A. I don't know whether or not he retained anybody. Sometime between there and June 13, 1905, he evidently retained William Barclay Parsons.

Q. You don't know the exact date he retained Parsons? A. No, I do not.

[6664] TRIAL EXAMINER: You said June.

THE WITNESS: I mean January, 1905; January 13, 1905.

By MR. HALL:

Q. Parsons was associated with Hutchinson in his proposed power project. Isn't that so? A. I don't know what you mean by "associated."

Q. He was engaged by Hutchinson to make engineering studies and so forth? A. Yes.

Q. And the report he prepared is embraced in part 3 of Exhibit 27. Is that right? A. Yes, sir, as I recall it is in there.

* * *

[6672] Q. Mr. Gunn, is it correct to say that the Holtwood project was conceived by Cary T. Hutchinson, electrical engineer, about the year 1901?

* * *

[6673] A. Yes. It appears that Hutchinson first became interested in development of hydroelectric power on the Susquehanna River in 1901 or 1902. However, the difficulty I was having was this: I don't think that when he first

became interested in the river that he had in mind the precise location or the scope of the project that was ultimately built at the McCall site.

Q. What I mean to say is that he conceived the desirability and the possibility of a project in the general area that the Holtwood project now is located? A. Yes.

Q. About the year 1901? A. Yes, I think that is about right.

Q. Did the Hutchinson group carry on their activities in competition with two other major interests known as Harlow-McGaw and Welch interest? A. Yes.

Q. Did Hutchinson, to protect his position at Holtwood, acquire property below the site of the proposed dam? A. Yes, sir.

Q. Were such acquisitions intended to interfere with and delay execution of the Harlow-McGaw and Welch plants? A. Yes, I think that was their general purpose.

Q. The Welch holdings I believe were located in the general vicinity of the present Conowingo project. Is that [6674] right? A. In that general vicinity, yes.

Q. Did the Welch holdings overlap the Harlow-McGaw properties to any extent? A. Well, Harlow-McGaw properties, I think it would be more proper to say, overlapped the Welch properties and McGaw properties, both, particularly Harlow-McGaw's ownership of the Welch——

Q. The Welch holdings on the lower Susquehanna partially overlapped the Harlow-McGaw properties. The Harlow-McGaw properties extended upstream into the territory involved not only in the present Holtwood development but even beyond that development into the present area of the Safe Harbor development? A. Yes, that is true. Harlow-McGaw properties, of course, also extended downstream through the Welch properties.

Q. Yes, that is my understanding. As I understand it, Welch and Harlow-McGaw were opposing interests for land and water rights, but not Welch and Hutchinson. A. That is my understanding of it.

Q. Were all three groups competitors for power markets and financing? A. Yes, I think they were.

Q. Did the overlapping of the separately-controlled properties, together with the aspirations of the opposing groups, present a stumbling block for the financing of any of [6675] the contemplated projects prior to Hutchinson's option obtained from Harlow-McGaw?

* * *

A. Yes, I think the overlapping did constitute a stumbling block.

Q. However, Hutchinson did finally enter into a compromise agreement with Harlow-McGaw on April 14, 1903, which removed Harlow-McGaw's opposition to the Holtwood development? A. That is correct.

Q. That option agreement was never carried out? A. No, it was not carried out because Fisk ultimately bought the whole of the Harlow-McGaw holdings.

Q. But notwithstanding the fact that it was never carried out, the option agreement did break the previously-existing deadlock and permit Hutchinson to go forward with the development? A. Yes, sir.

Q. Did Harlow-McGaw in April, 1905, make the final [6676] attempt to bring the entire river area under one management by suggesting a plan to Harvey Fisk and Sons for the consolidation of all interests on the Susquehanna River? A. As I recall it that is correct. They first suggested, I believe, a proposal for overall development of the river, and then later, when Harvey Fisk and Sons didn't accept that they proposed to sell the properties to Harvey Fisk. The thing that confuses me is the fact there was a man by the name of Pullen also trying to accomplish the same thing.

Q. Just prior to Harlow-McGaw's suggestion to the Fisk firm did Charles D. Pullen obtain an option on the Harlow-McGaw properties in an effort to combine the conflicting interests? A. Well, it was quite a little time prior to that. As I recall it, Pullen first obtained an option

on the Harlow-McGaw properties and on the Welch properties, and attempted also to obtain an option on the Hutchinson properties.

Q. Pullen's option was subject, among other things, to Hutchinson's unexpired option. Isn't that right? A. Yes, I think it was. It was also subject to his obtaining an option from Hutchinson to combine Hutchinson's properties with the other at first. Then it was later modified so that it related to Harlow-McGaw and Welch, I believe.

Q. Was McCall Ferry unwilling to pool its interests as suggested by Harlow-McGaw, and did they insist on carrying [6677] out Hutchinson's option? A. Yes, as I understand it they insisted on carrying out Hutchinson's option.

Q. Was that controversy settled on April 27, 1905 by the execution of two contracts for the acquisition by McCall Ferry interests of all rights, properties, and other assets owned by Harlow-McGaw? A. Yes, sir.

Q. And the considerations stated in those two contracts I believe were $200,000 in cash, $250,000 principal amount of McCall Ferry bonds, and $100,000 par value of McCall Ferry common stock? A. Yes, that was the consideration stated in the agreement to purchase Harlow and McGaw's property. But there was also another transaction that took place at that time.

Q. I think I will come to that transaction. If I don't, Mr. Gunn, remind me. A. Yes, sir.

Q. Was one of the contracts for the acquisition of the Harlow-McGaw properties subject to Pullen's option? A. Yes, sir, it is my understanding it was.

Q. Pullen had obtained that option from Harlow-McGaw? A. Yes, sir.

Q. Was this option purchased for $10,000 in cash and $15,000 par value on the common stock? [6678] A. Yes, sir, that was the purchase price.

Q. The option held by Hutchinson which was not exercised covered only a portion of the Harlow-McGaw prop-

erties. Is that right? A. Yes, sir. Those portions that would interfere with the Holtwood project.

Q. But the two contracts obtained on April 27, 1905, were for the total properties of Harlow-McGaw, right? A. Yes, from their total holdings on the river.

Maybe it would be important to note that the option McCall Ferry had with Harlow and McGaw provided for more than just the release or the withdrawal of Harlow's objections to the Holtwood development. It provided for a right of way for a proposed Harlow Railroad and the construction of locks in the Holtwood dam, and navigation facilities above the reservoir, above the Holtwood reservoir.

* * *

[6679] Q. When was the capitalization of McCall Ferry Power Company increased from the original 10 shares to 50,000 shares of common and 50,000 shares of preferred? A. That authorization for the increase in capitalization of McCall Ferry Power Company appears to have taken place on June 13, 1905.

Q. Were both the common and preferred stock of McCall Ferry Power Company voting stock? A. As I recall it they were. I think I can check it if you wish.

Q. Will you do that? A. Yes, they were both voting stock.

Q. Prior to the incorporation of McCall Ferry Power Company, had Hutchinson made any effort to finance the hydroelectric project? A. Yes, I think he had. Prior to that date the underwriting undertaken on March 1 had been tried and failed.

Q. In other words, in February of 1905, Hutchinson did attempt to finance the project? A. Yes, and it failed.

Q. Was that Hutchinson's first attempt to finance [6680] a project as well as the first attempt of anyone associated with him in the proposed project? A. It seems to me that there had been a previous attempt, but I don't have in mind the facts. I think I could verify that if you wish.

Q. Will you do that, please? A. I don't have before me the facts with which to verify that. My recollection is that prior to 1905 some consideration had been given to financing the Hutchinson project, but that it was not nearly on the extensive scale that the March 1 attempt was.

Q. What happened in February of 1905 insofar as Hutchinson's effort to finance the project is concerned? A. It failed.

Q. What did they accomplish in February of 1905 insofar as the financing of the project is concerned? A. They obtained subscriptions, as I recall, for something like half of the bonds.

Q. What financing houses did Hutchinson approach with reference to financing the project in February of 1905? A. As I understand it, the financing house was Bertron, Storrs and Griscom, and Bertron, Storrs and Griscom was working in cooperation with Lee, Higginson & Company.

Q. Was a syndicate formed in February of 1905 for the purpose of financing the project? [6681] A. Yes, sir.

Q. Was that the first time Bertron, Storrs & Griscom had been approached with respect to the financing of the McCall Ferry project? A. That is the first record I know of, the first indication I have found that they were approached.

Q. What was the proposition that the Hutchinson group presented to Bertron, Storrs & Griscom? A. Well, as I understand it it was in principal that the bankers would obtain the necessary underwriting in raising the funds to construct the project. About eight million dollars of bonds would be issued and about four million dollars of preferred stock would be issued, and about four million dollars of common stock.

I believe the preferred stock was to be issued in combination with the bonds and the common stock was to be

divided equally between Hutchinson and his associates and the bankers.

Q. Do you mean that the preferred stock was to accompany the bonds as a bonus? A. Yes, it would accompany the bonds in a combination.

Q. As a bonus? A. Call it whatever you please. They were going with the bonds. The shares of preferred stock were going to be issued with the bonds in combination. [6682] Q. Was the understanding between the Hutchinson group and the other syndicate members reduced to writing? I am speaking now of the original syndicate.

TRIAL EXAMINER: Which was that? February 1905?

MR. HALL: Yes.

THE WITNESS: The financing plan was reduced to writing, I believe, to this extent: That the amount of each different class of security to be issued, I believe, was stated.

By MR. HALL:

Q. Are you saying now that it was reduced to the extent reflected in part 5 of Exhibit 27? A. Yes, sir.

Q. Which is the prospectus and underwriting agreement dated March 1, 1905? A. Yes, sir, it was to that that I referred.

Q. Mr. Gunn, I refer you to page 17 of Exhibit 26, paragraph No. 2. Do you not there state that the "Subscribers to the bonds would receive a bonus of 50 per cent in preferred stock"? A. I believe that is the language which was used in the underwriting agreement.

Q. There is no question about it. The preferred stock did accompany the bonds as a bonus. Is that right? A. It accompanied the bonds, period.

The Dimock, Bertron and Barney underwriting agreement [6683] called it a bonus, as I recall.

Q. Will you point out where in part 5 of Exhibit 27 the preferred stock is referred to as a bonus? A. Do you want me to examine it thoroughly now?

* * * *

THE WITNESS: Mr. Hall, if you refer to page 48 of Exhibit 27, the fourth paragraph and the fourth line, you will find it there called a bonus.

By MR. HALL:

Q. You don't disagree with that description, do you, Mr. Gunn? A. If it has no abnormal connotations, I do not.

Q. What do you mean by "abnormal connotations"? A. In the sense it is to be used as an epithet to discredit the financing.

Q. What does "Bonus" mean to you, Mr. Gunn, as used on page 48 of Exhibit 27? A. It simply means to me that the bonds and the stock were given in exchange for the amount of money that was to be raised.

Q. How much cash was to be received for the bonds, Mr. [6684] Gunn? A. For the bonds and the stock, $900.

Q. Just for the bonds? A. I don't know.

Q. What financial experience have you had, Mr. Gunn? A. Practically none, except my own personal financing, and I haven't been very successful.

* * *

[6685] By MR. HALL:

Q. Have you investigated the mode followed in 1905 in connection with financing hydroelectric projects?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: I have a general knowledge of it only.

By MR. HALL:

Q. Don't you know it to be a fact that in those days it was a practice to issue bonds with a sweetener in the form of stock? A. I know only that it was the practice, as I understand it, to issue combinations of bonds and stocks for a certain amount of money. You can call it a sweetener or a bonus or anything else you want to. That is all I know about it.

* * *

[6692] Q. As I understand it, part 5 of Exhibit 27 shows the arrangement between the syndicate and the subscribers but it does not disclose the arrangement or agreement among the syndicate members themselves? A. I believe that is correct.

Q. I believe you have indicated in your testimony that you were unable to locate any agreement setting forth the arrangement between the syndicate members themselves? A. That is correct.

Q. Then, as I understand it, you do not know what arrangements were agreed upon between the syndicate members themselves? A. Well, I know from Mr. Hutchinson's affidavit.

Q. If you eliminate that affidavit you have no basis for stating what the arrangement was between the syndicate members themselves? A. That is correct, I believe—if you eliminate that then I wouldn't know.

Q. Do you know what business Dimock, Hutchinson's father-in-law, was engaged in in the four or five years covering the period from 1902 until 1905? A. As I recall it, I believe he was connected with [6693] some steamship company, although I don't know just how. I have very little knowledge at all of his activities.

[6694] Q. Do you know whether Mr. Dimock had been acquainted with Bertron, Storrs & Griscom, or any member of that firm, before the syndicate was formed in February, 1905? A. No, I don't know. I assume he must have been acquainted with them for some time before the formation of the syndicate.

Q. What was the nature and extent of the prior association of Dimock and members of the firm of Bertron, Storrs & Griscom? A. I have no idea.

• • •

[6696] By Mr. Hall:

Q. You have indicated previously that you did not find the agreement between the syndicate members themselves. A. Well, when I answered that question I was under the

impression that you were referring to Dimock, Bertron and Barney.

Q. Why did you think I was referring to those individuals?

TRIAL EXAMINER: Take Page 14 of your Exhibit 26 where you said "Pursuant to this understanding Bertron formed the syndicate."

What was the syndicate?

MR. HALL: That was my question, Mr. Examiner.

THE WITNESS: I don't know, other than Bertron, in cooperation with Lee, Higginson, obtained underwriting to about $4,000,000 worth of bonds.

TRIAL EXAMINER: Yes, but what did you understand was the basis of that statement when you made it?

THE WITNESS: I had reference to Item 5 in Exhibit 27.

TRIAL EXAMINER: What in Item 5 tells you that Bertron formed the syndicate?

THE WITNESS: Item 5, and what Hutchinson said in his affidavit, namely, that he took, either he or Dimock, took his water rights to Bertron to assist in financing to raise enough money to construct the project.

[6697] TRIAL EXAMINER: Where is that?

MR. KING: Item 4, Mr. Examiner, Page 5 of Exhibit 27.

TRIAL EXAMINER: Page 5 of Exhibit 27?

THE WITNESS: Yes, sir, Item 4 at the bottom of that page.

TRIAL EXAMINER: All right. Is that all you know about that as far as the syndicate is concerned?

MR. GOLDBERG: Let's get the reference straight here. The difficulty with the references to Exhibit 27 is that there are two sets of numbers on the pages.

THE WITNESS: Three sets on this page.

MR. GOLDBERG: There is a numbering system for Exhibit 27 which runs from "one" straight to the end. I think it would be better if we all used those numbers.

TRIAL EXAMINER: It is Page 5 of those numbers.

Is that all you know about the formation of that syndicate?

THE WITNESS: Well, I know what is stated in Item 5 of Exhibit 27, and I know that the syndicate, headed by Bertron and managed by these three individuals we have discussed, did obtain subscriptions to about $4,000,000 worth of bonds.

TRIAL EXAMINER: Read that, please.

(Witness' statement read.)

TRIAL EXAMINER: Do you know anything about the character of the syndicate itself?

THE WITNESS: No.

TRIAL EXAMINER: Or the composition of the syndicate, who [6698] composed it?

THE WITNESS: No, I don't know anything more about it than is revealed by Exhibit 26 and Exhibit 27, and perhaps some collateral information we have in our files which has been available to the Commission staff. That is all I know about it.

TRIAL EXAMINER: Does that collateral information indicate anything more about the formation of the syndicate?

THE WITNESS: I don't believe it would.

• • •

[6700] Q. Mr. Gunn, you have referred to Charles T. Barney, I believe, as being one of the managers under the agreement which is part 5 of Exhibit 27. Is that right? A. Yes, sir.

Q. Will you identify Mr. Barney for the record? A. Yes, sir. He was President of the Knickerbocker Trust Company of New York.

Q. When did he first become associated in any manner with McCall Ferry Power Company? A. I don't know.

* * *

[6701] Q. You also referred to Mr. C. A. Coffin as a manager under the agreement which is part 5 of Exhibit 27. Will you identify Mr. Coffin? A. Mr. Coffin? I don't think I referred to him.

Q. I am wrong about that. Will you identify Mr. Coffin [6702] for the record? A. Yes, sir. I understand at that time he was President of General Electric Company.

Q. What part did Mr. Coffin play in the original syndicate? A. May I have the question, please?

(Question read.)

THE WITNESS: I don't know what part he played in the Dimock, Bertron and Barney attempt, but either in that attempt or in the one headed by Fisk, Mr. Coffin obtained subscriptions for some bonds, I believe.

By MR. HALL:

Q. When did Mr. Coffin first become associated with the project?

* * *

THE WITNESS: I can't state precisely when Mr. Coffin was first associated with it, but if you will refer to Page 60 of Exhibit 27 near the middle of the page in a letter written by Gardiner M. Lane to Mr. Robert Fleming, in London, England, on the first page of the letter dated March 10 there is the following statement: "Some time ago Mr. Coffin, [6703] President of General Electric Company, brought the McCall Ferry Power to our attention."

By MR. HALL:

Q. According to the statement made by Mr. Lee as shown at the bottom of Page 66 of Exhibit 27, that "some

time ago" would be about 1903, is that correct? A. Yes, sir, that statement would indicate it was about 1903.

Q. At whose request or sponsorship did Mr. Coffin become associated with the McCall Ferry project? A. I don't know.

Q. What was Mr. Coffin's interest in the initial syndicate? A. I don't know.

• • •

[6704] Q. Can you state that it was a fact that Hutchinson secured funds for his project activities from individuals other than Mr. Dimock? A. I can state it no more than what Hutchinson says in his affidavit. I have no personal knowledge of it.

• • •

[6705] Q. Was Mr. Hutchinson able to recall any individuals whom he reimbursed for advancements which had been made to him? A. He recalled his father-in-law, at least.

Q. Other than his father-in-law. A. I don't recall that he did, although he did identify some people to whom he had been obligated for services, and to whom he made payments.

Q. Who were they, Mr. Gunn? A. One was a Thomas Newhall of Philadelphia, to whom I believe he said he gave 1,000 shares of stock.

Q. What had Newhall done? A. I believe Newhall had assisted Hutchinson in his negotiations with Pennsylvania Railroad Company for the relocation of the tracks.

Q. Anything else? A. As I recall it that is all Hutchinson said he had done.

Q. Do you recall he gave you any other names of individuals to whom [6706] he made reimbursements? A. Well, I believe he paid off his counsel who had assisted him, that is Coudert Bros., who were his counsel up until the time Fisk took control and replaced them. I believe he paid them——

Q. That was not reimbursement for advances made to Hutchinson but rather was payment by Hutchinson for services rendered. A. Yes. I thought that was one and the same thing.

• • •

Q. Dimock, of course, was closely associated with Hutchinson in carrying out Hutchinson's proposals in connection with the project? A. Yes, sir.

Q. What part did Mr. Dimock take in the financing arrangements? A. I don't know, other than that Hutchinson, I believe, says that Dimock made the arrangement with Bertron, Storrs & Griscom. I believe he mentions that. Other than that I don't know what part he took.

Q. Will you identify Lee, Higginson and Company for the record? A. They are a financial house, I suppose you would call [6707] them, a bank in Boston.

Q. Was Mr. Coffin instrumental in bringing Lee, Higginson & Company into the financing? A. I don't know, but Lee, Higginson's records show Mr. Coffin called their attention to it. Whether or not that constituted bringing them in I don't know.

Q. Under the initial financing plan by Hutchinson, Dimock, Bertron, which is covered by the document comprising part 5 of Exhibit 27, what disposition was to be made of the common stock? A. One-half of the issue of $4,000,000 par value of common stock was to be given to the bankers, and one-half was to be given to Hutchinson.

Q. What is the basis for that statement, Mr. Gunn? A. Mr. Hutchinson's affidavit.

Q. What connection did Mr. Gardiner M. Lane have with Lee, Higginson & Company? A. He was a partner.

• • •

[6709] Q. • • • Lee, Higginson and Company secured subscriptions to what amount of bonds under the initial syndicate agreement, approximately? A. As I recall it, it

was approximately two million dollars. However, that can be checked.

Q. I believe you stated near the bottom of page 19 of Exhibit 26 that it was approximately $2,500,000.

THE WITNESS: May I have the question, please?

(Question read).

THE WITNESS: Yes, that is correct. My memory was in error when I said two million dollars.

• • •

[6710] Q. Incidentally, Mr. Lane became a director of McCall Ferry Power Company in August of 1905. Isn't that so? A. I believe that is correct.

Q. At the same time he was also selected a member of the executive committee of McCall Ferry. Is that right? A. I think that is also correct.

• • •

[6717] Q. Under the original syndicate plan how much cash was Hutchinson to receive for his holdings? A. $750,000.

Q. Did Hutchinson ultimately receive, under the contract which is part 19 of Exhibit 27, the $750,000 in cash and the common stock of McCall Ferry Power Company as provided for in connection with the initial financing before Harvey Fisk and Sons came into the picture?

THE WITNESS: May I have the question?

(Question read).

THE WITNESS: Yes, it is my understanding that Hutchinson did, that being 18,840 shares of common stock. The odd shares arise out of the fact that some of Hutchinson's stock appears to have been taken to satisfy other land acquisitions, namely, the Harlow and McGaw acquisition, and the Pullen acquisition.

• • •

[6718] By Mr. Hall:

Q. You referred, Mr. Gunn, to Hutchinson receiving 18,840 shares of common stock and not 48,840 shares? A. Yes, sir.

Q. After Harvey Fisk and Sons were brought into the financing arrangement and McCall Ferry Power Company was organized, didn't Hutchinson, in accordance with his contract with Susquehanna Contracting Company, transfer his property holdings to McCall Ferry Power Company? A. Yes, in the transfer they passed through Susquehanna Contracting Company and then to McCall Ferry Power Company.

Q. And those holdings included the lands and rights covered by Hutchinson's option on the York Furnace properties? A. Yes, sir.

Q. Didn't that transaction take place under the contract embraced in part 19, Exhibit 27?

The Witness: May I have the question, please?

(Question read).

The Witness: Yes, sir.

* * *

[6719] By Mr. Hall:

Q. Did Susquehanna Contracting Company and Hutchinson ever enter into an agreement which in any way amended or modified the contract embraced in part 19 of Exhibit 27?

* * *

[6720] The Witness: They entered into another agreement and it seems to me to have amended it.

By Mr. Hall:

Q. Which one is that, Mr. Gunn? A. Agreement shown on page 172 of Exhibit 27.

Q. Do you recall generally what that provides? A. Provides for Hutchinson indemnifying or guaranteeing the

titles of the property he had transferred under the previous exhibit.

Q. This agreement you are now referring to did not modify or amend in any way the consideration to be paid to Hutchinson for his property holdings? A. No, but it could have the effect of causing Hutchinson to spend some more of it in perfecting of the titles of the property he had transferred if the titles were not perfect.

[6721] Q. What consideration was called for in Hutchinson's contract with Susquehanna Contracting Company, which is Part 19 of Exhibit 27? A. There was to be passed to Hutchinson under that agreement 750 thousand dollars in cash, four thousand shares of preferred stock, and 48,840 shares of common stock.

Q. Doesn't the consideration called for in that contract bear out the fact that Hutchinson ultimately received what it was initially planned he would receive?

• • •

THE WITNESS: Yes, I think the agreement bears that out except in this respect: It bears it out that he could receive from that amount substantially the same number of shares of common stock. However, in the intervening transaction [6722] between the first underwriting and the second one the number of common shares had been increased, as I recall it, from 40,000 to 50,000. So in the first instance he was to receive a half of the equity in the company and in the second instance he was to receive two-fifths of the equity in the company.

By MR. HALL:

Q. Now, Mr. Gunn, this contract shows that Hutchinson received 48,840 shares of common stock rather than the 18,840 shares that you referred to a few minutes ago? A. Yes, sir, this agreement shows there passed through Hutchinson's hands 48,840 shares.

TRIAL EXAMINER: Where did you get the 18,840? Are you interpreting?

THE WITNESS: Not exactly interpreting, Mr. Examiner. I was taking Hutchinson's statement that he received for himself 18,840 shares, and I was also considering a very substantial amount of collateral evidence which shows that was a fact.

You will find that statement of Hutchinson's on page 6 of Exhibit 27 near the middle of the page where Hutchinson states that of the 50,000 shares of common stock the bankers were to receive 30,000 shares, which left only 20,000 shares for Hutchinson after 1,000 shares of that had been used to satisfy the purchase from Harlow-McGaw and 150 shares to satisfy the purchase from Pullen.

[6723] By MR. HALL:

Q. Mr. Gunn, so that we might have in one place in the record the distribution of the 50,000 shares, 48,840 shares were delivered to Hutchinson under Part 19 of Exhibit 27. Is that right? A. Yes, sir.

Q. Ten shares were incorporators' shares? A. Yes, sir.

Q. 150 shares were delivered to Pullen? A. Yes.

Q. And 1,000 shares were delivered to Harlow-McGaw? A. That is correct.

Q. Does that add up to 50,000 shares of common stock? A. Yes, sir.

Q. Fifty thousand shares of common stock represented the total issued and outstanding common stock of McCall Ferry Power Company? A. Yes, sir.

Q. If Hutchinson, as you indicated, was not to retain the 48,840 shares of common stock and the 4,000 shares of preferred stock, where is the agreement between the syndicate members which specified the distribution which was to be made of the stock? A. I don't know. I don't know that there ever was such an agreement. I attempted in the original cost study by every [6724] means I knew to find such an agreement, even to the extent of going to the only surviving member of Simpson, Thacher and Bartlett, who

had any connection with Harvey Fisk at the time this transaction took place, and asking his advice, Charles B. Eddy, asking his advice as to how or where I might look for such an agreement. It was his opinion that there may never have been a formal agreement reduced to writing which made that provision but rather that the division of the stock was carried out coincidental with the other transactions and didn't require an agreement.

Q. Then am I right in assuming that the only basis you have for saying that Hutchinson was not to retain all of the 46,840 shares of common stock, and the four thousand shares of preferred stock, is Hutchinson's statement in Part 1 of Exhibit 27?

* * * *

THE WITNESS: No, you are not correct in making that statement.

By MR. HALE:

Q. What is the other evidence you have, Mr. Gunn? A. A very considerable amount of it included in Exhibit [6725] 26, and it consists, for instance, of the evidence revealed by the stock ledgers and stock certificate books of McCall Ferry Power Company, both as regards preferred and common stock, the records of Bertron and Griscom Company where they recorded receipt of it, records of Lee, Higginson and Company where they recorded receipt of some common stock, 5,000 shares to be exact, Fisk's statement that he did receive it, and there is a whole host of evidence that Hutchinson did not keep it all.

Q. Did the evidence you have just referred to disclose the exact distribution of the fifty thousand shares of common stock as well as a distribution of the preferred stock of McCall Ferry Power Company? A. You mean the exact total distribution of it?

Q. That is correct. A. No, it didn't reveal the exact total distribution of it, but it revealed some pretty exact facts concerning the distribution of it. For instance, we

know that the March 1 underwriting agreement provided for a bonus of fifty per cent preferred stock to go with the bonds, that is in combination with the bonds, and that the underwriting agreement of Fisk provided for 45 per cent.

TRIAL EXAMINER: What is the date of that agreement?

THE WITNESS: March 25.

TRIAL EXAMINER: 1905?

[6726] THE WITNESS: Yes, sir.

TRIAL EXAMINER: All right.

THE WITNESS: And we can trace——

TRIAL EXAMINER: What did that agreement provide? 45 per cent of the preferred to go with the bonds?

THE WITNESS: Yes, sir.

* * *

* * * It is possible to trace, I believe, somewhere near 2,000 shares of that 4,000 shares to the original subscribers under the March 1 agreement in satisfaction of their difference between 45 per cent preferred stock and 50 per cent preferred stock given in combination with bonds.

Q. Did the evidence that you have referred to show the circumstances under which the people or firms you referred to came into possession of the common stock and preferred stocks?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: It seems to me that it did. For instance, [6727] Lee, Higginson received 5,000 shares.

TRIAL EXAMINER: Of what?

THE WITNESS: Common stock, as their compensation for underwriting 2½ million dollars worth of bonds.

Is that the circumstance you refer to?

By Mr. Hall:

Q. What records substantiate what you have just said, Mr. Gunn? A. The fact Lee, Higginson received five thousand shares and the obvious fact Lee, Higginson obtained 2½ million dollars worth of bond subscriptions.

• • •

[6728] Q. Mr. Gunn, was the firm of Harvey Fisk and Sons invited to join the McCall Ferry project financing during the early part of March, 1905? A. As I understand it, they were requested to salvage it after the first attempt to finance it failed. Is that the invitation to which you refer?

Q. Are you saying anything different from what is contained in the bond and stock purchase agreement, Part 10 of Exhibit 27, specifically the paragraph at the top of page 82 where it is stated "Whereas, the bankers have been requested and are willing to aid in financing the said plant to the extent of taking agreement from the subscribers for the purchase of bonds and preferred stock of the power company, of acquiring the bonds and stocks for delivery under such purchase, and of making or procuring the loans herein mentioned;——?

• • •

[6729] The Witness: No.

By Mr. Hall:

Q. Under the original syndicate what amount of bonds, referring now to par value, did the initial syndicate secure subscriptions for? A. Approximately $4,000,000 par value bonds.

Q. Did Harvey Fisk and Sons come into the financing as bankers under the agreement which is Part 10 of Exhibit 27? A. Yes, sir.

Q. When the Fisk firm came into the financing who were the five largest interests in the McCall Ferry enterprise?

• • •

THE WITNESS: Mr. Hall, how do you want interest measured? In terms of bond subscriptions or what?

By MR. HALL:

Q. For the purpose of my question will you measure it in terms of common stockholders, or proposed holders? A. Read the question, please?

Q. Let me add to that question.

Who became the five largest interests in the McCall Ferry enterprise after its organization, that is the organization of McCall Ferry?

* * *

[6730] THE WITNESS: It is impossible to tell until the date on which the common stock was distributed and when the common stock was distributed——

By MR. HALL:

Q. What is the date you refer to, Mr. Gunn? A. I think it was about the middle of June, 1905. The distribution of common stock which resulted was the (sic) [to] Hutchinson, and whoever he may have given it to in his group, who had 18,840 shares. Harvey Fisk and Son had 17,537½ shares.

Bertron, Storrs and Griscom had 7,462½ shares.

Lee, Higginson had 5,000 shares.

Harlow-McGaw had 1,000 shares. Those were the five [6731] largest holders.

I didn't quite read that correctly. In addition to the amounts I read for Hutchinson there should be added four shares which were of the original qualifying ten shares, and of the amount stated for Harvey Fisk and Son should be added six shares, which were six of the original qualifying shares.

Q. What is the distribution based upon, that is what you just read? A. I read it from Exhibit 26.

Q. What is the basis for that distribution contained on Page 51 of Exhibit 26? A. Various bases for it. The stock certificates, the agreement with Harlow and McGaw

to deliver them 1,000 shares, the records of Lee, Higginson which show they received 5,000 shares, the records of Bertron, Griscom and Company which show they received 7,462-and-a-half shares, the stock certificate book which shows that two certificates were issued, one for 18,840 shares and one for 30,000 shares, the statement of Hutchinson that he received the certificate which called for 18,840 shares, and the statement of Harvey Fisk and Son that he received 17,537½ shares.

Q. To whom was the certificate for the 30,000 shares issued? A. To the Susquehanna Contracting Company.

Q. When did they receive the stock? [6732] A. About the middle of June.

Q. 1905? A. Yes, 1905, when the whole group of transactions which made the property transfers take place.

Q. When did they distribute those shares you referred to? Speaking now of Susquehanna Contracting Company, referring to the 30,000 shares. A. May I have the question?

(Question read.)

THE WITNESS: The only thing that I have in the shape of a record to indicate the date on which that took place are the records of Bertron, Griscom and Company which show that they received 12,462½ shares on November 21, 1906. That amount of shares represented their 7,462½ shares plus the 5,000 shares which were conveyed by them to Lee, Higginson.

By MR. HALL:

Q. How do you know that, Mr. Gunn, that is about the transfer to Lee, Higginson? A. Lee, Higginson's records show that they received it, and Bertron's records also show that they transferred it to Lee, Higginson.

* * *

[6733] By MR. HALL:

Q. Mr. Gunn, where does Fisk make the definite statement that Harvey Fisk and Sons received 17,543½ shares

of common stock? A. The statement which Mr. Fisk made occurs on Page 79 of Exhibit 27 under paragraph number 10 on that page.

Q. Where in that paragraph number 10 does he say that the Fisk firm received 17,543 shares of common stock, definitely received that? A. The paragraph states as follows, though not in exact shares: "Stock only; common stock, in my opinion at least as much as the 12,000-odd shares that went to Bertron, Storrs & Griscom and probably the difference between that amount and the 30,000 shares represented by one of the two largest [6734] certificates issued; also apparently the 1,800-odd shares of preferred stock that went to my firm."

Q. When Mr. Fisk referred to 12,000 odd shares was he referring to Bertron, Storrs and Griscom compensation? A. Yes, he was referring to Bertron, Storrs and Griscom's receipt of 12,462½ shares on behalf of Bertron, Storrs and Griscom and Lee, Higginson.

Q. How do you get that out of this paragraph, Mr. Gunn?

MR. KING: I object to the question. The paragraph speaks for itself.

TRIAL EXAMINER: I will sustain the objection.

MR. HALL: Mr. Examiner, the——

TRIAL EXAMINER: You can ask him where he gets it. It is apparent from the paragraph the figure is not there.

By MR. HALL:

Q. Mr. Fisk uses the words "in my opinion—apparently." What he says here is all guess work, isn't it? A. You can't characterize it as guesswork. When Mr. Fisk made this statement he had before him all of the information that we had in our possession which had a bearing on the stock distribution. I don't see why it should be characterized as guesswork on his part.

Q. None of that information told you definitely that Harvey Fisk and Sons received 17,543 shares of stock. Is that right?

[6735] MR. KING: You mean tells Mr. Gunn definitely or Mr. Fisk?

THE WITNESS: I think it very well may have told him by deduction without very much difficulty.

• • •

[6736] Q. Were there any files of Harvey Fisk and Sons available at the time you contacted Mr. Fisk? A. No, sir, we never were able to find any of them.

Q. Then what Mr. Fisk says is based upon information you furnished him, but not obtained from files of Harvey Fisk and Sons? A. Yes, plus Mr. Fisk's recollection.

• • •

[6739] By MR. HALL:

Q. Part 10 of Exhibit 27 shows the arrangement between Fisk and the subscribers to that agreement. Is that right? A. Yes, sir.

Q. It does not show the arrangement between the syndicate members themselves? A. No.

Q. Do you have a copy of the agreement entered into between the syndicate members themselves? A. No.

Q. Have you ever seen a copy of any such agreement? A. No, sir, I have not.

[6740] Q. There is no reference in the agreement of March 25, 1905, to the distribution of common stock. Is that right? I mean the distribution to be made of the common stock.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: Yes, there is a reference on page 81 of Exhibit 27 to the purpose for which all of the securities of McCall Ferry Power Company will be used. That reference is in the last paragraph on page 81.

By MR. HALL:

Q. That reference does not disclose the distribution to be made of the common stock. Right? A. By "distribution," I take it you mean the number of shares that will go to various individuals or firms?

Q. Yes. A. No, it does not disclose that.

Q. Among other things, this reference that you have just referred to provides that the common stock was to be issued among other things for "all profits in connection with bringing together and turning in of said properties"? A. Yes, and for compensation for financial assistance.

Q. There is likewise no reference in the March 25, 1905, agreement to the 4,000 shares of preferred stock issued to Hutchinson pursuant to his contract which is part 19 of Exhibit 27. Isn't that so? [6741] A. No, there is no mention except indirectly. The terms of the March 25 agreement under which the bonds were to be issued called for a one thousand dollar bond together with preferred stock of a par value of $450, which is the 45 per cent stock combination that we have spoken of.

Now, it was out of that change in the amount of stock to be issued with the bonds between the March 1 agreement and March 25 agreement which brought a part of the four thousand shares into the agreement with Hutchinson, as I understand it, it being necessary to make up the difference to the subscribers under the March 1 agreement in order for Fisk to hold those subscribers.

* * *

[6746] Q. Did the subscribers to the initial agreement, part 5 of Exhibit 27, become subscribers to the March 25, 1905, agreement or did Lee, Higginson and Company subscribe to the March 25, 1905, agreement on behalf of the subscribers to the initial agreement? A. It is my understanding that the initial subscribers under the March 1 agreement became subscribers under the March 25 agreement and Lee, Higginson was also required to endorse

their subscriptions. At least that is my understanding of it.

Q. You had two subscriptions covering the same amount of bonds. Is that what you are saying? A. Well, it is a subscription and an endorsement.

Q. What did the endorsement mean? A. As I understand it it was a guarantee of Lee, Higginson as a firm to be used in connection with the loans from Knickerbocker Trust Company in case the actual subscribers themselves didn't pay up.

Q. What is the basis for your understanding in that connection? A. May I have the question, please?

(Question read.)

THE WITNESS: The basis for my understanding of that is [6747] information that I obtained from the Irving Trust Company, who were successors to Knickerbocker Trust Company after the failure, that being data which Irving Trust Company had prepared in connection with final settlement with the deferred subscribers. I don't remember the details of that and if you wish details on it it will be necessary for me to look it up.

* * *

By MR. HALL:

Q. Had you finished your last statement, Mr. Gunn? A. May I have it read, please?

(Statement of witness read.)

THE WITNESS: Yes, sir, I had finished.

By MR. HALL:

Q. When did the final settlement to which you refer occur? A. I believe it was in 1908.

Q. What was the occasion for the settlement, Mr. Gunn? A. The occasion for the settlement was when the loan fell due on November 2, 1908.

Q. Let us fix that just a little more definitely, Mr. Gunn. Part of the bonds were non-deferred subscriptions

and part were deferred subscriptions? A. Yes, sir.

[6748] Q. And the Knickerbocker Trust Company loaned construction funds to McCall Ferry with the deferred subscriptions as collateral for the loan? A. That is correct.

Q. Is it in connection with settling the loan agreement that the final settlement you refer to occurred? A. Yes, sir, the loan agreement for which the deferred subscriptions were collateral.

Q. What type of information did the Irving Trust Company have in connection with the final settlement which showed an obligation on the part of Lee, Higginson and Company? A. The large tabulation of the bond subscribers which showed a certain group of bond subscribers, and, as I recall it, had written along by the side of it a notation to the effect that certain of the bond subscriptions were to be guaranteed by Lee, Higginson and Company.

Q. In other words, Mr. Gunn, there was an individual list of subscribers with a marginal notation to the effect you mentioned? A. Yes, as I recall it that is what it consisted of.

• • •

[6750] By Mr. Hall:

Q. Did they do that to the extent of the subscriptions obtained under the March 1, 1905, agreement? A. That is my understanding.

Q. That was two and a half million dollars? A. Yes, about that amount.

Q. Did the other members to the March 1, 1905, agreement obtain bond subscriptions? A. Yes, there were additional bond subscriptions obtained.

Q. In approximately what amount? A. Well, the difference between about two and a half million and four million, I think.

Q. In other words, the other members obtained a million and a half and Lee, Higginson two and a half million, making a total of four million under the initial agreement? A. That is approximately the full amount.

Q. When I refer to the initial agreement I am referring to the March 1, 1905, agreement. A. That is what I understood you to be referring to.

Q. The original undertaking by its terms was not to become operative until subscriptions to six million principal amount of bonds had been obtained. Is that right? A. You are again referring to March 1?

Q. Correct. [6751] A. That is correct.

Q. The six million goal was never reached? A. That is my understanding of it.

Q. When it became evident that the original syndicate members were not going to be able to complete the financing did they invite Harvey Fisk and Sons to come into the financing picture? A. That is my understanding.

Q. And Harvey Fisk and Sons became bankers under the agreement which is incorporated as part 10 of Exhibit 27. Right? A. Yes, sir.

Q. Were the subscriptions already obtained under the March 1, 1905, plan retained under the subsequent plan of March 25, 1905? A. Yes, sir.

Q. Did the March 25, 1905, agreement provide for a 45 per cent bonus of preferred stock with the bonds? A. Yes, sir.

Q. What preferred stock bonus was provided under the commitments which had previously been obtained by Lee, Higginson and Company to its customers under the March 1, 1905, agreement? A. 50 per cent.

Q. Did Lee, Higginson Company customers who became [6752] subscribers to the March 1, 1905, agreement for $2,500,000 principal amount of bonds receive a 50 per cent bonus in preferred stock notwithstanding the fact that the March 25, 1905, agreement provided for only a 45 per cent bonus? A. Yes, that is my understanding.

• • •

[6753] Q. Was part of the 4,000 shares of preferred stock issued to Hutchinson under the contract which is part 19

of Exhibit 27 used to supply the additional 5 per cent to the original subscribers? A. Yes, sir.

* * *

[6756] By Mr. Hall:

Q. You have testified that under the initial financing agreement of March 1, 1905, Lee, Higginson and Company obtained subscriptions to 2½ million dollars principal amount of a total of four million dollars principal amount. Did the subscribers to the other $1,500,000 become subscribers to the agreement of March 25, 1905? A. I don't know. I believe they did, although I do not know as a fact.

Q. Did the subscribers to the $1,500,000 principal [6757] amount of bonds receive a 45 per cent stock bonus with bonds or a fifty per cent preferred stock bonus?

The Witness: May I have the question, please?

(Question read.)

The Witness: The records in the possession of the company indicate that 2,125 shares of preferred stock were used to supply five per cent bonus on bonds. That would indicate that a bonus was paid on slightly more than four million dollars of bonds, and it would also indicate to me that a bonus was paid on that many because of retaining subscribers other than those that Lee, Higginson had obtained.

By Mr. Hall:

Q. That would also indicate, wouldn't it, that the total subscriptions under the initial agreement of March 1, 1905, totaled $4,250,000 principal amount of bonds. Is that right? A. Yes, sir.

Q. Did they actually sell $4,250,000 principal amount of bonds under the initial agreement, procure subscriptions for the purchase of bonds in the amount of $4,250,000 principal amount? A. I don't know, but that figure would indicate that they obtained subscriptions for that amount.

Q. Well, how did you arrive at the figure of 2,125 shares of preferred stock shown in the tabulation on page 51, Exhibit 26? [6758] A. From various items of correspondence and from the stock certificate book.

Q. Did any of those documents state that 2,125 shares of stock were given to the subscribers to the original agreement as an additional 5 per cent bonus? A. I don't remember any single document which said 2,125 given for that purpose.

Q. How did you arrive at the figure? A. But there were documents which mentioned various other amounts as being given. For instance, the documents I referred to a moment ago, being Item 11 in Exhibit 27, the correspondence between Bertron, Storrs and Griscom, and Lee, Higginson.

Q. That merely indicates that Lee, Higginson and Company received a five per cent bonus only insofar as $2,500,000 principal amount of bonds are concerned. Is that right? A. Yes, sir, it indicates that.

Q. How do you make up the balance of 2,125 shares of preferred stock? A. That information was obtained from the stock certificate book and a distribution of that number of shares shown in the stock certificate book.

Q. Did the stock certificate book show the purpose for which the stock was issued? [6759] A. It shows the list of people to whom it went, and they were subscribers.

Q. But it doesn't show they got the preferred stock because it represented the additional five per cent bonus? A. Yes, I believe there is a list in there which pretty clearly shows that in the stock certificate book.

Q. Mr. Gunn, will you refer to page 191 of Exhibit 27? A. Yes, sir.

Q. Also the page number 186, last paragraph? A. Yes.

Q. According to pages 186 and 191 the stock books of Bertron, Storrs and Griscom show a recording of a total of 2,235 shares. Is that right? I refer to preferred stock. A. Let me check that.

Q. Yes. A. Yes, sir.

Q. And they show that a total of 2,075 were charged out? A. Yes, sir.

Q. Leaving 160 shares on the book? A. Yes.

Q. Who got the 160 shares? A. I don't know. As I recall it, however, Bertron kept it.

Q. Did Bertron, Storrs and Griscom sell any securities under the initial financing agreement? [6760] A. I believe they did.

Q. Can you state that to be a fact? A. Not without verifying it.

Q. Would you do that, and also determine what disposition was made of the 160 shares? A. I think I can determine what disposition was made of the 160 shares now.

Q. All right. A. I believe I will have to check that. This photostatic copy I have is so dim I can't read it.

Q. If you will, Mr. Gunn? A. Yes, sir.

THE WITNESS: May I have the last question, please?

(Question read.)

THE WITNESS: I state the disposition of 160 shares remained in the hands of Bertron, Storrs and Griscom and was written off of their books as having no value on December 22, 1908.

Q. But you are not in a position to say that the 160 shares of preferred stock represents bonus due Bertron, Storrs and Griscom for the sale of bonds under the initial agreement. Is that correct? A. No, I couldn't say that at the moment without checking further.

* * *

[6767] Q. Mr. Gunn, this morning we were discussing the consideration received by Hutchinson under the contract which is part 19 of Exhibit 27. Is it your contention that the purpose of the agreement of June 13, 1905, between Susquehanna Contracting Company and Hutchinson was to arrange for the distribution of the 48,840 shares of Mc-

Call Ferry common and 4,000 shares of its preferred stock among the syndicate participants? A. Will you read that question, please?

(Question read.)

THE WITNESS: You mean June 14, don't you?

By MR. HALL:

Q. Yes. A. It is my understanding that the 30,000 shares which went to the syndicate participants were included in the 48,840 shares which passed under the agreement to which you refer from the Susquehanna Contracting Company to Hutchinson.

Q. Was that block of stock included for the purpose of [6768] distributing it to the other syndicate members who ultimately received it?

* * *

THE WITNESS: The stock which was ultimately distributed to the syndicate members is included under the agreement which is Exhibit 19 and it was ultimately distributed to the syndicate members.

[6769] Now, why it was put in that particular instrument I do not know.

By MR. HALL:

Q. In other words, what you are saying is that the contract embraced in part 19 of Exhibit 27 constituted the vehicle for distributing 30,000 shares to the Fisk firm, Lee, Higginson and Company and the other members of the syndicate who received it? A. It seems to me it did.

* * *

[6770] Q. How did you determine, Mr. Gunn, the total amount of common stock which you say was transferred by Hutchinson to other syndicate members?

THE WITNESS: Determined from the stock certificate books, plus all the other bits of evidence that are included in Exhibit 26 and Exhibit 27.

By Mr. Hall:

Q. Are you saying that the stock certificate books show the distribution of a total of 48,840 shares? A. No, the stock certificate books as I recall it show two certificates—one for 18,840 and one for 30,000 shares.

Then, as we discussed it this morning we explained the various places where the total of the shares might have gone, and we found that Hutchinson says he received 18,840. That leaves 30,000 shares. We discovered that Bertron, Storrs & Griscom got 7,462½ shares, Lee, Higginson got 5,000 shares, and this afternoon we have discussed how and where the 4,000 shares went.

* * *

[6771] By Mr. Hall:

Q. You referred to two stock certificates, one for 18,840 shares and the other for 30,000 shares. Those two certificates, I believe, were issued to Susquehanna Contracting Company? A. Yes, as I understand it.

[6772] Q. Was the thirty thousand shares ever broken down? A. In the McCall Ferry Company stock certificate book?

Q. That is right. A. No, I don't think it was. The breakdown that would have been made of that would have been in the form of voting trust certificates issued by Harvey Fisk and Sons.

Q. Did you have the voting trust certificates? A. No, sir, we never had those.

Q. How did you break it down? A. The way I have described it, by finding out who wound up with it in their possession.

* * *

[6773] By Mr. Hall:

Q. In other words, you never have found an answer to why Part 19 of Exhibit 27 refers to the consideration received under that contract as land cost whereas it in fact, according to you, included stock for distribution in part to

the syndicate members other than Hutchinson. A. No, I never particularly tried. I may have been curious about it. It didn't seem to me to be very important.

Q. Didn't you think that that fact had a bearing on the cash value of the stock?

• • •

[6774] THE WITNESS: It doesn't seem to me that what was or wasn't stated in the agreement, which is Item 19 in Exhibit 27, has any relationship at all to the valuation of the stock.

The only facts which have any relation to the valuation of the stock are a knowledge of those things for which those securities were ultimately used. And, as a matter of fact, we know that the consideration that passed in that agreement went for other things besides land. As a matter of fact, Hutchinson says it went to compensate him for several years of his effort where he advanced money which he used to [6775] hire engineers, hire lawyers, make surveys and lots of things of that nature.

By MR. HALL:

Q. The last part of your statement refers to the 18,840 shares retained by Hutchinson and not the 30,000 shares distributed to the other syndicate members? A. That is right, yes.

Q. Mr. Gunn, how much common and preferred stock did C. A. Coffin receive for his activities in connection with the Holtwood financing? A. He received 775 shares of preferred stock through Bertron, Griscom and Company.

Q. For what purpose? A. As five per cent of the amount of preferred stock that was to go with bonds subscribed to by himself and by people whose subscriptions he obtained.

Q. You mean he obtained subscriptions under the initial financing agreement which provided for a fifty per cent stock bonus? A. That is my understanding.

Q. And the 775 shares was the difference between fifty per cent and 45 per cent received under the second undertaking as to which the Fisk firm was banker? A. That is my understanding.

Q. How do you know that Coffin, Dimock and other [6776] syndicate members did not share in the stock which you have assigned to Harvey Fisk and Sons?

MR. KING: May we have the question?

(Question read.)

TRIAL EXAMINER: Is this preferred or common?

MR. HALL: To answer your question, Mr. Examiner, Harvey Fisk and Sons, according to Mr. Gunn, received both preferred and common stock. I had in mind how does he know that the individuals I named did not receive part of the preferred and common stock which he has assigned to Harvey Fisk and Sons.

THE WITNESS: I believe the principal evidence of that upon which I came to that conclusion for myself was Fisk's statement and Hutchinson's statement.

By MR. HALL:

Q. Isn't it a fact that you first determined the amount of stock which went to the syndicate members other than Harvey Fisk and Sons? A. That is one of the facts I determined.

Q. And didn't you assume that Harvey Fisk and Sons got all the stock which did not go to the other syndicate members? A. No, I don't think you can say that.

Q. Didn't you do that? A. No, sir. As I said before, I got together this [6777] information and gave it to Mr. Fisk and he's the man who drew that conclusion.

Q. At no place in this affidavit does he say, for instance, that Harvey Fisk and Sons received 17,000-plus shares of common stock. Isn't that so? A. We went over that this morning. The Fisk statement says what it says.

[6778] Q. He doesn't say his firm received 17,000-plus shares of common stock.

• • •

THE WITNESS: No, he expresses the opinion they probably did.

By MR. HALL:

Q. Then how did you arrive at the conclusion that they did receive 17,000-plus shares of common stock? A. On the basis of Fisk's opinion.

Q. Does Fisk anywhere in his affidavit, which is Part 9 [6779] of Exhibit 27, mention 17,000 shares of preferred stock in his answers to your questions? A. You mean common stock, don't you?

Q. Yes, common stock. A. Suppose I read what Fisk says? That is all there is to it.

Q. No, just answer my question, Mr. Gunn. A. Yes, he mentions he probably got 17,000 odd shares.

Q. Where is the figure 17,000 shown on Page 79 of Exhibit 27? A. It is the difference between 12,000 shares and 30,000 shares that Fisk talks about there.

Q. In other words, he gives you a minimum and maximum limitation? A. No, he says he probably received the difference between 12,000 and 30,000.

Q. Does "probably receive" mean to you that he actually received 17,000 shares of common? A. It means it is the only information I have on the subject.

• • •

[6781] MR. KING: If your Honor please, I would like the record to show Messrs. Wetzel, Bortner, Eichhorn and Chase are in the room and available for cross-examination. They have been available since Tuesday and will continue to be during the duration of the cross-examination.

MR. GOLDBERG: Will someone explain to counsel for the Staff how a witness who never has taken the stand

is available for cross-examination, and, if so, on what subjects?

MR. KING: I would be delighted.

If your Honor please, in connection with the preparation of the original cost filing and reclassification, and in connection with the original cost testimony in this case in connection with Exhibits 25, 26 and 27, Mr. Eichhorn, Jr., who is a secretary and assistant treasurer of the company, assisted Mr. Gunn in connection with all accounting matters involved in those exhibits and in the reclassification.

Mr. Bortner, who is the right of way engineer and assistant secretary of the company, assisted Mr. Gunn on all matters relating to real estate.

I might say that subsequent to 1910, Mr. Gunn accepted Mr. Bortner's conclusion in connection with land matters.

Mr. Chase, who is civil engineer assigned to special studies, assisted Mr. Gunn in the determination of the date [6782] of beginning of commercial operation, in producing details in connection with the construction period, and on other problems involving engineering and technical decisions.

Mr. Wetzel, who is the budget engineer, assisted Mr. Gunn in connection with inventorying the property, compiling cost analysis, and reconciling those analyses with the inventory and similar matters.

Now, I might say that back at page 44 of the record Mr. Goldberg, for the first time, made the statement that with respect to the company's investment rate base it was the Staff's position that the gross investment for the rate base is, in round figures, $32,920,738.

He further stated that in round numbers this is $5,663,494 less than the company's book figure.

He then said, "The Staff proposes the elimination of the $5,663,494 because the Staff contends that such

amount does not represent actual cost and should be disallowed.

"The Staff's evidence will, of course, develop the details of the elimination and the reasons therefor."

Now, those reasons were not placed in the record until Mr. Goldberg introduced Exhibit 51. We say they are not fully contained in Exhibit 51, but certainly prior to the time of filing Exhibit 51 the reasons for recommending the elimination of these various items were not known to the respondent.

[6783] Now, under those circumstances there was nothing which respondent could do except to proceed in its direct case to put in Exhibits 25, 26 and 27, because they had no knowledge of the Staff's position in connection with these various items.

The Company proceeded and put in the exhibits which I have mentioned. Then, subsequently, Exhibit 51 was placed in the record during the Staff's case in chief. Since that exhibit has been placed in the record we, of course, have attempted to study it and prepare to put in on rebuttal, and we submit it is proper rebuttal, our position in connection with the items recommended for elimination in Exhibit 51.

We now, therefore, offer the four witnesses to whom I have referred in connection with Mr. Gunn's cross-examination in regard to Exhibits 25, 26 and 27 simply because they assisted Mr. Gunn in connection with the preparation of those exhibits and have the details of the exhibits in mind as well as they can.

Mr. Goldberg has asked Mr. Gunn a number of questions.

MR. GOLDBERG: Mr. Hall has asked.

MR. KING: Mr. Hall has asked Mr. Gunn a number of questions which involved in some instances conferences between Mr. Gunn and the gentlemen who assisted him. That is one reason why I offer them for cross.

I think Mr. Goldberg has a perfect right to examine anyone [6784] with whom Mr. Gunn confers openly on the stand.

• • •

MR. GOLDBERG: I thought I could safely make that statement.

We have just been advised by counsel for the Respondents that there are four individuals in this hearing room who have assisted Mr. Gunn in the preparation of the original cost studies reflected in Exhibits 25, 26 and 27. The individuals referred to by Mr. King are as he indicated, Messrs. Eichhorn, Bortner, Chase and Wetzel.

There seems to be a confusion of ideas in Mr. King's statements. At one point we are told that they are available for rebuttal. At another point we are told they are available for cross-examination in connection with Exhibits 25, 26 and 27, and at another point we seem to be told they are available in combination with respect to support for Exhibits 25, 26 and 27, and in support of the inclusion in those exhibits certain exclusions proposed by Exhibit 51.

TRIAL EXAMINER: I don't think we need get into any discussion on that point.

[6785] MR. GOLDBERG: I am not going to get into any detailed discussion because I can probably go on for a long time if I did.

TRIAL EXAMINER: If you want to avail yourself of the offer of the Respondents' counsel you can. If you don't you don't have to so far as the Examiner is concerned.

MR. GOLDBERG: I am certainly delighted to have the Examiner state counsel for the Staff doesn't have to avail himself of the offer, because that statement means this:

Mr. Gunn, like other individuals, had assistance. Now, Mr. Gunn, despite that assistance, was the individual who was offered in this hearing as taking the ultimate responsibility for what he did.

Now, then, if Mr. Gunn is not in a position to take that ultimate responsibility, and we must turn to Messrs. Eichhorn, Bortner, Chase and Wetzel for the support in Exhibits 25, 26 and 27, then I say now, as I said the other day, that there has not been a proper foundation laid for the direct testimony of Mr. Gunn with respect to Exhibits 25, 26 and 27, and his testimony, if we are to avail ourselves of Messrs. Eichhorn, Bortner, Chase and Wetzel, must be stricken in its entirety, and the duty is incumbent upon the company to place——

TRIAL EXAMINER: This is no time for discussion of a motion to strike because counsel has gotten up and Respondents' [6786] counsel has stated Mr. Gunn had certain assistance.

Proceed with the examination of the witness.

MR. GOLDBERG: I think, Mr. Examiner, I am entitled to state on the record——

TRIAL EXAMINER: There is nothing at this point the Examiner wants to hear any discussion about.

* * *

[6789] By MR. HALL:

Q. Mr. Gunn, you indicated in your testimony yesterday afternoon that C. A. Coffin received 775 shares of preferred stock in connection with the sale of bonds. Did Mr. Coffin receive any of the 50,000 shares of common stock of McCall [6790] Ferry Power Company? A. Not so far as I know.

Q. Can you state it to be a fact that Mr. Coffin did not receive any part of the 50,000 shares of outstanding common stock of McCall Ferry Power Company? A. I

couldn't state that as a fact because he might have received some of Hutchinson's allotment of stock. I don't know.

Q. There is also a possibility, is there not, that he might have received part of the shares of stock that you have assigned to Harvey Fisk and Sons? A. Not in my opinion. I believe that went to Fisk, Bertron and Lee, Higginson.

Q. Isn't it possible that Mr. Coffin shared in the distribution of common stock to Lee, Higginson and Company as well as Bertron, Storrs & Griscom? A. I don't think it is. Bertron's records, at least, show he kept his common stock. I also believe Lee, Higginson's records show the same thing as regards their 5,000 shares.

Q. What definite piece of evidence can you point to which will conclusively rule out the possibility that C. A. Coffin did not receive a portion of the stock distributed to one or all of the three firms, Harvey Fisk and Sons, Lee, Higginson and Company, and Bertron, Storrs & Griscom?

* * *

[6791] THE WITNESS: As regards Bertron, Storrs and Griscom, the evidence on which I based my opinion, the principal evidence, respecting where the stock went is contained in Part 22 of Exhibit 27, and is the fact that the stock that Bertron had he retained until the McCall Ferry Power Company was reorganized.

By MR. HALL:

Q. How much common stock did Bertron, Storrs & Griscom have recorded on their books? A. 7,462½ shares.

Q. Referring to Page 191 of Exhibit 27, it seems an entry was made on December 28, 1908 with a note to charge out. What does that mean? A. I assume that at that date they realized it had no value and they wrote it off.

Q. That is just an assumption on your part? A. It seems to me to be a pretty good assumption because [6792] they put a zero after value of it.

Q. It could have been a distribution, couldn't it? A. Not at that date. I don't think anybody would have wanted it. The stock already had lost its value at that time obviously.

Q. You still have not given me an answer to my over-all question, Mr. Gunn. You have referred to the over-all shares Bertron, Storrs and Griscom entered on their books. But that doesn't answer my question as tc the evidence you can point to which will conclusively rule out the possibility that C. A. Coffin did not receive some portion of the common stock of McCall Ferry Power Company. A. You mean which Bertron had? Are you speaking now of this 7,642½ shares?

Q. That, and in addition I also have reference to the stock you have assigned to Harvey Fisk and Sons and Lee, Higginson and Company. A. Well, the evidence I have called your attention to is the evidence on which I relied in the case of Bertron, Storrs & Griscom. It is my understanding, it is my recollection, and we may have some evidence in the files on it although I am not sure, that the same situation existed with respect to Lee, Higginson, namely, that they kept their 5,000 shares themselves and distributed none of it.

Now, as regards Fisk, as I said, we never found Fisk's [6793] records.

Q. You mean that as Mr. Fisk states in his affidavit all of the Harvey Fisk and Sons' records were destroyed by fire? A. Yes, destroyed somehow as a result of his going out of the banking business. We never found his records and therefore the evidence, the only evidence I have, is the statement of Fisk plus the fact that Hutchinson says Fisk took over and dominated the proposition, and the statement of Fisk that he did take over and dominate it and that in his opinion he received the difference between the 30,000 shares certificate and the amount which went to Bertron, Storrs & Griscom for Bertron, Storrs & Griscom's own services and for the services of Lee, Higginson.

Q. Did Mr. Fisk, at the time of your conference with him, remember the number of shares of stock that were delivered to Bertron, Storrs & Griscom? Did you have to refresh Mr. Fisk's recollection by showing him some documents which were in the company's files? A. I think I probably showed him documents in the company's files. I didn't do it personally, but I supplied to Mr. Fisk's attorney, Mr. Cole, all of the information we had, that I had in my possession, from the company's files and other sources which had a bearing on Mr. Fisk's connection with the McCall Ferry enterprise.

[6794] Q. But Mr. Fisk had no independent recollection of the distribution of the common stock of McCall Ferry Power Company? A. That I can't say. I wasn't present when Mr. Cole discussed it with him.

Q. At least Mr. Fisk's statement shows that he did not contribute anything more than was already reflected in the documents in your possession? A. Oh, yes, he contributed a great deal more——

Q. I am speaking now only with respect to the distribution of the common stock. A. Nothing except his memory and opinion.

* * *

[6795] Q. Did Mr. Lee tell you that their records show that they received the 5,000 shares, received and retained the 5,000 shares of common stock of McCall Ferry Power Company? A. Mr. Lee told me this: That he received it, that it was their total compensation, and that when the company [6796] was reorganized they lost everything they had expected to receive for having obtained the subscriptions to the bonds. Now, from that I took it that he had kept the 5,000 shares of stock.

The correspondence between Bertron, Storrs & Griscom seems to me clearly to show that the 5,000 shares were going to Lee, Higginson for their services, and there is a distinction in the description of it made between the 5,000 shares of common stock and the shares of preferred stock

which were being transmitted to them for the purpose of making up the difference between 45 per cent of preferred stock and 50 per cent in the combination.

I might also say that part 11 of Exhibit 27 also pretty clearly indicates that there couldn't possibly have been any syndicate agreement, or whatever that agreement was we were talking about yesterday, because Lee, Higginson didn't even know how much stock they were going to get and had to write to Bertron and ask him.

It also pretty clearly indicates that Harvey Fisk was completely dominating the picture because Bertron couldn't give Lee, Higginson an answer and had to go to ask Harvey Fisk if they would give him some, which Harvey Fisk agreed to do.

* * *

[6798] By MR. HALL:

Q. Before going further with my present line of cross-examination, Mr. Gunn, do you have any list of common stockholders of McCall Ferry at any dates? A. Nothing more than stock certificate books and I believe a stock ledger or some sort of a record which was kept of it.

Q. But those records would not show you who the common [6799] stockholders were? A. No, I don't think they would.

Q. When do you say that the common stock was distributed to the bankers and the syndicate members? A. I have a little difficulty with that question, Mr. Hall. Are you making a distinction between the so-called bankers and syndicate members, or do you intend to put them both in there?

Q. I have reference to the distribution of the 30,000 shares. A. I see. I can't say precisely when the distribution was made. All I know is the date on which Bertron received their part of the 30,000 shares and the date on which they in turn gave Lee, Higginson their part.

As to when the stock may have gone into the possession of Fisk, I don't know. However, as I recall it the 30,000

shares were issued on a stock certificate to Susquehanna Contracting Company, which I take it had the effect of placing it in Fisk's hands. The stock certificate will show when that was. I think it can be looked up.

• • •

[6800] Q. Getting back now, Mr. Gunn, to my previous question with reference to the 4,000 shares of stock, preferred stock, which passed under the contract which is Part 19 of Exhibit 27, is it your statement that all but 1,875 of the 4,000 shares of preferred stock was used as additional bonus in connection with the sale of bonds? A. No, that is not my statement. I don't know.

Q. You don't know whether it was or not? A. No, I don't know any more than is given in Exhibit 27.

TRIAL EXAMINER: What page?

THE WITNESS: All through this, Mr. Examiner, in various sections.

TRIAL EXAMINER: Very well.

THE WITNESS: One of the things which causes the mystery about it, Mr. Hall, is this: Fisk says he got 1,875 shares, Bertron says he was entitled to 1,875 shares, and it appears that out of Bertron's 1,875 shares, plus, also, the shares to which Bertron was entitled for his firm's own subscription to bonds, that he supplied a certain amount of that to make up the five per cent to which the subscribers under the March 1st agreement were entitled. That is about the limit of my knowledge as to where that part of the preferred stock went.

[6801] By MR. HALL:

Q. Did you determine in your report, Mr. Gunn, that 1,875 shares of preferred stock were issued to Harvey Fisk and Sons for services? A. Yes, that is what Mr. Fisk says.

Q. Mr. Fisk's statement is the only basis you have for that? A. No. I believe we have the stock certificate

showing that. I believe the stock certificate book shows that.

Q. Are you saying that stock certificate book shows that there was issued to Harvey Fisk and Sons 1,875 shares of preferred stock? A. Yes, that is my recollection of what it shows.

Q. Does the stock certificate book indicate why the 1,875 shares of preferred stock were issued to Harvey Fisk and Sons? A. I don't think so. I wouldn't expect it to.

Q. Mr. Gunn, up to the time of the distribution of the common stock by Hutchinson for whom was it held? A. May I have the question, please?

(Question read.)

By Mr. Hall:

Q. I have reference, Mr. Gunn, to the total of 48,840 shares. A. I suppose it was held for the people who were [6802] ultimately to get it.

Q. I show you, Mr. Gunn, a copy of a letter dated January 20, 1906, bearing the initials "PGB/MMB" addressed to Cary T. Hutchinson, Esq., 60 Wall Street, New York City.

Mr. King: May we look at the letter?

Mr. Hall: Yes.

The Witness: May I read it, please?

Mr. Hall: Yes.

By Mr. Hall:

Q. Are you familiar with that letter, Mr. Gunn? A. Yes, sir, I believe I have seen it.

Q. The initials "PGB" stand for Phillip G. Bartlett? A. Yes, sir, I believe they do.

[6803] Mr. Hall: May we have this letter marked for identification as Exhibit No. 158?

Trial Examiner: Yes, the document may be marked.

(The document referred to was marked Exhibit No. 158 for Identification.)

* * *

[6804] By Mr. Hall:

Q. According to Mr. Bartlett's letter, Mr. Gunn,—incidentally, Mr. Bartlett is connected with the firm of Simpson, Thacher and Bartlett—— A. Yes, sir.

Q. —according to Mr. Bartlett's letter the stock, common stock of McCall Ferry Power Company, to the extent of 48,850 shares, was being held by Harvey Fisk and Sons for Mr. Hutchinson. Isn't that so? A. Yes, the letter so states. It is certainly evident Mr. Fisk had the stock in his possession.

The letter also states that Simpson, Thacher and Bartlett had furnished to Harvey Fisk and Sons "the list which you sent us for the distribution of your part of the common stock", which certainly indicates that all of the common stock was not for Hutchinson and that Hutchinson was not making the distribution of all of it.

[6805] Q. It definitely indicates that up until the date of this letter, January 20, 1906, Harvey Fisk and Sons were holding the 48,850 shares of common stock in safekeeping for Mr. Hutchinson? A. Yes, the letter states that.

Q. And the common stock was being held for Hutchinson by reason of the contract of June 14, 1905, between Hutchinson and Susquehanna Contracting Company. Right?

The Witness: May I have the question, please?

(Question read.)

The Witness: I don't know whether or not you could draw that conclusion. The letter says it was being held for Harvey Fisk and Sons.

By Mr. Hall:

Q. For Hutchinson? A. Yes, for Hutchinson, by Harvey Fisk and Sons, and there is a contract of June 14,

1905 between Hutchinson and Susquehanna Contracting Company.

Incidentally, that also indicates to me the Susquehanna Contracting Company and Harvey Fisk and Sons were pretty near one and the same thing.

Q. What indicates that in Exhibit No. 158? A. The fact that Harvey Fisk and Sons had the stock and were holding it, but the contract was between Hutchinson and Susquehanna Contracting Company.

[6806] Q. If they were holding it for Mr. Hutchinson pursuant to the contract which is Part 19 of Exhibit 27, what is there about that which indicates an identity between Susquehanna Contracting Company and Harvey Fisk and Sons? A. The fact that Harvey Fisk and Sons had the stock.

Q. Would you say the same thing if Hutchinson had been holding the stock, that is that there was an identity of interest between Hutchinson and Susquehanna Contracting Company? A. Well, I wouldn't necessarily say that.

Q. Why not? A. For this reason: The fact that we have just mentioned is only one of a large number of facts that indicates the identity between Susquehanna Contracting Company and Fisk, and there are no facts whatsoever that indicate any identity between Hutchinson and Susquehanna Contracting Company.

Mr. King: May we have Mr. Hall's question read back? I think he inadvertently referred to identity between Hutchinson and Company when he meant——

Mr. Hall: No, no.

Mr. King: You meant Hutchinson?

Mr. Hall: Yes.

By Mr. Hall:

Q. In reaching your conclusion as to identity of interest between Harvey Fisk and Sons and Susquehanna Contracting [6807] Company, had you relied in part upon the

letter which had been marked as Exhibit No. 158? A. That was unquestionably one of the facts. They were many, many facts, however, not the least of which was the fact that Susquehanna Contracting Company was run from Simpson, Thacher and Bartlett's office, and they were Fisk's attorneys.

Q. The Susquehanna— A. I don't know just what you mean by identity of interests, but I take it that you mean was substantially controlled by Hutchinson. If that is what you mean then my answer is correct.

MR. GOLDBERG: Did you mean "Hutchinson" in your last answer?

THE WITNESS: No, I meant Fisk, Harvey Fisk and Sons.

By MR. HALL:

Q. What do you mean by substantially controlled, Mr. Gunn? A. Just that. In other words, that the actions of Susquehanna Contracting Company would be subject to Fisk's dictation.

* * *

[6808] By MR. HALL:

Q. Mr. Gunn, the Susquehanna Contracting Company contract which we have been discussing, Part 19 of Exhibit 27, called not only for the 48,840 shares of common stock to [6809] be delivered to Hutchinson but also for the delivery of 4,000 shares of preferred stock and 750 thousand dollars in cash. Is that right? A. Yes, sir.

Q. Isn't it clear from Exhibit No. 158 that if there was a distribution of the common stock it occurred subsequent to January 20, 1906? A. Yes, I believe Exhibit 158 indicates that, at least.

Q. I notice that the letter, Exhibit 158, refers to 48,850 shares, making ten shares difference.

Now, the ten shares represents the incorporators' shares. Is that right? A. I would assume that it does, although I don't know, of course.

Q. And according to Exhibit 158 the incorporators' shares were delivered to Hutchinson, or were being held for Hutchinson? A. No. Well, Exhibit 158 is a little ambiguous on that point. The first paragraph indicates to me that Hutchinson had previous to this letter sent to Simpson, Thacher and Bartlett, and they had in turn delivered to Harvey Fisk and Sons, a list of people to whom he was going to distribute his share only of the 48,850 shares, and the second paragraph of the letter says that the whole 48,850 shares was being held for Hutchinson, so it seems to me that [6810] the Exhibit 158 is clearly ambiguous on the face of it.

Q. I don't have as much difficulty with that letter as you seem to have, Mr. Gunn.

Was the entire 48,850 shares of common stock placed in a voting trust? A. It was supposed to be, and I assume it was.

Q. Do you know it to be a fact that it was? A. No, I never did find the voting trust records.

Q. In other words, you don't know how many shares of stock were actually placed in the voting trust? A. No, I assume they all were, but I don't recall I have any positive proof of it for the reason I couldn't find the voting trust records. As a matter of fact, I don't know of any other way they could have distributed the stock, and I don't know of any other reason for writing this letter at this time contemplating a distribution except in the form of voting trust certificates.

Q. Does this letter, Exhibit No. 158, refer to voting trust or voting trust certificates? A. No, but it refers to a distribution of the stock and it was not distributed through McCall Ferry certificates so far as I know, so it must have been distributed through voting trust certificates.

Q. That is purely and simply an assumption on your part? [6811] A. I think it is a lot more than an assumption. It seems to me it is. It seems to me to be more than——

Q. Was there a voting trust created? A. It is my understanding that there was.

Q. What is the date of that voting trust? A. The date of the stock deposit agreement in the voting trust was January 20, 1906.

Q. Is that voting trust agreement Part 20 of Exhibit 27? A. Yes, sir.

Q. I believe you have indicated you do not know what stockholders became parties to the voting trust agreement. A. I assume they all did. I have no reason for supposing they didn't.

Q. Can you state it to be a fact they all did become parties to the voting trust agreement?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: No, I cannot state it to be a fact from the information I have before me now.

By MR. HALL:

Q. Who were the voting trustees under the voting trust agreement, Mr. Gunn? A. Mr. Henry F. Dimock, Mr. William F. Barnum, and Mr. S. Reading Bertron.

[6812] Q. To whom were the voting trust certificates issued? A. I suppose to the beneficial owners of the stock ultimately.

Q. You do not know who deposited their stock in the first place? A. No.

Q. Accordingly you do not know to whom voting trust certificates were issued. Is that right? A. No.

Q. In other words, you agree with my last statement? A. Yes, I agree with your last statement.

Q. It appears from Bertron, Storrs and Griscom Company Incorporated letter dated May 27, 1938, which is included in part 22 of Exhibit 27, that that firm did not record the receipt of either preferred or common stock until November 21, 1906. Is that right?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: That is correct. It so appears from that letter.

By MR. HALL:

Q. In other words, the stock was recorded in the books of that firm approximately ten months after the voting trust was created? A. Yes, it so appears.

[6813] Q. Did the other syndicate participants receive their stock on the same date, that is November 21, 1906? A. We haven't discovered yet who the other syndicate participants are. Lee, Higginson received theirs at a somewhat later date. We don't know when Harvey Fisk and Sons received theirs.

Q. Who were the members of the syndicate after Fisk came into the financing picture about the middle of March, 1905, Mr. Gunn? A. Mr. Hall, you have to tell me what "the syndicate" is.

Q. Do you know? A. No. I know who the syndicate managers were.

Q. Is that all you know about who composed the syndicate? A. I think I might know more if you tell me what you mean by "syndicate."

Q. I mean the members who associated themselves together for the purpose of financing the project in connection with Harvey Fisk and Sons' participation. A. Well, Harvey Fisk and Sons were the bankers, and Mr. Fisk says that Bertron, Storrs and Griscom were in joint account with him as a banker, or joint banker, I guess you would call it. Lee, Higginson was acting apparently under Bertron, Storrs and Griscom.

You might call those the syndicate, I believe are the words [6814] you used, or you might call the syndicate anybody that bought any bonds. I don't know what you mean. I really don't know what you mean by syndicate.

Q. Mr. Gunn, will you refer to the bottom of page 21 and the top of page 22 of Exhibit 26? A. Yes, sir.

Q. You there state, "This estimate was based upon Harvey Fisk and Sons acting as syndicate managers and actually selling approximately one-half of the eight million dollars bond issue."

What did you mean when you referred to "syndicate managers"? A. That is taken from Mr. Fisk's statement.

Q. What did Mr. Fisk mean? A. I don't know. I would assume he probably meant—well, I just don't know what he meant and never have known. No use guessing at it.

Q. Did you ever ask Mr. Fisk what he meant by that statement? A. No, sir.

Q. With reference to this matter? A. No, sir. As I told you, the information was secured from Mr. Fisk by Mr. Fisk's counsel at my request. I didn't have an extended discussion with Mr. Fisk except on one occasion.

[6815] Q. Mr. Gunn, what did you refer to at the top of page 21, Exhibit 26, when you said "New syndicate"?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: That statement was taken verbatim from Part 1 in Exhibit 27 and they are the words Mr. Hutchinson used to describe the Fisk arrangement for the new financing.

By MR. HALL:

Q. What page are you now referring to in Exhibit 27? A. Page 6. I am referring to about the fifth or sixth line down from the top.

Q. Who was, or who were the new syndicate members that Hutchinson referred to? A. I don't know.

Q. Did you ever ask Hutchinson the names of the individuals comprising the new syndicate? A. I don't recall whether or not I did. I think this is probably the reason why I may not have: The work that I had done, which ultimately became Exhibit 26, prior to the time I first saw Hutchinson I had supposed, and I had arrived at that con-

clusion from a study of the documents in Exhibit 27 without the benefit of these people who were involved in it, I had arrived at the conclusion that the financing or the development of McCall Ferry was being done more or less in a cooperative manner by a group of people. However, [6816] the first time I saw Hutchinson he explained to me that that was not the case at all, that under the first attempt to underwrite the agreement that he had understood that he would have control of it, that when that underwriting failed Harvey Fisk and Sons took control from him, and after that he said that Harvey Fisk and Sons ruled the corporation in their own fashion without too much help from him.

Q. What has that to do with who made up the individuals who composed the new syndicate? A. I understood that Harvey Fisk had done the whole thing.

Q. You know that isn't so, though, don't you, Mr. Gunn? A. I know it now to be sure, yes.

Q. In other words, what Mr. Hutchinson was telling you was not exactly in accord with the facts? A. Oh, yes it was. What Mr. Hutchinson told me was that Fisk took control of the enterprise from him, and it certainly to me is obvious that Fisk did.

Q. Who are the members of the new syndicate referred to by Mr. Hutchinson? A. I don't know.

Q. You never asked him? A. Not that I recall.

Q. Mr. Gunn, as shown in lines 17 through 22 of the [6817] transcript on page 6583, you stated that you submitted a portion of Exhibit 26 to Fisk, Hutchinson and Hopkins. Do you still have the portions of Exhibit 26 that you submitted to those individuals? A. Yes, I told you that on preliminary cross-examination, and that they were available if you wanted to look at them.

Q. Will you please make them available at the first opportunity? A. They have been available for six months.

Q. Where? A. In the company's files, and you have had auditors there who have had time to look at them if they wished.

Q. Do you think you could have the portions to which I referred here on Monday? A. Yes, sir, I think I could.

Q. Do you know why the distribution of the stock of McCall Ferry Power Company was deferred to November, 1906?

TRIAL EXAMINER: Read that question, please.

(Question read.)

THE WITNESS: No, I do not.

By MR. HALL:

Q. Who held the stock prior to its distribution in November of 1906? A. I don't know; at least I don't recall now.

* * *

[6818] By MR. HALL:

Q. Mr. Gunn, you have referred to Messrs. Dimock, Barnum and Bertron as being the trustees under the voting trust agreement? A. Yes.

Q. Barnum was Fisk's partner. Is that right? A. Yes, sir.

Q. Bertron was Dimock's banker associate? A. Not that I know of.

Q. Bertron, Dimock, maybe one or two others, were associated together in connection with the initial financing before Harvey Fisk came into the picture?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: They were both in it. I don't know how they were associated. But Dimock was Hutchinson's father-in-law, and Bertron, as I understand it, was the man to whom Dimock took the proposition to get it financed.

[6819] By MR. HALL:

Q. Bertron, Hutchinson and Dimock were all associated together in connection with the initial financing? A. They were all there. I don't know what the association was.

Q. And participated in the initial financing, at least in the attempt to finance the project? A. I don't know about that. I don't know of any participating in it that Hutchinson did. You mean by "participating" that they were all out attempting to obtain subscribers? Is that what you are referring to?

Q. They were all engaged in the financing of the project? A. I don't know what Hutchinson had to do with the financing of it.

Q. I am referring to Dimock, Mr. Gunn. A. I still don't know precisely what part Dimock played in the financing.

Q. He was one of the syndicate members. Is that right? Mr. Dimock was one of the syndicate managers under the original financing as reflected in part 5 of Exhibit 27? A. Yes, sir, he was.

Q. And was associated with Bertron in that financing attempt? A. In that capacity he was associated apparently.

[6820] Q. As a matter of fact, Mr. Gunn, in your report, particularly on page 19 of Exhibit 26, you refer to the failure of the "Dimock, Bertron, Barney underwriting"? A. What I meant by that was that that was simply a terminology used to distinguish it from Fisk, and relating it to the fact those three men were——

Q. Managers under the initial agreement? A. Yes, were managers under the initial agreement.

Q. How long did the voting trust continue in effect? A. You are speaking now of Harvey Fisk and Sons' voting trust?

Q. I am speaking now of the voting trust agreement that was created on January 20, 1906, and referred to in the agreement which is part 20 of Exhibit 27. A. According to the stock deposit agreement on which the voting trust was created it was to continue in effect until November 1, 1908, or until the plant of McCall Ferry Power Company should be completed and put into actual operation if prior to that date.

Q. How long did it actually continue in effect? A. I don't know what became of it. I don't suppose there was any use for its continuing after the reorganization of the company.

Q. When did that occur? A. I am not lawyer enough to say which one of these [6821] dates it occurred on.

The bondholders committee sent out a notice of the impending default on December 7, 1908. McCall Ferry actually defaulted on December 15, 1908. The suit for foreclosure instituted by Knickerbocker Trust Company was on July 13, 1909.

Aldred was appointed Receiver on the 17th.

McCall Ferry Power Company was reorganized into Pennsylvania Water and Power Company on January 13, 1910. I don't know which one of those you would call the particular date on which you referred to.

Q. Do I correctly understand you to say that you have no information which will definitely fix the date of termination of the voting trust agreement? A. That is correct.

Q. Did an executive committee carry on the active direction of McCall Ferry affairs from August 8, 1905, to 1909?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: I don't believe I understand what you mean by active direction, Mr. Hall.

By MR. HALL:

Q. Who carried on—withdraw that.

McCall Ferry Power Company had an executive committee? [6822] A. I understand they did, yes.

Q. Which committee exercised most of the functions of the board of directors between meetings of the board of directors? A. Yes, it is my understanding that was its function.

Q. Who were the members of that executive committee?

* * *

THE WITNESS: H. F. Dimock, C. A. Coffin, Gardiner M. Lane, William M. Barnum, William Barclay Parsons.

By MR. HALL:

Q. Did Mr. Bertron replace Mr. Lane in September, 1905, on the executive committee? A. I don't have the information before me which would indicate whether he did or not.

[6823] Q. Mr. Gunn, my information is that Gardiner M. Lane resigned on September 20, 1905, and that he was replaced on the same date by Mr. Bertron. Will you check that information, please? A. Yes, sir.

Q. Mr. Parsons was Mr. Hutchinson's consulting engineer. Is that right? A. Mr. Parsons was a consulting engineer and had previously done some work in association with Hutchinson.

Q. Didn't Mr. Hutchinson bring Parsons in as his consulting engineer after Mr. Morison's death? A. As I recall he did. He came in some time prior to the date——

Q. January 13, 1905? A. Yes, date of the prospectus, which is—may I have the question again, please?

(Question read.)

THE WITNESS: Yes, Parsons was employed by Hutchinson some time prior to January 13, 1905, which is the date of Parson's report which became a part of the prospectus.

By MR. HALL:

Q. And he was employed by Hutchinson as his consulting engineer? A. That is my understanding.

Q. Mr. Coffin was associated with Mr. Hutchinson as [6824] arly as 1903. Is that right? A. He may have been. I don't recall offhand.

Q. So far as you know? A. So far as I know he may well have been.

Q. Wasn't Hutchinson at one time connected with General Electric Company? A. Yes, sir, Mr. Hutchinson says in his affidavit he was once connected with General Electric Company. That is shown at the bottom of Page 3.

Q. Was Mr. Coffin also connected with General Electric during the period from 1903 to 1905? A. Yes, sir, I think so.

Q. There is no question about that, is there? A. I don't think so.

Q. Is it reasonable to assume that is how the project came to Coffin's attention, through Hutchinson? A. No, I wouldn't say that would be a reasonable assumption.

Q. They were both in the same company and the record shows they were both interested in the construction of the project? A. Yes, but there were other people interested in the development of hydro-electric power on the Susquehanna River long before Hutchinson was, and some of them may very well have called Coffin's attention to it.

[6825] Q. Who do you refer to now? A. James H. Harlow for one.

Q. Was Mr. Harlow connected with General Electric? A. Certainly not, but General Electric Company was well-aware, and kept well-abreast, of all hydro-electric potentialities at that time.

Q. And it is reasonable to assume C. A. Coffin came into contact with Mr. Hutchinson in that connection? A. He may very well have. I have no idea when Mr. Coffin first came into contact with Hutchinson. It may well have been long before 1903 so far as I know, and it probably was.

Q. In Exhibit 26 you state that with the advent of Harvey Fisk and Sons in the picture control passed from Hutchinson to the Fisk firm. What basis do you have for that statement? A. The fact that Mr. Hutchinson says that is what happened, that up to his death he was very bitter over it, and the fact that Fisk says that is what happened, plus all of the direct and indirect indications of that included in Exhibit 26 and Exhibit 27.

Q. Can you be more specific about the direct and indirect evidence that you refer to, Mr. Gunn? A. I don't know whether I can or not. One of the pieces of evidence

I had in mind was the fact that when Harvey [6826] Fisk and Sons came into the picture they kicked out the former law firm that had been doing the company's work, and Harvey Fisk's domination of the firm was so well-known that when Harlow-McGaw wanted to get out from under their water power rights they knew they had to go to Harvey Fisk and Sons to do it. Those are a couple of the items. There are undoubtedly others.

Q. Isn't the reason Harlow-McGaw went to Fisk that Fisk was named in the prospectus as bankers? A. That is also another indication that Harvey Fisk and Sons dominated it.

Q. Isn't it reasonable to assume that because they were named as bankers that is the reason they went to Fisk? A. No, not necessarily. If Hutchinson was such an important figure in it, Harlow and McGaw both personally knew Hutchinson well. It looks to me like they more likely would have gone to Hutchinson.

Q. And Harlow-McGaw had had differences with Hutchinson. Isn't that so? A. Oh, but they had been composed.

Q. What did they do that indicated that their differences had been composed? A. The fact that Harlow and McGaw withdrew their opposition to Hutchinson in McCall Ferry Power Company and entered into an agreement with him.

Q. Mr. Gunn, before you conferred with Pliny Fisk had [6827] you concluded that there was this control by the Fisk firm? A. May I have the question, please?

(Question read.)

THE WITNESS: I don't remember, Mr. Hall, and my difficulty is this: The statement I obtained from Hutchinson was dated January 14, 1939, and the statement I obtained from Fisk was dated December 29, 1938.

Now, I had had discussions with Hutchinson, as I recall, over a period of something like a year, and it was dur-

ing the first discussion that I had with Hutchinson that he told me that Fisk had deprived him of control of the McCall project.

Now, the one discussion I did have with Mr. Fisk personally took place some considerable period of time before December 29, 1938, and I don't recall whether that conversation with Fisk was before my first conversation with Hutchinson or not. My first knowledge of that situation came with either Fisk or Hutchinson, whichever I talked to first.

By Mr. Hall:

Q. Prior to your first discussion with Hutchinson had you reached the conclusion that Harvey Fisk and Sons had deprived Hutchinson of control? A. I had Hutchinson's statement to that effect.

Q. Prior to Hutchinson's statement had you reached that same conclusion? A. No, not unless I had talked to Fisk first. I think [6828] I can answer the question perhaps clearly this way: Prior to the time I talked to Fisk or Hutchinson I did not know of that control situation.

Q. So that no evidence in your possession prior to your discussion with Fisk and Hutchinson enabled you to reach the conclusion that Fisk had deprived Hutchinson of control about the middle of March, 1905? A. May I have that question, please?

(Question read.)

[6829] The Witness: No, that is not a correct conclusion for this reason, Mr. Hall: I had a lot of information in my possession which served the sole purpose of confusing me and making it impossible for me to put the various pieces together so as to make a consistent story.

After I talked to Fisk and Hutchinson and found out of this arrangement I could then put together the pieces of information I had and they then fitted into the pattern that Fisk and Hutchinson had given me in their statements, and for the first time made it possible for me to come to

what seemed to me to be a reasonably rational conclusion as to what was the story of the development of McCall Ferry.

By Mr. Hall:

Q. Mr. Gunn, will you specify the pieces of information that enabled you to conclude finally that Harvey Fisk and Sons did deprive Hutchinson of control in March of 1905? A. I can't specify them in any more detail than simply to say that they are all the pertinent parts of Exhibits 26 and 27.

Q. Will you specify the pieces of evidence which enabled you to confirm the statements which Fisk and Hutchinson made to you—— A. I mentioned——

Q. —that you had had prior to your conferences with Hutchinson and Fisk?

[6830] The Witness: May I have that, please?

(Question read.)

The Witness: One piece I can think of offhand is the March 25 underwriting agreement.

By Mr. Hall:

Q. Is that the only one? A. No, I don't think so.

Q. What other? A. I can't recall it all. They are included in Exhibits 26 and 27.

Q. Name some others. A. Well, I think prior to that conversation I had known that Harlow-McGaw approached Fisk for the sale of their property. I think also I had known that Simpson, Thacher and Bartlett had replaced Coudert Brothers as lawyers. I can think of those matters offhand.

However, I will say this: That just those three items standing alone are not all that there is to offer that confirmation. The whole of Exhibit 26 and Exhibit 27 seems to me to bear that out.

Q. Every bit of them? A. All the pertinent parts.

Q. What are the pertinent parts as to this question of

control by the Fisk firm? A. The history of the development of the property.

[6831] Q. Be specific. A. I can't do it. It is obvious from Exhibit 26 that I can't go through and put in categories each and every statement contained there. Exhibit 26 is a description of the historical development of the project.

Q. Will you take the first ten pages and be specific? A. I can't be specific.

Q. Is there any part of the first ten pages of Exhibit 26 that bears on your conclusions as to control? A. I can't be specific about it. If you want me to sit here and read it and study it I will be glad to do it.

Q. Do you have to read it and study it, Mr. Gunn? A. I certainly do. That exhibit was prepared by me eight years ago.

Q. Look at page 1. What is there on page 1 to indicate that Fisk acquired control from Hutchinson?

MR. KING: Your Honor, I object.

TRIAL EXAMINER: The witness said he couldn't do it without reading the exhibit. The Examiner will not delay the hearing while the witness reads the exhibit.

• • •

[6832] By MR. HALL:

Q. What is there contained in the March 25, 1905, underwriting agreement about control passing from Hutchinson to Harvey Fisk and Sons? A. The fact that their name was mentioned and they were the bankers. There may be other things that indicate it but that is what I had in mind when I mentioned it.

[6833] Q. What other things, Mr. Gunn? A. I don't know. I said there may be. If you want me to study it I will be glad to undertake it.

Q. There is nothing in part 10 of Exhibit 27 which says that control passed from Hutchinson to Harvey Fisk and Sons. Isn't that so? A. Nothing except the fact

that Harvey Fisk and Sons were amongst the most powerful bankers in New York, and he is named as banker in that.

Q. A man could be banker and still not acquire control from Hutchinson. Isn't that so, Mr. Gunn? A. I doubt whether Harvey Fisk would do it or not.

Q. But they could do it? A. Sure, they could do anything if they were foolish enough.

Q. What is there about the Harlow-McGaw's sale of property, to which contract Harvey Fisk and Sons were a party, which indicates control passed from Hutchinson to Harvey Fisk and Sons? A. The fact Harlow-McGaw went to Harvey Fisk and Sons to sell their property.

TRIAL EXAMINER: What part of Exhibit 27 shows that? Do you know? 14 and 15?

THE WITNESS: Yes, sir.

[6834] By MR. HALL:

Q. How do you know the reason Harlow-McGaw went to the Fisk firm was not merely because they were named as bankers in this underwriting agreement? A. The reason I assume that was not the reason particularly was because Harlow-McGaw knew that the people who were named in a document such as the Fisk underwriting generally control the enterprise. They knew Hutchinson personally, knew very well they could go to him. Hutchinson would have been the logical man for them to approach on the sale of property. It just seems to me it was so well known that Harvey Fisk was running the McCall Ferry project that it was just obvious to them he was the man to go to. Or, indeed, Harlow-McGaw may have asked Hutchinson and Hutchinson may have said, "You will have to see Fisk."

* * *

By MR. HALL:

Q. What concrete evidence enables you to look into the minds of Harlow-McGaw and make the statements such as

you [6835] have just done? A. Nothing, Mr. Hall. You and I are just speculating on what might have happened.

TRIAL EXAMINER: Let's not speculate any further.

THE WITNESS: He asked a question and I was trying to answer.

MR. HALL: I am not speculating. You are the one that is speculating. Isn't that so?

TRIAL EXAMINER: I will rule out that question.

By MR. HALL:

Q. Will you refer, Mr. Gunn, to part 14 of Exhibit 27? A. Yes, sir.

Q. Specifically the first paragraph on page 116 of Exhibit 27.

According to that first paragraph doesn't it appear that Mr. Houseman states that he approached Harvey Fisk and Sons because the Fisk firm was named in the March 25, 1905, underwriting agreement? A. I can't draw that conclusion without reading further.

Q. Go ahead.

[6836] THE WITNESS: May I have the question, please?

(Question read.)

By MR. HALL:

Q. I mean named as bankers. A. I do not think you can draw that conclusion for the reason that the second paragraph states that at least one of the purposes of addressing the letter to Harvey Fisk and Sons was to explain about the fact Harvey Fisk and Sons were using Harlow-McGaw's Company name and wanted them to change it. It was perfectly proper he ought to go to whoever's name was on the document for such a purpose as that.

Q. So far as you know that is the only reason Harlow-McGaw went to the Fisk firm? A. I don't think that conclusion can be drawn. I don't know. It may very well have been that Houseman was using that as a pretext to

approach Fisk for the proposed merger of their interests shown on the second page of the letter. I just don't know.

• • •

[6838] By Mr. Hall:

Q. Mr. Gunn, yesterday you stated that Mr. C. A. Coffin had received 775 shares of preferred stock, representing the 5 per cent additional bonus for subscriptions obtained by Mr. Coffin in connection with the initial financing. Is that so? You will find your testimony on page 6775 of yesterday's transcript. A. Yes, that is correct.

Q. That would mean, would it not, that Coffin had secured subscriptions in the principal amount of 1½ million dollars of bonds? A. Yes, it would mean that if you make the assumption that Mr. Coffin had secured all the subscriptions of which this represents five per cent. That we don't know except from the notation in Bertron, Griscom's books, which notation was to C. A. Coffin interest. I don't know what that word [6839] "interest" may have been. I don't know whether that word "interest" can be interpreted as meaning that all of the subscriptions of which the 775 shares or 5 per cent were subscriptions obtained by Coffin. I don't know that conclusion could be drawn.

Q. That could be reasonably interpreted to mean Coffin and those associated with him and selling that amount of bonds? A. Yes. The difficulty of it is I don't know who sold the bonds. That doesn't indicate who did the selling.

Q. Do you think that the million and a half is part of the 2½ million for which Lee, Higginson secured subscriptions? A. No, I wouldn't think that it was.

Q. You think it is in addition to the 2½ million subscriptions secured by Lee, Higginson? A. Yes, the notation indicates that that is true. The only point I am attempting to explain is that I don't know whether Coffin secured the subscriptions of which 775 shares are five per cent.

Q. Who could have secured them, Mr. Gunn? A. That I don't know. For instance, if I may try to explain a little further, Mr. Coffin may have subscribed to some personally and his associates in General Electric Company or other associates of his may have also subscribed [6840] to some. I don't know that the relationship between him and the other people is such that it would be proper to say that Coffin obtained the subscriptions. That is the only point I am attempting to clarify.

Q. Do you think that it was part of the million and a half dollars principal amount of bonds subscribed for under the March 1, 1905, agreement which represented the difference between the total subscriptions of 4 million dollars and Lee, Higginson's subscription of 2½ million dollars?

THE WITNESS: Will you read that back, please?

(Question read.)

THE WITNESS: I don't believe I understand that question, Mr. Hall. Could you simplify it a little? I can't follow it.

By MR. HALL:

Q. You have mentioned, Mr. Gunn, a figure of four million principal amount of bonds being sold under the initial agreement of March 1, 1905. A. Yes, that is a deduction. We think there were about four million dollars subscribed.

Q. Of that four million principal amount of bonds you have stated that Lee, Higginson obtained subscriptions for approximately 2½ million dollars? A. That is correct.

Q. That leaves us with 1 million 5 hundred thousand dollars principal amount of bonds for which subscriptions were [6841] secured? A. That is correct.

Q. Do you know whether or not the million and a half secured by Coffin and represented by the 775 shares is the million and a half not secured by Lee, Higginson and Company?

MR. KING: May we have that question read, please?

(Question read.)

THE WITNESS: No, I don't know.

By MR. HALL:

Q. Do we add Coffin's one million and a half to the total of four million secured or is Coffin's million and a half included in the four million? A. I think in my opinion it is undoubtedly included in the four million. The thing that is giving me the difficulty is your repeated statement that Coffin obtained them. I don't know whether or not he did. With that qualification in my opinion the amount of bonds of which 775 shares would be the bonus was included in the four million dollars worth of bonds I estimated that the first syndicate obtained subscriptions for, and was in addition to the bonds subscribed to by Lee, Higginson.

Q. What amount of subscriptions did Bertron, Storrs and Griscom obtain under the initial financing? A. I don't know.

TRIAL EXAMINER: What is the question, please?

[6842] (Question read.)

By MR. HALL:

Q. Do you know that Bertron, Storrs and Griscom procured any bond subscriptions at all under the initial financing? A. Well, at one time or another the firm, I believe, subscribed to $80,000 worth as a firm.

Q. Was that under the initial—— A. There is no way of telling. We know what the total subscriptions were but there is no way of being certain when those subscriptions came in or by whom they were obtained. The only thing we can do is to make an implication out of the fact this five per cent bonus went, simply a conclusion drawn from that fact.

Q. Don't you know this, Mr. Gunn: That those subscriptions to which the additional five per cent bonus at-

tached were obtained under the initial financing agreement? A. Yes, sir, and that is the way we draw the conclusion that about four million dollars of bonds were obtained under the original underwriting, that is the underwriting agreement of March 1, 1905.

Q. Then, so far as you know, Mr. Gunn, you could account for subscriptions only by Coffin and Lee, Higginson and Company under the initial financing agreement?

THE WITNESS: May I have that question, please?

(Question read.)

[6843] THE WITNESS: No, that is not quite right. I could account for subscriptions by Lee, Higginson and I know there were other subscriptions, but I don't know who obtained them.

By MR. HALL:

Q. The only evidence you have seems to indicate, does it not, that Coffin obtained the subscriptions not obtained by Lee, Higginson and Company? A. No, that doesn't seem to me to be a reasonable conclusion for two reasons: First, Bertron was a banker and was the man who was heading the financing syndicate. It certainly seems to me he must have gotten, his firm must have gotten, some subscriptions. In addition to that, if you look at page 186 of Exhibit 27, you will find a notation down at the bottom of the page which reads "Owe," and then in brackets there are four names listed—Henry F. Dimock, Sanderson and Porte , and then an initial M. W. D. and then the H. McKittrick, and then opposite that group of names in another bracket, outside of which it states, "Not delivered," in an amount listing shares there are 275 shares listed. I have not been able to understand what that was but that might indicate some more.

Q. What do the initials M. W. D. stand for? A. I don't recall.

Q. Did you say you didn't know—— A. I said I did not recall what the initials are.

[6844] Q. What do the 275 shares of preferred stock represent? A. Represents 275 shares of preferred stock is all I know.

Q. For what purpose was it issued? A. I don't know.

Q. What does the notation "Not delivered" mean to you? A. Well, it simply means to me, at least at the time this notation was made, either Bertron had not delivered it to the people who were entitled to have it, or that it had not been delivered to Bertron. I don't know which it means.

Q. You notice that the 775, 1,025, and 275 totals 2,075 shares? A. Yes.

[6845] Q. Then there is a subtraction of 1,875 shares with the note "Less our." What does that mean, Mr. Gunn? A. I don't know. I have speculated on that a great deal. But this may be significant: Fisk says that he and Bertron and Griscom were joint bankers in this financing. We know that Fisk got 1,875 shares, and that notation may mean that Bertron, being in joint account with Fisk, also got 1,875 shares.

Q. Are you saying each got 1,875 shares for the same purpose? A. Whatever purpose it was. However, it appears Bertron was forced to use his 1,875 shares, and perhaps more shares than he got with his own firm's bond subscriptions, to satisfy the five per cent owing to subscriptions that had been obtained under his March 1, 1905, underwriting.

Q. Did you say the Fisk firm and Bertron, Storrs & Griscom operated a joint account? A. That is what Fisk said.

Q. Is Fisk's statement the only support for that answer? A. I couldn't say that is true. I can say this, though: The first time I knew that was when Fisk told me. I would say——

Q. Up to that time you had not had any indication of that fact? [6846] A. Up to that time I had not been able to put any of this story together.

Q. Isn't it possible, Mr. Gunn, that the 1,875 shares means that that is the sum total for both Bertron, Storrs & Griscom and Harvey Fisk and Sons? A. Read that again, please.

(Question read.)

THE WITNESS: No, I don't think that is possible.

By MR. HALL:

Q. Why not? A. Because, as I recall it, there was a stock certificate for a like amount of stock issued to either Harvey Fisk and Sons or to Susquehanna Contracting Company. I think it was probably Harvey Fisk and Sons.

Q. Were there two stock certificates issued for 1,875 shares of preferred stock? A. May I have the question, please?

(Question read.)

THE WITNESS: No, there was one stock certificate issued in that amount to Fisk, and then there were several other stock certificates issued for varying amounts, but none of the amounts, none of those other certificates were in the amount of 1,875 shares.

By MR. HALL:

Q. After subtracting the 1,875 shares from the 2,075, [6847] as shown at the bottom of page 186 of Exhibit 27, we have a remainder of 200 shares. What do the 200 shares represent? A. I don't know, except that it represents the difference between 2,075 and 1,875.

Q. But you don't know who got the 200 shares? A. I don't know whether or not anybody got it. The answer is no.

MR. HALL: May I have the question and answer, please?

(Question and answer read.)

By MR. HALL:

Q. Do you have any documentary evidence which would disclose a joint account between Harvey Fisk and Sons and

Bertron, Storrs and Griscom, or a joint banking arrangement? A. Read that, please.

(Question read.)

THE WITNESS: Yes, we have Fisk's affidavit.

By MR. HALL:

Q. Other than the Fisk affidavit? A. I don't have any particular document in mind except that the inference may be drawn from such as we were just discussing, from this page 186.

Q. You mean that is the inference you have drawn? A. Yes, sir.

Q. Would you expect Mr. Coffin to subscribe through Lee, Higginson and Company or through Bertron, Storrs and [6848] Griscom, Mr. Gunn, if Mr. Coffin was making subscriptions through any bankers?

MR. KING: May we have that question?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: I don't know which one he would subscribe through. I have no opinion on that. I know nothing about Mr. Coffin's connections.

• • •

[6851] By MR. HALL:

Q. When you said this morning, Mr. Gunn, that Fisk and Sons displaced Hutchinson from control when Fisk and Sons came into the financing picture, do you mean that Fisk and Sons thereafter controlled the activities and affairs of McCall Ferry Power Company? A. That is my understanding.

Q. In other words, you are saying that McCall Ferry was dominated by, and its activities and affairs were subject to, the dictation and wishes of Fisk and Sons? A. Yes, that is my understanding.

Q. That would mean, would it not, that Fisk and Sons had the power to dictate who should be the officers of the company? A. Yes.

Q. Or who should be the directors? A. Yes, I should think it might even extend that far.

Q. Are you familiar with this letter of June 22, 1906, written by Cary T. Hutchinson to H. F. Dimock? The letter is copied from McCall Ferry Power Company file number 68. [6852] A. Yes, I am familiar with that.

MR. HALL: I pass the letter over to Mr. King for inspection.

By MR. HALL:

Q. Mr. Gunn, this letter reads as follows:

"Dear Mr. Dimock:

Mr. Eddy, of Simpson, Thacher and Bartlett, has just asked me what board of directors shall be elected at the annual meeting of the stockholders, which will be held in Lancaster next Tuesday; the stock will be voted entirely by proxy, and nobody need be there. I told Mr. Eddy to re-elect the present board of directors, with one possible exception, which is the substitution of Kirkland for somebody else; the trouble is to know whose place Kirkland should take. I do not see how it can be arranged at present; probably it will be better to let the board stand exactly as it is, and if you wish later to get someone to resign to make place for Kirkland this could be done very well if Kirkland will have a nominal residence in Pennsylvania, at the works, as we can then get one of the dummy directors to resign.

"Will you let me know certainly Monday morning what you wish done?

"Yours very sincerely,

"Cary T. Hutchinson."

Does that sound like Hutchinson had no voice in the [6853] direction of the affairs of McCall Ferry after Harvey

Fisk and Sons were in the picture? A. May I have the question, please?

(Question read.)

THE WITNESS: It sounds to me like he had very little voice and was being used as a messenger boy. You have to remember this: Mr. Eddy was a member of the firm of Simpson, Thacher and Bartlett but was not the member of the firm that ordinarily handled McCall Ferry's business. Mr. Dimock, President of McCall Ferry Power Company, was Mr. Hutchinson's father-in-law. I don't see that what is stated there indicates one way or the other about Hutchinson's influence.

By MR. HALL:

Q. Are you saying that Dimock was under the control and direction of Harvey Fisk and Sons? A. I certainly think he was.

Q. Even though he was Hutchinson's father-in-law? A. Yes, that didn't preclude Fisk from dominating him.

Q. You say that Fisk dominated McCall Ferry activities? A. That is my understanding.

Q. McCall Ferry activities, notwithstanding the fact that Hutchinson selected the board of directors? A. Yes, I say that because I don't believe Hutchinson selected the board of directors. If he did it would simply mean the board of directors didn't have too much influence.

[6854] Q. Is that your interpretation? A. Yes, that is my interpretation.

Q. Mr. Hutchinson was chief engineer of McCall Ferry among other things? A. Yes, sir.

Q. Do you think those are the duties of a chief engineer, to select members of a board of directors? A. No, but he might very well have discussed them with his father-in-law who was president, and particularly might that be true if there were somebody with a power superior to them.

Q. Is there any indication in Mr. Hutchinson's letter of a power superior? A. No, not in this particular letter

standing alone. I don't know what may have been the reply to this letter. I don't know what may have been the other associated correspondence.

Q. Doesn't Mr. Hutchinson's letter indicate that he had considerable influence in the affairs of McCall Ferry Power Company? A. No, it doesn't to me. All it indicates to me is that he is interceding with his father-in-law to get Kirkland, who was as I recall it vice-president of McCall Ferry Power Company, put on the board of directors perhaps in the place of one of the dummies who was on the board. That also does [6855] not speak too highly for the board's great power if it was filled with dummies.

Q. Apart from this intercession that you see in this letter, Mr. Gunn, it appears, does it not, that Hutchinson was asked to name the board of directors? A. No, sir, I don't think that follows from this letter.

Q. And you say that despite the fact, "Mr. Eddy, of Simpson, Thacher and Bartlett has just asked me what board of directors shall be elected at the annual meeting of the stockholders"? A. Certainly I say it in spite of that. Hutchinson didn't answer him when he asked him that, did he? He went to somebody else to ask them.

[6856] Q. What board of directors was elected, Mr. Gunn, at that meeting? A. I don't have anything before me which would indicate to me what the composition of the board which was then elected would be.

Q. How are you able to say they were dummies? A. The letter said so. I didn't say so. You just read it into the record yourself.

Q. I thought you characterized them as dummies. A. The letter characterizes them that way, Mr. Hall. You just read it into the record yourself.

Q. You didn't intend to so characterize the directors? A. I am repeating what the letter said. Certainly I know that at that time some of the directors weren't dummies by any manner of means.

Q. Such as? A. Pliny Fisk.

Q. He was a member of the board of directors? A. I think he was.

Q. Elected in June of 1906? A. I suspect he was. Let me look. I am not aware any substantial change took place in the board of directors of McCall Ferry after it was first constituted. The board on August 8, 1905, and there may have been some changes, but I don't think they were substantial, consisted of William M. [6857] Barnum. He was no dummy. A. C. Bedford. He wasn't either.

Q. Is that your opinion? A. That is my opinion. All these will be my opinion.

S. R. Bertron was not. E. J. Berwin was not.

Charles A. Coffin wasn't a dummy, I think.

Pliny Fisk wasn't.

Rodman E. Griscom wasn't. Gardiner M. Lane wasn't. William Barcley Parsons wasn't.

As to the rest of them, I don't know how you can classify them. I don't think you can call Dimock one appropriately.

Q. How many more are there? A. William F. Beyer. W. Merriott Canby, and J. J. Hope, and George B. Willson.

Those are the ones I am uncertain about.

Q. When you say you are uncertain about the last few individuals, what do you mean by that? A. I am uncertain as to how they would be classified in view of the fact that this letter that you just read into the record, dated June 22, 1906, refers to the board as having dummies on it. I was just looking down the list and speculating on which might be the dummies.

Q. Are you saying that Beyer, Canby, Hope and Willson might be referred to as dummy directors? A. We have to find a dummy somewhere to fit this letter. I thought it might be some of them.

[6858] Q. If, as you say, they were dummy directors, to whose direction were they subject? A. I don't know. I

don't even know they were the dummies Hutchinson referred to. I was just speculating on who they might be. Hutchinson in his letter to Dimock says he has some dummies and he is considering kicking one of them off the board. I was considering who the dummies might be.

Q. Do you think Hutchinson could have kicked them off the board of directors? A. No, I don't think he necessarily could, but I don't know who could have. I should think, however, that if Fisk, either through the majority of people on the board of directors or by some other means, had complete control of the company that he might be so gracious as to have Hutchinson have a director.

Q. Were all the directors you have named subject to Harvey Fisk and Sons' domination? A. In the sense that directors are dominated I suppose they were.

Q. Could they exercise independent judgments if Fisk didn't want them to? A. I don't know. I suppose they could. I don't know how long they would remain directors.

Q. In other words, you are saying that Fisk was in [6859] a position to impose his will on all those directors. A. In the matters of McCall Ferry Power Company that is my understanding of it. That is what Fisk said he could do.

Q. In other words, Fisk was in a position to impose his will on the president of General Electric Company, C. A. Coffin? A. No, I do not necessarily mean impose in that sense. I simply mean this: That if Mr. Fisk picked these individuals and put them on McCall Ferry board, and Mr. Fisk was primarily responsible for the success of the enterprise, I would expect the men who Mr. Fisk put on the board to support Mr. Fisk's policies.

Q. Did Mr. Fisk select and put those individuals on the board? A. I don't know.

Q. Mr. Eddy's request of Hutchinson is a natural one, isn't it, in view of the fact that Hutchinson was the owner of the largest block of stock? A. No, I don't think it is a

natural one because I don't believe Hutchinson was the owner of the largest block of stock.

Q. Who owned more than 18,840 shares, assuming that is all Hutchinson had? A. I don't know who owned more shares than that. I don't make the assumption Hutchinson had that many shares [6860] beneficially of his own.

Q. Can you state that to be a fact? A. Well, Hutchinson says he used approximately half of the 18,000 shares for the purpose of meeting the obligations he had created in developing the enterprise. So I assume that he had only about half that amount.

Q. You mean Hutchinson says that in Part 1, in his statement which is Part 1, of Exhibit 27? A. Yes.

Q. But that does not mean Hutchinson gave up his power to vote the stock that he gave up if he did? A. Well, he certainly gave up his power to vote some of it.

Q. Do you know to whom Hutchinson gave half of the 18,840 shares? A. No, but I know some of the people to whom he gave some of it.

Q. How much can you account for? A. Well, he gave one thousand shares to Coudert Brothers, one thousand shares to Thomas Newhall, and it seems to me he gave some lesser amounts to other people. Perhaps some engineers working for him, as I recall it.

Q. Was Ehle one of them? A. I believe Ehle got some shares.

Q. When were the two blocks of 1,000 shares delivered to [6861] Coudert Brothers and Newhall? A. I don't have anything before me that will indicate that.

Q. Mr. Gunn, according to page 17 of Exhibit 51, the Commission's accountant, Mr. Newlands, states that the certificates for the two 1,000 shares of stock that you have just referred to were issued in 1909.

My information is that certificate number 30 for 1,000 shares went to Newhall and No. 43, for 1,000 shares, went to Lorenzo Semple. Does that check with your information? A. Just a moment and I will see.

May I have that question, please?

(Question read.)

THE WITNESS: Not necessarily. May I ask this: Those certificates referred to there are McCall Ferry Power Company certificates, are they?

By MR. HALL:

Q. That is right. A. I don't think that has very much significance because this stock from the time it was first distributed was distributed, as I understand it, as voting trust certificates, and probably all this would mean here would be in exchange of voting trust certificates for McCall Ferry Power Company certificates.

Q. Then, in that case, Mr. Gunn, control depended upon [6862] the voting trust, didn't it? A. Yes, I would say that it did, or at least it was another agency which represented the stockholders, as I recall for the period of construction under Fisk financing arrangements.

I am not saying, however, that as an independent agency it has such control over the corporation. Don't misunderstand me.

Q. Who controlled the voting trustees under the voting trust agreement, Mr. Gunn? A. Undoubtedly, as I understand it, Fisk did.

Q. Why do you say "undoubtedly", Mr. Gunn? A. Because Mr. Fisk says he did and Mr. Hutchinson says Fisk did.

Q. And that is the basis of your statement, right? A. That plus all the other things we have talked about which relate to Fisk's control.

TRIAL EXAMINER: That voting trust agreement was as of what date?

MR. HALL: As I understand it it was created January, 1906.

THE WITNESS: As I recall it that is about the time.

MR. GOLDBERG: January 20th is the date I think we used this morning.

THE WITNESS: A moment ago, when I mentioned where [6863] Hutchinson's might have done, I missed one item. 1,000 shares also were given to Lorenzo Semple.

By MR. HALL:

Q. I think we had covered that. Those are the thousand shares that went to Coudert Brothers; isn't that right, Mr. Gunn? A. Yes.

Q. I believe you mentioned the fact that Mr. Dimock, Hutchinson's father-in-law, was president of McCall Ferry Power Company. A. Yes.

Q. During what period was he president? Wasn't it from August 8, 1905 until the bankruptcy? A. No, before that. He was president on August 8, 1905.

Q. Was he the only president that McCall Ferry ever had? A. As I recall it, he was.

Q. All right. A. Maybe we had better correct that last answer. Prior to August 8, 1905, when Dimock was elected president, there had been what I think I referred to as a dummy president prior to that.

Q. McCall Ferry was created in April, 1905, and this dummy president you referred to served up until what date? A. As my records show it, until August 8, 1905.

Q. When was Susquehanna Contracting Company [6864] incorporated? A. June 12, 1905.

Q. What was the purpose of its incorporation? A. First to acquire or construct hydro-electric developments along the Susquehanna River; second, to do a general contracting business—third, to purchase, lease, and so forth, rights and interests in respect to real estate and water—fourth, to acquire and sell machinery, supplies, merchandise, and so forth—fifth, to acquire, use, and dispose of rights in respect to construction, manufactured, and so forth. Sixth, to acquire, pledge, and sell securities of any

corporation and to issue in exchange therefor its own securities.

Q. Did you get that from the certificate of incorporation? A. Yes, sir, I believe that is where I got it.

Q. Was Susquehanna Contracting Company created in connection with the project? A. Yes.

Q. What was its particular function in connection with the project? A. It was the corporate medium through which the securities of McCall Ferry Power Company passed to the subscribers and other people who got them, and also through which the lands and water power rights passed from the people [6865] who owned them, to McCall Ferry Power Company.

Q. Those are two sides of the same purpose, right—in other words, the securities passed for the property? A. Yes, as I understand it—for the property, and, of course, the cash which was raised from the subscribers.

Q. In other words, it was acting as a vehicle in securing the property and distributing the securities? A. I suppose you could call it that. I don't know what the legal significance was.

Q. Why didn't Hutchinson and the others pass their property directly to McCall Ferry? A. I don't know.

Q. At the time Susquehanna Contracting Company was formed, all the bonds had been sold. Right? I mean bond subscriptions had been obtained. A. Yes, I believe they had been obtained.

Q. Do you know of any obstacle that existed which would prevent Hutchinson and the others from passing their property directly to McCall Ferry rather than going through Susquehanna Contracting Company? A. No, I personally don't know of any. I assume there must have been a reason for its creation or they wouldn't have created Susquehanna Contracting Company.

Q. Did you ask Hutchinson or anyone else what the reason was? [6866] A. I don't recall that I did.

Q. Weren't you ever interested in the reason for the creation of Susquehanna Contracting Company? A. As

a matter of curiosity I might have been. I noticed this about the study of the hydroelectric developments on the river: Apparently any time anybody got the idea that they wanted to develop a hydroelectric project they had Susquehanna Contracting Company or its equivalent in the picture. So I assume there must have been some reason for it. As you recall from Exhibit 26, Hutchinson had one, he didn't call it Susquehanna Contracting Company, when he was first planning the development under the Dimock, Bertron and Barney underwriting.

Q. Was that the contemplated company that Johnson had reference to in his letter which is part 4 of Exhibit 27? A. Do you have reference to the particular part of the letter?

MR. GOLDBERG: Let us have the pending question.

(Question read.)

By MR. HALL:

Q. What I mean, Mr. Gunn, is did they follow, in creating Susquehanna Contracting Company, the method contemplated by Mr. Johnson in his opinion? A. That is my understanding of it.

Q. May we properly refer to Susquehanna Contracting [6867] Company as a "paper company"?

MR. KING: May I ask what you mean by a "paper" company?

MR. HALL: What I have in mind, Mr. King, is what the company meant on page 3 of item "K" in this proceeding where in the first complete paragraph they said, "It" referring to Susquehanna Contracting Company "had a capital stock of only $500 and was a 'paper' company which did no construction work and derived no profit. It was dissolved in April, 1910."

THE WITNESS: In the sense it is described there you may refer to it as a paper company. My hesitancy was in describing it in this discussion, whether it might have had

some legal significance or purpose. I guess you could also call that paper.

By Mr. Hall:

Q. It is a fact, is it not, Mr. Gunn, that the temporary McCall Ferry Power Company bonds in the principal amount of $8,483,000 were first turned over to Susquehanna Contracting Company?

The Witness: Will you read that for me, please?

(Question read.)

The Witness: What do you mean by "temporary bonds", Mr. Hall? To what do they refer?

[6868] By Mr. Hall:

Q. What bonds did Susquehanna Contracting Company get from McCall Ferry Power Company under its contract with McCall Ferry under the contract which is Part 18 of Exhibit 27? In other words, were not temporary certificates delivered by McCall Ferry to Susquehanna Contracting Company under that agreement? A. Perhaps they were temporary but I always looked upon them as being the bonds of McCall Ferry Power Company.

Q. As of what date were the bonds turned over to Susquehanna Contracting Company? A. It is my understanding the bonds are dated June 15th. I have nothing before me to indicate that.

Q. My impression is that they were turned over to Susquehanna Contracting Company on August 8, 1905. Will you check that? A. Yes, I will.

Q. After the bonds were turned over to Susquehanna Contracting Company, it retained them until February 1908. Isn't that so, except, of course, for the bonds issued to Harlow-McGaw? A. I think that is correct.

Q. In February, 1908, part of them were issued for the first time to subscribers. Is that right? I am referring now to the non-deferred subscribers. [6869] A. Yes, I believe that is correct.

Q. And they had been held until February of 1908 because they were not to be issued to the subscribers until fully paid for? A. Yes, that is correct. They had been pledged under the loan arrangement with Knickerbocker Trust Company.

Q. There was no loan on the non-deferred subscribers? A. Yes, that is right. I was mistaken about that.

Q. The non-deferred subscribers, as I understand it, represented the principle amount of $1,895,000. A. That sounds correct. I can check it if you wish.

Q. The balance of the bonds to the deferred subscribers were not issued until November 1908 or later, being held by Knickerbocker Trust Company? A. Yes, that is correct.

Q. And they totaled $6,180,000 in principal amount? A. That is correct.

* * *

[6870] By Mr. Hall:

Q. Am I correct in saying, Mr. Gunn, that you have included in your original cost claim certain amounts as representing the cash value of common and preferred stock issued by McCall Ferry Power Company in 1905? A. Yes, I believe that is correct.

Q. What total amount have you included in Penn Water's original cost claim as the claimed cash value of those securities?

* * *

The Witness: There is included in the claimed cost to Pennsylvania Water and Power Company an amount of $471,000, which represents the 18,840 shares valued at $25 a share which was given to Hutchinson for his property.

By Mr. Hall:

Q. You mean the common stock was valued at $25 per share? A. Yes, sir.

There is also included $25,000 representing 1,000 shares of common stock at $25 a share which was given to Harlow and McGaw in the acquisition of their rights.

Did you want the bonds, also?

Q. If you would limit it to common and preferred stock [6871] right now I think it would keep the record straight. A. There was also included, I believe, an amount of $3,750 representing 150 shares of common stock at $25 which was given in acquisition of the Pullen option.

There is included also an amount of $199,570.31 which represents three-eighths of the total value of securities given to Harvey Fisk and Sons for their services. Those securities which Harvey Fisk and Sons received were 1,875 shares of preferred stock, which for this purpose was valued at $50, 17,537½ shares of common stock which was valued at $25 a share.

As I recall it, I believe that is all.

Q. What does that total, Mr. Gunn?

* * *

[6873] MR. HALL: My information is that the total figure was $1,031,273.46.

MR. KING: May I say we did some mathematics here and it indicates to us that that figure is approximately correct.

TRIAL EXAMINER: What is that figure, please?

(Amount read by reporter.)

THE WITNESS: Yes, that is approximately the figure.

By MR. HALL:

Q. What portion of the total figure that I have mentioned represents incorporators' shares? A. Ten shares, as I recall it.

Q. $250?

* * *

[6874] THE WITNESS: I think I can explain it, Mr. Examiner, if you will permit me.

TRIAL EXAMINER: All right.

THE WITNESS: The way I made up the figure was by taking the stock valuation item in number 1 of Page 53 of Exhibit 26.

TRIAL EXAMINER: All right.

THE WITNESS: Plus the common stock item in number 2 on that page, plus the common stock item in number 3 on that page, then I skipped to the bottom of the page and took the $199,570.31, and then from a different source I took an amount of $331,703.15 which is a calculation based upon the [6875] ratio of the exchange of bonds and stocks of Pennsylvania Water and Power Company related to the par value of the bonds of McCall Ferry Power Company which were outstanding, and the total comes out to be $1,031,273.46. But in order to make it that total I believe you have to add in ten of the qualifying shares which I did not mention and which are shown on Page 53.

MR. HALL: That agrees, Mr. Examiner, with my information.

TRIAL EXAMINER: How is it you didn't include the original cost to McCall Company so far as it related to preferred and common stock of McCall Company?

THE WITNESS: May I have the inquiry?

(Question read.)

THE WITNESS: I don't believe I quite understand the question, Mr. Examiner. I am sorry.

TRIAL EXAMINER: You were asked how much of the original cost reflects the valuation placed on the preferred and common stock of McCall Ferry Power Company?

THE WITNESS: Yes.

TRIAL EXAMINER: How much of that was included in the original cost statement of Pennsylvania Water and Power Company?

THE WITNESS: Yes, sir.

TRIAL EXAMINER: All right. Now, in Exhibit 26, Pages 53 [6876] and 54 you have the original cost to

McCall Company of its preferred and common stock. Then when you answered the question you went over that list and picked out certain items and excluded certain items.

Why did you make that selection in order to get your $1,031,000 figure?

THE WITNESS: I understand. The items I excluded were not proper elements of capital cost and were not included in our claim for original cost as it was prepared and filed.

TRIAL EXAMINER: Why is it with Penn Water and not with McCall? Why isn't it so far as Penn Water is concerned and why is it original cost to McCall?

MR. HALL: I believe during the course of cross-examination we will develop what you are now trying to ascertain.

TRIAL EXAMINER: All right.

MR. HALL: What I am saying, we will develop the calculations in detail.

MR. GOLDBERG: Do I understand the Examiner's inquiry to be this: The statement on Page 53 of Exhibit 26 is in part: "The original cost to McCall Company," and the Examiner wants to know why it should not be "The original cost to Penn Water Company"?

[6877] TRIAL EXAMINER: Well, to this extent: In determining the original cost to Penn Water the witness has used the original cost to McCall Company of certain blocks of these securities but not other blocks of the same types of securities.

THE WITNESS: The reason for that, Mr. Examiner, you are referring now to the items I excluded, the $332,617.19 shown at the bottom of page 53, and the other two items, the two other items on page 54. The reason why those were not claimed as a part of the original cost either of McCall Ferry Power Company or Pennsylvania Water and Power

Company is because they were financing charge costs and were not properly included as a part of the original cost except to the extent that they enter into the determination of that figure of $331,703.15.

TRIAL EXAMINER: Your heading is original cost to McCall Company for all those items.

THE WITNESS: Yes. Those items listed there are original cost to McCall Company, but the use of "original cost" there is not the same as the use and definition of original cost in the classification of accounts.

TRIAL EXAMINER: You do not make that clear, do you, in your Exhibit?

THE WITNESS: Not at this particular point, but it is made clear in the original cost filing.

[6878] By MR. HALL:

Q. Where is that mentioned in the original cost filing, Mr. Gunn? A. What do you mean by that?

MR. HALL: You said it was made clear in the original cost filing.

THE WITNESS: It is made clear in the original cost filing by the inclusion in Account 301, organization expense of the amount of $331,703.15.

By MR. HALL:

Q. Do you show a separate amount for each of the other items making up the total? A. Total of what?

Q. $1,031,273.46.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: Yes, sir, they are shown on pages 53 and 54 of Exhibit 26.

By MR. HALL:

Q. Item "K", Mr. Gunn, is Penn Water's original cost claim filed in 1940. Is that right? A. Yes.

Q. Where in Item "K" do you show the breakdown of this total figure we have been talking about? A. You mean of the $1,031,273.46?

[6879] Q. Yes. A. No, that breakdown is not shown in the original cost filing, but the results of it are included in the original cost filing.

Q. As a matter of fact, Mr. Gunn, Item "K" doesn't indicate within its covers that cash value is claimed for common and preferred stock. Isn't that so? A. That very well may be true. Item "K" indicates what the Federal Power Commission requested that Item "K" should indicate. We had an elaborate set of specifications as to what should be put in Item "K".

• • •

[6881] TRIAL EXAMINER: Why didn't you pick up the $93,750, and the $438,437.50?

THE WITNESS: I did not for the reason that Fisk stated that three-eighths of the total amount of $532,187 was for management services, and under the classification of accounts management service is a proper capital cost.

He stated that five-eighths of that total figure was for banking service, and it is my understanding that the banking services were not proper capital items under the uniform system of accounts.

• • •

[6882] TRIAL EXAMINER: You have an item of $532,187.50 under number 4.

THE WITNESS: Yes, sir.

TRIAL EXAMINER: You have got it under original cost.

My question is why include the total figure if you say five-eighths of it is not includable?

THE WITNESS: Mr. Examiner, this tabulation on page 53 is not our claim for original cost. It is merely put there for the purpose of setting forth everything that McCall Ferry got in exchange of securities.

Now, one of those things they got was banking services. Banking services is not a proper part of original cost and the division is here made for the purpose of excluding it from the cost.

• • •

[6884] THE WITNESS: Are you asking me now the date of the issuance of the stock or the date of the commitment to issue it? Which are you asking?

By MR. HALL:

Q. Date of the issuance of the stock? A. I don't have that information before me.

Q. Give me the date of the commitment.

Mr. Gunn, is not the date of the transaction for all of the stock you have listed June, 1905? A. Yes, I think the commitments were made in that month.

Q. And that applies to the stock issued to Bertron, Storrs and Griscom and Lee, Higginson and Company shown at the top of page 54 of Exhibit 26? A. Yes, sir, I think that also applies to that.

• • •

[6886] Q. Mr. Gunn, have you indicated why 1,000 shares of common stock was given to Harlow-McGaw? A. It was part of the consideration which Harlow-McGaw received for his water power rights, lands, canals and other things of value he held on the river and turned over to Susquehanna Contracting Company through Harvey Fisk and Sons.

Q. Why did Pullen get 150 shares? A. That was, as I understand it, in purchase of the option that he held over Harlow-McGaw's property.

Q. That payment to Pullen was in the nature of a nuisance payment, wasn't it? A. I wouldn't say so, no, no more than a nuisance payment on anything else you buy that you want.

Q. It was to get Pullen out of the way so that they could proceed? A. It was to acquire Pullen's option

which he held on Harlow-McGaw's property. You can call it whatever you please. That is what it was.

• • •

[6887] Q. What do you say the purpose was for Harvey Fisk and Sons receiving 1,875 shares of preferred stock? A. That was part of their compensation for the management and banking services they rendered.

Q. And the basis for that statement is what? [6888] A. Fisk affidavit.

Q. Does that also apply to the 17,537½ shares of common stock which you assigned to Fisk? A. Yes, sir.

Q. What does the payment of 5,000 shares of common stock to Lee, Higginson and Company represent? A. Banking services and obtaining subscriptions to bonds and the underwriting.

Q. Did you include in your claim of original cost any cash value for the bonds which were issued by McCall Ferry? A. Yes, sir.

Q. In what total amount? Is it $225,000? A. Yes, sir, $225,000. That was issued in acquisition of the Harlow-McGaw properties.

Q. What does that amount to in terms of cash value per bond? A. $900 per bond.

Q. Did you attempt to determine the cash value of the common and preferred stock? A. McCall Ferry common and preferred stock?

Q. That is right. A. Yes, sir.

[6889] Q. In other words, you attempted to proceed in accordance with Electric Plant Account instruction 3-D? A. Yes, sir, I undertook to comply with that requirement.

Q. And you construed that as a requirement that the cash value of the securities be determined? A. Yes, if they could be determined.

Q. What do you understand by cash value of securities? A. I understand it to mean their cash value.

Q. It is, is it not, the amount of dollars that could be received from a willing purchaser at the time of the trans-

action in which the securities passed? A. Yes, I would say that is a definition of it.

Q. If no one is willing to pay cash for the security it has no cash value. Isn't that right? A. Yes, that would seem to follow.

Q. The cash value is not what may be secured at some time in the future. Is that right? A. May I have that question?

(Question read.)

THE WITNESS: You mean the cash value at a given time is not the cash value, the cash that could be received at some time in the future?

By MR. HALL:

Q. That is correct. [6890] A. I think it is correct that it is not.

* * *

By MR. HALL:

Q. Did you, during your original cost study, obtain affidavits from Cary T. Hutchinson, Pliny Fisk, George C. Lee, and James E. Hopkins for the purpose of assisting you in placing a value on the McCall Ferry Power Company common stock? A. Yes, that was one of the purposes for which those affidavits were secured.

Q. Do the affidavits to which I have just referred comprise parts 1, 9, 8, and 24 of Exhibit 27? [6891] A. Yes, sir.

Q. On Page 52 of Exhibit 26 I believe you point out that the individuals who signed these affidavits arrived at their valuation of the common stock in question, "by means of a valuation of services rendered." Is that correct? A. Where does that occur?

Q. Your exact statement at the bottom of Page 52 and top of Page 53 is as follows: "Inasmuch as the foregoing values for the stock were arrived at by means of a valuation of services rendered, it was necessary to establish one

value for the stock in order to determine the *cost* of these services to the company." A. Yes, sir, it so states.

* * *

[6894] By Mr. Hall:

Q. Mr. Gunn, will you refer to transcript pages 6890 and 6891? A. Yes, sir.

Q. As is there shown you have recognized that the method utilized by Fisk, Hutchinson and others in their affidavits is not proper for the purpose of arriving at the cash value of the common stock at the time of the transaction. Isn't that so?

Mr. King: May we have the question read, please?

(Question read.)

The Witness: No, sir, that is not correct.

By Mr. Hall:

Q. Didn't the individuals to whom I have referred value services rather than the stock? A. They valued services as the only means of arriving at the value of the stock under the circumstances which existed in that case.

Q. Didn't you recognize in that statement that [6895] Instruction 3-D required determination of cash value of stock and not services?

Mr. King: You mean the statement on page 6891?

Mr. Hall: That is correct.

The Witness: It was not my intention to take any such recognition of it. My understanding of Instruction 3-D as explained before yesterday, is that it was necessary—or I had better say, as I have already explained, too,—that there was some uncertainty in my mind about it.

Instruction 3-D seems to me to require obtaining a cash value for the stock at the time it was given.

Now, if it be freely traded in the market, and the market afforded a basis for valuing the stock directly, that

would have been one way of doing it. But that was not the situation in the case of McCall Ferry Power Company, and in order to value it it was necessary to value the thing for which the stock was exchanged, in this case, in the case of Lee, Higginson, at least, it was services.

In the case of Bertron it was services. In the case of Harvey Fisk and Sons it was services. In the case of Hutchinson it was both property and services.

By Mr. Hall:

Q. Generally, what kind of services did Bertron's firm render? A. Financial services in raising the money.

[6896] Q. In view of what you have just said what did you mean when you stated at the bottom of page 52 and at the top of page 53 in Exhibit 26 as follows:

> "Inasmuch as the foregoing different values for the stock were arrived at by means of a valuation of services rendered, it was necessary to establish one value for the stock in order to determine the *cost* of these services to the company"?

The Witness: Will you read that, please?

(Question read.)

The Witness: I meant precisely what I explained in my previous answer.

By Mr. Hall:

Q. Isn't it a fact that neither Hutchinson, Fisk, Lee, nor Hopkins at any place in their affidavits claim that the values they have assigned represent cash value of the common stock at the time of the transaction?

The Witness: May I have that question?

(Question read.)

The Witness: No, I don't think that is a fact.

By Mr. Hall:

Q. Will you refer to those affidavits and point out where they say that they are determining the cash value

of the common stock as used in Instruction 3-D, of Electric Plant Accounts? A. You cannot find those precise words used in there, but the affidavits obviously are doing that, taken as a whole.

[6897] For instance, in the Lee affidavit at one point he said that it was his opinion that if the firm of Lee, Higginson and Company, immediately following the time they received that stock, were going to add or eliminate a partner, thus necessitating a division of the assets, that they would have based that division upon $25. a share, or upon the stock having a value of $125,000 one or the other. That is what I mean by saying that the affidavit was determining the cash value of the services or the stock.

Q. Does that mean that Mr. Lee was saying that the stock could be sold to a willing purchaser for that amount of cash at the time of the transaction? A. That is what it means to me.

Q. Was any stock sold for cash at the time of the transaction?

MR. KING: At the time of what transaction?

MR. HALL: Transaction pursuant to which the common stock was issued.

THE WITNESS: You are speaking of common stock now, are you?

By MR. HALL:

Q. Yes. A. Not so far as I know. I could find no record of cash sale at that time. However, that doesn't prove it couldn't have been sold by any manner of means if they tried.

[6898] Q. Nor does it prove it could have been sold? A. That is right. The only reason I have for believing it could be sold at that price is the fact Mr. Lee states in his affidavit.

Q. How do you explain the fact that if the stock could have been sold for cash it was not? A. Because people who had it wanted to hold it and sell it for a bigger cash price. That is obvious.

Q. Why didn't McCall Ferry get cash from anybody at any time? A. Because they got services.

* * *

[6899] Q. Are you accepting the responsibility for the determination of the cash value of the securities here in issue? A. May I have that question, please?

(Question read.)

THE WITNESS: Yes, to the extent it was necessary to make a determination I had a part of the responsibility and Mr. O'Connor had the other.

I would like to explain what that responsibility consisted of.

By MR. HALL:

Q. Yes. [6900] A. It consisted of taking the evidences of value, which are mentioned in Exhibits 26 and 27, and selecting, based upon those, a figure at which the stock would be valued for the purpose of the original cost claim.

What I am seeking to explain is that I could not, myself, make a valuation of stock as a financial expert would do it.

Q. Did Mr. O'Connor make the valuation as an expert? A. No, I don't think he did. I think the people who actually made the valuations were Lee, Fisk, Hutchinson, and those people.

Q. What is the division of responsibility between you and O'Connor in so far as the determination is concerned? A. I don't know just how to describe it. Mr. O'Connor was my superior in the company at that time and he had considerable knowledge and experience in financial matters, and I discussed the evidences we had of value with Mr. O'Connor and also company counsel.

Q. What experience had Mr. O'Connor had in financial matters? A. He had been secretary of the company for a long number of years and had been largely responsible for the handling of the company's financial affairs.

Q. Did that involve the valuing of common stock or any stock? A. I don't know. It involved buying and selling stocks [6901] as investment for the company so I guess you could call that a valuation.

Q. It involved buying and selling as distinguished from valuation of stock? A. It seems to me when you buy something you value it, don't you?

TRIAL EXAMINER: Don't give argumentative answers.

THE WITNESS: I was trying to answer. I didn't mean to be arguing about it. What I was trying to indicate is that when a person makes up his mind to buy, and decides to buy, a share of stock it seems to me he is then and there valuing it.

By MR. HALL:

Q. Will you specify in detail, Mr. Gunn, just what Mr. O'Connor's responsibility was in connection with determining the cash value of the common stock of McCall Ferry Power Company? A. I don't know how to specify it. It was what I have described to you and the value was arrived at in the way I have described it.

Q. For instance, who determined that the cash value of the common stock was $25? A. It was determined jointly by Mr. O'Connor and myself and by company counsel.

Q. Now you have brought into the picture a third party. [6902] A. No, I mentioned a few moments ago that the discussions relating to the proper value of this stock was had between Mr. O'Connor, company counsel and I.

Q. Who selected the figure of $25? A. I suppose I had as much to do with it as anybody else.

Q. Does that mean that you selected the figure of $25? A. I think you can take it to mean that.

Q. Do you mean by your testimony that you checked your figure with Mr. O'Connor and company counsel? A.

I mean we all sat down and discussed it together numerous times. I can't say that I had absolute responsibility for it in that if I had picked a different figure that Mr. O'Connor couldn't have caused me to change it.

Q. But he didn't cause you to change it? A. No, he did not.

Q. Was $25 the only figure you ever picked?

MR. KING: You mean picked or considered, Mr. Hall?

MR. HALL: We will make it "considered."

THE WITNESS: No, it was not the only figure I considered. I considered figures up as high as $30 and $35.

By MR. HALL:

Q. And as low as what? A. I don't recall that I considered any any lower than $25.

[6903] Q. That means any figure you had lower than $25 you necessarily rejected? A. It also means any figure I had above $25 I rejected.

Q. When did you make your cash value determination of $25? A. I don't recall the date but shortly before the original cost study was completed.

Q. And that would be when? A. Probably early in 1940. I believe we filed the original cost study, as I recall it, in May of 1940.

Q. Mr. Gunn, I don't remember your stating in your qualifications and experience that you have had any experience in determining the cash value of securities. Will you please state what experience you had prior to this proceeding? A. You mean in valuing securities?

Q. Yes. A. None, practically none. I bought a few securities and I sold a few, but my knowledge of it is no more than just the knowledge of a layman.

Q. I believe you have indicated that in determining cash value of securities there were no market prices available to you at all? A. That is right. I couldn't find any.

MR. KING: You are talking about McCall securities?

MR. HALL: Yes.

[6904] THE WITNESS: And McCall common stock also?

MR. HALL: Yes.

THE WITNESS: All right.

By MR. HALL:

Q. Do you know why there were no market quotations available? A. No, except the people who held the common stock didn't want to sell it. That is the only reason I could give. That was certainly true of Harlow. He so testified.

Q. In other words, none of the securities ever reached the market? A. That is my understanding of it, if by "market" you mean a place where they are generally bought and sold.

Q. And that applies to both common and preferred stock? Right? A. So far as I could determine it applies to both.

Q. Did you determine the cash value of the bonds as well as the common stock? A. Well, to the same extent I determined the value of the common stock I determined the value of all of them.

Q. What was the cash value you assigned to the bonds? A. $900 per $1,000 bond.

* * *

[6906] Q. As of what date is $25 the cash value of McCall Ferry common stock? A. I would say at about the same date. Of course, it was the amount of it that was to go for the various services, the commitment for that was made early in March.

Q. 1905? A. Yes. Also, the prospectus on which the project would be built and financed was dated early in March. It would seem to me there would be no difference in the date of valuation between March and June.

Q. At what date did you fix it? A. I didn't have in mind any specific date. I simply had in mind about those dates we have been discussing. As a matter of fact, the only thing I did in fixing the value of a stock was simply to take the valuations fixed by other people and judge what appeared to me to be a reasonable figure based upon all those valuations. For that reason it was not necessary for me to have in mind any particular date other than the fact that I was valuing the stock at the beginning of the enterprise.

Q. In other words, you weighed the evidence available to you and arrived at the $25 valuation and the $90 valuation? A. That is right.

MR. KING: Did you say $90?

[6907] MR. HALL: $900.

THE WITNESS: And the $900 you speak of applies to the bonds.

By MR. HALL:

Q. Yes. In other words, the date for the common was between March and June of 1905? A. Yes, I would say that.

Q. As of what date is $50 the cash value of the McCall Ferry preferred stock? A. The same date.

Q. Would you say that the $900 received for the bonds is based upon the cash received for the bonds? A. May I have that question, please?

(Question read.)

By MR. HALL:

Q. In other words, would you say that it is based upon the evidence of the cash received for the bonds? A. In part, yes.

Q. What else was the $900 valuation based upon? A. Well, it was based upon the fact that Harvey Fisk had the right or the obligation, as Fisk described it, to repurchase the bonds at 900, and it was based upon Harlow's testi-

mony that while he didn't know whether he could sell the bonds for 900 that he would not sell them for less than 1,000, and based on the fact that Bertron, Storrs & Griscom, as I [6908] recall, when they entered them in their records entered them at 90.

Q. Do you know the date of Harlow's statement? A. The latter part of 1906, I believe, and it is also a fact that when Mr. Harlow gave that testimony, in which he made that statement, that he was testifying in a situation where it would be in his interest to have stated the minimum figure he could for those bonds.

Q. That is your own interpretation of the issues in the case. Is that right, Mr. Gunn? A. Well, it is my interpretation of it but it seems a rather obvious interpretation.

TRIAL EXAMINER: Where is that, Mr. Witness?

THE WITNESS: Beg your pardon?

TRIAL EXAMINER: Where is included Harlow's testimony?

MR. KING: Item 21 of Exhibit 27.

By MR. HALL:

Q. Referring to Exhibit 26, page 47, paragraph 2, isn't it a fact that Mr. Harlow indicated in his testimony that he couldn't get $90 cash for the bonds? A. He said he did not think he could.

[6909] Q. Nevertheless, he said he was not willing to part with it for less than $100, is that right? A. Less than one thousand.

Q. Because he was thinking in terms of its future worth to him? A. I don't know what he was thinking of.

Q. When you use 90 your reference is to $100 and when you refer to $900 the relationship is to $1,000. Is that right? A. Yes, always speaking of the bonds.

Q. In other words, bonds are usually recorded on the basis of $1,000 or $100 units? A. Yes.

Q. Isn't it a fact that when the bonds, preferred and common stocks were issued the cash received for the bonds was the only cash received for any of the McCall Ferry Power Company securities?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: Yes, I believe that was the only cash received, but it was not the only thing of value received.

By MR. HALL:

Q. In your opinion? A. In my opinion, yes, sir.

Q. If, as you say, the preferred stock had a cash value [6910] of $50 can you explain why it was not sold at that price rather than being issued as bonus stock? A. Well, it seems to me there were several reasons.

Q. Such as? A. The people who had the money which was sought for the purpose of developing the property, when they subscribed to that bundle of securities, and I refer to the $1,000 bond and the $450 or $500 worth of preferred stock, they were doing two things:

They were parting with $900 in cash and they were then and there assuming a very substantial risk of losing it, and those two together seemed to me to be the reason why it was necessary to furnish preferred stock which did have a value with the bonds in order to make the transaction.

Q. The assumption of risk, Mr. Gunn, applied both to the bonds and stock? A. Yes, to be sure. It applied to everything. The risks applied to the enterprise.

Q. But the assumption of risk as to the bonds was of a lesser degree. Is that right? A. The assumption of risk as to the bonds was less than the risk on other securities.

Q. Do you know why that was so? A. By the preferences, I suppose.

Q. That was because it was secured by the property. Is [6911] that right?

MR. KING: You mean the bonds were secured by the property.

MR. HALL: Yes.

THE WITNESS: That is what I had in mind when I mentioned the preferences.

By MR. HALL:

Q. But there was nothing at all which would modify the risk of the preferred?

THE WITNESS: May I have that question?

(Question read.)

THE WITNESS: I don't believe I understand what you mean.

By MR. HALL:

Q. Well, there was no protection to the preferred stock as in the bonds? A. Not as much but there was the same protection to that preferred stock as there is to any other preferred stock.

TRIAL EXAMINER: As of the time the preferred was issued all property owned by the company in toto was not equal to the face value of the bonds. Is that true?

THE WITNESS: May I have that question?

(Examiner's question read.)

THE WITNESS: It seems to me, Mr. Examiner, McCall Ferry Power Company thought it was.

MR. HALL: What is that answer, please?

[6912] By MR. HALL:

Q. Then, Mr. Gunn, why is there a discount on the bonds involved? A. Because of the risk of the enterprise.

Q. But if the value of the property was the equivalent of par, they should have gotten par for the bonds. Is that right? A. I think there is some confusion here. The

Examiner asked me a question referring merely to the par value of the bonds. Now we seem to be discussing the value of the total securities outstanding.

Q. But if there was an equivalence between the bonds and the property they nevertheless should have gotten par for the bonds. Is that right?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: I don't know, but I shouldn't think so.

By MR. HALL:

Q. What was the outstanding capitalization of McCall Ferry Power Company as of June, 1905, in toto?

MR. KING: Was that question the capitalization of the Company or the outstanding securities?

MR. HALL: Outstanding securities is what I had reference to, Mr. King.

THE WITNESS: It seems to have been between seventeen [6913] and eighteen million dollars.

TRIAL EXAMINER: Can you break that down into bonds and the two classes of stock?

THE WITNESS: Yes. There were $8,483,000 principal amount of bonds; $4,116,500 principal amount of preferred stock; $4,999,000 shares of common stock. I suppose that common stock should be five million dollars because the missing shares are the qualifying shares from the figure I gave you. That should be five million dollars.

By MR. HALL:

Q. The total of that is approximately $17,500,000.

A. Yes, sir.

TRIAL EXAMINER: Where did you get that data?

THE WITNESS: Page 41 from the agreement between McCall Ferry Power Company and Susquehanna Contracting Company at the top of the page.

By MR. HALL:

Q. Mr. Gunn, what property did McCall Ferry Power Company own at that time which could be used to satisfy claims totalling 17½ million dollars?

MR. KING: If your Honor please, I object to the form of the question. I think this witness has indicated he is not a lawyer. He can indicate what property they had, but the balance of the question calls for a legal conclusion.

TRIAL EXAMINER: Read the question, please.

[6914] (Question read.)

TRIAL EXAMINER: I think the witness can answer that question. Objection is overruled.

THE WITNESS: It seems rather obvious to me that they didn't own enough to satisfy any such claim as that.

By MR. HALL:

Q. How much do you think they owned, Mr. Gunn? A. I think they owned enough to support the valuation that I have placed on the bonds, the preferred, and the common stock.

Q. Are you saying that the property which passed to McCall Ferry Power Company had a valuation of seventeen million dollars? A. No, sir.

Q. How much did it have? A. I don't know [that] I valued it. But the value that I placed on the securities is what we have been discussing this morning, $900 for the bonds, $50 for the preferred stock and $25 for the common stock.

Q. And the value for the preferred and common is based upon the valuation of services and not property. Is that right? A. That was the means by which we arrived at the value of the shares, yes, in part. It was also, in part, on the property.

[6915] TRIAL EXAMINER: Mr. Witness, if you applied your valuation to the capitalization you gave a moment ago, what would your result be?

THE WITNESS: You would get nine-tenths of the bonds, one-half of the preferred stock, and a quarter of the common stock.

By MR. HALL:

Q. You are saying that the value of the securities is represented by services and not property. Is that right?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: No, I don't think that is what I am saying.

By MR. HALL:

Q. What are you saying? A. I am simply saying that because of the peculiar circumstances here it was necessary in arriving at the dollar equivalent of the stock to value services exchanged in certain transactions because that was the only evidence of it. But it doesn't follow from that that the valuation so placed upon it arises out of the services, at least not totally out of the services.

Q. What property did Lee, Higginson and Company transfer to McCall Ferry for the securities they received? A. I don't think they transferred any property. They [6916] rendered services for the securities they received.

Q. How about Harvey Fisk and Sons? A. I think the same thing is true of Harvey Fisk and Sons, except in addition to financing services he rendered managing services.

Q. That is your contention? A. Yes, sir, that is what Mr. Fisk says.

Q. How about Bertron, Storrs and Griscom? A. I think they rendered largely financial services.

Q. What property did the bondholders who received the bonus preferred stock transfer to McCall Ferry Power Company?

THE WITNESS: May I have that, please?

(Question read.)

THE WITNESS: They transferred cash and assumed risks.

By MR. HALL:

Q. And that necessarily means they transferred no property? A. What do you call property?

Q. Except for the cash. A. Yes, I suppose the cash is the only tangible property they transferred, but they rendered a valuable service to the enterprise in the shape of assuming the risk in parting with their $900.

Q. It is a fact that the only two individuals who [6917] transferred property to McCall Ferry were Hutchinson and Harlow McGaw. Right? A. What do you mean by "property" in that question? I thought we decided a moment ago that money was property.

Q. With that qualification.

THE WITNESS: Now may I have the question?

TRIAL EXAMINER: Yes.

(Question read.)

MR. KING: You mean at the time of the early development and issuance of the securities?

MR. HALL: June, 1905.

THE WITNESS: Yes, as I recall all the property came in through those two individuals.

By MR. HALL:

Q. What do you claim, Mr. Gunn, is the total original cost of McCall Ferry as of June, 1905?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: You mean cost of, or cost to?

By MR. HALL:

Q. What do you claim the total original cost of the McCall Ferry Power Company property is as of June 1905? A. You are speaking now of these two property transactions?

Q. No, I am speaking of all property which McCall [6918] Ferry Power Company had as of the date of June, 1905. A. I don't know. I never computed it. If you want to know what the claimed original cost of the Hutchinson and Harlow-McGaw transactions are, I can tell you that. I didn't make a determination as of 1905.

Q. Wasn't that one of the determinations you had to make in reaching your conclusion in this case? A. Not if I understand your question it was not.

Q. Just what did you understand my question to mean? A. I thought you were asking me what was the total original cost of McCall Ferry Power Company in June of 1905.

Q. Up to that date. That is what I was asking you. A. I told you that I had not computed the cost as of that date, or at least I do not have it before me now.

Q. Will you enumerate what property McCall Ferry Power Company had as of June, 1905, in general terms? A. What do you mean by "property"? Are you including the money in it now or not?

Q. Yes, I am including the money. A. Well, they had the property they obtained from Hutchinson. They had the property they obtained from Harlow-McGaw. They had $6,400,000, I believe it was, that had been raised to construct the project.

Q. That is the loan you are talking about from Knickerbocker Trust Company? [6919] A. No. They had available to them the proceeds of the bonds that had been subscribed to.

Q. All right. A. And they had a very great intangible element of property, shall we say, in the fact they had the financing assured and all the water power rights necessary to go ahead and complete the project.

Q. What original cost did you put on Hutchinson's properties at the time of their transfer to McCall Ferry Power Company?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: $1,221,000.

By MR. HALL:

Q. What original cost did you put on the Harlow-McGaw properties at the time of their transfer to McCall Ferry Power Company? A. $450,432.

Q. What original cost, if any, did you put on the Pullen transaction? A. $13,772.22.

TRIAL EXAMINER: Where does that come in the list of things you gave a moment ago? Is that among the intangibles or is that something which was omitted?

THE WITNESS: I think that is something we missed a [6920] moment ago, but it should have been included, Mr. Examiner.

Do you want the other things of value they got?

MR. HALL: I beg your pardon?

THE WITNESS: Do you want the other things of value they got?

By MR. HALL:

Q. I will ask you the questions as we go along, Mr. Gunn.

What did 90 per cent of the bond subscriptions amount to dollarwise? The bond subscription according to my information, Mr. Gunn, was $8,075,000.

TRIAL EXAMINER: As of June, 1905?

MR. HALL: Yes.

TRIAL EXAMINER: Were there any deferred subscriptions still outstanding at that time?

MR. HALL: They were all sold at 90, Mr. Examiner, because of the loan arrangement which had been made with Knickerbocker Trust Company.

TRIAL EXAMINER: All right.

MR. HALL: In other words, Knickerbocker Trust Company advanced funds——

TRIAL EXAMINER: Against the deferred subscriptions?

MR. HALL: Yes.

TRIAL EXAMINER: On the basis of $100?

MR. HALL: On the basis of 90, less the initial [6921] advancement made by the subscribers themselves.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: $7,267,500.

By MR. HALL:

Q. Mr. Gunn, by adding the amounts of $13,772, the $1,221,000, the $450,000, and the $7,267,000, we arrive at a total of $8,951,772, which represents all the physical property or cash available to McCall Ferry Power Company at June, 1905. Is that right?

THE WITNESS: May I have the question, please?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: Yes, it represents it in the form of original cost, but that doesn't seem to me to represent all the assets of McCall Ferry Power Company.

By MR. HALL:

Q. What other assets, Mr. Gunn, do you have in mind which could be sold for cash? A. You mean McCall Ferry Power Company could sell for cash?

Q. That is right. A. Water power rights.

Q. The water rights you refer to are included in the Harlow-McGaw and Hutchinson properties. Is that right? [6922] A. Yes, but there is a vast difference in the value of water power rights sold as separate parcels or small groups of parcels than it is when you bring them together and have assured financing and an assured market. At least I am told there is a difference. I am not a water-rights expert, but at least that is my understanding of it.

* * *

[6923] By MR. HALL:

Q. Mr. Gunn, you were talking about selling the property in your last answer in connection with its being a successful enterprise at the time of sale. Is that right? A. Let's have the answer read. I am not aware I proposed to sell it.

TRIAL EXAMINER: Read the answer, please.

(Answer read.)

THE WITNESS: If you note there I was not suggesting a sale by McCall Ferry Power Company. The word "sale" used in [6924] that question refers to Hutchinson and Harlow and McGaw's sale to McCall Ferry Power Company.

By MR. HALL:

Q. In other words, you are talking in terms of value of a successful enterprise based upon prospective earnings?

MR. KING: You mean solely based upon prospective earnings, Mr. Hall? The question is a little ambiguous.

MR. HALL: Will you answer the question, Mr. Gunn?

TRIAL EXAMINER: Read the question, please.

(Question read.)

MR. KING: I object to the question on the ground it is ambiguous, if Your Honor please.

MR. GOLDBERG: To counsel?

MR. KING: Yes.

TRIAL EXAMINER: What is ambiguous about that?

THE WITNESS: The thing ambiguous to me is that in a successful enterprise the earnings are not prospective. That is one thing ambiguous about it.

By MR. HALL:

Q. And it is earnings that give it value? A. Beg your pardon?

Q. It is the earnings that give it the value? A. I don't know you could say it is the sole reason for its having a value. If it had no prospect of having any earnings then it wouldn't have very much value.

[6925] Q. Now, Mr. Gunn, what did the bondholders get in the foreclosure proceedings—strike that, please.

What was paid in the foreclosure proceedings for the McCall Ferry Power Company property?

MR. KING: I object to that question as being wholly irrelevant and immaterial.

TRIAL EXAMINER: On what grounds?

MR. KING: To establish the value in 1905.

TRIAL EXAMINER: When was this foreclosed? 1909?

MR. KING: A number of years later, 1909 or 1910. I don't recall the exact date.

TRIAL EXAMINER: The project then was still uncompleted?

MR. KING: Yes, sir.

TRIAL EXAMINER: The objection is overruled.

THE WITNESS: Will you read the question, please?

(Question read.)

THE WITNESS: $2,000,000, I think, was one of the payments. Then, of course, there was an exchange of securities. I don't know just which one of those things you would call payment in the foreclosure proceedings. I don't think that has any significance because when Barnum went in to bid the property, as I recall it, he was authorized by the bondholders' committee that if there was a competitive bid made to bid up to the face value of the bonds plus accrued interest plus all expenses that had been incurred up to that time.

[6926] By MR. HALL:

Q. How much is that? A. I don't know offhand.

Q. But the foreclosure price was $2,000,000, period? A. I understand that was the bid, $2,000,000, and nobody bid against them. Hutchinson later complained bitterly, and so did Sanderson and Porter, that McCall Ferry Power Committee moved so fast they wouldn't give them an opportunity to organize any opposition.

* * *

[6935] Q. But there were no earnings created by the financing itself? A. I don't quite follow your question. Are you saying this: That the mere act of financing standing alone did not create earnings? If that is what you are asking me the answer obviously is that it didn't, except to the extent they deposit the money in the bank and get some interest on it.

Q. Other than the interests there were no earnings. A. Not out of that item standing alone. The earnings would come out of the combination of all these things I mentioned.

Q. Were there any earnings out of the water power rights to which you have referred, Mr. Gunn? A. Not standing alone. Separate from the other items I mentioned I don't suppose there would be any earnings out of

it. They would be valuable water power rights that could be sold, of course, but undeveloped water power rights don't have any earnings ordinarily.

Q. There could be no earnings until the project was constructed and successfully operated? A. That is correct, there could be no actual earnings until that time.

Q. And that was, of course, all in the future in 1905.

[6936] A. You mean prospective completion?

Q. Yes. A. Yes, obviously.

Q. And the earnings as well. A. Yes. Yes, I think that is right.

Q. There was absolutely nothing available in 1905 to pay dividends on the stock. Is that correct? A. I don't think there was anything with which you could properly have paid dividends.

• • •

[6976] Q. How did Pliny Fisk use Part 10 of Exhibit 27 in arriving at the cash value? A. I don't know. You will have to ask Mr. Fisk.

Q. Then the fact is that you do not know how Fisk, Hutchinson, Lee, and any others to whom you submitted the documents, used them in arriving at their conclusions as to cash values?

THE WITNESS: May I have the question, please?

(Question read.)

MR. KING: Mr. Hall, by the words "How they used them", you mean what weight they gave to particular documents?

MR. HALL: Simply how it entered into their conclusions as to cash value.

[6977] THE WITNESS: I obviously do not know. I couldn't look into their mental processes.

By MR. HALL:

Q. As a matter of fact, Mr. Gunn, you don't even know what documents entered into their considerations. Right? A. I do know what documents I gave them.

Q. But that is not the—— A. But I do not know what weight they gave to the various documents. Certainly I do not.

Q. Or whether they even used them in arriving at their values? A. No, I don't know that. As I have told you, I wasn't present when Mr. Fisk came to his conclusions. I wasn't present when Mr. Hutchinson came to his. As a matter of fact, I don't know as I was present when any of them came to their conclusions. So I can't tell you what the mental process was.

* * *

[6981] Q. I am merely asking you how much profit you considered the bankers got. A. I didn't have to consider any profit myself. I assumed that Fisk and Lee and these other people considered it when they made the valuation.

Q. Didn't you say that the profit the bankers got would have a bearing on the cash value? A. Yes, it seems to me it would. I made that [6982] speculation, yes.

Q. Didn't you also state that you applied an independent judgment as to the determination which Fisk and the others made? A. No, sir, I don't think I stated that. I didn't intend to.

Q. Didn't you say, for instance, that you had considered part 2 of Exhibit 27? A. I don't think so. What I was saying at that time is what would have to be considered to arrive at an appraisal of this stock. I told you earlier this morning, I think, that between Mr. O'Connor and counsel and myself we simply arrived at a valuation from the opinions that had been given by people who were present at the time and in that in confirmation of those, or in order to assure myself that they at least looked reasonable to me, I considered what would be the earnings of McCall Ferry Power Company.

Now, in order to consider that you have to have the facts included in other parts of Exhibit 27 than those parts which we mentioned.

* * *

[6986] Q. Is Mr. Lee, who signed part 8 of Exhibit 27, still alive? A. Yes, sir. He was according to the last account I had of him. I haven't heard of his dying.

Q. When was that, Mr. Gunn? A. Perhaps a year ago or some such time.

Q. How old is Mr. Lee? A. I can't say precisely. I can probably find out. I would say he is in his eighties. He was a rather old man whom I would judge to be well in the seventies when I obtained from him the affidavit which is Part 8 in Exhibit 27. That was some eight years ago. So he is rather advanced in years now.

Q. Mr. Gunn, upon which statement included in Exhibit 27 did you place the most reliance in reaching your conclusion [6987] as to cash value of common stock? A. May I have that question?

MR. KING: Of the McCall Company?

MR. HALL: Yes.

(Question read.)

THE WITNESS: I don't believe I could designate a single one. But I would say this: I placed considerable reliance in the statement of Mr. Lee, Mr. Fisk, and Mr. Hutchinson.

By MR. HALL:

Q. Did you consider that those three were all equally reliable? A. I don't think I ever graded them.

Q. What is that? A. I don't think I ever graded them as to their reliability.

Q. Did you use Hutchinson's determination of cash value of McCall Ferry common stock? A. Did I use it?

Q. Yes. A. I took it into consideration, yes.

Q. And then rejected it, right? A. No, I wouldn't say I rejected it. I wouldn't say any of them were rejected.

Q. What cash value did Mr. Hutchinson place on the common stock in his affidavit which is part 1 of Exhibit 27? [6988] A. May I have the question, please?

(Question read.)

THE WITNESS: He said he believed it was worth from 20 to $30 a share.

By MR. HALL:

Q. What did Mr. Lee say in his affidavit which is Part 8 of Exhibit 27? A. $25 per share.

Q. What cash value did Mr. Fisk arrive at in his statement which is Part 9 of Exhibit 27? A. For the common stock?

Q. Yes. A. He sets forth in that Exhibit figures from which it is possible to compute $18 a share for the common stock.

MR. HALL: Would you read back the last answer?

(Answer read.)

By MR. HALL:

Q. How did the $18 cash value assigned by Fisk to the common stock assist you in determining the $25 cash value which you used? A. In the same way the others did. It was a fact to be taken into consideration.

Q. Just how did you take it into account? A. I just considered all of the estimates of value I had and came to the conclusion that $25 a share was the proper [6989] figure.

Q. By what process did you get from $18 to $25 per share? A. By the process of considering what Hutchinson had said the value was, what Lee said the value was, what Fisk said the value was, what Hopkins said he thought the value was. I believe that is all of them.

Q. What did Mr. Hopkins say the cash value of the common stock was? A. Mr. Hopkins stated in Part 24 of Exhibit 27 an amount for the legal services of Coudert Bros., which was equivalent to a $30 per share value on the 1,000 shares of stock they received for their services.

Q. Didn't Mr. Hopkins also point out, "I am not qualified to place a value on that stock as such"? He makes

that statement, does he not, on page 201 of Exhibit 27? A. May I have the question, please?

(Question read.)

THE WITNESS: Yes, I think Mr. Hopkins felt the same about it as I do.

By MR. HALL:

Q. You mean by that you are not qualified to place cash value on the McCall Ferry common stock? A. Independently of my own ability? I certainly would not be qualified to do it.

[6990] Q. How were you able, Mr. Gunn, to apply any independent judgment to what Mr. Fisk, Lee and Hutchinson said when you just stated you didn't think you were qualified? A. In the same way anyone else would do it. In the same way the Commission would do it, I think. I considered the figures they gave me and picked the ones which in my judgment were most appropriate.

Q. Does that mean you don't think the Commission is qualified to pass on this determination? A. I was not saying that at all. I didn't understand the Commission were financial experts. That is the reason I thought it was necessary to bring financial experts down to testify for them once in a while.

Q. Mr. Gunn, who was the financial expert who assisted you in determining the $25 cash value for the common stock? A. Mr. O'Connor had some knowledge of financial matters. It was discussed with company counsel and among the three of us we arrived at that conclusion.

Q. When you used a $25 cash valuation for the common stock you necessarily rejected Fisk's valuation of $18 per share. Right? A. No, I don't so term it. There were three or four different values stated by different people and in taking them into consideration and arriving at a single value it automatically makes that value different from at least two [6991] of the others, but I don't think that constitutes rejecting them.

Q. If you thought that Fisk's $18 valuation was the correct figure you would have used that $18 figure. Isn't that right? A. Not necessarily. I don't think so. I think you assumed in that question that I had no other evidence but just Fisk's, haven't you, or are you still assuming I have these other people's opinions?

[6992] Q. Assuming you had the evidence but you concluded that Fisk was the best evidence of cash value of common stock, you would have agreed with Mr. Fisk. Is that right? A. Do you also include in that assumption that the others were worth less?

Q. No, just the thought that Fisk's statement was the best evidence. A. No, I think I would have considered them all. That is if I had not come to the conclusion that the others were worth less.

Q. How did Mr. Hutchinson's twenty to thirty dollar valuation assist you in arriving at a $25 cash valuation for the common stock? A. In the same manner in which the others did. It was one factor to be considered and weighed in reaching a conclusion.

Q. Can you explain how you considered Mr. Hutchinson's valuation? A. No, sir, I cannot. I can not describe my mental processes in reaching the conclusion.

Q. You cannot explain how you weighed it? A. No, sir.

Q. It is a fact, is it not, Mr. Gunn, that the determination of $25 that you did use coincided with Mr. Lee's determination? [6993] A. Yes, and it also fell within the range of Mr. Hutchinson's determination.

Q. It fell—— A. Right square in the middle of the range.

Q. Are you saying what you did was to take the average? A. I may have done some averaging. As I said, I can't describe my mental process of how I came to the conclusion of $25 a share. It just seemed to me that from a consideration of all the facts the $25 was a proper figure. I have to say again that I am not a financial expert.

• • •

[7021] MR. KING: * * * Lastly at pages 6816 and 6817 we were requested, as we understand it, to produce so-called participation, which is a list of documents submitted to Hutchinson and Fisk. I now hand Mr. Hall copies of those two documents.

I would like to say in connection with the last documents I have handed to Mr. Hall that they are the only copy which we have. We would like to have them returned as soon as possible.

MR. HALL: Receipt is acknowledged of these documents, Mr. Examiner, and they will be returned intact.

* * *

By MR. HALL:

Q. Mr. Gunn, why didn't you use $18 as the cash value of the McCall Ferry common stock? A. Because I reached the conclusion that $25 was the proper value to use.

Q. Why didn't you consider the $18 cash valuation proper? A. Because I had several valuations and I considered them all and arrived at the conclusion that $25 was proper.

[7022] Now, as I recall, the valuations I have ranged from $18 to $30. It was necessary to pick a single valuation of the stock and it was therefore a mathematical result, and in picking any single valuation it would be different from the others that varied from it.

Q. Why didn't you pick the $30 valuation? A. For the same reason I didn't pick the $18 one.

MR. KING: Would you excuse me just a minute, Mr. Hall.

You asked for another bit of homework which I forgot to make a statement in connection with.

At Pages 6816 and 6817 I have stated that I have handed you participations of Hutchinson and Fisk in response to the request you made at those pages.

MR. HALL: Yes.

MR. KING: You will note from examining the pages that you also asked, in addition to the participations submitted to Hutchinson and Fisk, the ones submitted to Hopkins. I forgot to say that we do not have any participation submitted to Hopkins because the information in Hopkins' statement was limited to matters in his own firm's file.

MR. HALL: In other words, you did not submit any documents at all to Mr. Hopkins upon which he based his statement in part or in whole?

MR. KING: Correct, because he based his statement upon the documents in his own files.

[7023] MR. HALL: How about Mr. Lee?

MR. KING: You didn't ask us for Mr. Lee. We have a participation submitted to Mr. Lee.

MR. HALL: Will you submit those covering Mr. Lee's participation also?

MR. KING: Yes.

TRIAL EXAMINER: What is the meaning of the word "Participation"?

MR. KING: Simply means a list of the documents which were submitted to the affiants Hutchinson, Fisk, and Lee upon which they made up their minds and finally prepared and executed affidavits in connection with.

TRIAL EXAMINER: Are they the documents which were presented to each one of them for affidavits and upon which they based all of the material contained in each of the affidavits?

MR. KING: Would you like to look at them?

TRIAL EXAMINER: I am afraid I couldn't get much out of them if I looked at them right at this moment.

MR. KING: Those so-called participations, if Your Honor please, contained on top of them a summary nar-

rative of the facts; and, secondly, exhibits relating to the particular party's participation in the project. They do not contain all of the exhibits in the company's files, as Mr. Gunn heretofore has stated.

TRIAL EXAMINER: You used the word "participation" then, [7024] in connection with the project?

MR. KING: Correct.

MR. HALL: Serving as the basis for refreshing recollection, is that right, Mr. Gunn?

THE WITNESS: A part of the basis.

By MR. HALL:

Q. What is the other part you refer to? A. Well, for example, in the case of Lee, Higginson, they in their own files had some additional information in addition to what was supplied in the participation.

Q. What additional information did Hutchinson have other than that which you furnished him and which is contained in these documents Mr. King has turned over to me? A. In the case of Mr. Hutchinson he had access to a very considerable amount more than that because he worked with me off and on for a period of eight or ten months, I believe, during which we devoted several days to conferences and a considerable part of that time was spent in reviewing a large volume of information in the company's files, of which the portion in the participation appeared to be the more important items.

[7025] Q. I believe you have testified Mr. Hutchinson had no personal files relating to the early history of the McCall Ferry Power Company? A. That is correct.

Q. Then he relied solely upon the information in the company's files, right, plus his recollection? A. Plus his recollection; yes.

Q. All right. A. But what I am seeking to explain is that all of the information from the company's files which he reviewed is not in that participation.

MR. HALL: Mr. King, did I correctly understand you to say a few moments ago that Hopkins, in preparing his affidavit, which is Part 24 of Exhibit 27, relied solely upon his recollection and the information contained in the files of Coudert Brothers and was not submitted any participation in connection with the preparation of that exhibit?

MR. KING: That is my understanding.

By MR. HALL:

Q. Mr. Gunn, before these documents were submitted to the individuals we have been discussing, speaking of the participations, had it been ascertained whether they had documents of their own upon which they could rely? A. Yes, I think that had been ascertained.

Q. What did you ascertain in that connection? [7026] A. It varied from one to another. In the case of Mr. Lee I ascertained that he had a considerable amount of information in his own files. Just precisely how much and what the information consisted of I never knew except that he produced certain documents in support of his statement, gave me copies of them, and I think for the most part they are included in Exhibit 27, and also in the Lee, Higginson participation.

In the case of Hutchinson, he had no personal documents of his own. He attempted to secure from the successor to Continental Trust Company in New York, I believe, the records of his bank account through which the cash paid to him was disbursed in satisfaction of his obligation to other people, and advised me that it was impossible—that that bank long since had destroyed the records and he could not obtain that information. Therefore, the information which Hutchinson had available to him was what was supplied him from our company's files, a part only of which is included in the participation, and that was supplemented by his recollection.

Now, as regards Fisk, I don't know just what information he had before him, but I am sure he had more than I submitted to him. I believe that for this reason: He was represented by a personal counsel by the name of Wilton Cole, and he had a son who, working with Mr. Cole, undertook to find as much information as possible about the McCall Ferry participation, [7027] and it was my understanding that they found some information in the Pliny Fisk library at Princeton University. I don't know whether it was the same that I had made available to him or whether it was additional, but it was my understanding from Mr. Cole that it was not of primary importance.

Q. I don't understand your last statement there, Mr. Gunn, in view of the fact that Mr. Fisk, at the bottom of page 70 and top of page 71 of Exhibit 27, states, "Their search", referring to the search made by his son and Mr. Cole, "established the fact that all of the records of Harvey Fisk and Sons relating to the McCall Ferry Power Company deal had been destroyed." A. Well, I think that was in general true, but it was my understanding that there was some information in the Fisk library at Princeton.

Q. Are you in a position to state that it is a fact that Fisk relied upon information which you did not furnish him through Cole? A. No, I personally cannot state that as a fact that I know.

Now, as for Mr. Hopkins, I did not supply him any information because the total connection with his firm, about which I ever had any information, came from the files of Coudert Brothers, and he therefore had the information.

Q. Then no statement was submitted to Hopkins? [7028] A. No; that is right.

Q. Mr. Gunn, I find in the participations turned over to me by Mr. King, which were submitted to Fisk, pencil notation in the margin. Whose handwriting is that? A. I don't know. I have not looked at them in several years. May I look at them? I might be able to identify them.

Q. I refer you to these notations in the margin. A. I cannot state for certain, but they look like the handwriting of Mr. Wilton D. Cole. I can state for certain they are not mine.

* * *

[7036] By Mr. Hall:

Q. Can you answer the question, Mr. Gunn? A. I don't understand what you mean by "distillation", Mr. Hall.

Q. I mean the $25 cash valuation is the result of a composite consideration of the opinions of [7037] the four individuals to whom I have referred. A. It is primarily that, but it is also based upon such consideration as Mr. O'Connor and company counsel and myself could apply to those figures, and it is also obviously affected by the fact that at the time the stock was given the company seemed to have very good prospects of earnings in the future.

Q. Did you consider the four opinions of equal reliability? A. I don't know. I think perhaps I thought that the opinions of Lee and Hutchinson and Fisk were probably somewhat more reliable than Hopkins.

Q. Did you think that the opinions of Lee, Hutchinson and Fisk were of equal reliability? A. I think I probably did. I never recognized any substantial difference in their reliability.

* * *

[7038] By Mr. Hall:

Q. Did you contact persons other than Lee, Hutchinson, Hopkins and Fisk for the purpose of securing valuations of the common stock of McCall Ferry Power Company?

The Witness: May I have that question, please?

(Question read.)

The Witness: No.

By Mr. Hall:

Q. Did you contact other persons for the purpose of securing valuations on the preferred stock? [7039] A. No.

Q. Mr. Gunn, what association did Mr. Lee have with that portion of the McCall Ferry financing which was done by Lee, Higginson and Company? A. I don't know.

Q. Does Mr. Lee make any statement in his affidavit about that? A. You mean about his association?

Q. Yes. A. Nothing other than he gives a recitation of facts there which seem to indicate his familiarity with it.

Q. Have you located any documentary evidence showing direct participation by Mr. Lee in the McCall Ferry financing?

Mr. King: What do you mean by "participation", Mr. Hall?

Mr. Hall: Direct connection?

The Witness: Mr. Hall, that doesn't help me much. There are all sorts of evidence that the firm participated in it. He was a member of the firm.

By Mr. Hall:

Q. Did you find any correspondence addressed to Mr. Lee or written by Mr. Lee relating to the financing of the McCall Ferry deal? A. I don't recall that I did. I never examined Lee, Higginson's files. However, I do recall that Mr. Lee told me [7040] that he had been directly connected with it in the instance of the conference which we mentioned last week.

Q. Why isn't that last information that you referred to contained in Mr. Lee's affidavit, Part 8 of Exhibit 27? A. I suppose he didn't think it was necessary to put it in there. That is the only reason I know. After all, everything couldn't be put in the affidavit.

Q. Wouldn't that be a material fact which should be included in Mr. Lee's affidavit? A. I don't think so. I think from the affidavit it is obvious.

Q. How could you judge the weight of his statements without any such statement as to direct connection with McCall Ferry financing? A. Well, because he was a member of the firm, and the firm handled it, or handled a part of it.

• • •

[7041] By Mr. Hall:

Q. Mr. Gunn, do you consider Lee's statement to you of direct participation a material fact? A. Prior to this cross-examination I didn't. But inasmuch as it has become of such acute interest to you it is beginning to look like it would have been desirable for it to be in there.

Q. Even prior to the cross-examination didn't you consider that it had a bearing on the weight to be attached to Mr. Lee's statement? A. No, I didn't think it had any bearing.

Q. What were Mr. Lee's duties and activities in connection with the McCall Ferry financing? A. I don't know.

Q. Does Mr. Lee refer to his duties and activities in connection with the McCall Ferry financing in his affidavit? A. I don't think so; not as I recall it.

[7042] Q. Isn't it a fact that Mr. Gardiner Lane represented Lee, Higginson and Company in handling the McCall Ferry affairs? A. As I understand it, Mr. Gardiner Lane was the partner particularly responsible for the McCall Ferry business. That doesn't seem to me, however, to preclude anybody else in the firm knowing anything about it.

Q. Is Mr. Lane dead? A. That is my information that he is.

Q. Do you know when he died? A. Some time prior to the time I went to Mr. Lee to get this statement, or I would unquestionably have gone to Mr. Lane.

• • •

[7053] By Mr. Hall:

Q. Was July 10, 1939, the earliest date when you were aware of Mr. Lee's valuation of the common stock? A. Yes, I think it was at least that early. I think [7054] he mailed it to me and I received it a few days later as I recall.

Q. Was Mr. Lee's determination of the cash value of the McCall Ferry common stock made to assist you in determining the original cost of the McCall property? A. May I have that question?

(Question read.)

The Witness: Yes, sir, and I suppose for any other purpose we might need the cash value.

By Mr. Hall:

Q. Had Mr. Lee made any previous valuation of the McCall Ferry common or preferred stock? A. Not that I know of.

Q. Did you ask Mr. Lee if he had made any previous valuation of the McCall common or preferred stock? A. No, I don't recall that I did.

Q. Didn't you think a previous valuation of the stock made by Mr. Lee would be pertinent to your determination? A. Yes, but I had no reason to suspect he had ever been asked to make another one.

Q. Did you ask Mr. Lee to make sure he had never made such valuation? A. No, but I asked him to value it. I assumed if Mr. Lee had made a valuation I would have heard about it. I know Mr. Lee did make a very thorough study into other [7055] projects he financed about this time, and I certainly would assume that if he previously valued the securities of McCall Ferry Power Company they would have been a part of the thing he considered.

Q. Was the risk assumed and the sacrifices made in connection with the projects analyzed by Lee the same as the risk assumed and the sacrifices made in connection with the McCall Ferry project?

MR. KING: May we have that question again, please?

(Question read.)

THE WITNESS: I assume they were as nearly as he could find from his firm's records. It was my understanding he endeavored to pick the financings that were most nearly comparable to those of the type of McCall Ferry Power Company.

As I recall it, one of the company's——

By MR. HALL:

Q. But can you state——

MR. KING: Let him finish.

MR. HALL: I am sorry. I thought he was through.

THE WITNESS: As I recall it, most of the companies were water power companies. I recall Colorado River Power Company and Washington Water Power. Of my own knowledge I don't know how comparable it was.

By MR. HALL:

Q. Can you state it was the fact Mr. Lee even considered [7056] risk assumed and sacrifices made in arriving at his valuation of the common stock? A. No, I don't know what Mr. Lee's mental processes were. I can't state what he had in mind.

Q. And Mr. Lee's affidavit doesn't help us in that respect? Is that right?

MR. KING: I object to that question. It is pure argument.

TRIAL EXAMINER: Objection sustained.

By MR. HALL:

Q. So far as you know Mr. Lee never attempted to value the McCall common or preferred stock until you made your request for a valuation of the common stock in connection with your original cost determination? A. How did that question start?

(Question read.)

THE WITNESS: That is correct.

By MR. HALL:

Q. Did Mr. Lee, at the time he prepared his statement, know of any valuations of the McCall common or preferred stock made by his firm or anyone else? A. Not so far as I know or can recall.

Q. Did you ask Mr. Lee if he knew of any valuations of the McCall common or preferred stock made by anyone else? A. No, I don't think I asked him that question.

Q. Mr. Lee, then, had no knowledge of any contemporaneous [7057] valuation of the McCall common or preferred stock made in 1905 to 1907?

* * *

THE WITNESS: I don't know.

By MR. HALL:

Q. Did the records of Lee, Higginson and Company show any purchases or sales of McCall Ferry common stock at $25 a share? A. It is my understanding they did not. As I recall it Mr. Lee said they kept the 5,000 shares and realized a total loss on it.

Q. Did the records of Lee, Higginson and Company show any purchases or sales of McCall Ferry common or preferred [7058] stock at any price? A. Not so far as I know.

* * *

[7059] By MR. HALL:

Q. Mr. Lee's difficulty to place a value on the common stock was due to the fact he was attempting a determination 34 years after the transaction. Isn't that so?

* * *

THE WITNESS: No, I don't find that here. The second paragraph of Mr. Lee's affidavit on Page 66 states what his difficulty was, and reads as follows: "It is difficult for me to place a value on this stock because of the long lapse

of time since the transaction, and also because the enterprise passed through a receivership and the stock ultimately became worthless."

By MR. HALL:

Q. Doesn't that mean substantially what I said? A. 34 years is 34 years, but it doesn't so state.

Q. But Mr. Lee did not let the difficulties he [7060] encountered deter him from placing a value on the stock, although others confronted with the same difficulties declared their inability to do so. Isn't that so? A. May I have that question, please?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: To whom do you have reference?

By MR. HALL:

Q. Mr. Griscom, for instance. A. Yes, Mr. Griscom said he couldn't, but I think that——

Q. Mr. Griscom was connected with the firm of Bertron, Storrs & Griscom in 1905, 1906 and 1907 and 1908? A. He managed the Philadelphia office of that firm and the McCall Ferry proposition was handled from the New York office by Mr. Bertron.

Q. Being a member of the firm didn't help matters. Is that it? A. Well, I shouldn't say——

MR. KING: I object. That is argumentative.

TRIAL EXAMINER: Sustained.

By MR. HALL:

Q. What records did Lee, Higginson and Company have with respect to the McCall Ferry development which had a bearing on the cash value of the common stock? A. I don't recall all the records they had, but some [7061] of them as I recall are in Exhibit 27.

Q. Are they all in Exhibit 27? A. I don't know whether they are or not. All of them we have are either

in Exhibit 27 or in the company's files which have been available to the Commission staff.

• • •

[7063] Q. What records did Mr. Lee review which are not part of Exhibit 27? A. I don't know.

Q. Did Mr. Lee show you any of the records to support [7064] his valuation of the McCall Ferry common stock?

MR. KING: Do you mean any of his records that are not in Exhibit 27?

MR. HALL: That is right.

THE WITNESS: No. He didn't show me any of the records. As I said, he did show me, I believe, a substantial tabulation that had been made from his records for him, but as for seeing the documents or the records from which the results show on the tabulation came from, I don't recall seeing them.

By MR. HALL:

Q. What did the tabulation reflect? A. As I recall it it was a tabulation showing what Lee, Higginson, as a firm, had realized on other underwritings, I believe from 1900 to about 1910, in projects similar or as nearly similar as they had to McCall Ferry Power Company.

Q. How did that support any valuation for the McCall Ferry securities? A. I don't know any way that it supported it other than as Mr. Lee stated in his affidavit.

Q. Are you vouching for the similarity between McCall underwriting and the other underwritings? A. No, sir, I am simply stating the facts Mr. Lee told me.

Q. Do you have available a copy of the tabulation [7065] which Mr. Lee showed you? A. No, sir, he kept it himself. It was a long hand-written tabulation.

Q. What underwritings did Mr. Lee analyze? A. I don't recall. The only two I recall, and I am not too certain about those, were Colorado River Power Company and Washington Water Power. I do recall he had several others but I don't recall the names of them.

Q. What was the nature of the underwritings which he analyzed? A. I don't recall. As a matter of fact, I don't think I ever knew in detail.

Q. In other words, Mr. Gunn, you are in a position of not being prepared to be cross-examined on the reliability of the analysis made by Mr. Lee.

• • •

THE WITNESS: That is certainly a fact. I don't think I ever had enough information to have undertaken cross-examination on them.

• • •

[7066] By MR. HALL:

Q. What is the basis for Mr. Lee's statement that his firm would not have participated in the McCall Ferry proposition unless they had believed the stock worth $25 per share? A. May I have that question, please?

(Question read.)

[7067] THE WITNESS: I don't know what his basis was. It would seem to me it was probably largely his judgment and recollection, plus his study of these other projects I have stated.

By MR. HALL:

Q. What other members of Lee, Higginson and Company did Mr. Lee consult at the time his affidavit was prepared? A. I don't know.

Q. What other members were alive at the time he prepared his affidavit? A. I don't know.

Q. If he did not consult, assuming he didn't, other members of Lee, Higginson and Company at the time he made his affidavit, how was he in a position to state what their belief in 1905 might have been?

• • •

THE WITNESS: You are asking me to assume he didn't talk to any others. Is that your question?

[7068] By Mr. Hall:

Q. That is correct. A. I don't know. If you assume he didn't talk to any others then it would seem to me the statement is his own opinion.

Q. So far as you know that is all it is, Mr. Lee's opinion? A. I don't know whether it is or isn't, as I said, I don't know whether he talked to any other members of the firm. I don't know whether there are any more living or not.

Q. Was Mr. Lee an officer or director of McCall Ferry Power Company or Susquehanna Contracting Company? A. Well, he was not of Susquehanna Contracting Company. I am pretty sure of that. I don't recall he was of McCall Ferry Company. That can be checked.

Q. My information, Mr. Gunn, is that Mr. Lee was neither an officer or director of McCall Ferry Power Company or Susquehanna Contracting Company. A. That is my recollection, also.

Q. Did Mr. Lee ever attend as an observer any meetings of the board of directors or the executive committee of either McCall Ferry or Susquehanna Contracting Company? A. I haven't the remotest idea.

Q. Did the early records disclose that Mr. Lee was consulted by McCall Ferry on any of its problems? [7069] A. The early records of McCall Ferry?

Q. Yes. A. I never made an investigation to ascertain that.

Q. Wouldn't it be in the fifteen files you have referred to several times? A. Yes, it very well may have been. But the volume of those files is such that I cannot remember everything that is in them, and unless I had been looking for some specific thing I might well have passed over some indication of the question you have just asked me. Having no interest in it, I would have taken no note of it.

* * *

[7070] Q. Does Mr. Lee at any place in his statement refer to his valuation as being the cash value of the stock? A.

I don't know. Shall I read the statement? I don't recall it. Shall I read it?

Q. Do you understand Mr. Lee's valuation to have been made as representing the cash value of the common stock? A. That was my understanding of it.

Q. As used in Electric Plant account instruction 3-D? A. Yes, or at least the nearest approach to that which was available.

[7071] Q. Did you ever show Mr. Lee Electric Plant account instruction 3-D? A. I don't know whether I showed him the instruction or not. When I first asked him for his assistance I told him the purpose for which it was to be used and I am pretty sure I explained it to him.

Q. Did you explain Electric Plant Account instruction 3-D to Mr. Lee? A. I think I told him what the thing said and what our lawyers concluded it meant.

Q. What did you tell him? A. I don't recall the words I used, but I think I told him that the company was required by the Federal Power Commission to determine the original cost of its property and that in order to ascertain the original cost it was necessary to make an evaluation of the common stock, and that our lawyers had examined the facts as we knew them up to that time and thought it was desirable to obtain Mr. Lee's opinion as to what his services were worth, and from that a statement of the valuation of the common stock.

Q. You assumed that when Mr. Lee said "Stock worth $25 per share", he meant cash value as specified in Electric Plant account instruction 3-D? A. I assume he meant cash value from all the things he said in the affidavit about the value of the stock. You [7072] have taken a few words out of context. As I recall it, there are some more words in there.

Q. Isn't it a fact that stock may be worth to a person a certain amount but that it could not be sold for that amount? A. I don't know how that would exist. It might be worth to a person a certain amount and he might

not wish to sell it, and therefore it might not be sold for that amount.

Q. And he might not be able to sell it for cash. Right? A. I don't think so. That is not my understanding of the cash value.

Q. Do you think that it is synonymous to say that stock is worth a certain amount and that it can be sold for the same amount? A. That is my understanding if you undertook to sell it. I don't know how it could be otherwise. I thought we agreed several days ago that the two were synonymous.

Q. It is a fact that Mr. Lee does not specifically state that common stock of McCall Ferry could have been sold for $25 a share at the time of the transaction or at any time thereafter?

MR. KING: You mean states in the affidavit?

MR. HALL: That is right.

MR. KING: If that is what you mean I object to the [7073] question because the affidavit speaks for itself.

TRIAL EXAMINER: Read the question, please.

(Question read.)

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: I don't believe Mr. Lee uses that particular terminology. However, I took it to be substantially the equivalent of that when he said that if partners were being admitted, or were leaving the firm, that in his opinion $25 would be the value at which the readjustment of the firm's membership would be made.

By MR. HALL:

Q. What is Mr. Lee's opinion based upon when he states that a division of the firm's assets immediately following acceptance of the stock would have been based on a value of not less than $25 a share? A. I don't know. I will speculate he based it on all of his study as to the value of the stock.

Q. What divisions of assets took place in the firm of Lee, Higginson and Company around 1905? A. I don't know.

Q. Or any year thereafter? A. I don't know.

Q. But it does not mean, does it, that valuation for the purposes of division of assets of a partnership is necessarily the same as cash value in the open market? [7074] A. No, it doesn't necessarily follow. If the partners chose to make it different they could have made it different.

Q. Did Mr. Lee make any studies of market conditions in the spring of 1905? A. I don't know whether or not he did, but he was pretty active in business there. It doesn't follow that if he didn't make studies he had no knowledge. I don't know.

Q. Did Mr. Lee find any valuation by Lee, Higginson and Company of their services to McCall Ferry? A. I don't know. I don't know what occasion there would have been to make such a valuation.

Q. Did you find any such valuation available—withdraw that.

Did you find any such valuation in the available records relating to the McCall Ferry project? A. Valuation of Lee, Higginson's services, do you mean?

Q. Yes. A. No.

Q. Have you found in the available records any agreement showing that McCall Ferry or Susquehanna Contracting Company had contracted to pay Lee, Higginson a specified amount for services? A. No, sir. I think it is obvious that nobody had contracted to, because when it comes time to pay Lee, Higginson off they were in the situation of having to write a [7075] letter to Bertron and telling him how much they got. If it was a contract or agreement they obviously would know how much they were supposed to get.

Q. The fact is, is it not, that McCall Ferry never paid anything either in cash or in securities to Lee, Higginson and Company or to any of the other bankers?

MR. KING: May I have that question again, Mr. Examiner?

TRIAL EXAMINER: Yes.

(Question read.)

THE WITNESS: Are you making a distinction between McCall Ferry paying directly and those securities passing through Susquehanna Contracting Company?

By MR. HALL:

Q. Yes, that is the distinction. A. McCall Ferry delivered their securities to Susquehanna Contracting Company, and then, in accordance with understandings, as I believe, the securities passed on to those people who were supposed to get them.

Q. These understandings that you referred to are not supported by the written documents covering the transfer to Huchinson. Right? A. No, the distribution of stock is not given in the transfer to Hutchinson, the document which is the agreement between Susquehanna Contracting Company and Hutchinson.

Q. What you are saying is that Hutchinson got all of [7076] the securities which subsequently wound up in the hands of the bankers as their compensation? A. Yes, sir. They passed under that agreement to Hutchinson, and then we also have other evidence, of course, which showed up in the records of Lee, Higginson and Bertron we have already discussed in detail.

Q. None of the documents covering the transfer of the securities to Hutchinson support a conclusion that McCall Ferry paid anything to the bankers?

• • •

[7077] THE WITNESS: I don't know whether they do or not. It would seem to me that they are certainly a part of the support. Whether they standing alone would support it or not I don't know.

• • •

[7132] TRIAL EXAMINER: How was this affidavit prepared? Did Mr. Lee's attorney prepare it, or an attorney?

THE WITNESS: No, Mr. Lee was submitted the participation similar to the one I have already described. He then, together with Mr. Glidden, who was Secretary and Treasurer of Lee, Higginson, worked out a draft of it. Some time after the draft was worked out I was in Boston and Mr. Lee showed it to me and asked me if it covered the scope that I thought it ought to. I had previously described the scope I would like for him to cover. I did that in connection with [7133] describing the purpose for which we wanted the affidavit. He showed me a draft of the scope. As I recall it I made some suggestions to points which had not been covered, and then he and Glidden, so far as I know, I don't know whether his lawyer participated or not, but I know primarily he and Mr. Glidden, that is my understanding, completed the affidavit in the form in which you now find it.

TRIAL EXAMINER: Was Mr. Glidden an attorney?

THE WITNESS: He was Secretary and Treasurer of Lee, Higginson and Company. I don't know what his training was. Of course, I can't say that either one or both of them didn't discuss it with the lawyers of Lee, Higginson and Company. They didn't do it, however, in my presence.

By MR. HALL:

Q. Of what did your suggestions to Mr. Lee consist? A. I don't recall. I don't recall the detailed suggestions, but there were several points, as I recall, that are now in the affidavit that Mr. Lee had not included in his original draft.

Q. Do you recall those points? A. No, I do not. I simply read hastily over it when he showed it to me and suggested whatever they were that they be covered. He said he would do it. I don't remember the details of it.

Q. Was Mr. Lee aware of the fact that the lower the [7134] valuation the less assistance his statement would be to you? A. I don't know whether he was or not. If so he drew it as a conclusion. I didn't so advise him.

Q. Wasn't he in a position to draw that conclusion since you had told him the purpose of the statement? A. Yes, I think he very well may have drawn that conclusion.

Q. Why did you use Mr. Fisk's determination of $50 a share for the preferred stock, Mr. Gunn? A. As I recall it is the only one I had and it didn't appear to me to be unreasonable.

Q. Did you consider Mr. Fisk's $50 valuation reliable? A. I evidently considered it as reliable as anything I could get. I at least used it.

Q. That necessarily means that you considered it reliable evidence as to the cash value of the preferred stock? A. I considered it the most reliable evidence I had. I don't know whether that is reliable or not. I considered it further than that, as I recall, about the only evidence I had.

Q. Do you think Mr. Fisk was in a better position to value the preferred stock than he was to value the common stock? A. No.

Q. Why didn't you use the $18 valuation he placed on [7135] the common stock? A. Because I had other evidence as to the value of the common stock and I thought it was appropriate to consider all of the evidence.

Q. In other words, if you had other evidence of the cash value of the preferred stock you might have used that also? A. If I considered it reliable, yes, I would have used it, at least taken it into consideration.

Q. Since you didn't accept the $18 valuation for the common stock fixed by Fisk because of the existence of other evidence, isn't it reasonable to conclude that had you had other evidence it would have caused you to use a cash value other than $50 for the preferred stock?

* * *

THE WITNESS: No, I don't think that conclusion would follow, Mr. Hall, for two reasons: First, other evidence might have confirmed Mr. Fisk's opinion. Second, the other evidence may not have been of sufficient value to justify varying from the Fisk estimate.

[7136] By MR. HALL:

Q. The other evidence you had on the common didn't confirm Fisk's valuation. Isn't that so? A. Within a reasonable range I wouldn't say it was too bad as a confirmation.

Q. Isn't it a fact that the $18 per share as to the common is derived by Mr. Fisk only after giving effect to the $50 per share for the preferred stock? A. Yes, sir.

Q. Doesn't that of necessity require you to accept the $18 for the common stock since you used the $50 for the preferred stock? A. No, sir, it obviously doesn't because the $50 for the preferred stock was the only evidence I had of the preferred stock value, and I had other evidence than the Fisk $18 figure for the common stock.

TRIAL EXAMINER: What figures do you divide to get your $18 from Mr. Fisk's affidavit?

MR. HALL: May I have the Examiner's question, please?

(Examiner's question read.)

MR. KING: Page 79.

THE WITNESS: $305,000 shown on paragraph 11, page 79 of Exhibit 27 was divided, I believe, by 17,000-some-odd shares to give the $18 per share.

[7137] By MR. HALL:

Q. Was it divided by the 17,537 and a half shares shown on Page 53 of Exhibit 26, Mr. Gunn? A. I believe it was, although I have not computed it exactly. I can if you wish.

Q. Will you do that? A. $305,000 divided by 17,537 appears to be about 17-and-a-half dollars a share, and I believe that was simply rounded off to $18 a share.

MR. KING: May we have that read?

(Answer read.)

By MR. HALL:

Q. Mr. Gunn, isn't it a fact that by using $50 per share of the preferred stock, which is based upon a valuation of Fisk's services, you have attributed a value to all the preferred stock based upon a valuation of services, despite the fact that the balance of the preferred stock so valued was not issued for services? A. May I have that question, please?

(Question read.)

THE WITNESS: It is awfully complicated, but I think the answer is no. We have, it is true, arrived at the $50 per share, rather Mr. Fisk did, through a valuation of his services. That is the one evidence we have, and it is the only means which occurred to me of valuing the preferred [7138] stock. Then the value having been established in that transaction it is quite true it could be assumed that the entire issue of that particular stock had the same value. It is also true that the other stock, the remainder of the issue, was not issued for the same sort of services, at least, that Harvey Fisk and Sons rendered.

By MR. HALL:

Q. Since you are valuing services rather than stock it can not be assumed that all of the stock has the same cash value. Isn't that so? A. No, I don't see how you can make that assumption. I don't see how you can assume that the particular 1,875 shares that Fisk received had a value different from the remainder of the shares of the same issue in the same company that other people received. It seems to me an assumption to that effect would be irrational.

MR. HALL: May I have that answer, please?

(Answer read.)

By Mr. Hall:

Q. Those determinations by Mr. Fisk were made some 33 years after the transaction. Right? A. Yes, sir.

Q. And they were made at your request? A. Yes, and my request was made necessary by the theory of original cost.

[7139] Q. And when Mr. Fisk made them he knew you wanted them to support your original cost claim. Isn't that so? A. I think I most assuredly explained the necessity for my coming to him at that late date and bothering him with a thing like this.

* * *

[7140] By Mr. Hall:

Q. As a matter of fact, Mr. Gunn, by using $25 a share for the common stock you are placing a greater value on the services alleged to have been rendered by the Fisk firm than did Mr. Fisk himself. Isn't that so? A. Yes, I believe that is the result. It was necessary for me to arrive at a value for the common stock, and since several people had stated the value differently, my selecting a single value implied a different computed amount of dollars for all the services of those people who did [7141] not conclude that the stock was worth $25 a share.

In the case of some it made the services more and in the case of others it made the services less.

Q. What did Mr. Fisk value his services at? $400,000, wasn't it? A. Yes, $400,000 total.

Q. What have you included for those same services? In other words, what have you valued those services at? A. I valued them at $532,187.

Q. By using the $25 valuation for the common stock whose valuation did you lower, Mr. Gunn? A. I think it could be said that I lowered Hutchinson's, perhaps, and I lowered Hopkins. I believe that is all.

Q. Is there any valuation included in your original cost for Hopkins services? A. Not directly. Hopkins serv-

ices were services to Hutchinson, and they were paid for, as I see it, by Hutchinson. That is the reason I must say they are not directly in there. They are in there indirectly.

Q. But they are not included in your original cost claims as Hopkins' services? A. No.

Q. Or Lorenzo Semple? A. Yes, I think they are included in the original cost claim in the amount which was paid to Hutchinson, because [7142] Lorenzo Semple's compensation was one of the obligations that Hutchinson was required to meet out of his part of the cash and stock which he received in exchange for the properties. They are not identified as such, if that is your question.

Q. How can you say that you lowered Hutchinson's determination when he used a valuation range from $20 to $30? A. Well, to the extent he had $30 in his range it was lowered. It was that to which I referred.

Q. To the extent he had $20 in that range you raised it? A. Yes, sir.

• • •

[7144] Q. Did Penn Water pay Mr. Cole for his services in connection with Mr. Fisk's affidavit? A. Yes, sir, I believe they did.

Q. Did Penn Water reimburse Mr. Fisk for his services? A. Mr. Pliny Fisk, Jr., was paid for his services. I don't recall whether there was any payment to Mr. Pliny Fisk, Sr., or not.

Q. Was anybody else in the Fisk family reimbursed for their services in connection with obtaining Mr. Fisk's statement? A. I am pretty sure they weren't. There was nobody else who assisted him, assisted in the investigation which led up to Mr. Fisk's affidavit.

Q. Since Mr. Fisk states in his affidavit that his recollection of the transactions were dim, are we to understand that you are responsible for refreshing it? A. No, sir. You are to understand it was refreshed by [7145] such information as I furnished to his lawyer and by Mr. Cole.

Q. Do you know whether Mr. Fisk had any independent recollection of the McCall Ferry activity upon which he was able to draw? A. Yes, sir, I know that he did. In the very first conversation I had with him he recalled a great many facts.

Q. What cash value did he recall, Mr. Gunn? A. I didn't discuss any cash value with him the first time I saw him. He recalled the fact that Barnum was, aside from himself, the partner who had the largest interest in the Fisk firm, and he recalled, I believe, that he and Bertron were what he described as joint accounts in the underwriting, and he recalled that the underwriting had been brought to him in a condition of failure, and he recalled many other more or less minor things that I don't remember offhand.

Q. How many conferences did you have with Mr. Fisk after you obtained his statement? A. After I obtained his statement?

Q. Yes. A. I didn't have any. I had only one or two conferences with Mr. Fisk at all, and that was when he was first approached. When I first approached Mr. Fisk I had one discussion of several hours, and I may have had another, although I am not sure. After that Mr. Pliny Fisk, Sr. told me I would have to take up the matter with his counsel, who [7146] was a Mr. Wilton D. Cole, and who was general counsel for Union Bag and Paper Company, I believe, and in any event his offices were in the Woolworth Building. I never saw Mr. Pliny Fisk, Sr. again after the time he gave me those instructions.

Q. In view of the fact that Mr. Fisk admits that he took very little active interest in the management or supervision of McCall Ferry, how was he in a position 33 years after the event to determine the value of the common stock and preferred stock? A. I don't know, but it didn't seem to me his statement that he didn't actually do the managing of the firm but turned it over to Barnum, it didn't seem to me that that statement supports the con-

clusion he knew nothing about it, because as I recall it somewhere in his statement he says it was a custom of their firm to have weekly meetings of the partners and discuss all of the firm's activities, at least once a week.

Q. Would you say that a determination of cash value or expression of opinion as to cash value made contemporaneously with a transaction would be relevant to the determination of cash value?

THE WITNESS: May I have that question?

(Question read.)

THE WITNESS: Do you mean by that, Mr. Hall, that a [7147] determination of cash value or an expression of opinion, or are you using one the same as the other in that question?

By MR. HALL:

Q. Either. A. Well, I would say that a valid determination of a cash value made contemporaneously should be given very considerable weight. An expression of opinion would depend upon the circumstances or any other indication of the value would depend upon the circumstances under which it was made, the purpose for which it was made, and all the things which might enter into it.

Q. In other words, you would want to consider all of them and decide what weight should be attached to them? A. Yes, I should think so; certainly.

Q. Did you ask Mr. Fisk if he had made any previous valuation of either the McCall common or preferred stock? A. No, I don't recall that I did because, as I said, I saw Mr. Fisk only once or twice, and the discussions at that time were not devoted to the valuation of the stock but rather to my ascertaining just precisely what had happened in the financing of this firm and what part his firm took.

Q. Didn't you think that a previous valuation of the McCall stock made by Fisk would be pertinent to your determination of the cash value of that stock? [7148]

A. Yes, if the previous valuation were an attempt to determine the cash value I would think it would be pertinent. If it was made for some other purpose it might or might not be pertinent.

Q. But as I understand it, you did not make any inquiry as to whether or not he had made a previous determination? A. No, I never had discussed any stock value with Mr. Fisk previously. However, I do know that in his investigation which he had Mr. Cole make he made an extensive effort to find the records of his firm in which Mr. Cole thought, at least, there might be evidence of what they thought the cash value was.

Q. Those efforts by Mr. Cole to locate the records were of no avail. Is that right? A. They were substantially unsuccessful except for some few pieces, I think, they found at the Pliny Fisk library.

Q. So far as you know Mr. Fisk never attempted to value the McCall common or preferred stock until you made your request for a valuation of the stock in connection with your original cost determination. Is that right? A. That is correct.

Q. Did Mr. Fisk know of any valuations of the McCall common or preferred stock made by his firm or anyone else? A. I don't know. I didn't ask him. I certainly assumed [7149] that if Mr. Fisk did know of any he took them into consideration in expressing his opinion as to the value at a later date.

Q. Then, so far as you know, Mr. Fisk had no knowledge of any contemporary valuation of the McCall common or preferred stock made during the years 1905 to 1907? A. So far as I know he didn't.

Q. Did Mr. Fisk have any records showing actual purchases or sale of McCall common or preferred stock at the time he made his affidavit? A. None that I know of. I am sure if he had any I would have been able to obtain it.

Q. Did Mr. Fisk place a valuation on the risks assumed and the sacrifices made by the bond subscribers?

A. I think you could say that indirectly he did, at least. I don't think he was requested to make a separate determination of it.

Q. What risks assumed and what sacrifices made, did Mr. Fisk consider? A. I assume he considered them all.

Q. What were they? A. I don't know. I can't enumerate them all any more than we previously discussed them.

Q. You don't know whether Mr. Fisk knew of any, either, or thought of any. Is that right? [7150] A. It seems to me that he certainly did. As a matter of fact, he must have weighed those pretty carefully before he undertook to get the bond subscriptions.

Q. Did Mr. Fisk ever discuss with you the risk assumed and the sacrifices made by the bond subscribers? A. No, not with me personally.

Q. Did Mr. Fisk inform you that his stock valuations included an amount for the risk assumed and the sacrifices made by the bond subscriber? A. No, Mr. Fisk didn't inform me of anything other than what you see in Part 9 in Exhibit 27, and discussions that I gained from Mr. Cole as a result of his conferences with Fisk. But I don't remember there was any discussion of such a valuation except as it took place indirectly through Fisk's knowledge of the risks and his consideration of them in his valuation of the securities.

Q. Then you cannot tell us what amount, if any, Fisk included to cover the risk assumed and the sacrifices made by the bond subscribers? A. No, I can't tell you what amount he allotted to that item.

Q. And you cannot state as a fact that Fisk even considered risk assumed and sacrifices made by the bond subscribers in arriving at his valuation of the McCall Ferry securities? [7151] A. I can only draw that as a deduction. I cannot state it as a positive fact. I don't know what Mr. Fisk's precise mental processes were.

Q. Did Mr. Fisk make a study of the security market conditions as they existed in the spring of 1905 in connec-

tion with his valuation of the McCall stock? Can you say that he did? A. I believe he did. I believe it was done by Mr. Cole and by Mr. Pliny Fisk, Jr.

Q. I wasn't referring to either one of those. I am referring only to Mr. Fisk himself. A. Well, I was attempting to explain I believe they gathered some information on that for him.

Q. What information? A. I don't know what would be the scope of it.

Q. What was Mr. Cole's qualification as a financial analyst? A. Well, Mr. Cole was a lawyer, and it is my understanding that he had been connected with a considerable amount of financing.

Q. What, for instance? What do you mean when you refer to a considerable amount of financing? A. Well, financing in connection with Union Bag and Paper Company, and I believe that he was at one time or another counsel in several underwritings.

[7152] Q. Which ones? A. I don't know. I can ask Mr. Cole what his qualifications are if you wish, but I don't know offhand.

Q. Were any of them hydroelectric projects? A. Union Bag and Paper Company has a lot of hydroelectric projects.

Q. When were they financed? A. Oh, in various years. I don't recall now.

Q. Which were financed in 1905? A. I don't know whether or not any of them were. There may have been some but I just don't know. In any event I don't think Mr. Cole would have been counsel on them in 1905 because I don't think he was big enough.

Q. By "big enough," you mean old enough? A. That is what I mean. In other words, he is about as old as you and I, and we weren't doing anything.

Q. Did you ask Mr. Fisk if he had made a study of the security market conditions as they existed in the spring of 1905 in connection with his valuation of the McCall

stock? A. No, sir, I did not. I did not talk to Mr. Fisk after he arrived at his conclusion as to that.

[7153] Q. Did you ask Mr. Cole? A. It seems to me that during the several months that Mr. Cole was attempting to find records and was discussing this matter off and on with Mr. Fisk that he did mention information concerning the market had been given to Mr. Fisk. However, that is simply a recollection.

Q. What cash value had Mr. Cole decided upon? A. I don't know. I don't know whether he decided upon any or not. It is my understanding Mr. Fisk made the decision as to the cash value.

Q. Mr. Gunn, I am a little confused. I think you have stated at page 430 of the transcript you saw Mr. Pliny Fisk, Sr., two or three times? A. That is my recollection.

Q. What is the fact? Did you see Mr. Pliny Fisk, Sr., two or three times or just once? A. My recollection is that I saw him twice, that I did see him two or three times. However, I note that Mr. Fisk states in one of these documents that he saw me only once. Mr. Fisk made this statement at the conclusion of his investigation into the valuation of stock and his recollection is probably more creditable than mine because I am attempting to remember how many times I saw him eight years ago, and I was seeing a large number of people at that time. It can be said that perhaps my recollection is not as good as was Mr. Fisk's at the time he made the statement.

[7154] Q. When you refer to Mr. Fisk's statement you are referring to the statement made at the bottom of page 70 of Exhibit 27. Is that right? A. Yes, sir.

Q. Mr. Fisk there states among other things that you came to see him in June of 1938 and at that time, "I told Mr. Gunn that I would be very glad to have my son, Pliny Fisk, Jr., and my personal attorney, W. D. Cole, make a search for these records. That was the only occasion upon which I spoke to Mr. Gunn." A. Yes, that is right. I

recall distinctly at that time there was a discussion of several hours I had with Mr. Fisk. When I testified at page 430 that I had seen him two or three times I then thought that I remembered I had seen him on one or two occasions after that, but perhaps my recollection was defective.

Q. Did Mr. Fisk show you any previous valuation of the services of the Fisk firm to McCall Ferry? A. No, sir.

Q. Did you ask Mr. Fisk if he was aware of any previous valuation of his firm's services to the McCall Ferry? A. No, sir. On the occasion I talked with Mr. Fisk we didn't discuss valuation of either services or stock.

Q. Then so far as you know there never was a previous valuation of services of the Fisk firm? [7155] A. That is right.

* * *

[7158] By Mr. Hall:

Q. Mr. Gunn, when Mr. Fisk states in his affidavit that his firm arranged for the sale of approximately $8,000,000 principal amount of bonds, and the preferred stock, he has forgotten, has he not, that $2,620,000 of the subscriptions were obtained by Lee, Higginson and Company? A. Where do you find that statement, Mr. Hall, on page 72?

Q. Yes, near the top of the second answer. A. May I have the question, please?

(Question read.)

The Witness: No, I don't think he has forgotten, Mr. Hall. He doesn't say his firm sold $8,000,000 of bonds. It says they simply arranged for the sale of it. Now, as I understood it, his firm did arrange to retain the Lee, Higginson subscription, and it is to that that he is referring there.

By Mr. Hall:

Q. The fact is that Lee, Higginson Company did obtain subscriptions to $2,620,000 principal amount of bonds.

Right? A. Yes, some such amount as that as I recall it.

Q. And the fact is that the Coffin interests obtained bond subscriptions in the principal amount of $1,550,000. Is that right? [7159] A. I don't know what you mean by "Coffin interests."

Q. I thought we had discussed Coffin interests in the record to some extent already. A. We have, if it is that discussion to which you refer. Then it is my understanding that Coffin and some other people that might be imputed to association with him had raised certain bond subscriptions. I don't remember just what they were.

Q. And adding the $2,620,000 plus the $1,550,000 principal amount to which I referred, we arrive at a total of $4,170,000? A. Yes, sir, those two figures add up to that amount.

Q. And subtracting the $4,170,000 figure from the total of $8,075,000 principal amount procured leaves $3,905,000? A. Yes, sir, roughly $4,000,000.

Q. That means that the Fisk firm participated in the procuring of a part of the bond subscriptions represented by the figure of $3,905,000? A. Will you read that, please?

(Question read.)

THE WITNESS: Yes, it means they did what you stated in that question, and also they arranged to retain all of the other subscriptions that had previously been gotten by Lee, Higginson and others.

[7160] By MR. HALL:

Q. And if Bertron, Storrs & Griscom obtained any subscriptions the subscriptions they obtained came out of the amount of $3,905,000 principal amount? A. I don't recall the facts well enough to say whether or not that is true. As I recall, from the records we examined and which are included in Exhibit 27 of Bertron, it was impossible to actually trace who had obtained what particular subscriptions.

Q. If Bertron, Storrs & Griscom sold any subscriptions they necessarily had to sell part of the $3,905,000 amount that I referred to? A. Well, no. I don't think that follows. It might have been a part of what has been ascribed, the Bertron subscriptions may have been a part of those subscriptions which have been assigned to Coffin.

Q. But you don't know that is a fact? A. No, I don't know either way. It is impossible to trace who obtained what subscriptions.

* * *

[7167] By Mr. Hall:

Q. The earliest valuation appearing in the records of Bertron, Storrs and Griscom is November 21, 1906, more than a year after the date the stock was issued by McCall Ferry. Isn't that so? A. Yes, sir, that appears to be correct.

Q. Construction had not begun at the time of the transaction but was well under way in November of 1906. Isn't that so? That is the transaction which resulted in the issuance of the stock? A. I believe that is correct. I can check it if you wish.

Q. Yes, will you check it? Didn't construction begin in October, 1905? [7168] A. Yes, as I understand, it did.

Q. The dates of completion of the project and realization of earnings were a year nearer in November of 1906. Isn't that right? A. Yes, sir, I think that is correct.

Q. Wouldn't you—— A. At least they thought it was. Let's put it that way.

Q. At that time they thought it was? A. Yes, that is right.

Q. And we must consider these records only prospectively? A. I think that is correct.

Q. In the sense in which they were making them? A. Yes, I believe that is correct.

Q. Wouldn't you expect the stock, if it in fact had a value, to be worth more in 1906 than in the spring of 1905? A. Yes, I would think it would be worth more.

Q. But even at the date of November, 1906, Bertron, Storrs and Griscom placed a book value of only $1.00 a share on the common stock and $10 a share on the preferred stock. Isn't that so?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: They recorded those two stocks at the values you mention in their books. I don't consider they represent a valuation of the stock.

[7169] Q. The changes Bertron, Storrs and Griscom later made in these valuations were obviously an effort to anticipate the approaching completion of the project. Isn't that so? A. I don't know whether or not they were. It is not obvious to me.

Q. They could have been? A. I don't know.

Q. Bertron, Storrs and Griscom never sold any shares at those valuations or any valuation. Isn't that right? A. Not so far as I know.

* * *

[7170] By MR. HALL:

Q. Isn't it a fact, Mr. Gunn, that as the project approached completion of construction the values reflected on the books of Bertron, Storrs and Griscom increased? A. Yes, I believe up to a certain point they did increase, and then they decreased.

Q. The changes reflected on the records of Bertron, Storrs and Griscom for the common stock are reflected on page 48 of Exhibit 26. Is that right? A. Yes, sir, they are. I might mention in that connection, Mr. Hall, that because of the peculiarity of the change it was largely those facts stated there which caused me to consider that the entries on Bertron's books weren't worth very much as evidence of cash value.

Q. To what peculiarity do you refer? A. Well, on November 21, 1906 they recorded $1.00. On December 11th, they doubled it and called it $2.00. On December 31,

they raised it from $2.00 to $10.00. Certainly there was nothing in construction during that period of time, nor the nearness to completion, which would have justified any such gyrations as that in the value of stock, or at least nothing I can imagine.

Q. Do you consider an $8.00 increase between November 21, 1906 and December 31, 1906, a gyration in the stock? A. It certainly is in my language when it lies between [7171] $2.00 and $10.

Q. Is that increase an unjustified gyration?

* * *

THE WITNESS: I don't know. It is just a gyration.

By MR. HALL:

Q. Did you consider that it was an unjustified increase? A. No, I just considered I didn't know what it was for, and because of those gyrations I referred to I didn't think any of them were worth very much as evidence of the value of the stock.

Q. Do you have a record of the values placed on the books of Bertron, Storrs and Griscom for the preferred stock? A. Yes, sir, I believe that is given on page 47 of Exhibit 28. It seems to have been similarly gyrating, except one of them was left out. If you will notice on November 21 they had it at $10. a share and on December 31, which was about four or five weeks later, they raised it to $40 a share. Next April they raised it to $50. I just [7172] don't know what they were doing to those valuations. They don't look like valid valuations to me, though.

Q. When did the McCall Ferry financial difficulties begin? Just before December 31, 1907, right? A. Yes, in the latter part of 1907 they began to realize they were in difficulty.

Q. And on December 28, 1908, what was the situation financially?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: McCall Ferry Power Company had defaulted on its bond interest.

By MR. HALL:

Q. Mr. Gunn, the only shares that Bertron, Storrs and Griscom ever purchased were the 150 shares of common stock they had promised to Pullen in 1905 in connection with the acquisition of Pullen's option. Isn't that so?

MR. KING: May I have that question, please?

(Question read).

THE WITNESS: That is all I know of.

TRIAL EXAMINER: 1905 or 1907?

MR. HALL: They had promised to Pullen in 1905, Mr. Examiner. The purchase was made in 1907 by Bertron, Storrs and Griscom.

THE WITNESS: May I have the question and answer again, [7173] please?

(Question and answer read.)

THE WITNESS: Yes, that is the only purchase I know of.

By MR. HALL:

Q. Was that a cash purchase? A. I don't know whether or not it was. I presume it was.

Q. Will you refer to page 190 of Exhibit 27? Is that page from a cash book? A. It appears to be.

Q. And since the Pullen purchase appears there we may draw the reasonable inference that cash was paid? A. Yes, I think you may.

Q. That purchase by Bertron, Storrs and Griscom was made on August 9, 1907, when the plant was nearing completion. Is that right? A. That is correct. It was also made at a time when Bertron had stated in his account a ten dollar value for stock. It seems to me that he bought an imaginary bargain.

Q. That purchase was made over two years later than the date of issuance of the stock. Isn't that so? A. Yes, sir.

Q. In the summer of 1907 the officers were making rather confident predictions of selling power by June, 1908. Is that right? [7174] A. June, 1908?

Q. Yes. A. I don't recall whether or not that is a fact. Perhaps I can verify it if you wish.

* * *

[7178] By Mr. Hall:

Q. The Bertron, Storrs & Griscom records were the only contemporaneous records, is that right? A. The only contemporaneous records but there is no possible way for us to know whether Bertron had some sort of an arrangement with Pullen whereby he had agreed to take that stock from them at $5 a share at the time the Pullen option was secured. I am not saying he did do it, but I am saying that very well may have accounted for it.

Q. Do you think that Bertron, Storrs & Griscom were [7179] fulfilling an obligation to Pullen? A. I think they might have been.

Q. And that obligation was being fulfilled by Bertron, Storrs & Griscom at $5 a share. Is that right? A. It was being fulfilled at $5 a share and for that reason I do not think it could be construed to represent a sale establishing value at all.

* * *

[7206] By Mr. Hall:

Q. Mr. Gunn, will you refer to page 8 of Exhibit 27? A. Yes, sir, I have it before me.

Q. Doesn't it there appear that the value of 20 to 30 dollars per share referred to by Mr. Hutchinson was determined by earnings alone?

The Witness: May I have the question, please?

(Question read.)

THE WITNESS: He says his conclusion was based upon earnings alone. Those are the precise words.

By MR. HALL:

Q. You have no reason to doubt that? A. No.

Q. Hutchinson does not say in his affidavit that that value could have been secured from a willing buyer at the time of the transaction for cash. Isn't that so? A. He does not say he could. He does not say he couldn't. He just doesn't say.

Q. And isn't it a fact that the twenty to thirty dollars per share valuation used by Mr. Hutchinson could have had reference only to earnings in the future? A. I don't know whether that would be true or not. That very well may have been Mr. Hutchinson's manner of expressing it. Mr. Hutchinson had been asked to state what he thought [7207] the value was at the time the securities were received by him and I take that statement to mean he thought they were worth from 20 to 30 dollars a share.

Q. In terms of earnings alone? A. He has those words in there. I don't know what they mean. I think if you are going to take any implication out of those words it might be that if other things were considered he thought the stock had a greater value.

* * *

[7208] MR. GOLDBERG: Questions have been asked to elicit from the witness what use he made of these affidavits and what there is in them to support the use he made of them. These people are not here. They are not made available for cross-examination. We have no means of knowing what weight or how the exhibits are to be approached except the exhibit itself and some attempt to find out from the only man we have made available to us who had anything to do with the preparation of these exhibits, or who has had contact with the individuals involved, what in the world these vague and indefinite statements in the affidavits mean.

Personally we are of the opinion they are worthless.

TRIAL EXAMINER: Very well.

Proceed.

MR. KING: If your Honor please, I move to strike the last phrase "We are of the opinion they are worthless." It contributes nothing to the record and is proper comment, if proper at all, in the brief.

TRIAL EXAMINER: Motion to strike is denied.

• • •

[7209] By MR. HALL:

Q. In view of the fact that the valuation of 20 to 30 dollars was to be as of a date prior to the realization of earnings, the earnings that he has reference to necessarily were prospective earnings. Isn't that so?

MR. KING: Your Honor, there again it calls for speculation.

TRIAL EXAMINER: He doesn't have to speculate. If he doesn't know he says so. If he does, based upon what other information he may have, he may answer.

MR. KING: The question is not pitched that way. To [7210] answer at all it requires speculation. I object to the question.

TRIAL EXAMINER: Objection overruled.

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: Yes, I think that is right. I think they were prospective earnings of the initial project probably, not the ultimate project.

By MR. HALL:

Q. And that is borne out, Mr. Gunn, by the fact that Mr. Hutchinson based the 20 to 30 dollars on a dividend of from two to three per cent of its par value of the common stock. Is that right?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: Yes, I would say that is correct. Whether that is all Mr. Hutchinson had in mind in reaching the conclusion I don't know.

• • •

[7215] TRIAL EXAMINER: How did he get from two to three per cent return on par value to a valuation of $20 to $30 per share?

THE WITNESS: I don't know. That is just what I was trying to explain, Mr. Examiner.

The two to three per cent, as I understood it, relates to the initial project. Then after 1, 2, 3, or maybe 4 years it was contemplated the project would be considerably extended and would very materially increase the earnings from the common stock based upon the initial project alone, and it is the consideration that Hutchinson gave to that of which [7216] I am not aware.

TRIAL EXAMINER: How did he capitalize the two or three per cent returns and get $20 to $30?

THE WITNESS: I don't know. I don't know whether he based that on a simple capitalization or not. If you are going to assume that it is a simple capitalization then it would seem to me he capitalized it at about ten per cent.

By MR. HALL:

Q. Mr. Gunn, do you know the persons who fully concurred in the opinion as to the $20 to $30 per share valuation used by Mr. Hutchinson? A. No, I do not. Mr. Hutchinson there referred to the people who were associated with the McCall Ferry enterprise, and I don't know which ones he had in mind. I presume he had in mind generally the people who were closely associated with him. It might have been the board of directors, for example.

Q. Did you ask Mr. Hutchinson whom he had in mind? A. No, I did not. I assume he had in mind people connected with the McCall Ferry Power Company.

Q. Do you know whether Hutchinson investigated the market conditions in 1905 to determine the reasonableness of his conclusions with respect to the cash value of the securities of McCall Ferry? A. May I have that question again, please?

[7217] (Question read.)

THE WITNESS: I don't know whether he investigated the stock market conditions but he investigated very thoroughly the power market conditions. I assume since he lived during that period he certainly had some knowledge of what the money market conditions were.

By MR. HALL:

Q. What experience did Mr. Hutchinson have in financial matters, if you know? A. I do not know. I know he had been connected with several enterprises, but just precisely the capacity in which he was connected I do not know.

Q. Had Mr. Hutchinson ever made any valuation of stock that you know of? A. No, not except as he would have evaluated stock in buying and selling it for his own use or for whomever he may have bought it.

Q. Had McCall Ferry continued in business on the basis of the original capitalization plus the additional funds needed to complete the project, it would have been a very long time, wouldn't it, before any surplus would have been available as dividends to the common stockholders? A. I haven't made any computation of that but I assume it would have been a considerable period of years.

Q. Mr. Hutchinson made his valuation solely for your [7218] use in connection with the original cost studies? A. Well, that was the occasion for my asking him to make it. I presume he made it for any and every use for which it might be needed.

Q. And it was made about 34 years after the event? A. Some such period of years. The date of the affidavit shows it.

Q. You are claiming a cash value of $25 for the common and $50 for the preferred stock in the spring of 1905. Right? A. Yes, sir.

Q. Had any construction been started at that time? A. No, sir.

Q. The fact is that the plans for the project at that time had not been fully completed. Right? A. That is correct, they had not been fully perfected.

Q. And further the site and location of the dam had not been definitely settled? A. That is right, it had not.

Q. Isn't it also a fact that no construction bids had been called for or received in the spring of 1905? A. Yes, sir.

Q. And it had not been determined who was to construct the project. Isn't that so? A. What is the question, please?

[7219] (Question read.)

THE WITNESS: That is correct, except that McCall Ferry Power Company would. I take it you mean by that question it had not been determined what contractor would construct it. Is that it?

By MR. HALL:

Q. That is right. A. That is right, the contractor had not been selected.

Q. What was the date of the construction contract? [7220] A. Cooper's contract was dated October 18, 1905. That is shown on page 58 of Exhibit 26.

Q. I believe you have indicated in the spring of 1905 it had not been decided whether McCall Ferry would build a project itself or let someone else do it. Is that right? A. No. What I was attempting to indicate at that point, what I was attempting to ascertain, was what your question meant.

Q. Yes. A. You simply asked me if it had been decided who would build the project. My answer was that it had been decided that McCall Ferry, as a corporation, would build it or have it built, and that the contractor had not actually been selected.

Q. Was that in the spring of 1905? A. I think we are all tangled up now. In the spring of 1905 it was determined that a project would be built by McCall Ferry Power Company, but the contractor for the actual construction of the project had not then been selected.

Q. And bids were not called for until August. Is that right? A. I believe that is correct.

Q. In other words, in the spring of 1905 the McCall Ferry Company did not know whether they would construct the project themselves or let someone else do it for them?

[7221] MR. SPARKS: May I object to that part of the question, letting someone else do it for them, unless you specify who it means?

MR. HALL: Obtaining a contractor.

THE WITNESS: I don't think McCall Ferry Power Company ever considered constructing the project without obtaining a contractor in one way or the other.

Does that answer your question?

By MR. HALL:

Q. Yes.

The total construction cost of the project had not been determined in the spring of 1905. Isn't that so? A. Well, an estimate had been prepared but it was on a project different in scope from the project actually built, and therefore the ultimate cost was different.

Q. It was not based upon the completed plans at that time either. Is that right? A. What does "It" refer to?

Q. The company had not finally determined what the plans would be? A. No, not in final detail.

Q. Do you think that an estimated dividend rate of two to three per cent fixes any specific value on stock?

THE WITNESS: May I have the question?

(Question read.)

[7222] THE WITNESS: That standing alone, I don't know whether it would or not. However, I think Hutchinson had much more information at his disposal than that figure standing alone.

By MR. HALL:

Q. Will you refer at this time to page 49 of Exhibit 26, Mr. Gunn? A. Page 49?

Q. Of Exhibit 26. You there indicate the prospectus which is part 5 of Exhibit 27, shows estimated earnings equal to seven per cent on the proposed issue of four million dollars par value common stock. Right?

THE WITNESS: May I have the question?

(Question read.)

THE WITNESS: Yes, that is what is there shown. However, the actual issue was five million dollars.

By MR. HALL:

Q. Referring to that estimate and all the other information that you had, you nevertheless stated "An estimated return of seven per cent on the common stock does not fix any specific value on that stock." A. That is my opinion of it. I couldn't fix the value standing on that alone.

Q. And that is the same sort of information Hutchinson was using on page 8 of Exhibit 27. Right? A. Yes, plus all other things he knew about the project. [7223] He used that sort of information plus all other knowledge he had of the project and its development.

• • •

[7311] GEORGE W. SPAULDING

* * *

RE-DIRECT EXAMINATION.

By MR. SPARKS:

* * *

[7316] Q. Did Safe Harbor agree to the termination of the contract identified as Exhibit 71 and the exclusion of Safe Harbor as a party to the new contract, Exhibit 72? A. Yes.

* * *

[7317] Q. Mr. Spaulding, are these letters which have just been identified as Exhibits 160 and 161 the correspondence between Penn Water and Safe Harbor regarding the termination of the contract identified as Exhibit 71 and the execution of the contract identified as Exhibit 72? A. They are.

* * *

[7321] Q. Will you briefly illustrate the process of determining the savings from a single interchange transaction for a single hour? A. I previously stated in my testimony that an interchange transaction really involves three stages. The first a scheduling stage, second, an operating stage, and third, an accounting stage.

In considering the "savings" we are concerned only with the accounting procedure. Suppose, then, that based on a scheduled interchange transaction the load dispatchers have arranged for the supply of interchange energy and capacity from Penn Water and Safe Harbor to one of their Pennsylvania customers. Some time after the actual operations have occurred the customer who received such interchange supply will advise Penn Water of its estimate of the additional operating costs that would have been incurred by them had the interchange supply from Penn Water and Safe Harbor not been received. Such estimated costs will include that customers cost in boiler operations, of starting units, of savings in fuel, and any reduced cost allowance for incremental labor and for maintenance. For

this same period of the interchange transaction, Baltimore Company will similarly estimate their actual increased cost of operation, resulting possibly from the operation of additional boilers or units, their cost of [7322] additional fuel burned, the cost of any additional labor where needed, and any allowance for incremental maintenance, these being costs which they would not have incurred in the absence of this interchange transaction.

Baltimore Company's additional operating costs will, of course, be less than the reduction in operating expenses of Penn Water's and Safe Harbor's customers. Otherwise no interchange transaction would have been scheduled. The difference between Baltimore Company's additional operating costs and the Pennsylvania customer's reduced operating costs is the savings which are divided between the suppliers and their Pennsylvania customer, the receivers.

Q. How is this division of savings accomplished? A. To accomplish this division of the "savings" and it is usually on a 50-50 basis, Penn Water bills the Pennsylvania customer in connection with this transaction as a part of its interchange bill for that month an amount computed at one-half of the sum of the reduced operating costs of the customer and the increased operating costs incurred by Baltimore Company.

The actual savings on the transaction do not appear on the bills as rendered. Only the billing costs and revenues are recorded in the operating accounts of Penn Water.

TRIAL EXAMINER: May I have the last sentence, please?

(Answer read.)

[7323] By MR. GOLDBERG:

Q. After Penn Water has received the revenues for such interchange——

TRIAL EXAMINER: Just a minute. That part of that answer is not understandable by me. Do you expect the witness to develop it?

MR. SPARKS: I can ask him to do it right now, if your Honor please.

By MR. SPARKS:

Q. Mr. Spaulding, would you explain the last clause in your last answer?

MR. GOLDBERG: Let's have that last clause.

By MR. SPARKS:

Q. Which reads "Only the billing costs and revenues are recorded in the operating accounts of Penn Water"? A. I am trying to distinguish, Mr. Examiner, between the recording on operating accounts of what was frequently referred to as "savings" on these interchange transactions and the actual billing which is recorded as revenue on the operating accounts of Penn Water.

The revenue so received will, of course, include the actual costs incurred plus an increment equal to one-half of the total savings, and they are the revenues that are recorded on operating accounts and not the savings as was frequently referred to both by myself and by Commission Staff [7324] counsel in that cross-examination.

TRIAL EXAMINER: As I understand it, you do not show in Penn Water's books the incremental cost that would be incurred by the Pennsylvania receiver, nor do you show the incremental costs that will be incurred by Consolidated.

All that your books show would be the revenues that Penn Water receives from the Pennsylvania receiver or customer?

THE WITNESS: May I have that last question?

(Trial Examiner's question read.)

THE WITNESS: That is correct.

TRIAL EXAMINER: The billing costs that you referred to which would be reflected in the books would consist of what?

THE WITNESS: The billing costs, as used here, in contradistinction to revenues, were the payments that Penn Water might make to that customer for a purchase rather than a sale.

MR. GOLDBERG: How about using some figures and letting us see how it works? Take six mills as what it would have cost the Pennsylvania customer, four mills as what it would have cost Consolidated. Then what do you do?

THE WITNESS: You would, as I have explained, add the sum of those two costs together, and divide by two, and would bill the Pennsylvania customer at the rate of five mills per kilowatt hour if energy alone is involved.

MR. GOLDBERG: And then the money involved at the rate of [7325] five mills per kilowatt hour received from the Pennsylvania customer is recorded on Penn Water's books as revenue?

THE WITNESS: That is correct.

Then if during another transaction energy is purchased from the Pennsylvania customer as interchange, then there is a cost incurred by Penn Water which is then set up as an expense, and that is the billing costs that I referred to in contradistinction from the billing revenues. It is not in the same transaction but in another transaction in our assumptions here.

MR. GOLDBERG: I wonder if we could follow through that reverse procedure, that is where Penn Water is purchasing?

Let's assume it costs Baltimore six mills and it costs the Pennsylvania customer four mills. What is the procedure then in a purchase by Penn Water?

THE WITNESS: Again, the cost to Penn Water would be five mills, computed in the same manner if there was a 50-50 split as we have assumed. Penn Water would set

up that five mills as part of its operating expenses, or part of its purchased power, and that would be the end of Penn Water's accounts so far as that transaction is concerned.

MR. GOLDBERG: Thank you very much.

By MR. SPARKS:

Q. Mr. Spaulding, after Penn Water has received the revenues for such interchange services, how does Baltimore Company receive the benefit of the savings from such [7326] transactions? A. Regardless of whether Penn Water, Safe Harbor, or some other system plant actually supplied the electric services that entered into such interchange transaction, and it is usually impossible to determine exactly from which plant the service is supplied, Penn Water will receive additional revenue from interchange as the result of such transaction, and these additional revenues reduce the payment which Consolidated will make under the contracts identified as Items H and I.

Q. Will you refer to Exhibit 18 and explain how the revenues from interchange transactions enter into the computation of those bills? A. Referring to Exhibit 18, the additional revenue received by Penn Water will increase the amounts to be recorded in (e) 5, 6 or 7, as the case may be. The resultant reduction in the payment to Penn Water by Baltimore Company is in turn a reduction in Baltimore Company's own operating expenses. Such reduction in the latter's operating expenses will more than offset the increase in its operating expenses incurred at the time of the interchange transaction, and in such manner Baltimore Company receives the full benefit of all operating savings resulting from interchange transactions between Penn Water, Safe Harbor, and their northern customers.

[7327] Q. Mr. Spaulding, in the discussion of "savings" at pages 2884 to 2899, you were asked about "savings" and "economies" resulting from firm power arrangements and coordinated operations.

Did you have any difficulty in understanding these questions, the answers to which appear at transcript page 2887, line 8, page 2896, line 24, and page 2898, line 1? A. Yes, I did.

Q. Why? A. I did not understand what "savings" or "economies" were referred to in connection with these firm power contracts.

Q. Are there savings involved in the Pennsylvania firm power contracts? A. Yes, in my opinion there are.

Q. Are there savings involved in the contracts with Baltimore identified in this proceeding as Items E, F, and G, and H and I?

* * * *

[7328] THE WITNESS: Baltimore Company recently stated that it could not obtain or produce the same services now received from Penn Water and Safe Harbor more economically from any other source. Furthermore, in answering Commission counsel's question it seemed to me that I would have to consider the "value of service" rather than "cost of service", and I have no ready answers at this time relating to value of service.

By MR. SPARKS:

Q. Where were the statements made by Baltimore Company to which you have just referred? [7329] A. They are included in the answer of Consolidated Gas Electric Light and Power Company of Baltimore to the Public Service Commission of Maryland in the matter of the investigation of the rates of Baltimore Company. This answer was executed under oath June 5, 1944, by Mr. Cohn, the then president of Baltimore Company. The proceedings before the Public Service Commission of Maryland were known as Cases 4649 and 4661.

* * *

[7336] Q. Mr. Spaulding, several times during your cross-examination you referred to the impossibility of painting kilowatt hours. Do you mean that it is at all times impos-

sible on the interconnected system of Penn Water and Safe Harbor to trace the kilowatt hours from a generating source of such energy to the customers' load centers? A. No, it is not always impossible. For example, where there may be only a single source of energy generation supplying a section of the system load there would be no trouble in tracing the kilowatt hours from the source of generation to that load center.

Q. Does this situation ever exist on the Penn Water-Safe Harbor system? A. Yes, it does on certain sections of this system from time to time.

Q. Will you please give an example? A. Under most operating circumstances we have no difficulty in separating the identity of the 25-cycle electric services, including energy, transmitted from the Holtwood Power Development. For example, the Holtwood frequency changers [7337] connecting the 25-cycle and 60-cycle systems at that plant are very frequently shut down. Under such conditions we can be certain that all of the 25-cycle energy sent out from Holtwood is Penn Water's own generated energy. We can, therefore, trace these kilowatt hours from Holtwood to Baltimore and to Lancaster. The character of these 25-cycle services are so distinctive that we have no trouble in tracing or identifying them.

Q. Can you similarly trace or identify the use made of the 25-cycle single phase energy generation at the Safe Harbor plant? A. Yes, but to a more limited extent, because frequently operating conditions require the conversion of power from 60-cycle three phase to 25-cycle single phase by means of the frequency changer at Safe Harbor.

Furthermore, we cannot always trace the energy on the high tension 25-cycle single phase transmission system to the trolley system of the railroad and identify it as being energy generated at Safe Harbor because of its mixture with the electric services flowing into this section of the transmission system from the other sources of supply at Philadelphia and Washington.

Q. You have referred to the conversion of power from 60-cycles to 25-cycles at Holtwood and at Safe Harbor through frequency changer units. Will you please describe such [7338] conversion? A. The frequency changer units installed at Holtwood and at Safe Harbor consist, for each unit, of two large rotating machines directly connected to a single shaft, each machine being designed to operate from time to time as either a synchronous motor or a synchronous generator, depending upon the operating service requirements.

The machine on one end of the frequency changing unit is designed for operation at 60-cycles and the one at the other end at 25-cycles.

If power is being converted from 60-cycles to 25-cycles, the 60-cycle machine will be operated as a motor, driving the 25-cycle machine as a generator by the mechanical power transmitted through its direct connected shaft, and, similarly, when power is converted from 25-cycle to 60-cycle the 25-cycle machine will be acting as the motor and the 60-cycle machine as the generator.

The direction of power flow, and the amount of conversion, may be controlled at Safe Harbor by mechanically varying the relative position of a stator, thus changing the electrical phase angle.

[7339] Q. Can you normally trace and identify the 60-cycle energy supplied at Holtwood or Safe Harbor to the load centers of Penn Water and Safe Harbor's customers? A. Not normally, because there is usually a co-mingling of the energy and other electric service attributes generated at Holtwood and at Safe Harbor, and frequently a further co-mingling with backfeed from one of their Pennsylvania customers or from Baltimore.

Q. Does it ever happen that all of the electric services originate at the Baltimore and Washington Steam Plants? A. No, such operation does not occur.

Q. If all the energy were generated in Baltimore and Washington, would you then be able to trace this energy

to your Pennsylvania customers? A. If at such time we were not receiving any interchange energy over Penn Water and Safe Harbor's interconnections with their Pennsylvania customers, there could be little doubt but that such energy supply would be traceable from its generating source in Baltimore and Washington to Penn Water and Safe Harbor's customers and to the Pennsylvania Railroad through Safe Harbor. Even under such operating circumstances Penn Water and Safe Harbor would be contributing certain essential attributes of the electric service being supplied in Pennsylvania. The energy so supplied by Baltimore to Penn Water and Safe Harbor would necessarily be changed [7340] in voltage and perhaps in frequency, would be mixed with reactive or wattless energy, and would be backed up by the spinning reserve capacity supplied by the hydro units operating as condensers, so that although we might be able to trace the energy from the generating source to the load centers we would find such resulting electric services would be considerably altered in their essential characteristics.

* * *

[7343] By MR. SPARKS:

Q. Mr. Spaulding, was parallel operation of Metropolitan Edison Company system and Penn Water system continuous from December 6, 1931? A. No. Regular parallel operation was not possible until the end of January, 1932.

Q. Had Penn Water made the necessary changes in its equipment at Holtwood prior to January, 1932?

TRIAL EXAMINER: Will you read that?

(Question read.)

THE WITNESS: Yes, in October, 1931, Penn Water rearranged its transformer units at Holtwood to provide additional capacity for its York circuits. These changes were made coincident with other changes required in its transformers and circuits to provide for the operation of the

tie circuits between the Holtwood and the Safe Harbor plants.

By Mr. Sparks:

Q. When parallel operation with Metropolitan Edison [7344] was established in January, 1932, was the tie circuit between Holtwood and Safe Harbor then in operation? A. Yes. The Safe Harbor-Holtwood tie circuits went into service a few weeks prior to the parallel operation with Metropolitan Edison.

Q. Then, in January of 1932, both the tie lines from Penn Water to Metropolitan Edison and the tie lines from Holtwood to Safe Harbor were in operation and electric services from Safe Harbor could have been used by Penn Water for supply to Metropolitan Edison? A. That is correct. However, it was recognized that in such operation Safe Harbor might be acting beyond its authority received from the Pennsylvania Public Service Commission, which did not include permission to sell or dispose of Safe Harbor's services directly or indirectly to Metropolitan Edison.

Q. How was this situation corrected? A. The situation was immediately corrected by separating various amounts of Holtwood generating capacity from the rest of the Penn Water system and connecting it only to the York circuits for the supply of electric services to the Edison Light and Power Company and to the Metropolitan Edison Company, under the contracts identified as Exhibits 138 and 139. Such operation, however, was not as economical nor as reliable as would result from this supply being paralleled [7345] with the main power system of Penn Water and Safe Harbor.

Q. How long did this segregated method of operation of the York supply continue? A. About one year. On January 10, 1933, Safe Harbor obtained additional authority, granted by order of the Public Service Commission, permitting it to sell or dispose of its services to Metropolitan Edison Company among others.

Q. Mr. Spaulding, I show you a document entitled "Copy—Application of the Safe Harbor Water Power Corporation for a Certificate of Public Convenience, evidencing the Commission's approval of the modification of the order of the Public Service Commission issued to the Safe Harbor Water Power Corporation on the 31st day of March, A. D. 1930," consisting of an application and a report and order of the Pennsylvania Public Service Commission, and I ask you if that is a true copy of the application and order filed in January of 1933? A. It is.

Q. Mr. Spaulding, does the application show that it was executed on the 29th day of March, 1932? A. It does.

Q. And is the date of filing which I mentioned, of January, 1933, incorrect? I am referring to the filing of the application. A. The application was filed in March of 1932.

[7346] Q. And is the order of the Commission as of January 10, 1933? A. That is correct.

MR. SPARKS: I ask, Mr. Examiner, that this document be marked for identification as Exhibit 163.

TRIAL EXAMINER: The document handed the reporter may be marked Exhibit 163 for Identification.

(The document referred to was marked Exhibit No. 163 for Identification.)

By MR. SPARKS:

Q. Mr. Spaulding, does this document contain the application and order which you identified for the record at transcript pages 3454 and 3455? A. It does.

Q. Will you please indicate the dates on which parallel operation directly between Penn Water or Safe Harbor's generating plants and the main system of Pennsylvania Power and Light Company was begun? A. The hydroelectric plants of Penn Water and Safe Harbor were first paralleled directly with the main system of Pennsylvania Power and Light on October 8, 1935. Such parallel

operation was specifically contemplated under the contract identified as Exhibit 76 and this parallel operation was made possible upon the completion by Pennsylvania Power and Light of its 66 K. V. transmission circuit between its [7347] Harrisburg sub-station and its Donegal sub-station northwest of the city of Lancaster where a connection was made to an existing 66 K. V. circuit extending from Safe Harbor to this Donegal sub-station, a distribution center of Pennsylvania Power and Light Company. These interconnection facilities, including those provided by Penn Water and Safe Harbor at Safe Harbor and Manor sub-station, were used more or less continuously until November 1939 and this interconnection of Penn Water and Safe Harbor with P. P. & L. has been used continuously since that date.

Q. When were the facilities of Penn Water and Safe Harbor first paralleled directly with the Philadelphia Electric Company's main system? A. Parallel operation of Safe Harbor and Penn Water's system with that of the main system of Philadelphia Electric Company resulted from the continuous parallel operation of the Pennsylvania Railroad's extensive transmission system in the manner contemplated under the provisions of the contracts identified as Exhibits 134 and 135.

Such parallel operation of the single phase power supply facilities of Penn Water, Safe Harbor and Philadelphia Electric Company was tested out on October 30, 1934, was operated more or less continuously until June, 1938, and since 1938 all of the railroad's power supply sources, other than that from New York City, have been operated in parallel.

[7348] TRIAL EXAMINER: What do you mean by "Parallel operation"?

THE WITNESS: By parallel operation is meant the operation of two systems, or sources of power supply, in synchronism as a result of an electrical connection between

those two systems, and as a result of that electrical connection those two systems are electrically tied together.

TRIAL EXAMINER: What is the difference between calling it a parallel operation and just saying the systems were connected as of a certain date and remained so over a period of time?

THE WITNESS: I don't think there is any distinction, as long as the expression "tied together" means electrically tied together.

TRIAL EXAMINER: Is that the full significance of the term as it appears in the contracts insofar as an engineering interpretation of those contracts is concerned?

THE WITNESS: Yes, sir, I think it is, remembering, of course, that when you refer to tying together two systems it may imply tying together parts of two systems, and that is the reason I used the expression "the main system of" because by "main" I meant to include all of the electrical transmission system and the sources of supply available to that particular company and operated together as a system.

TRIAL EXAMINER: Does "parallel operation" connote cooperation of any kind?

[7349] THE WITNESS: No, sir. Parallel operation as I use it, and as I know of its use, means only the actual operation.

TRIAL EXAMINER: It doesn't signify in addition power factor cooperation?

THE WITNESS: No, sir, it does not signify that.

Of course there must be that result but it does not signify anything other than just the technical fact you tie two circuits together electrically.

TRIAL EXAMINER: All right, Mr. Sparks.

By Mr. Sparks:

Q. At pages 3615 and 3616 Mr. Goldberg was questioning the justification for your allocation of the entire cost of the two—220 K. V. Safe Harbor-Baltimore-Washington transmission lines to Baltimore Company in Exhibit 35, was he not? A. That is right.

Q. You did assign the entire cost of those lines to Baltimore Company in Exhibit 35, did you not? A. Yes, sir. In my opinion the total cost of those lines should be allocated 100 per cent to Baltimore Company.

Q. Are those transmission lines used at times for backfeed? A. Yes, practically all of the backfeed from Baltimore and Washington to Safe Harbor and Penn Water is transmitted over those lines.

[7350] Q. Do you consider the transmission of such backfeed to Safe Harbor and Penn Water a service that Penn Water renders to Baltimore Company? A. Yes, I do.

Q. Will you briefly state for what general purpose backfeed is supplied from Baltimore and Washington to Safe Harbor and Penn Water over these facilities? A. Generally, the backfeed is so supplied to accomplish the maximum overall economy of system operations. More specifically, such backfeed is supplied by Baltimore Company to Penn Water and Safe Harbor for three different purposes:

First, as electric services supplied to the hydro companies in connection with interchange transactions between these two hydro companies and their northern customers.

Second, as electric services to supplement the power resources of Penn Water and Safe Harbor in meeting their operating responsibilities to their firm power customers, and

Third, for conversion by Safe Harbor and supply to the Pennsylvania Railroad through the facilities of Penn Water and Safe Harbor, because Baltimore Company has

no facilities of its own for the supply of electric services to the Pennsylvania Railroad to meet Baltimore Company's operating responsibilities under the railroad power supply contract, identified as Exhibit 10.

[7351] Q. Considering now these three different purposes for backfeed separately, will you indicate why, in your opinion, any costs relating to, or that might be allocated to such backfeed for interchange transactions, should be considered a cost to Baltimore Company? A. As I have frequently testified, the savings on interchange transactions are equitably divided between Penn Water and the northern customers. All of such savings allocated to Penn Water are ultimately a benefit to Baltimore Company. There are necessarily certain costs incurred in providing for such interchange transactions and the savings or benefits derived go in part to compensate for such costs. When Penn Water or Safe Harbor use backfeed from Baltimore in connection with such transactions, Penn Water and Safe Harbor do not retain any of these benefits or savings, but, because Baltimore Company does receive Penn Water's and Safe Harbor's share of the benefit and savings, Baltimore Company should bear any costs incurred by Penn Water and Safe Harbor in connection with such transactions.

Q. Do the customers in Pennsylvania make any investment or incur costs for facilities for interchange? A. Yes. These customers have themselves provided quite extensive transmission systems of their own which are used in this connection and, in addition, the costs of Penn Water's lines serving them would also be properly considered [7352] a cost to be allocated to such customer. These transmission systems in Pennsylvania are just as essential in such interchange transactions as are the lines from Safe Harbor to Baltimore.

None of the costs of transmission to the north of the hydro plants were allocated to Baltimore and there is no reason why the customers in Pennsylvania should be allo-

cated any of the costs for transmission between the hydro plants and Baltimore.

Q. Now, will you state why, in your opinion, any costs relating to or that might be allocated to such backfeed, used by Penn Water and Safe Harbor to supplement their own electric services rendered to their firm power customers, should be considered a cost to Baltimore Company? A. The operations of the hydro plants of Penn Water and Safe Harbor are carried out to obtain maximum economy of operations, the benefits of which wholly accrue to Baltimore Company. As one example of such operation, Baltimore Company obtains hydro services at a time when it can replace the highest cost service on Baltimore's own system. To obtain the maximum benefits the hydro companies are operated on the peak of the load curve, as was explained in connection with Exhibit Number 8. With this method of operation, Baltimore Company sends Penn Water and Safe Harbor as backfeed electric services in the off-peak hours when they can [7353] be supplied by Baltimore Company at a minimum cost to itself. Inasmuch as Baltimore Company receives the full benefit from the economies of such operation, it is only proper that Baltimore Company be allocated any costs incurred in connection with the backfeed necessary for the procurement of these economies, and I believe we properly considered that Penn Water was rendering transmission services to Baltimore Company when it transmitted backfeed from Baltimore Company for such purpose.

TRIAL EXAMINER: Would you read that last, please?

(Answer read.)

By MR. SPARKS:

Q. Will you also state why, in your opinion, any costs relating to, or that might be allocated to, such backfeed from Baltimore for conversion by Safe Harbor and supply to the Pennsylvania Railroad through the facilities of Penn

Water and Safe Harbor should be considered a cost to Baltimore Company? A. To the extent that such backfeed supplied to the railroad is the operating responsibility of Baltimore Company, it is again only proper that any transmission costs relating to such backfeed be allocated to Baltimore Company, for a transmission service is thus rendered by Penn Water to Baltimore Company.

Q. Will you briefly state the several reasons why the [7354] entire cost of the Safe Harbor-Baltimore-Washington Lines should be allocated to Baltimore? A. In the first place, considering the part of these circuits between Ellicott Sub-station and the connection with the Washington Company, this line, together with Ellicott Sub-station is clearly provided in connection with Baltimore Company's contract with Potomac Electric Power Company to which Penn Water is not a party.

With respect to the circuits between Safe Harbor and Baltimore, there are a number of important uses in addition to that of providing capacity and energy services, and all for Baltimore's use in meeting its own system obligations. The second of the two circuits between Safe Harbor and Baltimore, installed about 1937, was provided for Baltimore Company alone, and only to assure electric stability and reliability of service.

Q. What are these uses other than for capacity and energy services? A. One very important use is in connection with power factor cooperation. To permit Baltimore to operate its modern and efficient steam plants at maximum loads it is necessary that such plants carry near 100 per cent power factor. The hydro plants at Holtwood and Safe Harbor provide the required wattless power, often by operating hydro units as condensers.

Another use is in connection with the maintenance of [7355] satisfactory system frequency. The Baltimore system load, principally because of the Bethelehem Steel Company load, is subject to very heavy and rapid load fluctuations. In the absence of the tie-lines through Safe Harbor

to the north, these load fluctuations would create a serious problem of frequency and load regulation. About 75 per cent of these load fluctuations are carried by these tie-lines and absorbed in the several large inter-connected systems in Pennsylvania and New Jersey. It might be mentioned that the existence of the fluctuating load in the Baltimore system, and the need for carrying a considerable part of these fluctuations on the tie-lines, limits the capacity use of these tie-lines to the north and is a use of these lines by Baltimore Company, not compensated by any similar use by other customers, but for which use no cost was allocated against Baltimore Company.

TRIAL EXAMINER: In what sense do you use "capacity" in connection with those tie-lines?

THE WITNESS: The capacity of a tie-line may be limited by the size of the conductor, or it may be limited by the connected transformers at one end or the other. From a consideration of those two principal factors it can be determined what the maximum load carrying capacity of those tie-lines is.

If, for instance, it would be possible to continuously [7356] carry a steady load of 50,000 kilowatts on a transmission line with its connected transformers, and then for reasons of outside influence the power and energy flowing over those lines were widely fluctuating, perhaps to the extent of 20 or 30,000 kilowatts, then you can see that the continuous rating of those lines may be only half what it was before, because there is an upper limit to what you can carry on those lines, and if you have a widely fluctuating load the integration of the steady load must necessarily be much less than its rating would otherwise be.

Other factors that have to be considered in that is one of stability, one of voltage regulation between the two ends of the line, and one of the relay settings of that line in order that such relay settings may be coordinated with the other safety protection relays on the system.

• • •

[7378] Q. In your testimony you have referred to three methods of recording energy. You have referred to gross amounts, to net amounts, and to net hourly amounts. Will you please explain these terms more specifically? A. I will do so by example. If we were to add up the sum of all the energy registered on ratcheted meters, measuring the amount of power flowing toward Baltimore from Holtwood and Safe Harbor for one hour, a day or a year, we would obtain a gross figure.

As I have already stated, such a gross amount is not practical for operating purposes because we know that frequently power may be flowing in two different directions on the same circuit within a single clock hour, and again that power may be flowing north on one of our Baltimore circuits while flowing south on another Baltimore circuit, perhaps even at the same instant.

Nevertheless, gross amounts are recorded and are generally used only in connection with the records shown in Exhibit 143, and in our Commission reports wherever requested.

For most operating purposes we determine and record the net power flow on these several circuits for each hour. The separate totals of the "net hourly" flows in each direction are what we refer to as "net hourly" records.

"Net" records can be obtained either by taking the difference between the gross records or the algebraic sum of the [7379] "net hourly" records. However, we frequently find that the "net" of the north and south gross figures is so small that we get no indication of the large amount of actual energy services rendered in each direction. It is for this reason, in my opinion, that we must consider the "net hourly" figures for any practical analyses or for cost of service purposes, and we have, therefore, used these "net hourly" deliveries and receipts in connection with our analyses of energy transactions in Exhibit 35.

* * *

[7381] Q. Is a substantial part of the electric energy generated by Safe Harbor consumed at points in the state of

Pennsylvania? A. Yes. Using the statistics compiled by the company in the manner shown in Exhibit 143 for the years 1944, 1945, and for the first ten months of 1946, and expressing the sum of Item 1 plus Item 15 as a percentage of Item 10, we obtain a maximum percentage of 55 per cent for 1944, 58 per cent for 1945, and 51 per cent for the first ten months of 1946.

Not only is Item 1 greater in amount than should properly be used in any such accurate determination of the energy generated at Safe Harbor and consumed in states other than Pennsylvania, but Item 15 is also greater in amount than should properly be used by reason of the fact that a large but undetermined portion of Item 15 is in part backfeed received from Baltimore, and included in the amount shown [7382] in Item 2 of Exhibit 143, and in part interchange received from Philadelphia Electric Company at Perryville. These above percentages, subject to the inaccuracies stated, show that of the energy generated at Safe Harbor less than 58 per cent is transmitted to states other than Pennsylvania, and therefore the balance, which is a substantial part of such energy generated at Safe Harbor, is consumed in the state of Pennsylvania.

• • •

[7383] Q. Can you conclude from these statistics that Baltimore did not receive two-thirds of Safe Harbor's output, Mr. Spaulding? A. Yes, I can, but it must be understood that such computation of energy proportions, while clearly indicating that Baltimore did not receive two-thirds of the energy generated at Safe Harbor, do not represent nor measure the proportion of the electrical services rendered, nor the proportion of the electrical services supplied by Safe Harbor to Baltimore Company, for electric energy is not a measure of the electric services rendered nor a measure of the services available.

• • •

[7397] Q. Mr. Spaulding, do I understand that Pennsylvania Power and Light Company required supplemental

services to meet the firm power obligations on their own system? A. Yes, they did.

Q. Do these interconnected companies frequently depend on such interchange services to supplement their own power resources in meeting their system requirements? A: Yes.

* * *

[7402] J. RHOADS FOSTER.

* * *

[7404] RE-DIRECT EXAMINATION.

By MR. SPARKS:

Q. Dr. Foster, at page 700 of the transcript, lines 15 and 16, you were asked, "Did you have in mind the use of a credit to consumers in connection with the depreciated rate base?"

You answered "Yes."

Did you misunderstand the question? A. Yes. The answer should have been "No."

Q. At pages 5656 to 5659 of the transcript you illustrated the use of a depreciated and an undepreciated rate base. For this purpose you assumed utility plant accounts in an aggregate amount of $5,300,000, and made related assumptions.

In this connection have you prepared an exhibit having [7405] the title "Illustrations of different methods of treating depreciation within the rate making formula."? A. I have.

Q. Dr. Foster, I hand you a document entitled "Illustrations of different methods of treating depreciation within the rate making formula," and ask you if that one sheet document is the document to which you have just referred? A. It is.

Q. Was that document prepared by you or under your supervision? A. It was.

MR. SPARKS: Mr. Examiner, may this document be marked for Identification as Exhibit No. 165?

TRIAL EXAMINER: The document handed the reporter will be so marked.

(Thereupon, the document referred to was marked Exhibit No. 165 for Identification.)

By MR. SPARKS:

Q. Do the hypothetical data appearing on Exhibit 165 show variations of the two methods, namely, use of a depreciated and undepreciated rate base? A. They do.

Q. Is this exhibit the source of the figures which you mentioned at page 5656 of the transcript? A. It is.

[7406] Q. In the first and second lines of the exhibit have you shown the original cost of utility plant and the depreciation reserve balance which you have assumed to exist in a hypothetical situation? A. I have.

Q. What are the assumptions which you have made as to alternative treatments of depreciation in rate regulation? A. Cases 1 and 2 assume the use of an undepreciated rate base. The rate base is assumed to be $5,300,000, the amount of original investment.

Cases 3 and 4 each assume the use of a depreciated rate base. In case 3 the assumed rate base is $5,031,000 and in case 4 it is $4,600,000.

Q. In each case have you assumed that the fair rate of return is 6.5 per cent and that the regulatory authority has allowed this 6.5 per cent as the fair and reasonable rate of return? A. Yes. This rate is shown in line 5 of the exhibit.

Q. Have you shown on line 6 for each case the product of the rate of return times the rate base? A. I have. The product of the rate of return applied to the rate base is $344,500 in cases 1 and 2, $327,000 in case 3, and $299,000 in case 4.

Q. Have you carried to line 14, utility operating income, the amount of this return allowed by the regulatory

authority? [7407] A. I have. The amounts on line 14 are the same as the amounts on line 6.

Q. Have you for the illustrative purposes in cases 1 and 2 included a deduction representing what is assumed to be credits to consumers for the earning capacity of depreciation funds? A. Yes. The credit is shown on line 20 among the income deductions. In case 1 the deduction is at a rate of 2½ per cent, and in case 2 it is at the rate of 6½ per cent on the depreciation reserve balance.

Q. Is the credit to consumers shown on line 20 as $17,500 in case 1 and $45,500 in case 2, an operating expense? A. No, it is considered to be compensation for the use of funds other than the capital funds provided by stockholders. Therefore, the amount of the credit must be deducted from income before income is available for payment of dividends.

Q. Is the amount of the credit applied to reduce the annual provision for depreciation which is charged as an operating revenue deduction? A. It is.

Q. So that the operating revenue is correspondingly less than the amount which otherwise would be required to yield the return allowed by the regulatory authority? [7408] A. That is correct.

Q. In connection with the use of a depreciated rate base is there such a credit to consumers? A. No. In cases 3 and 4 there is no deduction on line 20 representing a credit to consumers.

[7409] Q. What have you assumed as the annual provision for depreciation? A. $106,000.

Q. In cases 3 and 4 does the recognition of depreciation take the form of a deduction from the rate base? A. It does. In case 4 the assumed deduction is an amount equivalent to the depreciation reserve. In case 3 the assumed deduction is five-thirteenths of the depreciation reserve corresponding to the ratio of the credit to the consumers shown in line 20 for case 2.

Q. Is this distinction the reason for your statement at page 704 of the transcript that the "use of a depreci-

ated rate base provides indirectly the credit which is provided directly by the adjustment of the fair return where the mode of treatment is the use of an undepreciated rate base"? A. That is right.

Q. Is the assumed fair rate of return of 6.5 per cent the same in each of the four cases illustrating different methods of regulatory treatment of depreciation in rate making? A. Yes.

Q. Is the effective return, that is the dollars actually available to investors, the same in each of the four cases? [7410] A. No; in cases 1 and 3 it is the same and in cases 2 and 4 it is the same.

Q. Is the effective rate of return which investors would earn on their investment the same in each of the four cases? A. No. In cases 1 and 3 it is the same and in cases 2 and 4 it is the same.

Q. At page 5669 of the transcript, lines 14-16, you said, "The results of the determination which follow from applying the six per cent rate of return to an original cost rate base are consistent with the first test, that of equitableness." Was that a complete statement? A. No. The experienced cost rate of six per cent was determined subject to the definition of experienced cost of capital at page 515, lines 6-11 of the transcript in this proceeding. Therefore, the application of six per cent rate to an original cost rate base is consistent with the test of equitableness only to the extent that the components of that rate represent return on debt and preferred stock capital.

Q. At page 5691 of the transcript, lines 10 to 23, you said that you know of no feasible procedure by which it is possible, "to directly determine the dollars of the fair return requirement so far as equity capital is concerned."

You then said that in this proceeding the certain number of dollars, not less than $2,450,000, were not determined [7411] before you "turned your attention to the question of fair rate of return."

Do you feel it necessary to clarify those statements? A. Yes. In the answer at lines 22 and 23 and in the answer

to the preceding question, I had reference to the general question of whether or not the fair annual return to a regulated enterprise, expressed in dollars, may be estimated directly, without consideration of either rate base or rate of return.

The desire for administrative simplicity sometimes has raised the question as to whether or not the fair annual return might be determined directly without the use of either a rate of return or rate base.

I was referring to this general question when I said that I know of no feasible procedure by which it is possible to determine directly the fair return on equity capital. A rate of return or percentage cost must be estimated for equity capital and can be given expression as an annual return only by multiplication of some base.

The amounts of 2,430,000 to 3,160,000, shown by Schedule 11 of Exhibit 30——

MR. GOLDBERG: Just a minute, Dr. Foster. May I refer to those schedules?

Is that the beginning of a long answer about Schedule 11 or is that one sentence you have there?

[7412] MR. SPARKS: About one paragraph, Mr. Goldberg.

THE WITNESS: Three or four sentences.

MR. GOLDBERG: Mr. Examiner, I object to any testimony on Schedule 11 in so far as it relates to II(a) through IV(b).

MR. SPARKS: May I say this, Mr. Examiner: There was reference during the cross-examination to Schedule 11, one, in Dr. Foster's answer to a question of Mr. Goldberg's, and also there was reference in some of Mr. Goldberg's questions to the replacement cost of capital.

In order to clear up this question of the determination of the dollars of fair return and of the rate of return and of the rate base we have to have this oppor-

tunity to state what Dr. Foster did in determining the fair rate of return.

That is a perfectly proper matter on redirect examination.

TRIAL EXAMINER: What Dr. Foster did in determining the fair rate of return, so far as his direct testimony was concerned, counsel stated was based upon a part of that schedule 11 which the Examiner excluded.

MR. SPARKS: That is right.

TRIAL EXAMINER: Are you taking the position that that ruling has to be modified?

MR. SPARKS: No, sir.

Don't let that last statement of mine be any qualification of our position that schedule 11 ought to be in the [7413] record. But at this time all we are doing is relating this redirect testimony to matters involved in the cross-examination.

TRIAL EXAMINER: Can you point to the place in the record where that is referred to?

MR. SPARKS: Yes, sir.

TRIAL EXAMINER: May I have the question and the answer as far as the witness has gone, please?

(Question and answer read.)

MR. SPARKS: Let me point out to Your Honor the figure of $2,450,000 mentioned in Mr. Goldberg's question at line 19, Page 5691 was taken by Dr. Foster, or derived from Schedule 11.

TRIAL EXAMINER: Let me see the transcript, please.

MR. SPARKS: Yes, sir.

TRIAL EXAMINER: Where else does that amount come from?

MR. GOLDBERG: It is not in the record, Mr. Examiner.

TRIAL EXAMINER: Where were you referring to it?

MR. GOLDBERG: Dr. Foster used that figure, didn't he?

MR. SPARKS: Yes.

TRIAL EXAMINER: On cross-examination?

MR. GOLDBERG: On direct examination.

MR. SPARKS: That is right.

MR. GOLDBERG: That was the amount of dollars, not less than that amount of dollars.

[7414] MR. SPARKS: That is right. That is the amount of fair return.

MR. GOLDBERG: The only cross-examination which related to the excluded part of Exhibit 11 had nothing to do with replacement cost of capital which, incidentally, is not Exhibit 11——

MR. SPARKS: I didn't say it was.

MR. GOLDBERG: The only question which was asked was to the effect "Could you have reached your conclusion in this case without the excluded portions of Schedule 11 of Exhibit 30?" All we wanted to know was what is the basis for his 6.5 answer. We did not go into the question of the use of the excluded portion. That is what they are trying to do now.

Suppose a witness decided that reproduction cost is the only means of determining fair rates, and he came in with testimony on that basis? But the Commission before whom he appears has long ago decided that that is not a competent basis and they won't listen to it?

TRIAL EXAMINER (Interposing): Let me have the answer of the witness where he refers to Schedule 11.

MR. SPARKS: You mean at a prior place in the transcript?

TRIAL EXAMINER: No, right here.

MR. SPARKS: We have not finished the answer, Your Honor.

MR. GOLDBERG: I interposed.

[7415] TRIAL EXAMINER: Let the reporter read what he has.

(The following answer of the witness was read by the reporter:

"A. Yes. In the answer at lines 22 and 23 and in the answer to the preceding question, I had reference to the general question of whether or not the fair annual return to a regulated enterprise, expressed in dollars, may be estimated directly, without consideration of either rate base or rate of return.

"The desire for administrative simplicity sometimes has raised the question as to whether or not the fair annual return might be determined directly without the use of either a rate of return or rate base.

"I was referring to this general question when I said that I know of no feasible procedure by which it is possible to determine directly the fair return on equity capital. A rate of return or percentage cost must be estimated for equity capital and can be given expression as an annual return only by multiplication of some base.

"The amounts of 2,430,000 to 3,160,000, shown by Schedule 11 of Exhibit 30——")

TRIAL EXAMINER: May I have the question now, please?

(The following question asked the witness previous to the above-mentioned answer was read by the reporter:

[7416] "Q. At Page 5691 of the transcript, lines 10 to 23, you said that you know of no feasible procedure by which it is possible, 'to directly determine the dollars of the fair return requirement so far as equity capital is concerned.'

"You then said that in this proceeding the certain number of dollars, not less than $2,450,000, were not determined before you 'turned your attention to the question of fair rate of return.'

"Do you feel it necessary to clarify those statements?")

TRIAL EXAMINER: When you asked the witness if he thinks it necessary to clarify the statement you are coming right back to the type of question the Examiner criticized this morning.

MR. SPARKS: May I state the purpose of that question, if Your Honor Please?

TRIAL EXAMINER: Yes.

MR. SPARKS: There is the implication, we feel, which should be corrected at this time, or the answer of Dr. Foster should be clarified in order that there may be no implication of inconsistency between what he said at 5691, in answer to Mr. Goldberg's question, and the method which he used in determining his rate of return. That is the purpose of the question and the answer. In the part of the answer which has [7417] not been completed Dr. Foster will attempt to show that the answer to the question which I pointed out to Your Honor on 5691 should have been amplified so as to show exactly what he did there so that there will be no implication left in the record as the result of his answer to Mr. Goldberg's question——

MR. GOLDBERG: Mr. Examiner?

MR. SPARKS: —of inconsistency.

TRIAL EXAMINER: You are asking the Trial Examiner to resign his function of ruling on the relevancy and materiality of questions to the witness.

MR. SPARKS: No, sir. I am only submitting my views to you.

TRIAL EXAMINER: Your question is in such form that the Examiner can only permit the witness to answer by resigning to the witness the function of determining relevancy and materiality.

MR. SPARKS: Mr. Examiner, counsel and the witness for the Respondent have to make the determination for themselves. That, then, is submitted to you for your consideration. If we didn't first make the determination for ourselves we never would have anything to present here.

MR. GOLDBERG: I am entitled to the protection, Mr. Examiner, of a proper question. There wasn't the slightest suggestion that that question would bring forth an answer [7418] bearing on the material to which I have objected and which the Examiner stated he was going to exclude.

MR. SPARKS: Yes.

MR. GOLDBERG: It was only when he started that sentence, that was the first time I had any notice that he was going into objectionable material, and that is the only time when I was able to interrupt and stop him.

TRIAL EXAMINER: The question is whether the witness wishes to clarify his previous answer?

MR. SPARKS: Yes, sir.

TRIAL EXAMINER: The witness has answered yes. Is that not right?

MR. SPARKS: Yes, sir.

TRIAL EXAMINER: Is that the way the answer starts?

MR. SPARKS: Yes. It starts "Yes." Then he proceeds to clarify.

TRIAL EXAMINER: Everything after "Yes" is stricken.

MR. SPARKS: We take an exception, if Your Honor please.

TRIAL EXAMINER: Let it be understood that this ruling is on a parity with the ruling which came up in a similar instance this morning in connection with the re-direct examination of the witness Spaulding. No evidence is being excluded. It is a question of putting proper questions to the witness.

MR. GOLDBERG: At least up to this time no evidence is [7419] being excluded, Mr. Examiner, because I will make an objection to any reference in any answer to those portions of Schedule 11 that I objected to.

TRIAL EXAMINER: All right.

MR. SPARKS: Recognizing the Examiner's ruling without acceding to it:

By MR. SPARKS:

Q. Dr. Foster, will you state in what respects you feel it necessary to clarify those statements to which you have referred at page 5691 of the transcript?

MR. GOLDBERG: I object to the form of the question. The witness ought to be asked first why he thinks any clarification is necessary.

MR. SPARKS: I don't think so. That is foolish, if Your Honor please.

MR. GOLDBERG: Why is it foolish?

MR. SPARKS: Ridiculous.

MR. GOLDBERG: We have heard statements about implications.

TRIAL EXAMINER: Read the question.

(Question read.)

TRIAL EXAMINER: The witness is to observe the import of the Examiner's ruling in giving his answer to this question.

MR. SPARKS: Yes, sir.

[7420] TRIAL EXAMINER: And is not immediately to proceed to give the same answer that he did in response to the previous question.

MR. SPARKS: Well, if Your Honor please, I thought that Mr. Goldberg's objection to the previous answer was only to the last incompleted sentence which Dr. Foster had testified to. He did not object to that portion of the answer preceding the incomplete sentence.

MR. GOLDBERG: Is the witness in his answer going to stop just before the reference to Schedule 11 of Exhibit 30?

MR. SPARKS: I don't think he is.

If Your Honor please, let me say this: If any portion of his answer is objectionable I recognize Your Honor's right and duty to exclude it if it properly should be excluded. But we have a portion of an answer here which was not objected to, and which I think Your Honor would not take objection to, certainly down to the sentence which was incompleted.

TRIAL EXAMINER: Read the question, please.

(The following question was read by the reporter:

"Q. Dr. Foster, will you state in what respects you feel it necessary to clarify those statements to which you have referred at page 5691 of the transcript?")

TRIAL EXAMINER: Having in mind the statements that have been made by counsel for the Respondents, particularly in indicating the witness' going to launch forth into a long [7421] answer, with respect to which this question is a mere type, the Examiner will rule that the witness may not answer the question in its present form. That is made for the same reason and on the same grounds as the previous ruling in connection with striking the previous question.

MR. SPARKS: I take exception to Your Honor's ruling on the basis we are being deprived of the right to a fair hearing by not being permitted to present proper re-direct testimony.

MR. GOLDBERG: Proper re-direct testimony based upon implications of inconsistency?

MR. SPARKS: Based upon cross-examination which counsel for the Commission launched into while this witness was on the stand under cross-examination.

MR. GOLDBERG: Point out where counsel for the staff went into how the witness used that portion of Schedule 11 of Exhibit 30 that he has objected to.

TRIAL EXAMINER: Very well. We will come to that in due course.

You can put a question to the witness which will elicit from the witness whatever he wishes to clarify in regard to cross-examination in an orderly way.

MR. SPARKS: I am not quite clear, if Your Honor please, as to whether the witness' answer in the affirmative to the question as to whether he felt it necessary to clarify those [7422] statements has been left in the record.

TRIAL EXAMINER: It has been.

MR. SPARKS: It has been?

TRIAL EXAMINER: Yes.

MR. SPARKS: Very well, sir.

By MR. SPARKS:

Q. Doctor, in your answer at lines 22 and 23, and in your answer to the preceding question, did you have reference to the general question of whether or not the fair annual return to a regulated enterprise expressed as dollars may be estimated directly without consideration of either rate base or rate of return?

MR. GOLDBERG: Where is this general question that counsel has reference to?

MR. SPARKS: I am asking Dr. Foster——

TRIAL EXAMINER: Let me have the question, please.

(Question read.)

TRIAL EXAMINER: I see no reason why he can't answer that question.

MR. GOLDBERG: I want to be sure, Mr. Examiner, that they are or are not referring to some general question about the subject that I asked during cross-examination. I don't know.

TRIAL EXAMINER: I think if you want to object to the question on specific grounds you may do so. If you want to inquire as to what relation this particular testimony has to [7423] the previous cross I think that comes up under cross properly.

MR. GOLDBERG: I could object to the question, of course, because it is vague and indefinite. But to avoid that I first wanted to ask whether they are referring in that question to some general question I asked on the subject.

MR. SPARKS: We are referring that to your question at page 5691 of the transcript, lines 10 to 23.

MR. GOLDBERG: Let me have that question again, please.

(The following question was read by the reporter: "Q. Doctor, in your answer at lines 22 and 23,

and in your answer to the preceding question, did you have reference to the general question of whether or not the fair annual return to a regulated enterprise expressed as dollars may be estimated directly without consideration of either rate base or rate of return?")

MR. GOLDBERG: I object, Mr. Examiner. The question was "Do you believe that you must first determine the dollars required for fair return before reaching a conclusion as to fair rate of return?" The answer was "I do not." Anything that came after that had nothing to do with the response to the question I had asked.

TRIAL EXAMINER: Objection is overruled.

MR. SPARKS: May we have the question, please?

(The question was again read by the reporter.)

THE WITNESS: I did.

[7424] By MR. SPARKS:

Q. Doctor, must a rate of return or percentage cost be estimated for equity capital?

• • •

[7425] THE WITNESS: In the process of fair return determination I know of no feasible procedure by which the fair return for equity capital can be determined without consideration and use of a percentage rate appropriately reflecting the cost of equity capital to be applied to some base.

• • •

[7426] Q. At page 5643, lines 21 to 23 of the transcript, you said that the margin of .869 per cent, subtracted from Penn Water's price ratios for the period since September, 1944, provides the adjusted earnings-price ratios. Is that a correct statement?

MR. GOLDBERG: What line is that?

MR. SPARKS: Lines 21 to 23.

THE WITNESS: No, that statement was in error with respect to the mechanics of the adjustment. The adjustment procedure was correctly described on the following page, 5744, and on page 6023.

The average was determined for the group of six for the period from August 1939 to August 1944, inclusive. It was assumed that during the period from September 1944 to January, 1946, inclusive, the Penn Water earnings-price ratios maintained the same relative position as had previously existed in relation to the average for the group of six. Therefore, the .869 per cent differential was added to the averages for the group of six in order to determine the adjusted earnings-ratios for Penn Water——

MR. GOLDBERG: Did you mean the medial four of six?

[7427] THE WITNESS: Added to the average of the medial four of six, yes. Those adjusted earnings-price ratios for Penn Water were used instead of the actual and higher earnings-price ratios in determining the 8.51 per cent.

By MR. SPARKS:

Q. At page 5744 of the transcript a reference was made to a study of a group of 11 earnings-price ratios and to its purpose. What are the facts which determined the availability of the group of six and the group of 11 earnings-price ratios for the purpose of the study? A. Prices or quotations were reported for 82 electric or electric-combination operating utility common stocks in the bank and quotation record for January 9, 1946. However, the number of operating utility common stocks traded in the securities markets has been extremely small until recent years because of holding company ownership.

In 1938 the rate and research department of the Federal Communications Commission found only 40 public utility common stocks for which market quotations were available, and some of those were traded so rarely or under such restricted conditions that weight could not reasonably be given to the bid quotations.

The total of 40, moreover, included seven telephone, six manufactured gas, and seven holding company common stocks, leaving only 20 electric and electric-gas operating [7428] company common stocks.

The list of twenty common stocks included those already identified as belonging to the group of eleven. The remaining nine are the common stocks of Pennsylvania Water and Power Company, Philadelphia Electric Company, Southern California Edison Company, Tampa Electric Company, Long Island Lighting Company, two others for which only over-the-counter quotations were available, and the then outstanding issues of three operating companies which were subsequently acquired by or merged into other companies.

In the case of Philadelphia Electric Company the proportion of the outstanding common stock held by United Gas Improvement Company was about 97 per cent prior to disposition during 1943. I excluded the Long Island Lighting common stock because of the non-payment of common dividends and the Tampa stock because of the comparative investor disfavor.

I also had determined the identity of common stocks listed on Securities Exchanges as of January 1, 1946, for which monthly market prices or quotations were available for a long period of years. Ten common stocks are included in this list.

All of the group of six are represented, plus Central Hudson Gas and Electric, Philadelphia Electric, Southern California Edison, and Pennsylvania Water and Power, Hartford Electric, Connecticut Power, Cleveland Electric [7429] Illuminating, and Duke Power were not included.

In this connection I determined for the common stock of each company the volume of trading over the entire period for which prices were available on a securities exchange.

The turnover of the Penn Water common stock had been generally equal to the turnover of the six most actively traded utility common stocks.

Q. At page 5799, lines 8 to 15 of the transcript, you were asked a question based on certain assumptions.

In giving your answer at line 16, did you understand that the question contained the assumption that all participants agree that the regulatory treatment of depreciation, including the use of a depreciated rate base, is fair and reasonable? A. I did.

Q. At page 5819, lines 8 to 14 of the transcript, you said that the increase in the earnings-ratios for the Penn Water common stock from November, 1939, to the end of 1941 was accompanied by similar movements of the earnings-price ratios for other common stocks, and that the movement of the Penn Water earnings-price ratios is not to be explained by the issuance of the license order of November, 1939.

At page 5828, lines 5 to 7 of the transcript, you said that as a general proposition selectivity in the market is greater in times of relative low prices.

[7430] Have you prepared a statement showing the comparative fluctuations of the Penn Water earnings-price ratios and of the earnings-price ratios of certain other common stocks? A. I have.

Q. I show you a one-page document entitled, "Comparative fluctuations of the two lowest and the two highest earnings-price ratios included in the group of 11, together with the Penn Water earnings-price ratios, within phases of cycles," and I ask you whether you can identify that document? A. I can.

Q. Was it prepared by you or under your supervision? A. It was.

MR. SPARKS: May this document as described by the witness be marked exhibit for Identification, No. 166?

TRIAL EXAMINER: It may be marked Exhibit 166 for Identification.

(Thereupon, the document referred to was marked Exhibit No. 166 for Identification.)

By Mr. Sparks:

Q. Will you please describe this exhibit, Doctor? A. The months in which the greatest variations exist among the earnings-price ratios are June 1932, March 1938, and April 1942. I have identified the two common stocks among the group of eleven which had the lowest earnings-price ratios for these three months and the two which had the highest [7431] earnings-price ratios for these three months.

The two common stocks appraised most favorably were those of Hartford Electric and Connecticut Power. The two appraised least favorably were Consolidated Edison and Pacific Gas and Electric.

For these two extremes within the group of 11 and for Penn Water I have shown the average earnings-price ratios at the end of each phase of each cycle. Those terminal months are the months identified on Exhibit 166. Thus prices were high and earnings-price ratios were at their lowest level in August 1929.

Prices were low and earnings-price ratios were at their highest level in June of 1932.

The alternate low and high positions were reached in August of 1936, March 1938, July 1939, April 1942, and January 1946.

I then determined the increase or decrease of the earnings-price ratios from the previous high or low position. Thus in July of 1939, the average for the two lowest earnings-price ratios, those for Hartford Electric and Connecticut Power, was 4.98 per cent.

In April 1942, the average for the same two earnings-price ratios was 7.79 per cent, an increase of 2.81. The increase of 2.81 was an increase of 56 per cent from the level of 4.98 per cent.

[7432] Q. Had you finished your answer to that question, Doctor? A. Yes.

Q. At page 5830, lines 14 to 19 of the transcript, you said that the earnings-price ratios of common stocks appraised by investors as having a greater degree of risk

tend to fluctuate more widely than the earnings-price ratios of common stocks appraised as having a lesser degree of risk.

Do the data shown in Exhibit 166 illustrate the behavior to which you refer? A. Yes. The Hartford Electric and Connecticut Power common stocks on the average have been purchased on a lower yield basis than any other among the eleven.

The Consolidated Edison and Pacific Gas and Electric common stocks on the average have been purchased on a higher yield basis than any other among the 11.

The changes in the earnings-price ratios from one phase to another of a cycle have been greater for the latter two common stocks, in amount and relatively, than in the case of Hartford Electric and Connecticut Power.

Q. How do the fluctuations of the Penn Water earnings-price ratios compare with those of the Hartford Electric and Connecticut Power earnings-price ratios? A. The Penn Water earnings-price ratios were higher during periods of relatively high prices and much higher during [7433] periods of relatively low market prices.

Q. How did the Penn Water earnings-price ratios compare with those of Consolidated Edison and Pacific Gas and Electric? A. The Penn Water earnings-price ratios were higher for August 1929 and for June 1932. They were lower for August 1936, March 1938, July 1939, and April 1942, and higher for January 1946.

The change in comparative position between April 1942 and January 1946 may be explained by the pendency of the rate proceeding.

Q. Did the fluctuations of the Penn Water earnings-price ratios within the intervals between the months shown in Exhibit 166 correspond more closely to the fluctuations characteristic of the two lowest earnings-price ratios or the two highest earnings-price ratios in the group of 11? A. The two highest.

Q. What was the increase in the Penn Water earnings-price ratio from November 1939 to April 1942? A. From 7.10 to 11.94 per cent, or 4.84.

Q. What was the increase in the average for Consolidated Edison and Pacific Gas and Electric during the same period? A. From 7.96 per cent to 14.26 per cent, or 6.30.

Q. What are these increases expressed as percentages [7434] of the earnings-price ratios for November 1939? A. Sixty-eight per cent for the Penn Water earnings-price ratios and 79 per cent for the average of the earnings-price ratios of the Consolidated Edison and Pacific Gas and Electric common stocks.

Q. What is your conclusion from these data? A. The increase in the Penn Water earnings-price ratios from July 1939 or November 1939 to December 1941, or to April 1942, conformed to the behavior which would be expected if considered in the light of the fluctuations of the earnings-price ratios of other common stocks.

No evidence is available to support a conclusion that the increase in the Penn Water earnings-price ratios during this period was accounted for by the license proceeding.

Q. If the order of November 3, 1939, directing the company to file with the Federal Power Commission an application for a license had an adverse effect on investors appraisals of the Penn Water common stock, would you expect that influence to be evident in the earnings-price ratios of the period immediately following the date of the order? A. I would. However, examination of schedules 1 and 3 of Exhibit 29 shows that from October 1939 to January 1940, the Penn Water earnings-price ratio increased from 7.18 to 7.26, and that the average for the group of six other common stocks, the mean of the medial four, decreased from 7.01 to [7435] 6.94. These movements in opposite directions are each of the magnitude of about one per cent. If the comparative behavior is in fact

accounted for by the license order a composite reappraisal resulting in readjustment to the extent of 1/50th of the previous appraisal in October can scarcely be described as significant.

Q. Doctor, does your answer at page 5857, lines 14 and 15 of the transcript, to the question asked by Mr. Goldberg which appears on the same page at lines 2 to 9, inclusive, require clarification? A. Yes.

MR. GOLDBERG: What is the answer?

(Answer read.)

THE WITNESS: I should have added that such a fact would not necessarily be evidence that the Commission's proceeding challenging the right of Penn Water to maintain a project without a license had a significant effect on Penn Water's earnings-price ratios.

By MR. SPARKS:

Q. At page 4900, lines 11 to 13 of the transcript, Mr. Goldberg asked this question:

> "Isn't it really a fact that the cycle you used began in June 1936 rather than August 1939, or August or September 1936?"

At lines 20 to 24 on the same page you characterized the [7436] movement, "From about August of 1936 to August of 1939, as being distinct and appropriately identified as a movement or fluctuation independent of, and not significantly related to, the movements reflected in the behavior at the later dates."

What were your reasons for that statement? A. It is reasonable to conclude that the cycle of earnings-price ratio movement from about September 1936 to about August 1939, was related to general business cycle conditions. The Federal Reserve Board index of industrial production moved upward from a low of 91 in February of 1936 to a high of 123 per cent in May of 1937.

The United States Bureau of Labor Statistics index of wholesale prices also moved gradually upward from

78.6 in May of 1936 to a maximum of 88 per cent in April of 1937.

The market prices of utility common stocks and the movement toward lower earnings-price ratios anticipated this level of increased production and higher commodity prices by some months.

Thereafter the index of industrial production fell with some rapidity from 123 per cent in May of 1937 to a low of 81 per cent in May of 1938.

The index of wholesale commodity prices also fell from 88 in April of 1937 to 78.7 per cent in April of 1938.

The decline in the stock market during the months of [7437] September, October and November 1937, can only be described as a collapse.

Barron's 50-stocks average moved from 136 in January of 1937 to 78 in December of that year.

The decline in market prices of utility common stocks and the corresponding rise in earnings-price ratios shown by Chart 1 of Exhibit 29 probably were closely related to the general business conditions and the loss of business confidence.

The rise of market prices and the decline of the earnings-price ratios during the latter part of 1938 and the first part of 1939 probably was related to the recovery from the depression of 1938.

Q. Were the fluctuations of the earnings-price ratios during the cycle extending from about September 1939 to about January 1946, the apparent result of different causes? A. Yes. The fluctuations during this period scarcely could have been the result of variations of industrial production. The Federal Reserve index of industrial production, which was at 107 per cent in August of 1939, rose steadily until it reached a maximum of 249 in October 1943, and was maintained at nearly that level until May of 1945.

Two special influences were present which did not exist in the period September 1936 to August 1939. The

first was the war and the second was more significant tax changes.

[7438] The stock market was influenced by adverse military needs and, after the swing to offensive operations, the growth of confidence in an early termination of the war.

Another influence on earnings-price ratios was the increase in Federal income tax rates from 19 per cent in 1939 to the high income and excess profits tax rates established by the Revenue Act of 1942, and the tax reduction which became effective at the beginning of 1946.

Diverse influences were present during the period September 1939 to January 1946. High and low extremes of business confidence were present and had an offsetting influence on the earnings-price ratios. I believe that the average offers a satisfactory representation.

Q. Doctor, at page 5924, lines 16 to 20 of the transcript, Mr. Goldberg asked whether the earnings-price ratios for the period beginning February 1946 appeared to be following the trend of the earnings-price ratios of the cycle which began August 1936 and ended September 1939.

You said that may be true as far as the shape of the curve is concerned, and at page 5925, lines 7 to 9 of the transcript, you said that the behavior during the recent period is largely the result of tax influences. Will you explain those statements? A. The earnings-price ratios is merely a ratio between past earnings as reported or as adjusted and the current market [7439] prices. In preparation of the earnings-price ratios shown by Chart 1 of Exhibit 29, and the earnings-price ratios for the month of January to the month of September 1946, which were read into the report at page 5742, no adjustments were made for the effect of tax changes which were anticipated during 1945 and became effective January 1, 1946.

The prospect of tax reductions resulted in reappraisals of the shares being traded. The market prices reflected the anticipated increases in net income as a result of the

tax change, particularly elimination of the excess profits tax.

The earnings-price ratios which determined the shape of the curve for the first months of 1946 are heavily weighted by 1945 earnings determined without adjustment for the prospective tax change.

The anticipated tax reductions and corresponding increases in net income are in considerable part reflected in the interim statements for the 12 months ended June or July of 1946.

The average market price of the six common stocks continued to rise during the first six months of 1946. The highest market price level was reached in June.

Nevertheless, when based on reported earnings which reflect in increasing degree the realization of the effect of the tax reductions, the earnings-price ratios moved upward beginning in February.

[7440] In January of 1946 the earnings-price ratios were below the true capitalization rate and the upward movement experienced during the first months of 1946 was in the nature of at least a partial corrective so far as the influence of the tax revision is concerned.

Q. At page 6007, lines 9 to 13, of the transcript, in making a distinction between rate of return and return on common stock capital represented in the rate base, you said, "In the case of a utility with only common stock equity there is no difference as a result of that distinction."

Is that a correct statement? A. No. In the case of a utility with only common stock capital the distinction between return and rate of return is, of course, significant. I intended merely to indicate that if there is only common stock capital in the capitalization the distinction is not complicated by the leverage resulting from representation of other kinds of capital in the capitalization.

Q. At page 6024, lines 19 to 25, and at page 6024, lines 1 to 16 of the transcript, the Examiner suggested that the revised earnings-price ratios for the period September 1944

to December 1945, inclusive, be supplied for the record. Have you prepared a schedule showing these revisions? A. I have.

Q. I show you, Doctor, a one-page document entitled [7441] "Changes in earnings-price ratios for the Penn Water common stock and for the medial four of six common stocks to reflect earnings data becoming available after the preparation of Exhibit 29."

Was that document prepared under your supervision? A. It was.

MR. SPARKS: May that document be marked Exhibit No. 167 for identification, Mr. Examiner?

TRIAL EXAMINER: Yes, the reporter will mark the document Exhibit 167 for identification.

(Thereupon the document referred to was marked Exhibit No. 167 for Identification).

• • •

By MR. SPARKS:

Q. Doctor, at page 6040 of the transcript, lines 22 to 25, Mr. Goldberg asked the following question:

"May I put briefly in the record the distinction I think you are making? You are saying that accounting costs are not economic costs, and those economic costs are the only ones you recognize as costs. Right?"

You answered in the affirmative.

Was that a complete answer? A. No, it was a response to the first part of the question.

[7442] MR. GOLDBERG: Just one moment, please.

I object to the question as not in accordance with the evidence and I move to strike the answer. The question was "You answered in the affirmative. Was that a complete statement?" or words to that effect.

The fact is that he agreed to the statement in the question and said "With the addition of one further point."

In other words, it was not merely an answer in the affirmative and stopping there. He went on to give all the reasons he thought necessary.

MR. SPARKS: No, he didn't, if your Honor please. That is just the purpose now of this further redirect.

MR. GOLDBERG: Who was restraining this witness?

TRIAL EXAMINER: Read the question, please.

(Question read).

TRIAL EXAMINER: May I have the answer too, please?

(Answer read).

MR. SPARKS: He has not completed this answer, Mr. Examiner.

TRIAL EXAMINER: I will sustain the motion to strike. We cannot stop and try now whether those answers were complete or not. He is entitled to answer the question correctly if it was answered incorrectly before.

MR. SPARKS: If your Honor please, this situation springs from the fact there were two questions in that question. Doctor [7443] Foster answered the first part of the question, namely, that accounting costs are not economic costs. He did not on cross-examination answer the second part of the question.

TRIAL EXAMINER: The form in which your question is put is properly objectionable.

MR. SPARKS: I don't understand why, if your Honor please. I have asked him if it was a complete answer. He said "No" in response to the first part of the question.

TRIAL EXAMINER: I do not think we can let the witness determine whether his answer was complete as of the time he gave it or not.

MR. SPARKS: Well, if your Honor please, I think the witness certainly must have some say as to whether he was completely answering the question. He said he did not completely answer it. I say he did not completely answer it.

I submit to your Honor that we ought to have an opportunity to complete the answer to that question. That seems to me to be the purpose of redirect examination.

TRIAL EXAMINER: Procedurally his answer was complete in that he was not interrupted.

MR. SPARKS: Will your Honor indulge just a moment?

MR. GOLDBERG: He went on to say he had one additional point to make. He made it.

MR. SPARKS: Obviously the answer was only to the first part of the question.

[7444] TRIAL EXAMINER: Objection is sustained and the motion to strike is granted.

MR. SPARKS: I take an exception.

By MR. SPARKS:

Q. Doctor, in your studies of the rate of return determination in this case have you disregarded accounted-for costs? A. I have not.

Q. Doctor, were schedules 4 and 5 of Exhibit 29 designed to show anything other than the actual experienced costs of debt and preferred stock capital and the costs as recorded in the accounts of Penn Water as at the time when incurred? A. They were not designed to show anything other than the costs which you have described.

Q. Are debt discount an expense and call premiums costs of supplying service?

MR. GOLDBERG: What does "service" mean?

MR. SPARKS: Service supplied by Penn Water.

MR. GOLDBERG: What service?

MR. SPARKS: Now, if your Honor please,——

TRIAL EXAMINER: Proceed with the witness.

MR. GOLDBERG: Mr. Examiner, you know, you speak of servicing debt, and this is financial cost we are talking about, as I understand it. We have heard the word "service" used in connection with the furnishing and selling of [7445] electric energy.

I am just trying to find out what these things mean.

TRIAL EXAMINER: Do you have any objection to stating whether it applied to debt service or not?

MR. SPARKS: It applies to services rendered by Pennsylvania Water and Power Company.

TRIAL EXAMINER: To its customers.

MR. SPARKS: To its customers.

TRIAL EXAMINER: All right.

THE WITNESS: I believe that at the time when incurred their status as costs is not questionable. An outstanding issue of bonds cannot be redeemed and onerous requirements of an existing debt contract——

MR. GOLDBERG: I move to strike the answer as given up to this point as unresponsive to the question.

TRIAL EXAMINER: Read the question, please.

(Question read.)

[7446] TRIAL EXAMINER: The answer, too, please.

(Answer read.)

MR. SPARKS: That is not a complete answer.

MR. GOLDBERG: I realize that. The reason I interrupted is because it was obvious it would not be responsive.

TRIAL EXAMINER: Finish the sentence.

THE WITNESS: —avoided without the payment of call premium.

TRIAL EXAMINER: Anything more to that answer?

MR. SPARKS: Yes, there is more. It is all responsive. I think Your Honor will recognize it.

TRIAL EXAMINER: Yes, but he gets right back to the same problem which has come up before in connection with permitting the witness to give lengthy answers in response to questions where really the first sentence the witness gives is an answer to the question.

MR. GOLDBERG: If you can call that an answer.

TRIAL EXAMINER: The question is usually in the form of something which requires a simple answer "Yes," and then the witness proceeds from there on on his own.

MR. SPARKS: To qualify and explain that categorical answer. It is perfectly proper.

TRIAL EXAMINER: It gives no one an opportunity to object. The question is retired with the first few words and then the witness is free.

[7447] Your answer to that question is "Yes," is it not?

THE WITNESS: Well,——

TRIAL EXAMINER: Isn't that a complete answer?

THE WITNESS: The question as put to me may be answered "Yes" which, however, provides no reason for an answer on a highly controversial subject.

TRIAL EXAMINER: Very well. All of the answer to the question other than "Yes" is stricken.

By MR. SPARKS:

Q. Can an outstanding issue of bonds be redeemed and onerous requirements of an existing debt contract avoided without the payment of call premiums? A. No.

Q. What is the measure of debt discount and expense or net premium? A. The measure is the difference between net proceeds to the company and the obligation at maturity of the fixed term contract.

Q. When an outstanding issue of bonds is refinanced is unamortized discount and expense related to that issue an unavoidable cost?

MR. GOLDBERG: May I have that question, please?

(Question read.)

MR. GOLDBERG: Is "that issue" the issue which is refunded or the new issue?

[7448] MR. SPARKS: The issue which is retired.

THE WITNESS: It is.

By MR. SPARKS:

Q. Must such costs be borne by someone, Doctor? A. They must be.

Q. What are the alternatives of treatment of these costs available to the Regulatory Commission for rate making purposes? A. Three alternative treatments of such costs of financing are available: First, these costs might be provided for among the operating expenses. This is an inappropriate alternative since they are not operating expenses.

Second, they may be recognized as part of the determined experienced cost of capital and accepted as evidence of the fair rate of return.

Third, such costs may be excluded from the determination of capital costs as well as the operating expenses.

Under this third alternative such costs absorb a part of what would otherwise be equity return. This third method imposes on the equity investment an additional hazard, the hazard of obsolescence of contracts for senior capital. Such an additional hazard, when recognized as such by investors, will become reflected in increased return requirements and subject to recognition in the allowance

for risk taking in determination of the fair rate of return. [7449] Q. Why do you say that under this third alternative such costs absorb a part of what would otherwise be equity return? A. I mean that such costs can not be avoided by the choice of accounting disposition. Expedited accounting disposition by write-off to surplus or by rapid amortization by charges against income conforms to the practice of conservatism in accounting. It represents an immediate or rapid absorption of the cost by the equity in exchange for the prospect of a corresponding increase in net income during future accounting periods. Disallowance as fair rate of return evidence on the ground that the cost has been written off to surplus has a double-barreled effect on computations such as are shown by Schedule 6 of Exhibit 29.

The cost of debt capital component of the over-all cost rate is reduced on the ground that the particular costs have been absorbed by the equity. The equity capital cost rate, however, is weighted by the proportion of equity capital in the total capitalization and that proportion is reduced by a write-off of such costs to surplus. Therefore the equity capital component of the over-all cost rate computed in the manner shown by Schedule 6 does not include any allowance to reflect the absorption of such cost by the equity.

Q. Are such costs subject to exclusion on the ground that they are imprudently incurred? [7450] A. I know of no evidence——

MR. GOLDBERG: Mr. Examiner, I must object to that. It seems to me it asks for a legal conclusion.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: I know of no evidence which suggests that such costs were imprudently incurred.

MR. GOLDBERG: Now may I have the question and the answer, please?

(Question and answer read.)

MR. GOLDBERG: I realize you have just indicated, Dr. Foster, that does not complete your answer, but

the answer you have already given raises in my mind the question that I would like to have counsel advise me on, and that is when he says "such costs" in his question is he referring his question specifically to costs that Penn Water has incurred or is it just a general question dealing with unamortized debt discount?

MR. SPARKS: We are talking about the costs Dr. Foster has reflected in his exhibits in this case.

MR. GOLDBERG: It is related, then, to Penn Water?

MR. SPARKS: Yes.

MR. GOLDBERG: All right.

THE WITNESS: In the words of Mr. Justice Brandeis the criterion of "Prudent" is applied "for the purpose of excluding what might be found to be dishonest or obviously [7451] wasteful" costs. The criterion should not be extended to exclude what may be found in the light of hindsight to be merely uneconomic. Such a criterion of exclusion on the ground that conditions have changed since the time when the costs were incurred would require, for example, that equity investors be penalized by disallowance of depreciation expense reflecting growing obsolescence.

By MR. SPARKS:

Q. Doctor, at Page 6054, lines 7 to 10 of the transcript the following question was asked:

"Assume that bonds are retired by using funds secured through the issuance of preferred stock. Is the unamortized discount and expense associated with the bonds a cost of the preferred stock?" You answered in the negative.

In the circumstance described is the unamortized debt discount and expense a cost of capital? A. Yes.

Q. Why? A. The character of the unamortized debt discount and expense as a cost of capital is not changed by the fact of the retirement of the bonds by use of proceeds from an issue of preferred stock instead of refunding bonds. Such unamortized costs are appropriately charged to sur-

plus at the time of the transaction, but their status as unavoidable costs is not changed by the accounting [7452] disposition, and they are appropriately recoverable by an allowance in the equity component of the rate of return.

The appropriate treatment of capital costs in the circumstance of substitution of preferred for debt capital is generally the same as where equity capital is substituted for debt capital.

In the case of Penn Water, equity capital was substituted for debt to the extent of $345,800 in the refinancing of the 5½ per cent series "A" and the six per cent Holtwood bonds by the 4½ per cent series "B" bonds issued in March, 1928. This is the difference between amounts shown by lines 16 and 17 of Schedule 4 of Exhibit 29.

The related unamortized debt discount and expense, which amounted to $38,700, the difference between the amounts shown by lines 15 and 19 of Schedule 4, was dropped from the computation of experienced cost of debt capital. That circumstance and the treatment for the purpose of Schedule 4 do not cause the item to cease to exist as a cost of capital. The item was not recognized in the determination of equity capital costs because it was relatively insignificant in amount. Its recognition as a cost assumed by the equity would have required surplus be adjusted to the extent of the amount involved for the purpose of the computation of the equity cost component shown by Schedule 6.

Q. Are the hypothetical replacement cost of capital [7453] rates shown by Schedule 10 of Exhibit 30 appropriate measures or evidence of the fair rate of return to Penn Water to be applied to an original cost rate basis? A. No.

Q. Why? A. Such replacement cost rates of 4.9 per cent, or 5.6 per cent, are not appropriate measures or evidence of a fair rate of return to be applied to an original cost rate base when its applicability is tested by either the equitable or the economic standards.

Q. During the course of your cross-examination Mr. Goldberg drew your attention to certain portions of the Federal Communications Commission rate of return study issued June 15, 1938. May I direct your attention to Page 20 of Chapter 2 of that study and to these statements:

"The price paid for capital, like many of the other costs which must be incurred to provide service, is largely determined by the forces of competition. Materials and supplies, and to some extent labor, as well as the funds necessary in the business must be secured in competitive markets. Regulation must provide the utility with sufficient revenues to enable it to purchase its materials, supplies and labor in competition with other businesses, and to the same end regulation must provide a return that will meet the demand of the capital market. If such return is not made [7454] available, capital funds will not be forthcoming.

"From this point of view, the primary purpose of permitting a utility to earn a 'return' is to enable it to pay the costs of its capital, and the amount of these costs should be the reasonable and proper measure of the return allowance."

I have skipped Note 1 and I shall read Note 2 at the bottom of Page 20.

"The necessary and useful distinction between 'expense' and 'economic cost', should be kept in mind. 'Expense' is an accounting term, and excludes many items properly considered as a part of 'economic cost.' The return may be an expense only in part or even not at all during a given accounting period."

Will you examine the portions which I have read, Doctor, and state whether or not you agree with those statements? A. I do agree with those statements.

Q. May I also direct your attention to Page 76 of Chapter 5 of the study which I have referred to in my previous question, and to these statements:

"While it is true that the prospects of a future rise or fall in the market price of stocks have their influence (and at times may even be controlling), it is believed that the financial and operating characteristics of the particular utility dominate the investing public's evaluation of [7455] its securities. In many cases this will not result unless the period used is long enough to even out the effect of market factors extraneous to the individual corporation's situation. In any event, however, it seems to be generally conceded that the long run average earnings-price ratio, more accurately than any other single factor, reflects the investor's composite evaluation of all fundamental influences effecting the corporation."

Do you agree with those statements as statements of the appropriate use of earnings-price ratios in the determination of the fair value of return? A. I do.

[7456] Q. At page 5691 of the transcript you gave certain answers to questions asked by Mr. Goldberg. Were the statements made by you on page 5691, lines 13 to 16, both inclusive, and lines 22 and 23 in any way inconsistent with the method which you used in this proceeding in arriving at the fair return of not less than $2,450,000 and the fair rate of return of not less than 6½%? A. They were not.

• • •

[7458] RE-CROSS-EXAMINATION.

By MR. GOLDBERG:

Q. Referring to Exhibit 165, Dr. Foster, in presenting that exhibit are we to understand that you are undertaking to support a specific treatment of depreciation in this case? A. No, you are not to so understand.

• • •

[7461] Q. What I am trying to find out is have you ever known of the use of depreciation expenses in rate making based upon the straight-line method of depreciation in as-

sociation with an undepreciated rate base? A. In a rate proceeding I cannot say that I have.

• • •

Q. In other words, depending upon your assumptions you can alter those results in Exhibit 165. Right? A. That is right. The only purpose of this exhibit was to attempt to supply an answer with respect to the meaning of the conclusion reached in the rate of return testimony. [7462] That is, there were numerous questions with respect to the meaning of the statement that the conclusion was prior to whatever might be the effect of the treatment of depreciation. In that connection it was said that the fair rate of return would not vary.

It was said also that the fair return defined as the amount reached by applying the rate of return to the rate base, depreciated or undepreciated depending upon the method, would vary.

This exhibit is intended to be no more than a mathematical illustration of what was meant in that connection.

• • •

[7466] DONALD GUNN.

• • •

CROSS-EXAMINATION (Continued).

• • •

[7469] By MR. HALL:

Q. Did you ask Mr. Hutchinson what risk he had assumed and what sacrifices he had made in subscribing to the McCall Ferry bonds? A. No, I don't believe I asked him that question. I didn't consider Mr. Hutchinson a financial expert as such.

• • •

[7470] Q. When did actual physical construction of the Holtwood project begin? A. The latter part of October 1905.

Q. October 24, 1905, is the exact date according to my information. A. Yes.

Q. At that time clearing of the reservoir began; right? A. I believe it was clearing of the reservoir and particularly clearing of a site for the construction site and construction labor camp.

Q. What source of income did McCall Ferry Power Company have in the spring of 1905?

MR. KING: May I inquire in what sense you refer to income?

MR. HALL: Income from operations.

THE WITNESS: None.

By MR. HALL:

Q. Or from any other source. A. The thing that is troubling me is this: I believe they did get some interest on bank deposits. I don't know whether or not you would call that income.

MR. KING: That is why I asked you the question.

By MR. HALL:

Q. Any other income? [7471] A. Well, they had a little income from operation of the construction camp.

Q. Very insignificant amount? A. Insignificant, yes.

Q. Had McCall Ferry consummated any power contracts for the sale of its project's output in the spring of 1905? A. They had not consummated any contracts as I recall it. Previous to that time there had been power surveys made of the potential market, and a market was known to be available, but no actual contracts had been consummated.

[7472] Q. No actual negotiations had begun in the spring of 1905. Is that right? A. That I don't know.

Q. Wasn't the first contract for power signed in March of 1907? A. I believe that is correct.

Q. When was work stopped on the project due to the exhaustion of available funds? A. About January, 1909. At that time construction practically came to a standstill. Previous to that time it had gone to a rather low ebb, during the months of February and March, 1908, but immediately following that there was a resumption of construction, and then the actual halting of work took place in January of 1909.

* * *

Q. The capacity and power output of the project had not been finally determined in the spring of 1905, right?

* * *

THE WITNESS: Well, in the spring of 1905 a capacity for the initial project had been decided upon which was substantially the same as the initial project actually installed. However, the plans for the project in the spring [7473] of 1905 called for a lower dam and a greater number of units without tailrace excavation, and the project as finally installed called for a higher dam, a fewer number of units, and tailrace improvement which increased the power from those units, so that at the end the initial project in each case was of substantially the same horsepower.

By MR. HALL:

Q. Wasn't the initial estimate based upon 50,000 horsepower? A. Yes.

Q. And that was increased to 100,000 a little later? A. There was a whole series of estimates which entered into the studies upon which the final plant was based. I don't recall what all the different horsepowers were, but the initial plant as actually installed consisted of five units, and they aggregated substantially 50,000 horsepower.

Q. When were bids called for on the dam of 185 foot elevation? A. On August 11, 1905.

Q. When was the final decision reached to construct the dam at 165 foot elevation? A. June 19, 1906. But previously, in the original financing in June, they had been

considering a dam at 155 foot elevation, which is still lower than the 165 and much [7474] lower than the 185.

Q. At the same time they were also turning over in their minds the 185 foot elevation, right? A. I don't know that they were. The 155 foot elevation first came into the picture in a substantial way in the Parsons Report on January 13, 1905. It was incorporated in the Fisk underwriting agreement and prospectus in March 25, 1905, and it appeared to be the prevailing plan, that is the plan to build to 155, down through the time the financing was completed.

Q. That financing was completed in May of 1905, right? A. The subscriptions were taken, I think, in March of 1905. The actual availability of money came about in June, I believe, or about the middle of June.

Now, apparently, the first variation or first serious consideration that was given to building a dam higher than elevation 155 was about June of 1905, and came about as a result of negotiation with Pennsylvania Railroad officials for raising the railroad. At that time the railroad company estimated that the railroad could be raised to Pennsylvania Railroad's satisfaction at a cost of about $577,500.

As soon as that estimate was made known to McCall Ferry Power Company, and the estimate was made by Pennsylvania Railroad, the advisory board of engineers immediately considered building a higher dam because that estimate of [7475] $577,000 was much less than they thought it would cost to raise the railroad track.

During the early part of August the advisory board recommended the construction of the dam to elevation 185, and on August 11 bids were called for for a construction of a dam to elevation 185. Then the bidders included in their bids up to $500,000 or $750,000 for risks of constructing the project in the Susquehanna River, that is risks from flood and also against the results of a penalty clause which McCall Ferry had included for completion. When McCall Ferry Power Company considered those bids they

came to the conclusion that if they accepted one of them they were accepting the worst contingency, and, therefore, the highest price that they could possibly be caused in the construction of the dam, and had no opportunity to have any advantage from the advantageous river flow conditions prevailing, and on the basis of that they rejected those bids and made an arrangement with Hugh L. Cooper, who at that time had a construction organization working on the hydro developments of Niagara Falls which were about complete, made an arrangement with him to construct the project at cost plus a stipulated fee, and signed the contract with him to that effect for a dam at 185. They also had a provision for building a dam at a lower elevation.

At about that time, or about December 6, 1905, Pennsylvania [7476] Railroad revised the estimate on the cost to relocate the railroad upward from $577,000 to $1,237,000, and certain landowners whose property would have to be bought in the relocation of the railroad, and also in the flooding at a higher elevation, made such exorbitant claims for the price of their land that McCall Ferry Power Company decided that they couldn't afford to build a project to elevation 185, and as a result on June 19, 1906, they settled upon the elevation for the dam at 165.

Q. From what you said, all the estimates of revenues in the Spring of 1905 were not final. Is that right? A. That is correct, none of the estimates were anything, as later events proved.

* * *

[7481] Q. Will you refer to Exhibit 159, Mr. Gunn? A. Yes, sir, I have it before me.

Q. Doesn't Mr. Dimock state in this exhibit that the [7482] contract which has been consummated is at $21.50 per horsepower? A. That is one of the things he states. I might suggest that has to be taken along with this fact: I believe the early expectations of McCall Ferry were to sell a certain category of their power to Consolidated Company in Baltimore, another category of it to United Railways. That is, that was their first expectation.

Later their plans changed to sell what may have been, and I believe was necessary, a different category of power to Consolidated, also a different category of power to United Railways, and to bring a third customer into the picture, that being the Lancaster Edison Company, as I believe it was known at that time.

What hydroelectric power is worth is determined wholly by the specifications for its use and delivery which are contained in the power contract, so it does not seem to me there is necessarily any inconsistency at all between the $21.50 Mr. Dimock mentioned to Mr. Higginson in Exhibit 159 and the figures stated on pages 45 and 46 of Exhibit 27.

I have not made a study and a comparison of those contracts, and I therefore am not in a position to state that as a fact other than just the general statements I have given you.

Q. Notwithstanding the absence of earnings in the [7483] Spring of 1905, the absence of contracts to insure any earnings in the future, the absence of any definitive arrangements for the construction of the project, you nevertheless contend that the McCall Ferry stock had a cash value at the time of the transaction in the Spring of 1905. Right? A. May I have that question, please?

(Question read.)

THE WITNESS: When you speak of a "definitive arrangement for the construction" to what are you referring? The absence of a contract executed with a contractor for building the project? Is that what you are referring to?

[7484] By MR. HALL:

Q. That plus the fact no definite plans had been agreed upon as indicated by the fact they went from a 155 elevation to a 185 elevation and back to a 165 elevation?

* * *

THE WITNESS: Yes, in my opinion the stock had a value. However, while the stock did not have actual earn-

ings then it had prospective earnings. It is also true there were no actual contracts then, which was normally to be expected. There was, however, available a market which had been thoroughly surveyed.

It is also true that there was no definitive plan for the project. However, there were plans which were perfectly practicable, and it is true that later several other plans were considered and rejected, and the final plan accepted was [7485] somewhat different from the original plan.

Q. Upon what contract were the prospective earnings that you referred to based? A. They had no actual contract. It was on the existence of an obvious market. That is what the prospective earnings were based upon.

Q. They thought that in the spring of 1905 they could get contracts for the output in the future. That is what you are saying? A. I think they knew that.

Q. How do you know that, Mr. Gunn? A. For the reason the markets were within practical transmission distance and they knew they could sell power against steam competition, and nothing short of an improvident management would fail to buy it under those circumstances, that is improvident management on the part of their customers.

Q. The McCall Ferry did not know the price at which they could or would sell the power output of the project? A. No, that lying in the future they could only estimate the price, which they did.

Q. And the estimates to which you refer were in excess of the contracts actually consummated; right? A. I wouldn't draw that conclusion. I have not made a study of them and I don't think we have anything before us now to support such a conclusion.

[7486] Q. Isn't that what Mr. Dimock says in his letter which is Exhibit No. 159? A. What part of that letter?

Q. In referring to $21.50 per horsepower? A. No, that doesn't necessarily follow for the reason I have already explained to you.

Q. Had Hutchinson always entertained the opinion shown in his affidavit as to the value of the stock? A. I don't know. I never knew Mr. Hutchinson before I met him about eighteen months, I think, prior to the date of that statement.

Q. He, like others you consulted, knew that you wanted the valuation for the purpose of supporting Penn Water's original cost claim, didn't he? A. Yes, for that purpose and any other purpose we might need it for. At least they could draw that as an inference or conclusion.

Q. Assuming he didn't know it, he could draw that conclusion, also. Isn't that right? A. Yes; surely. I believe I told him that was the purpose of it.

Q. And he could also draw the conclusion that it would be of no help for you if he said the stock had no cash value at the time of the transaction. Isn't that so?

* * * *

[7487] THE WITNESS: He could draw that conclusion, Mr. Hall, but there was every reason to expect that he would not act upon such a conclusion. Dr. Hutchinson felt all his life he had been mistreated very badly in the McCah Ferry project, and, as a matter of fact, there was a considerable amount of hesitancy in our company to even approach him and ask him for his help in this.

* * *

Q. At this point, Mr. Gunn, I would like to refer you to part 1 of Exhibit 27, and particularly to page 4 thereof. A. Yes, sir.

Q. Does not Hutchinson state there that when it was [7488] determined the financing was more than Bertron, Storrs and Griscom could complete then Harvey Fisk and Sons were approached in connection with the proposed financing of the project?

* * *

THE WITNESS: Yes, sir, it so states.

By Mr. Hall:

Q. Hutchinson there states that Fisk agreed to form a new syndicate and undertake to complete the financing. Isn't that so? A. That is correct. It so states.

Q. But according to Hutchinson's statement the Fisk firm insisted as consideration for its efforts a majority of the common stock of McCall Ferry. Is that right? A. It so states.

Q. According to Hutchinson, Harvey Fisk and Sons demanded [7489] that consideration to save the financing. Right? A. That is correct.

Q. Isn't it a fact that Hutchinson in no place in his affidavit states that Harvey Fisk and Sons rendered any services other than financing?

* * *

The Witness: I will have to read the affidavit if you wish me to answer that question.

By Mr. Hall:

Q. Do you recall that Hutchinson stated that the Fisk firm rendered any services other than financing services? A. I believe Hutchinson stated somewhere in his affidavit that Fisk deprived him of control of the enterprise, and that is the statement I will have to look for.

Q. Is it upon that statement that you would conclude that the Fisk firm rendered services other than financing? A. Well, that certainly would be one statement which would indicate they took the project over lock, stock and [7490] barrel, control, financing, management, and whatever else which went with domination of it.

Q. Do you recall any direct statement which Hutchinson made that the Fisk firm rendered services other than financing? A. I don't recall that Hutchinson attempted to enumerate the services which Fisk did render. I don't think he was either in a position or was asked to make such an enumeration, but it seems to me that all of Hutchinson's statement relating to Fisk, and Fisk taking the control, indicates that he did more than simply financing.

Q. Wasn't Hutchinson in a position to state who was managing the project? A. Yes, I think he was in a position to state it. My interpretation of his affidavit, and certainly of my considerations with him, was that Fisk did it and not him, as he had hoped to do.

The reason I can't answer specifically without reading the affidavit is that I can't be sure what I am remembering of what Hutchinson told me as separate from what may be stated in this affidavit.

Q. But nowhere in part 1 of Exhibit 27 does Hutchinson make any direct statement that the Fisk firm rendered services other than financing? A. That I don't know without reading the exhibit.

Q. All right. [7491] A. I haven't read the exhibit for a considerable length of time.

Q. When at the bottom of page 6 of Exhibit 27, Mr. Hutchinson refers to the ultimate consideration to affiant, what was his immediate consideration?

* * *

THE WITNESS: In that statement, Mr. Hutchinson was distinguishing between the amount of the consideration which passed to him under his agreement with Susquehanna Contracting Company and the part of that consideration which he was able to keep beneficially for himself and the people who had assisted him in developing the project to the stage it was developed when he turned it over to Susquehanna Contracting Company.

By MR. HALL:

Q. Why didn't you obtain from Hutchinson the details of the process by which he distributed, if he did, a portion of the common stock and the four thousand shares of preferred stock which constituted part of the consideration under the contract which is part 19 of Exhibit 27?

* * *

[7492] THE WITNESS: It seems to me that Part 1 of Exhibit 27 does state the details. It states that the bankers

would receive thirty thousand shares, that he was to receive 18,840, and that he was to receive the $750,000 cash. It seems to me that disposes of the whole of the consideration mentioned in part 19 of Exhibit 27.

By Mr. Hall:

Q. Mr. Hutchinson, according to your testimony, refers to the total consideration involved in part 19 of Exhibit 27? A. Yes, sir.

Q. But he does not describe in detail the terms of any agreement or relate the exact process by which he turned over or distributed a portion of the common stock and the preferred stock which he received under the Susquehanna contract. Isn't that so?

* * * * * * *

The Witness: It seems to me that he relates it in sufficient detail. I don't know what you mean by exact detail. He states in the affidavit, and I believe it was a fact from my attempts with him to locate his records, that he [7493] didn't have the records of that. However, he does state that he received 18,840 shares of the common stock, that the bankers received 30,000 shares of the common stock, and that accounts for all of the common stock.

By Mr. Hall:

Q. How were the 30,000 shares of stock distributed between the bankers? A. Hutchinson doesn't say, and I don't know whether he ever knew or not. I rather doubt he did.

Q. Mr. Gunn, would an investor be concerned with the adequacy of the proposed financing of the project? A. I think he should be, and I am very certain the investors in McCall Ferry wish they had been more concerned with it.

Q. Don't you think that would have a bearing on the cash value of the stock? A. Yes, I think it might. If at the time you were valuing the stock they knew that the financing was adequate it would have one effect. If they

knew it was inadequate I imagine it would have another effect. The mere fact their expectations at one time proved wrong at a later date wouldn't have any effect on the stock at a previous date.

Q. Mr. Gunn, have you ever found any evidence to indicate that the sale of common or preferred for cash in 1905 was believed possible or ever considered by McCall Ferry? [7494] A. I never have found any evidence either way. I have always believed that because the stock obviously had some value then that if an effort had been made to sell it it could have been sold.

Q. Do you know of any effort which was made? A. No, sir. On the contrary I don't believe any effort ever was made to sell it. I think the people who held it thought it was a good investment and wanted to keep it.

Q. How do you know that those who held the stock didn't want to sell it? A. Because I never found a scrap of evidence anywhere in the record of their attempting to sell it. If they wanted to sell it I assume they would have tried to sell it.

Q. That means they couldn't sell it. Isn't that so? A. No, I don't think so.

Q. Why not? A. It just doesn't to me.

* * *

Q. Do you know of any sales of McCall Ferry common [7495] or preferred stock for cash in the spring of 1905?

* * *

THE WITNESS: No.

By MR. HALL:

Q. Do you know of any—— A. Unless you want to, and perhaps it would be proper, to say that the acceptance of the stock by Hutchinson in exchange for his property was a sale. But I don't know of any market transaction in that.

Q. Do you have any record of any cash offer ever having been made for the McCall Ferry common and preferred stock?

• • •

[7496] THE WITNESS: You mean common or preferred.

By MR. HALL:

Q. Both. A. Nothing except the transaction between Bertron, Griscom Company and Pullen which related to purchase of 150 shares by Bertron, Storrs and Griscom from Pullen.

Q. Isn't it a fact that the initial syndicate found it difficult to sell even bonds and had to call in other bankers? A. I don't understand the question. My difficulty relates to who was the original syndicate.

Q. I am referring now to those involved in the March 1, 1905, plan? A. And I take that to mean Bertron, Storrs and Griscom, and Dimock and Barney.

Q. Lee, Higginson and Company. A. I thought they were the bankers you were referring to as having been called in.

Q. You are right.

THE WITNESS: All right. Now may I have the question?

[7497] (Question read.)

THE WITNESS: The original syndicate as we have defined it did call in other bankers. Whether that was because of the difficulty or indicated the difficulty of selling bonds, I don't know.

By MR. HALL:

Q. At any rate the initial syndicate under the March 1, 1905, plan, procured approximately subscriptions for four million dollars principal amount of bonds. Is that right? A. About that. My difficulty in answering the question relates, for example, to this fact: The Safe Harbor refinancing bonds were sold the other day, and they

sold for a very big premium. The First Boston Corporation was the successful bidder and they brought someone else with them. I don't know whether they brought them in because it was difficult to sell the Safe Harbor bonds or for some other reason. I have the same difficulty in answering your previous question.

• • •

[7498] By MR. HALL:

Q. Isn't it a fact that in the McCall Ferry reorganization of 1909 no value was allowed for the preferred and common stock of McCall Ferry? A. I have some difficulty with that. Perhaps I can answer it this way: It is a fact that in the reorganization the equity represented by the common and preferred stock was eliminated from the McCall Ferry Project.

Q. In other words, the common and preferred stock were wiped out completely in the reorganization process? [7499] A. Yes.

• • •

[7501] Q. Mr. Gunn, what cash value did McCall Ferry report for its capital stock to the state of Pennsylvania for the year 1905?

• • •

THE WITNESS: I don't know.

By MR. HALL:

Q. I show you at this time a photostatic copy of an excerpt from that report for the year 1905 which is dated July 13, 1906, and ask you if it is not a fact that the McCall Ferry representatives state that the stock had no cash value in 1905 and has had none since that time?

• • •

[7502] THE WITNESS: No, it doesn't seem to me that is what this letter states. It seems to me the letter states simply, at the beginning of the second paragraph, and particularly the final paragraph, after reciting all of the facts concerning the stock, "In view of what has been said the under-

signed have found themselves entirely unable to make any estimate and appraisal of the capital stock of said company for the purposes of taxation at the present time."

It just says they couldn't determine it.

By MR. HALL:

Q. Doesn't the second sentence in the second paragraph read,

"In the first place the stock did not have at that time," referring to 1905, "—nor has it had since, any market value, there having been no sales thereof according to [7503] our information and belief." A. That is correct. It seems to me there have not been sales and therefore from sales they could not determine the market value. Besides, this letter was talking about a valuation for taxation under Pennsylvania law. I have no idea as to what that legal requirement might be.

Q. Isn't it a fact they had that difficulty only six months after 1905? A. Yes, sir, I think it is. But, again, I don't even see the word "cash value" in the whole of this letter.

Q. Where is it mentioned in Hutchinson's affidavit? A. I don't remember whether it is in there or not.

Q. You know it to be a fact it is not in any of the affidavits? A. No, I don't know it to be a fact, but I don't recall it specifically having been called cash value. However, this is obviously a valuation for taxation purposes under Pennsylvania law. I don't know what may be the requirements of the Pennsylvania law for taxation. They might stipulate specific measure of value for taxation under Pennsylvania law for all I know.

Q. The difficulty of that was experienced only six months after 1905, isn't that so? A. That is what the letter would indicate. But it doesn't indicate the stock had no value to me.

[7504] Q. At that time they were closer to the facts than anyone 34 years after the event would be. Isn't that right? A. No doubt. They proved that.

* * *

(The document referred to was marked for Identification as Exhibit number 168.)

• • •

[7505] MR. HALL: Mr. Examiner, may we have marked for Identification as Exhibit 169 a photostatic copy of an excerpt from the capital stock report of McCall Ferry Power Company for the year 1906, which is dated January 31, 1907?

• • •

(Thereupon, the document referred to was marked Exhibit No. 169 for Identification.)

• • •

By MR. HALL:

Q. Mr. Gunn, do not the representatives of McCall Ferry Power Company make the same, or substantially the same representations in their report submitted in 1907 for the year 1906—by that I mean—they state that the McCall stock had [7506] no market value in 1906 and has had none since that time?

• • •

THE WITNESS: Yes, they make substantially the same representations as I have been able to determine from a rough comparison, it being, "In the first place, the stock did not have, at that time, nor has it had since, any market value, there having been no sales thereof, according to our information and belief."

By MR. HALL:

Q. And don't they say that no price or value is indicated or measured by net earnings or by the amount of profits made either declared in dividends or carried into surplus or sinking fund? A. Yes, they say that, Mr. Hall. Those latter words, beginning with "Indicated" and ending with "fund" is in quotes as though that were one of the stipulated measures of the Pennsylvania taxation law.

It is obvious they could not have had earnings during any of those years because the project was under construc-

tion, and it would appear from that that the Pennsylvania taxation laws provides only for the taxation of enterprises that have been completed and in operation.

Q. Do you know that to be a fact? [7507] A. No, but if our supposition that that quotation is from the Pennsylvania law is correct, then it would seem to me that would be the conclusion.

Q. Do you know whether or not McCall Ferry actually paid a tax? A. No, I don't know. It is a fact which could be ascertained, I suppose.

Q. Mr. Gunn, are we to understand that in reaching your conclusion as to the cash value of the McCall Ferry stock you did not consider exhibits numbered 168 and 169 for identification? A. I didn't consider them material evidence, no, and for the reason primarily stated in the last paragraph of each of those exhibits, which indicates definitely that the only thing the representatives of McCall Ferry Power Company were there stating was that they found themselves entirely unable to make any estimate and appraisal of the capital stock of McCall Ferry Power Company for the purposes of taxation at the present time. That doesn't indicate to me at all it might not have had a value for other purposes.

It just indicates they couldn't estimate how much the value was for taxation purposes.

Q. Did you, in making your study, consider exhibits numbered 168 and 169, and reject them? A. I don't follow just what you mean by rejecting [7508] them.

I considered them for what they were worth. I recall having looked at these tax returns.

Q. Did you reach the conclusion they were entitled to no consideration in arriving at the cash value of McCall Ferry stock? A. No, I don't think so. I would say that I reached the conclusion, because of the last paragraph, that they indicated the stock did have a value, McCall Ferry Power Company just couldn't estimate the form of value that the Pennsylvania tax law required them to estimate, or

perhaps in the way that the Pennsylvania tax law required them to estimate it.

Q. In other words, you believed that exhibits numbered 168 and 169 should have been weighed and considered? A. Should have been given some consideration, yes.

Q. Were Exhibits 168 and 169 submitted to Hutchinson, Lee, Fisk and Hopkins for the purpose of making their affidavits? A. I doubt it very much. I don't think it was necessary to submit them to any of them.

Q. In other words, you decided that for them. A. That they shouldn't be submitted?

Q. Yes. A. I suppose I did. I can't say that Hutchinson's and [7509] Fisk's lawyer may not have been shown this, but all I am saying is that as I recall this was not included among the exhibits finally submitted to them.

Q. By whom would exhibits 168 and 169 be shown to Fisk's lawyer and Hutchinson? A. By myself or Mr. Eichhorn or Mr. Chase.

Q. Do you recall showing these two exhibits to those people? A. I don't recall whether or not I did.

I showed those two parties a considerable volume of evidence, and I have no record of the total amount of it. I do have a record of the more important items of evidence which I have showed them in the end, and included in the participation which was made up for their final consideration.

Q. Do you recall whether Mr. Eichhorn and Mr. Chase showed Mr. Cole and Mr. Hutchinson exhibits numbered 168 and 169 for identification for their consideration? A. No, I don't recall whether they did or not.

Q. Mr. Gunn, didn't representatives of McCall Ferry make the same representations to the State auditor general of Pennsylvania for the years 1907, 1908, 1909, as they did in the years 1905 and 1906, as reflected in exhibits numbered 168 and 169? A. I don't know. I don't recall. They may have.

* * *

[7510] By Mr. Hall:

Q. Mr. Gunn, notwithstanding the report of the officers of McCall Ferry, you know, do you not, that the Auditor General and the Treasurer for the State of Pennsylvania nevertheless placed a value of one million dollars on the total preferred and common stock? A. I can't say that I recall that.

Q. Do you recall whether or not the company took an appeal to the Courts? A. I recall that there was some tax litigation, but I don't recall the details.

Q. Don't you recall that the Court involved was the Court of Common Pleas of Dauphin County?

* * *

[7511] The Witness: I imagine that is where the litigation would have been taken but I don't specifically recall it.

By Mr. Hall:

Q. What valuation finally was established as a result of the appeal to the Court? A. I don't recall.

Q. Would it help you if I said the valuation was reduced to $20,000? A. If that is the fact I will accept it. It doesn't help my recollection any, though.

* * *

[7513] By Mr. Hall:

Q. Mr. Gunn, will you assume that twenty thousand dollars is to be spread equally over 4,116,500 dollars par value preferred and five million par value of common stock outstanding? What total does that give you per share? A. Let me see if I understand your question.

You are asking me to assume that 4,116,000 par value of stock, plus five million dollars common stock is to be divided into $20,000. Is that your question? And how much that will be per share as a result of that arithmetical operation?

Q. That is right. A. What was it?

Q. 21 cents. A. It appears that if the total par value of McCall Ferry stock, both common and preferred, which is 9,116,000 dollars, is divided into——

Q. Number of shares represented by the par value? A. —twenty thousand dollars, then the results of that division would be 21 cents.

Q. Per share. A. Yes, 21 cents per share. I don't know what significance it would have, however.

Q. And if we were to assign to the preferred stock two times the amount we assigned to the common it would mean [7514] fourteen cents per share for the preferred and seven cents per share for the common. Right? A. Yes, I believe that that would be the result of allocating the 21 cents previously derived on the basis you have just stated.

• • •

TRIAL EXAMINER: Counsel is proceeding on the basis of an assumption. There is nothing to indicate the Court found it was twenty thousand dollars.

• • •

[7517] MR. HALL: Just one moment, Mr. Examiner, please.

Mr. Examiner, we have a letter dated June 10, 1907, copied from McCall Ferry Power Company file No. 13, signed by Olmstead and Stamm, to Messrs. Simpson, Thacher and Bartlett, and it appears that Olmstead and Stamm are lawyers located at 5 North Third Street, Harrisburg, Pennsylvania.

[7518] In that letter they refer to the appeal in the Court of Common Pleas of Dauphin County, and in referring to the verdict they state, "You will note that the tax of $100 is equal to five mills upon a valuation of $20,000 which is what we referred to in our letter of April 17."

TRIAL EXAMINER: That is all you know about the $20,000?

MR. HALL: The total judgment was paid in the amount of $105, $100 represented the tax, and in that

letter the tax of $100 is stated as equal to five mills upon a valuation of $20,000.

* * * *

[7519] By Mr. Hall:

Q. All of these valuations that we have just been considering, Mr. Gunn, were after the date of the transaction to which your cash values are related. Right?

Mr. King: I object to that because we have not established the valuations yet, sir.

* * *

By Mr. Hall:

Q. Will you refer specifically to Exhibits 168 and 169, Mr. Gunn? Those were the ones I had in mind. A. Those exhibits seem to me to show a lack of valuation. As a matter of fact, the last paragraph in each one of them said they couldn't estimate a value at that time. Then we later talked about a million dollars and now we are [7520] down talking about $20,000.

* * * *

Q. Mr. Gunn, were not the representations contained in Exhibits Numbers 168 and 169 for Identification made subsequent to the date of transaction to which your cash values relate?

* * * *

The Witness: Yes, sir, I believe that is right.

By Mr. Hall:

Q. Did Mr. Hutchinson ever purchase any of the McCall Ferry stock at his valuations? A. Yes, I think I would assume he purchased 18,840 shares at that valuation.

Q. For cash? A. No, not for cash but for things having a cash value.

[7521] Q. Did Mr. Hutchinson ever purchase any of McCall Ferry's stock for cash at any valuation? A. I don't know whether or not he did.

Q. Did he ever sell any of his stock for cash at any price? A. I don't know whether or not he did. I do know he gave some of it in lieu of cash. Whether that constitutes a sale for cash I don't know.

Q. You have previously testified that Mr. O'Connor participated in the determination of the cash value of the securities. Is Mr. O'Connor still alive? A. Mr. O'Connor is dead.

Q. When did he die? A. In July of 1944.

Q. What was his official capacity with Penn Water at the time of his death? A. He was Vice President and Secretary or Treasurer, I believe Secretary.

Q. When did Mr. O'Connor first become an officer of Penn Water and Power Company? A. I don't recall but I believe it was prior to 1930. I don't remember that date. It can be ascertained.

Q. What stock did Pennsylvania Water and Power Company buy since February 9, 1932, other than government bonds and the Safe Harbor stock?

• • •

[7522] THE WITNESS: I haven't the least idea. I have no knowledge of the company's investment portfolio, either as to what they bought or what they sold.

By MR. HALL:

Q. Haven't you previously testified, Mr. Gunn, that Mr. O'Connor had experiences in making investments for Penn Water? A. That is my understanding.

Q. But you don't know what those investments were, right? A. No.

Q. My information is that Mr. O'Connor was elected Assistant Treasurer as of February 19, 1932, and was elected Treasurer as of December, 1933. Will you verify that?

• • •

THE WITNESS: Yes, those two dates are correct.

• • •

[7523] By Mr. Hall:

Q. Mr. Gunn, did Hutchinson and Morison employ any assistants to aid them in their investigation of the hydro-electric possibilities on the Susquehanna River during the period from 1901 to 1905?

* * *

The Witness: Yes, it is obvious that in order to make the engineering investigation that Hutchinson and Morison did they would have had to hire engineering assistants and surveyors as well, and probably also personnel to assist on the stream gauging and the calibration of river sections [7524] in connection with stream gauging.

I think it is also clear from the record that during that period of time Hutchinson had retained Lorenzo Semple as a lawyer to assist him and advise him on the matter, and I believe that counsel by the name of John G. Johnson, in Philadelphia, had been frequently consulted during that period.

By Mr. Hall:

Q. Semple and Johnson were legal assistants? A. Legal advisers or assistants, yes.

Q. All right. A. As I recall, I believe it was during that period that Thomas Newhall, consulting engineer in Philadelphia, I believe, had assisted Hutchinson. Those are the ones of which I know. There may very well have been numerous others.

Q. What assistance did Newhall render? A. I believe Hutchinson told me that Newhall assisted him in his early negotiations with Pennsylvania Railroad in connection with the prospective relocation of Pennsylvania Railroad's tracks in connection with Hutchinson's contemplated development of McCall Ferry.

Mr. King: What was the period of time covered by your prior question?

Mr. Hall: 1901 to 1905.

MR. KING: I think the record shows Morison died before [7525] 1905. That is the reason I asked you the question. I think he died in 1903.

MR. HALL: That is probably true.

MR. KING: I just wanted to keep the record straight.

MR. HALL: So a part of the time it would be only Hutchinson.

MR. KING: Yes.

THE WITNESS: Then Hutchinson, I believe, had another assistant, or other assistants, it being William Barclay Parsons, because Parsons rendered a report in January of 1905, and it is obvious, in order to have made that report which he did on that date, it would have been necessary for him and numerous assistants of his to have done considerable work preparatory to the final report.

By MR. HALL:

Q. Were Newhall and Parsons engineers? A. Parsons certainly was. As I recall it, Newhall was, also.

Q. What other engineering assistants did Mr. Hutchinson have during the period I have indicated, or Mr. Morison or both? A. Boyd Ehle, and an engineer by the name of Anderson.

Q. Is this Boyd Ehle that you referred to the same one Hutchinson appointed as resident engineer on McCall Ferry? A. Yes, sir. Those are the only ones I have been able [7526] to find the names of. I don't think it necessarily should be assumed that that is all of the assistance that Hutchinson had. Of course, I guess he had assistance from his father-in-law, Dimock.

Q. Did Boyd Ehle render assistance to Hutchinson in connection with his investigation of the hydroelectric possibilities on the Susquehanna River during the period 1901 to 1905? A. Yes.

MR. HALL: Mr. Examiner, may we have marked for identification as Exhibit No. 170, a letter dated January 19, 1906, written by Cary T. Hutchinson to Boyd Ehle, Esquire, McCall Ferry, Pennsylvania?

TRIAL EXAMINER: The document described may be marked Exhibit 170 for Identification.

(Thereupon the document referred to was marked Exhibit 170 for Identification.)

By MR. HALL:

Q. Mr. Gunn, I show you the letter which has been marked as Exhibit 170 for identification written by Mr. Hutchinson to Boyd Ehle. Have you seen that letter before? A. Yes, sir; I believe I have.

Q. Is that the same Boyd Ehle that you referred to a few minutes ago? A. Yes, sir.

[7527] Q. Doesn't it appear from this letter that as late as January 19, 1906, which is a date subsequent to the June 1905 transaction which gave rise to the issuance of the securities, that Mr. Hutchinson was expressing the opinion that the stock of McCall Ferry was not worth anything? A. No, that is not the interpretation I would put on that letter. I would put the reverse interpretation on it. The first sentence in the letter reads as follows:

"I am enclosing form of stock deposit agreement for 100 shares of the common stock of this company, which I am putting in your name to give you an additional interest in the company."

If he thought the stock was worthless I don't see how he expected it to create an additional interest in the company.

I notice the last sentence in the letter reads as follows:

"Will you explain this to Anderson,"—the details of how the stock was being transferred to him—"and tell him that I hope the stock, before long, will be worth something."

I take that as simply a statement that he hopes in time it will have a substantial value.

Q. He says worth something; doesn't he? A. Yes, and also giving it to him for the purpose of its being worth something. If it was worth nothing I don't see how it would have been any incentive.

[7528] Q. Don't you think that you should read the phrase "Give you an additional interest in the company" in the light of "I hope the stock before long will be worth something"? A. No, I don't read it that way at all. I simply read the last sentence in the letter to mean that before long it may be freely traded and have a substantial exchange value in the market.

Q. And "worth something" means to you substantial exchange value. Is that it? A. That was my interpretation of it.

Q. Did you use Exhibit Number 170 for identification in reaching your conclusions as to cash value of the stock of McCall Ferry? A. I didn't consider it particularly important from that point of view. I may have given it some consideration. I considered it of most importance as a bit of evidence indicating where a part of the stock went which Mr. Hutchinson said he had given in satisfaction of obligations he had created in developing the enterprise to the point where it was turned over to McCall Ferry Power Company. That was the principal use I made of Exhibit 170.

Q. Did you show this letter to Mr. Hutchinson at any time? A. I believe I did.

[7529] Q. When did you first show it to Mr. Hutchinson? A. I don't recall the time but I believe I showed it to Mr. Hutchinson during the conferences in Baltimore shortly after I first approached him in connection with assisting the company in establishing the history of McCall Ferry Power Company.

Q. It is a fact, isn't it, that this letter is not included in the participation which you submitted to Hutchinson

for his consideration? A. I don't recall whether it is or not. That very well may be true.

Q. Would you check whatever records you have, Mr. Gunn, to ascertain whether or not you actually did submit this letter, Exhibit 170 for identification, to Mr. Hutchinson for his consideration? A. I have no records on that other than remembering myself or Mr. Chase or Mr. Eichhorn.

Q. Were you discussing cash value of the stock with Mr. Hutchinson when you showed him the letter? A. No. I think I was trying to find out if he recollected that these shares of stock referred to in this letter came from his 18,840 shares, or whether they might have come from some other block of the common stock of McCall Ferry Power Company.

Q. Did he recollect that in January of 1906 he had [7530] hoped the stock would be worth something before long? A. I don't believe I discussed that question with him at that time. He did recollect, when he saw this letter, that he had given those shares to Ehle and Anderson, and he told me they were given to Ehle and Anderson as part compensation for the work that they had done for him prior to the time the property was turned over to McCall Ferry Power Company.

Q. What do you mean by "part compensation," Mr. Gunn? A. I understood from him he also paid them some cash.

Q. Cash as a salary? A. Yes, surely.

Q. All along? A. That is my understanding of it. I am pretty sure the individual didn't work for him free.

Q. Who is this Mr. Anderson referred to in Exhibit 170 for identification in the next to the last line? A. The same Mr. Anderson, I take it, that is referred to in the fourth line.

Q. Who was this Mr. Anderson? A. An engineer that assisted Ehle and Hutchinson in their investigation of the river. I think both Mr. Ehle and Mr. Anderson

were subsequently connected with McCall Ferry Power Company in association with Hutchinson.

Q. Isn't it a fact that when Mr. Hutchinson wrote this [7531] letter of January 9, 1906, that he had no reason to be other than perfectly frank and honest about its worth? A. I think that is quite true.

* * * *

By Mr. Hall:

Q. Mr. Gunn, who was James H. Harlow? A. He was a hydro-electric engineer, or a hydraulic engineer, who in the middle 1890's began investigating the possibilities of power generation from the Susquehanna River and began acquiring properties, as I understand it, on his own behalf and on behalf of other people interested in the development of the river.

Q. Was Mr. Harlow familiar with the conditions and land values along the Susquehanna River? A. Yes, I would assume that he was.

Q. Had he attempted to secure financing for his project prior to 1907? A. It is my understanding that he had, he and people associated with him.

Q. What experience had he had with other hydro-electric [7532] projects? A. Other than his experience on the Susquehanna River?

Q. Yes. A. I really don't know. At least I don't recall. I did have some idea at one time but I don't recall now.

* * * *

By Mr. Hall:

Q. Did you consider Mr. Harlow's opinions of the cash value of the McCall Ferry stock? A. That was one of the evidences of the value of that stock that I considered.

Q. Did you think that because Harlow was testifying as a witness for those whose interest you say lay in placing a low value on McCall Ferry securities that he, while so testifying under oath, would not have told the truth? A.

No, I don't think that would have been the result. I do think this would have been the effect, however: In expressing judgment on a matter of that sort I should think that there would always be a leeway in a person's judgment since he doesn't know precisely what the answer is, [7533] and that there would be a tendency for him to state the value on the low side.

Q. He was under oath, wasn't he? A. Yes, I think so, but he didn't state his value in limits. He stated them in a precise figure.

Q. Part 21 of Exhibit 27 shows that Mr. Harlow was stating what he thought the stock was worth. Do you consider that this expression of value is synonymous with cash value at the time of the transaction? A. Which page does that occur on, Mr. Hall?

Q. 182.

* * *

THE WITNESS: I think it is synonymous with Harlow's opinion of the cash value. However, it appears to me from the whole tone of the cross-examination that Harlow may have been at that point, it would appear he was, expressing offhand opinions.

TRIAL EXAMINER: Is that cross-examination or direct so far as you know?

THE WITNESS: I suppose it is cross-examination, although I am not sure.

MR. KING: That is correct. The document indicates that it is direct examination because, on page 182 Mr. Williams, whom I assume to be one of the lawyers on the other side, says "Don't cross-examine."

[7534] By MR. HALL:

Q. Will you verify whether it was direct or cross, Mr. Gunn? A. Yes, sir. I think that can be done.

TRIAL EXAMINER: Do you know the nature of that proceeding?

THE WITNESS: Yes, sir, condemnation proceeding in which the interests represented by Mr. Harlow were attempting to condemn the property of McCall Ferry Power Company which lay below the McCall Ferry site. It was because of the fact that the proceeding was of that nature that it indicated to me Harlow, representing the buyer, was not overstating the value of the securities, if I may put it that way.

TRIAL EXAMINER: He was representing whom?

THE WITNESS: He was representing the interests which were attempting to condemn and take the property of McCall Ferry Power Company below the McCall Ferry development.

TRIAL EXAMINER: Is that the Susquehanna Power Company which was attempting to condemn the property of McCall Ferry Power Company?

THE WITNESS: I believe that was the company. There were two companies below that. Yes, I am sure it was the Susquehanna Power Company.

MR. KING: It states that, Mr. Examiner, on the title page preceding page 182 of Exhibit 27.

[7535] THE WITNESS: Yes, sir. It was the Susquehanna Power Company.

MR. KING: It gives the title of the case.

TRIAL EXAMINER: Why are the Proprietors of the Susquehanna Canal involved?

THE WITNESS: That was the name of the company which had developed the Susquehanna Canal in Maryland, and the corporate name in which I suppose the canal rights then stood.

TRIAL EXAMINER: In what state is Cecil County, Pennsylvania or Maryland?

THE WITNESS: Maryland.

TRIAL EXAMINER: Is that a reported case?

THE WITNESS: Yes, sir.

TRIAL EXAMINER: Do you have the citations?

MR. GOLDBERG: The Examiner does not mean whether there was a transcript. He wants to know whether there is a written opinion reported in some official report.

THE WITNESS: Oh, there was no opinion because the case was compromised before it ever came—I believe there may have been an opinion and a request for an appeal, and then while the appeal was pending I believe the case was compromised, and ultimately led to the agreement in which McCall Ferry Power Company, Susquehanna Power Company, and the company in which the Welch group was interested pooled their [7536] interests in a lower development, and taking their interest on the ratio of the head of the river that each one controlled.

TRIAL EXAMINER: This was before the Harlow interests and the Hutchinson interests had compromised, wasn't it?

THE WITNESS: No, this was a second one. The first time they got into trouble was in 1902 and 1903. That trouble related to the fact that Harlow owned this canal in Pennsylvania which passed up the west shore of Susquehanna River through the location where Hutchinson wanted to construct his projects.

If you will refer to Exhibit 26, Mr. Examiner, and to the map which is on the back of that exhibit, and to the west side of the river which is towards the bottom of the page, you will see there a dotted line which is colored green, which parallels the west shore of the river.

You will also note, just below Muddy Run which flows into the river from the East, just upstream from Muddy Run, you will notice a sketch there which is entitled "McCall Company or Holtwood dam."

The difficulty in 1902 and 1903 between Hutchinson and Harlow-McGaw arose over the canal rights which lay upstream from the site of the McCall Ferry project, and the compromise which took place in 1902 or 1903 related to, and gave, Hutchinson the right to flood the canal to such extent as it would be necessary to flood it by reason of the construction of his contemplated project at Holtwood.

[7537] That left in Harlow-McGaw's control all of the canal south of the McCall Ferry-Holtwood site and north of the backwater from a dam to be constructed there by Hutchinson.

Then when Harvey Fisk and Sons took control of the project——

TRIAL EXAMINER: Is this all in Exhibit 26?

THE WITNESS: Yes, sir, it is all there, but you won't find it all there in a single place. Exhibit 26 is set up primarily to show the development of McCall project.

I am now explaining the relationship of Harlow-McGaw which makes it necessary for me to collect together the bits that are included in Exhibit 27.

TRIAL EXAMINER: All right.

THE WITNESS: Will you read the last sentence again?

(Sentence read.)

THE WITNESS: —Harlow-McGaw interest approached Harvey Fisk's interests and sold to Harvey Fisk in its entirety all of Harlow-McGaw's holdings on the Susquehanna River from Wrightsville, Pennsylvania, which was the upstream terminus of the canal, to Havre de Grace, Maryland, which was the downstream terminus of the canal.

The section of that canal which is noted as Susquehanna and Tidewater Canal is the name for the canal which extends from Wrightsville to Havre de Grace, and the Proprietors of Susquehanna Canal lies in Maryland on the East shore [7538] of the Susquehanna River beginning at a point just north of the tract of land noted as Bell Farm,

and at a point designated as Ark Haven, and extends downstream to a point noted as Tidewater, which is just north of Rock Run.

TRIAL EXAMINER: The condemnation proceeding in which Harlow-McGaw was testifying when he gave this testimony to which we have previously referred was the condemnation proceeding by which Susquehanna Power Company sought to obtain from McCall Ferry Power Company the rights owned by the Proprietors of Susquehanna Canal. Harlow was then interested in the Susquehanna Power Company.

THE WITNESS: Yes, he was then interested in the Susquehanna Power Company.

Now, the thing which made Harlow's testimony in that proceeding relating to McCall Ferry bonds and common stock pertinent was the fact that he had previously sold these canal rights to Harvey Fisk and Sons, and accepted in exchange $200,000 cash, $250,000 par value of McCall bonds and I believe $100,000 par value of McCall common stock.

TRIAL EXAMINER: How did Harvey Fisk hold that —through McCall Ferry Power Company?

No, it would still be held by Proprietors of Susquehanna Canal.

THE WITNESS: It would be held through the ownership of a stock of Proprietors of Susquehanna Canal as I understand it. It was then in the possession of McCall Ferry Power Company.

[7539] Harvey Fisk and Sons didn't keep ownership to any of the lands or water power rights which they obtained from Harlow-McGaw in their early 1905 transaction, but conveyed all of that to McCall Ferry Power Company through the Susquehanna Contracting Company transaction.

TRIAL EXAMINER: Is the Susquehanna Power Company featured at all in your Exhibit 26?

THE WITNESS: Only to a limited extent to show the relationship between that development and the development of McCall Ferry Power Company as to the competition between them and as to the compromise of this attempt to condemn their canal property on the part of Susquehanna Power Company.

Susquehanna Power Company finally became the company which developed the Conowingo project, which is shown as a black line across the river just south of Amos Island, and labeled "Conowingo Dam", on the map which is a part of Exhibit 26.

TRIAL EXAMINER: Very well.

By MR. HALL:

Q. Mr. Gunn, isn't it a fact that in connection with Mr. Harlow's testimony there was a verdict which was appealed from, but while the case was pending the case was settled? A. That is my recollection.

Q. As you have already testified or indicated, you merely submitted excerpts of Mr. Harlow's testimony and included them in Part 21 of Exhibit 27? [7540] A. Yes, sir.

Mr. Harlow's testimony in that case as I recall it was very voluminous, and there was only a small part of it which related to his opinion as to the value of these securities.

Q. But that is not all of the testimony included in Part 21 of Exhibit 27, all of the testimony related to McCall Ferry Securities? A. No, I don't think that is all of it. That is the particular part of his testimony which contains the sense of his testimony as it relates to the valuation of the securities.

MR. KING: May I have the last question and answer, please?

(Question and answer read.)

MR. KING: I am a little confused by the question and answer the reporter just read. Did you mean

there any testimony contained on pages 182, 183 of Exhibit 27 which do not relate to the stock value?

MR. HALL: No. I meant to ask whether or not this was all of Mr. Harlow's testimony in that proceeding.

MR. KING: All right.

THE WITNESS: No, sir, it was not.

By MR. HALL:

Q. And it is not all of Mr. Harlow's testimony bearing [7541] on the question of the cash value of the securities. Isn't that so? A. Yes, I think that is right. This particular part that is included, this particular part of Mr. Harlow's testimony which is included, as Part 21 of Exhibit 27 is the part of his testimony which contains the sense of what he said in that case relating to the valuation of those securities.

Q. Do you know whether or not that testimony which is included in Part 21 took place on January 28, 1907?

• • •

THE WITNESS: I cannot state positively but I believe that is the date on which the testimony was taken.

MR. HALL: Mr. Examiner, may we have marked for identification as Exhibit 171, excerpt from the testimony of J. H. Harlow. This excerpt is taken from page 99 of the transcript, and the transcript is contained in the company's general file No. 40-B.

TRIAL EXAMINER: Is this in the same proceeding as Part 21 of Exhibit 27?

• • •

MR. HALL: Yes, sir.

• • •

[7542] (Thereupon the document referred to was marked Exhibit No. 171 for Identification.)

• • •

By Mr. Hall:

Q. Have you read that exhibit, Mr. Gunn? A. Yes, sir.

Q. Do you recognize this testimony of Mr. Harlow? A. I don't recognize it, but if you found it in our files it is all right.

Q. Isn't it part of the same testimony of which Part 21 of Exhibit 27 is a part? A. It appears to me to be a continuation of that line of testimony, with this limitation: It appears that the testimony in Part 21 of Exhibit 27 is probably direct testimony, and the testimony in Exhibit 171 gives me the impression, at least, it is probably cross-examination on the same [7543] subject.

Mr. King: May I point out to you, Mr. Examiner, that pages 182 and 183 of Exhibit 27 bear up in the right-hand corner pages 11 and 12, and exhibit for identification No. 171 bears page 99.

By Mr. Hall:

Q. Did you get your impression that Exhibit 171 covers cross-examination because of the fact that Willis and Homer represented McCall Ferry Power Company? A. No, just from the tone of the question.

* * *

[7544] Mr. Hall: Mr. Examiner, may we have marked for identification as Exhibit Number 172 an additional extract from the testimony of Mr. Harlow in the same proceeding? This extract was taken from pages 39 and 40 of Mr. Harlow's testimony.

* * *

(The document referred to was marked for identification as Exhibit Number 172.)

* * *

[7547] By Mr. Hall:

Q. In trying to ascertain the cash value of the stock, and to understand the method followed in issuing it, did

you consider the laws of Pennsylvania as they existed in 1905 with reference to the issuance of bonds? Did you consider that?

* * *

[7548] THE WITNESS: No, I don't think I specifically considered that law of Pennsylvania. In arriving at a conclusion as to the value of securities, as I said before, they were discussed with counsel and counsel were probably guided in their opinions as to the laws of Pennsylvania.

By MR. HALL:

Q. Did you consider Part 4 of Exhibit 27? A. Yes, I considered it for some things but I don't recall having considered it from the point of view of the Pennsylvania law in the issuance of securities.

Q. Did you consider what Johnson was saying about the requirements of the law in connection with the issuance of bonds? A. No, I can't say that I particularly did. The principal use I made of the Exhibit, of Part 4 of Exhibit 27, was the description of the plan which was proposed to Johnson and which I understood to be Hutchinson's original plan.

* * *

[7550] By MR. HALL:

Q. Mr. Gunn, have you included any amount in your original cost determination as compensation for services alleged to have been rendered to the McCall Ferry Power Company by Harvey Fisk and Sons? A. May I have the question?

(Question read.)

THE WITNESS: Yes, sir.

By MR. HALL:

Q. How much? A. $199,570.31.

Q. How did you arrive at that particular amount? A. The derivation of that amount is shown at the bottom of page 53 in Exhibit 26.

Do you want an explanation of what appears on that page?

Q. Yes. A. Mr. Pliny Fisk, or his firm, rather, received as their total compensation 1,875 shares of preferred stock which has been valued for the purpose of the original cost determination at $50 a share, and making an amount of $93,750.

He received, also, 17,537½ shares of common stock which has been valued at $25 per share, making an amount of $438,437.50.

The sum of those two amounts is $532,187.50.

In Mr. Fisk's affidavit and correspondence, which is [7551] Part 9 of Exhibit 27, Mr. Fisk has stated it as his opinion that the total compensation his firm received should be allocated three-eighths to management services and five-eighths to banking service. Three-eighths of $532,187.50 amounts to $199,570.31, which is the amount included in the original cost claim for the management services of the firm of Harvey Fisk and Sons.

Q. Did you include anything for the banking services of Harvey Fisk and Sons? A. Not directly, but that does come in indirectly.

Q. Are you saying that Harvey Fisk and Sons rendered to McCall Ferry management and banking services? A. Yes, sir.

Q. How was Harvey Fisk and Sons paid for their services? A. Through the issuance to them of 1,875 shares of preferred stock and 17,537½ shares of common stock, both being stocks of McCall Ferry Power Company.

* * *

[7552] By Mr. Hall:

Q. Did Harvey Fisk and Sons receive any specific amount of stock for banking services as distinguished from management services? A. No, sir.

Q. Will you describe the management services performed by Harvey Fisk and Company for McCall Ferry?

A. The records of Harvey Fisk and Sons were never found, and the only knowledge I have of the management services rendered by Harvey Fisk and Sons are those described by Mr. Fisk in the various parts of Part 9 of Exhibit 27.

Q. Over what period of time did the Fisk firm perform services? A. From the time they entered the picture in March, 1905, until the McCall Ferry Power encountered financial difficulty. Just what date during that later period their services could be said to be terminated I don't know, but perhaps with the receivership or with the appointment of the receiver.

Q. I take it you are now referring to management services? A. Yes, sir. Wasn't that your question?

Q. I think I left out the word "management", but I intended to have had it in my question. A. Yes, sir, I took it that you did.

[7553] Q. What management services did Harvey Fisk and Sons render at the time they came in as bankers in March of 1905? A. It is my understanding that they took over the management at that time in the sense that they completed the formation of the company, they purchased Harlow-McGaw's property, and arranged for the organization of the company and the selection of experts and other services of that sort. At least that is my understanding of it.

Q. Through whom were the management services rendered? A. William M. Barnum.

Q. All of them that you have been talking about? A. Well, at least in this sense: Mr. Fisk says that he turned over, says in Part 9 of Exhibit 27, that he turned over the principal functions of the management of the McCall Ferry enterprise to Mr. Barnum, and in giving you that answer I was relying upon that statement of Mr. Fisk's.

Of course, the legal services that were rendered were rendered by Simpson, Thacher and Bartlett, which I understand was the law firm selected by Fisk to replace the law firm which previously had handled Hutchinson's and McCall Ferry Power Company's attempt to develop power on the river.

Q. What were Mr. Barnum's duties with respect to the management of the McCall Ferry Power Company? A. I don't know what his duties were any more particularly than they are stated by Mr. Fisk in Part 9 of Exhibit [7554] 27. He was a member of the board of directors, he was a member of the executive committee, I believe, and he was a member of the voting trust committee, I believe. I don't recall whether those functions are stated in Part 9 of Exhibit 27 or not, but in any event he did serve in those capacities.

Q. When Mr. Fisk says that Barnum rendered management services does he say that he rendered them in the capacities you have just referred to? A. I don't recall just how he stated it. Do you wish me to check it.

Q. If you will just glance down the page?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: No, in glancing at Mr. Fisk's statement I don't see that he enumerated those capacities. However, it is evident from McCall Ferry Power Company's records, and from Exhibit 26, and parts of 27 which support Exhibit 26, that Mr. Barnum held the three positions that I have spoken of, and I recall now that there was one other that I forgot to mention. He was Chairman of the bondholders committee when the project got into financial difficulties. I don't believe I previously mentioned that.

None of those capacities are enumerated as such in Mr. Fisk's statement, but they are clearly evident from all [7555] of the remainder of McCall Ferry's records.

Q. Was the Chairman of the bondholders committee a management function? A. I don't know what you would call it. Perhaps if it wasn't management it was what Fisk considered was necessary to discharge his obligation to the people who had bought bonds through his house. It is my understanding he considered such things as that an

obligation. Whether you would call it management of McCall Ferry Power Company, I really don't know.

Q. Are those services covered in the cash value determined by Mr. Fisk? A. What do you mean by "Those services"?

Q. Chairmanship of the bondholders committee. A. As I recall it, the bondholders committee received specific compensation, or at least a certain amount of specific compensation. Whether that is to be looked upon as total or not I really don't know. I don't recall what the amount of the compensation was that they received for acting as a bondholders committee.

* * *

[7569] By Mr. Hall:

Q. Mr. Gunn, did Pliny Fisk, Sr., show you any records or memoranda to substantiate his claim that Harvey Fisk and Sons rendered management services to McCall Ferry? A. No, sir, he showed me no memoranda. As a matter of fact, he didn't have an opportunity to, because, as I said, my connections with Fisk were carried on entirely through his lawyer. The only evidence I had directly from Fisk on that was Mr. Fisk's statement made to me on the occasion of my meeting with him.

Q. As a matter of fact, since the Fisk firm records were destroyed some time prior to your contact with him he would not have been in a position to show you any records. Isn't that so? A. That is correct. He wouldn't have had any firm records, at least, to show me.

Q. Did you show Pliny Fisk any records or memoranda to support the claim for management services? [7570] A. You mean by that did I personally and directly show them to him?

Q. Yes. A. No, sir.

Q. Did Mr. Cole, Pliny Fisk, Jr., or anybody else acting in behalf of Mr. Fisk, show you any records or memo-

randa to substantiate the claim that Harvey Fisk and Sons rendered management services?

* * *

THE WITNESS: I don't recall they showed me anything other than what I had already seen.

By MR. HALL:

Q. Did you show Pliny Fisk, Jr., or Mr. Cole any records or memoranda to substantiate the claim for management services by the Fisk firm? A. Well, I showed Mr. Cole all of the documents included in the Fisk participation, and, as I recall it from time to time during the six months he worked on the case, I showed him numerous other documents. I don't recall just what the others were. However, all of the documents shown to Mr. Cole are included in the company's files.

Q. Do you recall any documents included in the participation which support the claim for management services? [7571] A. Well, directly or indirectly it seems to me they all had a bearing on it.

Q. How? A. Either by showing that Fisk was the principal banker in the transaction or by indications of various sorts that he was in control of the enterprise.

MR. KING: Would you like to see the participation, Mr. Gunn?

MR. HALL: I don't have it with me, I am sorry. It is on my desk.

THE WITNESS: I think I recall in general what is in the participation.

By MR. HALL:

Q. Do you know whether Pliny Fisk, Sr., relied upon or resorted to any evidentiary material that you know of in making his claim? A. I don't believe I understand the question. The two things which give me trouble are what is meant by evidentiary material and what is meant by his claim.

Q. Well, any documentary evidence. A. He relied certainly upon what evidence was included in the participation, and any other documents from our files which I gave Mr. Cole.

Q. Did you give Mr. Cole any documents not contained in the participation? [7572] A. I am pretty sure I did, and at least I gave him a statement which is included in the participation which contains data drawn from other documents.

Q. Was that statement presented to Mr. Fisk prior to or after the date of his affidavit? A. As I recall the documents, it was included in the participation and a statement of the participation was given to Mr. Fisk by Mr. Cole during the months that Mr. Fisk worked intermittently on the problem. It is my recollection that the participation given to him at that time had errors in it which Mr. Cole pointed out Mr. Fisk had mentioned.

Then at about the time when the exchange of letters, the first of which is dated July 9, 1939, and is contained in part 9 of Exhibit 27, was sent to Mr. Cole, the participation we now have was also given to Mr. Cole in its final form containing the corrections which Mr. Fisk had suggested.

Q. Are you saying that prior to the date of Mr. Fisk's affidavit, which is December 29, 1938, you did not present to him through Cole the complete participation which Mr. King turned over to me a few days ago? A. No, I am saying the reverse of that, with this modification: A complete participation was presented to Mr. Cole, but it was not in exactly the form as the final participation for the reason that as I recall I had misinterpreted in some respects Fisk's connection with the McCall [7573] Ferry Company, and he suggested corrections which might be made to it.

[7574] Q. Do I have the final participation? A. The final participation.

Q. Where is the previous participation? A. Probably destroyed when we made the final.

Q. Are you sure it has been destroyed? A. Yes, it has been destroyed.

Q. What did you misconstrue in the first participation? A. I believe in one of the early ones, at least, I had attempted from the documents I had available to me then, at least I had drawn the conclusion, that there was no one dominating interest in the McCall Ferry enterprise under Fisk, but it was a joint endeavor of some sort. As soon as I showed that to Mr. Fisk he very quickly, as soon as Mr. Cole showed that to Mr. Fisk, rather, he very quickly pointed out that that was incorrect.

* * *

By Mr. Hall:

Q. Did you subsequently obtain any documents which confirmed Mr. Fisk's statement as to control? A. I can't answer that precisely, and for this reason: There were documents in Lee, Higginson's files which I obtained and which do, in my opinion, show Fisk control. The point upon which I am uncertain is whether I obtained those documents before I talked to Mr. Fisk or after.

[7575] Q. What Lee, Higginson records are you referring to? A. The correspondence between Lee, Higginson and Bertron, Storrs and Griscom relating to Lee, Higginson's compensation which are contained in Part 11 of Exhibit 27 and which are a letter dated March 25, 1905, from Bertron, Storrs & Griscom to Lee, Higginson & Company; another letter dated March 28, 1905, which is a letter to Lee, Higginson from Bertron, Storrs & Griscom; and another letter dated March 30, 1905, from Bertron, Storrs and Griscom to Lee, Higginson; another letter dated March 8, 1906 to Lee, Higginson from Bertron, Storrs & Griscom; another letter dated March 9, 1906, from Lee, Higginson to Bertron, Storrs & Griscom.

Q. And the letters embraced in Part 11 of Exhibit 27 are the ones which you relied upon to support or confirm Fisk's statement? A. A part of it, yes.

Q. What is the other part? A. I can't recall offhand but I think you will find inferences to that effect all through Exhibit 27 in numerous of the documents. At the moment I can't put my finger on them all.

Q. Will you point out one where we can find that inference? A. I am at a loss now. We are looking for evidence of Fisk's domination of the enterprise, are we not?

[7576] Q. Management? A. Yes. Another piece of evidence is the fact that Harlow-McGaw went to Harvey Fisk and Sons for the sale of their property. Another one is the fact that Simpson, Thacher and Bartlett, Fisk's attorneys, displaced Hutchinson's attorneys, who were Coudert Brothers.

Another one, of course, is Hutchinson's statement to the effect that Fisk deprived him of his interest of control of the enterprise. Those I can think of offhand.

Q. When was the destroyed participation submitted to Fisk or Cole? A. I don't know just what date it was. Some months prior to the date of his affidavit, however, which was December 29, 1938.

* * *

By Mr. Hall:

Q. Was the final participation submitted to Fisk or Cole with your letter of January 9, 1939, embraced in Part 9 of Exhibit 27, Pages 74 and 75?

* * *

The Witness: Yes, I believe it was. The letter so states in the first paragraph.

[7577] By Mr. Hall:

Q. What else, other than what you have already referred to, had you misconstrued in the participation which you initially submitted to Mr. Fisk? A. I don't recall

anything else in particular of importance. I think there may have been some details.

Q. Mr. Gunn, is the participation that I have the only one that was ever submitted to Mr. Hutchinson? A. The only one in so comprehensive a form as the one you have. There were several descriptions comparable to the descriptive part of that participation submitted to Mr. Hutchinson.

Q. Do I have the final one now? A. Yes, sir.

Q. How many were submitted to Mr. Hutchinson before the final one that I have? A. I don't recall, but I would say two, three or four.

Q. When was the final participation submitted to Mr. Hutchinson? A. Only a few days before the date of his affidavit.

Q. When was the first one submitted, Mr. Gunn? A. May I have the question, please?

(Question read.)

THE WITNESS: Ten or twelve months before the date of his affidavit.

[7578] By MR. HALL:

Q. Mr. Fisk, in his affidavit as shown at the top of page 71 in Exhibit 27, states, "I have examined the photostatic copies hereto attached and identified by my initials, which photostatic copies I believe were true and correct copies of the original documents or of the true and correct copies thereof."

Where are the photostatic copies initialed by Mr. Fisk? A. I believe they are included in the participation.

Q. I don't recall seeing Mr. Fisk's initials on those participations, on those documents contained in the participation. A. Then they must be in the company's files.

Q. This affidavit of Mr. Fisk's is not complete without the photostatic copies initialed by Mr. Fisk. Isn't that right, Mr. Gunn?

MR. KING: I object to that question, if Your Honor please, I think the record shows that copies are already in the file. Whether they are initialed by Mr. Fisk does not make a particle of difference, it seems to me.

MR. HALL: Until we get the ones which are initialed, Mr. Examiner, we apparently won't have the ones he relied upon.

TRIAL EXAMINER: Read the question, please.

(Question read.)

[7579] TRIAL EXAMINER: You may answer the question.

THE WITNESS: I believe it would be more complete if we had those documents. As a matter of fact, I have been under the impression they were in Exhibit 27.

By MR. HALL:

Q. Would you submit those documents bearing Mr. Fisk's initials? A. We will undertake to find them.

MR. KING: Mr. Examiner, may I inquire of Mr. Hall whether he is implying that the documents in Exhibit 27 are different from the documents bearing Mr. Fisk's signature?

MR. HALL: Mr. King, I don't intend to make any implication. I don't know. I am trying to make certain as to what documents Mr. Fisk actually relied upon when he prepared this affidavit.

I assume those documents would be attached to the original of Mr. Fisk's statement.

TRIAL EXAMINER: Are those documents included somewhere in Exhibit 27?

THE WITNESS: Yes, I believe they are, but not the ones, I believe, with Fisk's initials on them.

TRIAL EXAMINER: Very well.

By MR. HALL:

Q. Mr. Gunn, am I correct in assuming that the several participations submitted to Hutchinson were submitted during [7580] the period from about the middle of 1938 to the date of his affidavit, January 13, 1939? A. Generally that is true, although I believe the first one was submitted to him in February or March of 1938.

Q. Did McCall Ferry or Susquehanna Contracting Company enter into any contract with Harvey Fisk and Sons for management services? A. I don't know.

Q. None that you know of? A. I never found a contract covering that service.

* * *

[7587] By MR. HALL:

Q. Mr. Gunn, what corporate management services did the Fisk firm render? A. I can't describe them in any more particulars than I did several minutes ago and which I did several times in the last two or three days.

Q. What other documents embraced in Exhibit 27 disclose management services rendered by Harvey Fisk and Sons? A. I don't recall offhand but I am very sure there are several others that directly or indirectly bear upon and indicate he did manage the enterprise.

Q. Other than those you have already referred to what other documents contained in Exhibit 27 do you have in mind? [7588] A. I said I didn't recall the specific documents. If you wish I suppose we can go through all 68 of them one at a time, searching for such indications, if you wish, and I am sure we will find a large number of them.

Q. That is what you have to do, search for it; is that right? A. Certainly. I cannot recall or remember 600 pages in Exhibit 27. As a matter of fact, most of the pages are printed. I might also be able to go back to the 15 filing cases and find still more of them if you wish, but it would be an interminable job.

TRIAL EXAMINER: But the documents Mr. Fisk initialed would be all the documents you would expect to find. Isn't that true?

THE WITNESS: No, not at all, Mr. Examiner. They are only the important ones. To indicate that fact to you, when I compiled Exhibit 27, or when it was compiled under my supervision, I put in that exhibit the documents that I thought were important and had an important bearing on the determination of original costs with which we are here engaged.

In the last few days the Commission Staff has pulled out several other documents from the files we made available to them that they thought had a bearing on it. I am inclined to think some of them may have had a bearing on it one way or [7589] the other. I have no doubt they will pull out innumerable other documents from those files. I just couldn't make Exhibit 27 of a workable size without making a selection.

TRIAL EXAMINER: When you are able to identify the documents Pliny Fisk initialed, then those which appear in Exhibit 27 in some other place bearing his initials would be the ones you consider important on this subject?

THE WITNESS: Most important ones, yes, sir.

By MR. HALL:

Q. Did you mean to say to the Examiner the documents the Staff pulled out and showed you supported your position? A. I think in general they do together with the other documents we will probably produce in connection with it. Several of them, I am told, were taken out of context.

Q. Who told you that? A. Mr. Chase or Mr. Eichhorn or somebody. I asked them to look in the file and find out which one——

Q. Which ones? A. I don't recall which ones they were.

Q. Are you saying Exhibit 170, Mr. Hutchinson's letter to Boyd Ehle was taken out of context? A. I don't recall whether or not that is one of them.

Q. How about exhibits numbered 168 and 169—were they taken out of context? A. I don't recall.

[7590] Q. How about Exhibits 171 and 172; were they taken out of context? A. I don't recall, but I strongly suspect they were.

• • •

By Mr. Hall:

Q. Mr. Gunn, isn't it a fact that the March 25, 1905, plan, as shown at the top of page 82 of Exhibit 27, says only that Harvey Fisk and Sons was willing to aid in the financing of the project to the extent of taking agreements from the subscribers for the securities, acquiring securities, and making and procuring loans? A. The paragraph at the top of page 82 which Commission counsel has referred to reads as follows: "Whereas, the bankers have been requested and are willing to aid in financing the said plan to the extent of taking agreements from the subscribers for the purchase of bonds and preferred [7591] stock of the power company, of acquiring the bonds and stock for delivery under such purchase, and of making or procuring the loans hereinafter mentioned;".

Q. In other words, that is what Harvey Fisk and Sons were to do under this agreement? A. It says just what I read into the record.

• • •

[7595] By Mr. Hall:

Q. What experts, engineers, contractors, or other personnel were selected by the Fisk firm? A. It is my understanding they all were in the sense that Barnum had the right to accept or reject them. At least that is my understanding of it. That would include Sanderson and Porter, the rejection of the early bids which were taken for construction, the acceptance of Hugh L. Cooper's later bid for construction, the selection of the engineers that

were on the engineers' advisory board, and probably the selection of at least the contractors on the principal equipment.

[7596] Q. How did you reach the conclusion that Barnum could accept or reject personnel and contractors? A. Because Mr. Fisk said he controlled the McCall Ferry enterprise and Mr. Barnum was his representative. In those days bankers didn't seem to have any hesitancy in making selections of that sort that they wanted. As a matter of fact, it is my understanding it was in order to put a stop to that practice that the Securities and Exchange Commission was established.

TRIAL EXAMINER: You needn't speculate on that. If Barnum had the authority to accept and reject and merely exercised such authority who had the authority to appoint and to exercise that authority?

THE WITNESS: That seems to me to be the authority to appoint. If you have the authority to accept or reject it seems to me that is the authority to appoint. Barnum undoubtedly had the advice of perhaps numerous people as to who to consider.

TRIAL EXAMINER: Do you know whether he did?

THE WITNESS: No more than he was chairman of the executive committee and he was Fisk's representative, and Fisk controlled the enterprise. It just seems to me that is an inescapable conclusion.

TRIAL EXAMINER: Do you know what the executive committee did?

[7597] THE WITNESS: They met every so often and considered matters relating to the company's progress, and it is my understanding that their meetings were interim between the meetings of the board of directors and that perhaps the executive committee would perhaps expect to go into matters of greater detail.

TRIAL EXAMINER: Do you have records of the executive committee?

THE WITNESS: Yes, we have the executive committee minutes. They have been available to the Commission staff for two and a half years, Mr. Examiner.

TRIAL EXAMINER: Did those minutes show what was done by the committee with regard to these contractors and engineers?

THE WITNESS: Yes, the executive committee minutes, or the board minutes, show the approvals of these various selections.

TRIAL EXAMINER: Do they show who selected them or how they were selected?

THE WITNESS: No, I don't think you will find that. As I recall the minutes of both the executive committee and the board, they state nothing but the conclusions. They don't state the reasons.

TRIAL EXAMINER: Nowhere in your Exhibit 26 or Exhibit 27 do you have a historical resume of the activity of the [7598] board of directors of the McCall Ferry Power Company after its incorporation or executive committee prior thereto?

THE WITNESS: Not separately as such, Mr. Examiner, but Exhibit 26, which is supported primarily by Exhibit 27, takes recognition of the contents of those minutes.

TRIAL EXAMINER: To get the picture a little more precisely, how did the executive committee fit into this thing? Did it function prior to the organization of McCall Ferry Power Company?

THE WITNESS: No. The executive committee we are referring to is the executive committee of McCall Ferry Power Company.

If you will turn to page 44 of Exhibit 26, Mr. Examiner, you will find that the permanent board of directors, the executive committee to which we have just referred, and the permanent officers of the company were all elected on August 8, 1905.

TRIAL EXAMINER: Where is it indicated Mr. Barnum was Chairman of that executive committee?

THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: There is no formal indication on page 44 of Exhibit 26. As I recall it that was a conclusion I drew from the fact Barnum in general was the one who stated the conclusions of the executive committee.

[7599] TRIAL EXAMINER: Where?

THE WITNESS: In the minutes.

TRIAL EXAMINER: That would be consistent with his acting as secretary of the executive committee, wouldn't it?

THE WITNESS: I don't think so. I would have to refer back to that to be certain. The executive committee so far as I know had no secretary. At least, Mr. Examiner, I have not referred to those minutes for almost eight years now, and to answer your question with any precision I would have to look back and see.

By MR. HALL:

Q. Isn't it a fact Barnum was not chairman of the McCall Ferry executive committee? A. You mean he was not formal chairman?

Q. He was not any kind of a chairman, he was not chairman in any sense of the word? A. I will have to refer back to the minutes. If he wasn't then it would seem to me they didn't have a chairman.

Q. Isn't it a fact that Mr. Barnum was not even the chief executive officer of McCall Ferry Power Company? A. That is a fact, yes. Mr. Barnum was sitting in the position where he could really control the thing. He was secretary and treasurer.

Q. Isn't it a fact Barnum did not even lead the [7600] discussion.

Strike that, please.

Mr. Gunn, aren't you mixed up as to the Barnum who was secretary and treasurer of McCall Ferry? A. Yes, sir, who as I recall it was Mr. William M. Barnum's son. I was referring to Mr. William H. Barnum, who is Mr. William M. Barnum's son as I recall it.

Q. Mr. Gunn, isn't it a fact that the minutes of McCall Ferry executive committee indicate Barnum did not even lead the discussions of the committee? A. I can't say that. As I said, if you want to go into the details of those committee minutes I will have to go back and read them because I have not seen them in eight years.

Q. Isn't it a fact that Mr. Dimock led the discussions of the executive committee? A. I can't answer that. As I said, I just do not recall.

TRIAL EXAMINER: Would you refer to page 44 of Exhibit 26? How many of the permanent directors do you identify as Fisk's representatives?

THE WITNESS: It is impossible to make the identification, Mr. Examiner. That is the attempt to which I referred this morning when I spoke of attempting to identify certain groups, or that this was a joint enterprise. I attempted to [7601] go through and classify this permanent board of directors. I always wound up with several directors and I couldn't tell who they represented. For example, A. C. Bedford was one of them who, as I remember it, was a high official of Standard Oil Company at that time.

E. J. Berwin was another who, as I recall it, was a rather important coal operator in Pennsylvania.

There are several others on there. I don't know who they were or what they were so it was impossible for me to classify them.

[7602] By MR. HALL:

Q. Mr. Gunn, isn't it a fact Mr. Bedford was the representative of Mr. C. M. Pratt? A. A representative of who?

Q. Mr. C. M. Pratt? A. I don't know. That is just exactly what my difficulty was. I couldn't classify them. As a matter of fact, I don't recall who Mr. Pratt was.

Q. Wasn't Mr. Pratt one of the large subscribers to the McCall Ferry bonds? A. He may have been. I recall the name. But the Examiner was asking me which of these people represented Fisk. That is where I got into difficulty. I said I didn't know.

Q. Isn't it a fact, Mr. Gunn, that during your study you always ended up with more than one group represented on the board of directors? A. I suppose I did, yes. I wound up with some people that I could certainly identify with Fisk, that being William M. Barnum and Pliny Fisk. I wound up with Cary T. Hutchinson and George B. Willson and H. F. Dimock, whom I could certainly identify with Hutchinson.

There were others in there. The rest of them, a considerable number of the rest of them, I didn't know who they were identified with.

[7603] Q. How did you identify Coffin? A. I didn't know what to do with him.

Q. How about Gardiner M. Lane? A. When I said I didn't know what to do with Coffin, I meant I didn't know what to do with him as respects classifying him on a board of directors. I knew he was president of General Electric Company. I knew Gardiner M. Lane was a member of the firm of Lee, Higginson.

Q. How did you classify Mr. Lane on the board? A. Just that way, as representing Lee, Higginson and Company.

TRIAL EXAMINER: You have your notes there. Haven't you covered this before more or less?

MR. HALL: Not in this way and not in this connection.

TRIAL EXAMINER: He classified Berwin, Beyer and Hope as dummies. Didn't he cover them all?

MR. KING: He did, Mr. Examiner, two or three days ago.

MR. HALL: The question is now, dummies for whom?

TRIAL EXAMINER: Wherever he testified as to the fact they were dummies, he testified on that matter.

MR. HALL: I don't recall be mentioned on whose behalf they were dummies.

TRIAL EXAMINER: We had better suspend questioning on this point until we can review the matter. I hesitate to have the whole matter reopened without doing that.

[7604] MR. HALL: Mr. Examiner, if the record does show any thing it shows a general statement heretofore that all of these fellows were under the thumb of Fisk.

THE WITNESS: Yes.

MR. GOLDBERG: But we now have the witness saying that prior to his statement from Fisk he had always ended up with the board of directors being classified as associated with one interest or another interest.

Now, the record does not show until this moment with what interests he was classifying these various directors. That is what we are trying to find out by dealing with page 44.

For example, he told us he was able to classify Dimock and Hutchinson together. He didn't know what or that he put Barnum with the Fisk firm. Certainly Pliny Fisk himself was put in with the Fisk firm. We are trying to find out what he did with the rest of them. If he didn't know we would like to know.

TRIAL EXAMINER: Let's find out what he said before on the subject.

MR. KING: 6856, 6857, 6858 and 6859.

* * *

[7605] By MR. HALL:

Q. Did you classify Beyer with the Hutchinson interests? A. I don't know just how to classify Beyer at this stage of the game. Beyer previously represented Hutchinson, but he continued on as counsel for McCall Ferry Power Company, I believe. I don't know just how to classify him.

Q. Do you think the fact Beyer continued as counsel for McCall Ferry would warrant your not classifying him with Hutchinson? A. It very certainly would, because I certainly imagine he was working with the sanction of Simpson, Thacher and Bartlett, being a lawyer.

Q. What do you mean by "sanction of Simpson, Thacher and [7606] Bartlett? A. I imagine Simpson, Thacher and Bartlett could have gotten another lawyer if they wanted.

However, this is all sheer speculation.

TRIAL EXAMINER: Let's not speculate.

THE WITNESS: The difficulty is that I just can't classify them.

By MR. HALL:

Q. Were you able to classify Parsons? A. No, I could not. Parsons is an engineer and I suppose he represented whoever controlled the project at the time he was working on it.

Q. How about Mr. Griscom? A. Griscom was a member of the firm of Bertron, Storrs and Griscom.

Q. How did you classify Bertron and Griscom? Were you able to do so?

* * *

THE WITNESS: What do you mean by "classify them"?

By MR. HALL:

Q. What interest did they represent? A. I thought they represented themselves. In the end they turned out to be joint bankers with Fisk, so I certainly assume they represented themslves.

[7607] Q. Who is J. J. Hope? A. I don't know.

Q. Who is W. M. Canby? A. I don't know that.

Q. Do you know whether or not Hope and Canby were from Philadelphia? A. No, I really can't say; probably I knew at one time but I don't recall now.

Q. Canby was a banker, wasn't he? A. I really don't know.

Q. Mr. Gunn, isn't it a fact that the entire key personnel of the McCall Ferry Power Company was appointed by the board of directors or the executive committee of the board at times with the advice of the board of advisory engineers? A. Those selections were passed upon by the board of directors and executive committee, as I recall it. However, it was my understanding from Mr. Fisk that Mr. Fisk controlled the firm and I therefore assumed he had veto power over the board and the executive committee. At least he so states in his affidavit, that his firm, that is he or Barnum, he in general acting through Barnum, made those selections.

[7608] Q. Selection of officers and key personnel is a customary function of the board of directors, is it not? A. Are you speaking of customary function at the present time or in 1905?

Q. 1905 as well as of the present time. A. I wouldn't say so. I would say selections back in those days were made by the persons who controlled the enterprise financially. I would extend that to include the board of directors and the executive committee, that is that selection.

Q. Even if we assume, as you do, that Fisk controlled McCall Ferry, the fact remains that the personnel was selected by the directors in their capacity as directors. Isn't that so? A. I don't think so, not as I understand the word "select," Mr. Hall. They passed upon the selections of these individuals that you refer to, but so long as Fisk had the right to accept or reject these individuals as an ultimate action it seems to me that it is he who in fact made the selection.

Q. McCall Ferry had its own officers, of course?

* * *

THE WITNESS: Oh, yes. Surely, I suppose it had to have them.

[7609] By MR. HALL:

Q. And the management of the company was in their hands? A. Except as Fisk managed it I suppose it was in their hands.

Q. Are you saying they had to keep clearing with Fisk? A. On the important items I most assuredly assume they did.

Q. You assume that? A. I assume it because of the statements Mr. Fisk and Mr. Hutchinson made in their affidavits. It is not so much an assumption as it is a conclusion.

Q. But you can not point to anything which cleared with the Fisk firm, right?

MR. KING: May we have that question again?

(Question read.)

By MR. HALL:

Q. I mean that the officers cleared with the Fisk firm?

MR. KING: Officers of the company?

MR. HALL: Yes.

THE WITNESS: No, we don't have enough records so we can do that. If we had succeeded in finding the Fisk record we might have been able to do that, although one of the officers of the McCall Ferry Power Company, and an important officer, if I may say, he being secretary and treasurer, was William H. [7610] Barnum. What he may have cleared with his father I have no means of knowing and I have no means of proving.

By MR. HALL:

Q. Isn't it a fact that Penn Water now has most of the correspondence relating to the activities of McCall

Ferry Power Company? A. Ordinary routine activities, yes, but activities of the character we are discussing I don't think we would necessarily ever have found in the files of McCall Ferry Power Company.

May I have the question and answer, please?

(Question and answer read.)

THE WITNESS: That is just for the reason we have been discussing, that Fisk did dominate the affairs of McCall Ferry Power Company.

By MR. HALL:

Q. Doesn't Penn Water now have the correspondence of McCall Ferry Power Company classified by officers of that company? A. Some of it I think we do have, but I have no means of knowing whether it is complete or not. I do know that it is the custom of companies to have a large number of files. Whether we have all the files or not I don't know. As a matter of fact, as I recall from my study of them there was reason to believe we didn't have them all.

[7611] Q. But the correspondence Penn Water now has of McCall Ferry Power Company is not limited to routine correspondence. Isn't that so? A. No, it is not strictly limited to that but there is no reason for assuming from a review of what we do have that that is complete.

Q. Do you know how many meetings the executive committee of McCall Ferry Power Company had? A. I don't recall. The minute books will show how many there were.

Q. My information is that there was a total of 109 meetings of the executive committee of that company.

Do you know Dimock attended all of those meetings? A. No, I don't know that he did, but I certainly would expect that he would attend most of them. In other words, I would expect him to have the lowest number of absentees.

Q. Why? A. Because he was president of the company and he had the detailed information with which it

might be necessary to answer questions which would come up before the executive committee.

Q. Isn't it the function of the officers of the company to manage the company? A. You mean at the present time or in 1905?

Q. 1905 as well as the present time. [7612] A. Not in the sense we have been discussing management it isn't, and particularly during the construction period.

Q. Are you saying that it was the function of the officers to manage the company but that the Fisk firm exercised that function for them? A. No, sir, that is not what I am saying. I am saying that the officers of the company performed certain managerial functions and that the Fisk firm performed the rest of them. Those which the Fisk firm performed were the important functions.

Q. As a result of your study, Mr. Gunn, don't you know that Dimock was often appointed to investigate particular management functions? A. I suppose he was. I don't recall any particular act that would lie in the field that you mentioned.

Q. Don't you know that Mr. Dimock led the discussions at the executive committee meetings? A. No, but I can very well imagine that he being the man who was closest to the construction progress of the project might have done most of the talking.

Q. And Mr. Dimock submitted reports from time to time, didn't he? A. I imagine he did. I suspect he submitted them rather often to Fisk.

[7613] Q. How about the executive committee? A. He may have submitted them to them. That may have been the same thing.

Q. You don't have to imagine Mr. Dimock submitted reports to the executive committee—it is in the records, isn't it? A. I don't know. As I stated I have not read the executive committee minutes for eight years. I don't recall what is in them.

Q. But with respect to the submission of reports by Dimock to Fisk you are unable to substantiate that, right?

A. That is right. Of course I can not substantiate it. I can not substantiate any of this. The whole thing is speculation.

TRIAL EXAMINER: Let's stop speculation and say you don't know.

[7614] By MR. HALL:

Q. You know, do you not, that Dimock actively exercised his duties as chief executive officer of McCall Ferry and participated in the management of the company? A. I think he did to the extent he was permitted.

TRIAL EXAMINER: Do you know whether or not he did?

THE WITNESS: It is impossible to answer that question, Mr. Examiner, because the Commission counsel has not described what he means by management functions. I think it is undoubtedly true that Mr. Dimock did perform certain management functions. I think it is also undoubtedly true that Fisk's firm did.

TRIAL EXAMINER: If counsel had specified would you have been able to answer?

THE WITNESS: I probably could have gone back to the correspondence and to the minutes of various meetings and ascertained an answer to his question.

TRIAL EXAMINER: From recollection or actually having knowledge?

THE WITNESS: I would have to do so. I couldn't do it from recollection.

By MR. HALL:

Q. Are you saying Mr. Dimock did not exercise all of the functions required of the president of the McCall Ferry Power Company?

[7615] MR. KING: If your Honor please, I object to that question because I think this is pure argument with the witness.

TRIAL EXAMINER: Can you answer the question? Is this question on any other basis than the other questions which have been addressed to you, that is you would have to refer to the minutes?

THE WITNESS: I would have to do more than that. I would have to know all the functions of the president of McCall Ferry Power Company in 1905. I don't know that.

TRIAL EXAMINER: Very well.

By MR. HALL:

Q. Aren't the duties of the president of McCall Ferry Power Company set forth in the articles of incorporation? A. In a general way, I suppose.

Q. And Mr. Dimock performed those duties as president of the company. Right? A. Some of them, I suppose.

TRIAL EXAMINER: What was that answer, please?

(Answer read.)

TRIAL EXAMINER: If you can't answer why don't you simply say so. I don't want supposition in the record.

THE WITNESS: The answer, then, is that I don't know.

[7616] By MR. HALL:

Q. Can you point to any matters that Mr. Barnum was instructed to investigate?

MR. KING: By whom, Mr. Hall—anybody?

MR. HALL: By the executive committee of McCall Ferry Power Company or the board of directors.

THE WITNESS: Not offhand I certainly can't. As I said I have not read those minutes for eight years and I don't have them in mind now.

By MR. HALL:

Q. Do you know of any matters Mr. Barnum did investigate? A. No, I have not read the minutes lately.

Q. Do you know of any matters Mr. Barnum introduced at any of the executive committee meetings?

MR. KING: If your Honor please, I object to that. The witness already answered that.

TRIAL EXAMINER: Objection overruled.

* * *

THE WITNESS: No, and for the reason I have not recently read the minutes.

By MR. HALL:

Q. Mr. Barnum was not even an officer of McCall Ferry Power Company—right? [7617] A. That appears to be correct.

Q. Mr. Hutchinson was chief engineer of McCall Ferry Power Company, isn't that so? A. Yes, sir.

Q. What were his duties as chief engineer? A. I suppose they were the same as any normal chief engineer's of any company which is under construction.

Q. I want to know if you know what Mr. Hutchinson's duties were, Mr. Gunn? A. General supervision over the construction contracts, general supervision over design, supervision over the quality, quantity and the sequence of construction. He had the right to make technical decisions within certain limits, I believe, subject to the advisory board of engineers. He was a member of the board of advisory engineers. He entered into negotiations for the relocation of the railroad and for power contracts. Surveys for potential power markets were made under his supervision. He made reports from time to time to the management of the company, and I suppose he selected the engineering personnel working under his direction on the construction of the project and for purposes of inspection of the construction work expediting the delivery of equipment, and other similar matters.

Q. What was Mr. Hutchinson's salary for what he did? A. I don't recall.

[7618] Q. Wasn't it fourteen thousand dollars a year? A. It may have been. I just don't recall.

Q. Will you check that, Mr. Gunn? A. Yes, sir.

Q. What do you mean by the general supervision performed by Mr. Hutchinson? A. In connection with what?

TRIAL EXAMINER: Why do you ask the witness to check that kind of a thing? If it is a part of your case and the Staff has had the files of the company and some member of the Staff knows, why can't you put that information in?

• • •

[7619] MR. GOLDBERG: We submit that the mere fact we may put on certain evidence, or the fact we had files available to us does not preclude a proper cross-examination. Where this witness comes in with claims as to management services and the like we are entitled to find out what goes into his consideration and what he did and what he didn't consider.

TRIAL EXAMINER: You are not entitled to ask the witness to come in and present a fact which he cannot remember. That is entirely voluntary on his part.

• • •

[7620] TRIAL EXAMINER: I have observed there have been an unnecessary number of requests made for the witnesses to check and bring in additional data, particularly when the information apparently is in the possession of Commission Staff.

• • •

[7621] By MR. HALL:

Q. What did you mean, Mr. Gunn, when you stated that Mr. Hutchinson had general supervision over construction contracts? A. That it was his responsibility to inspect the work, make certain that the work was done in accordance with specifications, make certain that the quantities of work claimed by the contractor were correct,

that the plan submitted by the contractor for doing the work was efficient and would result in sound construction and at reasonable cost, that the progress the various contractors were making towards completion was adequate, and other such matters as [7622] that.

Q. When you referred to the fact Mr. Hutchinson had general supervision over design you referred to the same sort of thing? A. Yes, same general sort of thing, just what would be the ordinary responsibilities of supervision of a chief engineer.

Q. What were his duties in connection with the quantity and quality and so forth of the work? A. Just what I have described. I just mentioned that as one of the duties in connection with the construction.

Q. What was Mr. Hutchinson's limit to his right to make technical decisions? A. His rights were subject and subordinate to the board of advisory engineers, as I understand it. I should say they were subject to the veto of the board of advisory engineers, at least.

Q. And as chief engineer I take it that Mr. Hutchinson had primary overall responsibility for the entire construction program.

THE WITNESS: May I have that question?

(Question read.)

MR. KING: If your Honor please, I object to that question. I think the witness has given the facts in connection with Mr. Hutchinson's responsibility. This question [7623] is argumentative and attempts to summarize those facts.

MR. HALL: This question relates to the chief responsibility, Mr. Examiner.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: I don't know what you mean by "primary overall responsibility."

By Mr. Hall:

Q. Who had responsibility superior to that which rested on Mr. Hutchinson's shoulders? A. The board of supervisory engineers, the executive committee, the board of directors, and Fisk, and in some instances Mr. Cooper.

Q. Although Mr. Hutchinson was not a member he did attend meetings of the executive committee and participated in their discussions. Isn't that so? A. He may have. I don't recall.

Q. Didn't Hutchinson present frequent reports and recommendations to the executive committee and to Mr. Dimock? A. I don't recall, but I suppose he did. It would be expected that he would.

Q. And those reports and recommendations would be dealing with construction of the project, negotiations for power contracts, relocation of railroads, and so forth? A. Yes, I think in general that would be their scope.

Q. Wasn't Mr. Hutchinson often selected to investigate [7624] specific management problems? A. What do you classify as a management problem, Mr. Hall?

Q. Any management problem with which the company was confronted, such as power contracts or relocation of the railroad? A. He certainly had certain duties with respect to those. Whether he had ultimate responsibility or not is something else.

Q. Wasn't Mr. Hutchinson often selected to investigate such problems? A. Certain aspects of them, yes.

Q. Did you know that Mr. Hutchinson attended more executive committee meetings than Barnum did? A. No, I didn't know it. I may have at one time.

Q. Who was Hugh L. Cooper? A. He was the contractor for the structural hydraulic portions of the McCall Ferry project and a prominent construction engineer.

Q. Mr. Hutchinson, with the assistance of Mr. Cooper, negotiated the contracts for the purchase of the turbines and generators. Isn't that so? A. They both participated.

Q. Who was J. W. Kirkland?

[7625] THE WITNESS: May I have the question, please?

(Question read.)

THE WITNESS: He was an engineer who became vice-president of McCall Ferry Power Company in 1906.

By MR. HALL:

Q. Going back to my previous question just for the moment, Mr. Gunn, isn't it a fact that Hutchinson and Cooper actually negotiated the contract for the purchase of the turbines and generators? A. I don't think you can necessarily draw that conclusion.

Q. Why not? A. Because they undoubtedly negotiated the contracts as the contracts related to the size of the units, characteristics of the units, and the details of design. But who placed the contract or directed where the contract should be placed may very well have been another matter beyond any one of themselves' control.

Q. Who did that? A. I don't know. I assume Fisk did, with Mr. Coffin's help.

TRIAL EXAMINER: You need not assume. If you don't know you don't know.

By MR. HALL:

Q. What were the duties of Mr. Kirkland? [7626] A. I don't recall offhand. Shall I look up his title?

Q. If you will. Was he vice president and general manager? A. Yes, I already mentioned that.

Q. To whom did Mr. Kirkland report? A. I don't know.

Q. Do you know what Mr. Kirkland's salary was? A. No. I do not recall offhand.

Q. Would it help you any if I said it was $7500 a year? A. Well, I accept your figure if it is $7500 a year.

Q. Wasn't Mr. Kirkland active in the management of the McCall Ferry Power Company? A. Yes, I believe he was active. Whether he devoted his whole time to McCall Ferry Power Company matters I don't know.

Q. Mr. Hutchinson, with the assistance of Mr. Kirkland, also undertook the study of power markets and the negotiation of power contracts resulting in the signing of the power contract with Consolidated Gas Electric Light and Power Company of Baltimore and United Railways and Electric Company. Isn't that so? A. May I have that question, please?

(Question read.)

THE WITNESS: It is my recollection that they both participated. As to who was assisting who, however, I don't know.

[7627] By MR. HALL:

Q. Do you know of anyone else who participated in the signing of those contracts? A. Signing or negotiation?

Q. Both. A. May I have the question, please?

(Question read.)

THE WITNESS: It seems to me I found some evidence in the file that Boyd Ehle did.

By MR. HALL:

Q. He was one of Hutchinson's assistants, right? A. Yes. As for who signed the contracts I think we can find that out by referring to the contracts. I suppose it was the appropriate officers of McCall Ferry Power Company.

May I have the question, please?

(Question read.)

THE WITNESS: The contract between Consolidated [Gas] Electric Light and Power Company of Baltimore, which is Part 36 of Exhibit 27 was signed by Mr. J. W. Kirkland, Vice President, and Mr. Harold Pender.

I notice on that agreement on each page of it in the lower left-hand corner J. W. Kirkland's initials, and the initials of someone else whom I do not recognize.

Referring now to the contract of the United Railways [7628] and Electric Company of Baltimore dated June 28, 1907, that contract was signed by Henry F. Dimock as President of McCall Ferry Power Company and Harold Pender, Secretary of the McCall Ferry Power Company.

By MR. HALL:

Q. Mr. Hutchinson had as his assistants Boyd Ehle and R. H. Anderson as resident engineer and assistant resident engineer respectively stationed at the site of the project and J. W. Young, assistant engineer assisting him in New York. Isn't that so? A. All of the parties that you mentioned were assisting Hutchinson. As to their location, I am sure Ehle and Anderson were at the project. I don't know just how much time J. W. Young spent at the project.

Q. What were the duties of Ehle and Anderson? A. Assisting Hutchinson.

Q. In engineering matters? A. Yes. I suppose at least Ehle's duties were related to most of Hutchinson's responsibility that was to be discharged at the project.

Q. They were assisting Hutchinson in the supervision of the project? A. Yes.

Q. Mr. Hutchinson, Mr. Dimock and Mr. Cooper negotiated railroad relocation contract with Pennsylvania Railroad. [7629] Isn't that so? A. As I recall it they all participated in it, as well as Thomas Newhall. I don't know who else may have participated in it. As I understand the story the negotiations for that railroad relocation contract were rather difficult and several people participated in them.

Q. Were not all accounts for engineering and construction work subject to the approval of Hutchinson and all other accounts subject to the approval of the president, vice president or executive committee of McCall Ferry? A. May I have that question, please?

(Question read.)

THE WITNESS: What accounts would fall in your category of "other accounts," Mr. Hall? I am trying to find out how inclusive the construction accounts are.

By MR. HALL:

Q. I have in mind all construction accounts whether for the purchase of material or construction work itself, if I make myself clear. A. What do you include in that? Do you include in that, for instance, the cost of designing the project and the various expenses of that sort?

* * *

[7630] THE WITNESS: I assume the approvals were as you have stated but I do not recall the facts right at the moment.

By MR. HALL:

Q. Mr. Gunn, my question was based upon a resolution adopted September 27, 1905 by the executive committee. A. Did the resolution give the particulars?

Q. The exact words of the resolution were, "Resolved, that all accounts for engineering and construction work be subject to the approval of the chief engineer, and that all other accounts be subject to the approval of the president, [7631] vice president or executive committee." A. It sounds to me like a general division of the work. That is about the way it is today. Ordinarily when Penn Water and Power Company places a construction contract it is subject to the approval of the chief engineer.

* * *

[7632] By MR. HALL:

Q. Mr. Gunn, Mr. Hutchinson, had general supervision and final authority over the work of Mr. Hugh L. Cooper, the manager of hydraulic construction, and Sanderson and Porter, Superintendent of electrical construction, isn't that so?

* * *

THE WITNESS: No, sir, I don't think that is correct.

By Mr. Hall:

Q. What is your understanding? A. My understanding is that Hutchinson had certain authority over the quantity and quality of work which would be done, but his authority was not absolute at all, as is evidenced by McCall Ferry records in one and perhaps more than one instance where Hutchinson and Cooper got into [7633] a quarrel and it had to be arbitrated by the board of advisory engineers. I don't think Hutchinson had anything to say over the manner of executing the work, particularly in the case of Cooper. If he did it was very little.

Q. Wasn't the work subject to Hutchinson's approval? A. Only the end result as regards quantity and quality.

Q. McCall Ferry had its own Secretary and Treasurer who were on the McCall Ferry payroll. Isn't that so? A. Yes, I believe that is correct.

Q. McCall Ferry also had a board of advisory engineers to give advice on difficult engineering problems? A. Yes, sir.

Q. The board of advisory engineers was headed by Wm. B. Parsons, as Chairman? A. Yes, sir.

Q. Do you recall that Mr. Parsons salary was twelve thousand dollars a year as Chairman of the Board of Advisory Engineers? A. No, I don't recall that. As a matter of fact, I don't know whether they worked on a retainer or salary.

Q. My information, Mr. Gunn, is based on the minutes of the executive committee of McCall Ferry Power Company, dated September 27, 1905, in which the Chairman of the Board of Engineers is listed as having a salary of twelve thousand [7634] dollars a year, and the chief engineer, who was Hutchinson, is listed as fourteen thousand dollars a year.

* * *

[7635] The Witness: I have verified the amount paid to Mr. William Barclay Parsons and find it to have been twelve thousand dollars.

By Mr. Hall:

Q. Who were the other members of the board of advisory engineers in addition to Parsons? A. Mr. Charles T. Main, Mr. F. O. Blackwell, and Mr. Hugh L. Cooper was a member for a time until he resigned to take over the construction or to submit a proposition for the actual construction of the project. Mr. Cary T. Hutchinson was the other member.

Q. Do you know whether or not those individuals that you have just named received a salary or retainer from McCall Ferry Power Company? A. No, I do not. I do not know offhand how they were compensated.

Q. Did Mr. Hutchinson participate in the deliberations of the board of advisory engineers and sign their reports? [7636] A. I am sure he participated in the deliberations. I don't know who signed their reports. I don't recall.

Q. As indicated on page 212 of Exhibit 27, Mr. Hutchinson signed the Hutchinson and Parsons' engineering report of 2-12-1905 [August 7, 1905], and also the report of the board of advisory engineers dated September 11, 1905, as indicated on page 216 [218] of Exhibit 27?

* * *

The Witness: The report referred to as part 25 of Exhibit 26 [27] is not a report of the board of advisory engineers but it is rather a report to the board of directors signed by Cary T. Hutchinson as chief engineer of McCall Ferry Power Company. The report is made on the letterhead of Cary T. Hutchinson, consulting electrical engineer of New York City, and it is signed also by Wm. Barclay Parsons as consultant engineer and not as a member of the advisory committee.

The last paragraph of that letter states as follows, which indicates it is not an action of the advisory committee:

"Messrs. Hugh L. Cooper, F. O. Blackwell and Charles T. Main, and other members of your advisory

board, all of whom have been consulted either personally or by letter, concur in these recommendations."

That indicates to me it is not a report of the advisory board.

[7637] By Mr. Hall:

Q. Before you proceed further, isn't it a fact that in the first paragraph of the report as shown on page 206 of Exhibit 27, it is stated, "This report is intended to give a general statement of the present status of the affairs of your company; the statements made and recommendations have the approval of every member of your advisory board of engineers, although owing to the absence from the city of three members, it is signed only by your chief engineer and consulting engineer."? A. That is right. I take that to mean that he had an informal discussion with them, but it is not an action of the advisory board, obviously.

Q. Did you want to complete your previous answer now? A. Yes, sir.

Q. If you had the three signatures on the report we have just been discussing would you consider it the report of the advisory board of engineers?

* * *

The Witness: I have no special information. The signatures don't appear on there. I can speculate on what it might [7638] be if they did appear.

* * *

By Mr. Hall:

Q. Did you finish your previous answer? [7639] A. Referring now to part 26 of Exhibit 27, which was included in your previous question, that appears to be a report of the board of advisory engineers and is so headed, and it is a fact that it is signed by Wm. Barclay Parsons, Chairman, and signed also by Cary T. Hutchinson, Hugh L. Cooper, and F. O. Blackwell.

Q. Negotiations for the employment of the other members of the board of advisory engineers were conducted by Hutchinson long before they were elected. Isn't that so? A. I don't know whether or not they were. I don't recall at this date ever having seen any evidence that would indicate whether they were or weren't. They were undoubtedly all personal acquaintances of Hutchinson. They were four of the most prominent engineers in the United States and known to practically every engineer. But as to whether he entered into negotiations for their employment, I don't know.

[7640] Q. Did the McCall Ferry Power Company officers, or the board of advisory engineers address any of its reports to Harvey Fisk and Sons or to William M. Barnum? A. I don't know whether they did or not.

Q. Did you ever see a report addressed to Harvey Fisk and Sons or Barnum? A. No, I don't believe I ever saw any reports other than those that are in Exhibit 27. It seems to me those were all appropriately directed to the McCall Ferry Power Company.

Q. As a matter of fact, Mr. Gunn, the board of advisory engineers never reported to the Fisk firm but addressed their reports to Mr. Dimock or the executive committee, isn't that so? A. I don't know whether or not that is true. They may have made more reports than I have knowledge of.

Q. As to those about which you have knowledge isn't that the fact?

* * *

THE WITNESS: As to the pending question, yes, I think that is correct about those reports of which I have knowledge.

By MR. HALL:

Q. Wasn't it upon the recommendation of the board of advisory engineers that Hugh L. Cooper was selected to take [7641] charge of the hydraulic construction? A. I

believe perhaps so, although I don't exactly recall the procedure. What happened was this: When the bids were taken from the group of construction companies who had been asked to quote, the construction companies included in their bids such high contingencies against the risk of construction that the board of advisory engineers concluded that McCall Ferry Power Company ought not to accept any of the bids but ought to make an arrangement with some reliable contractor to undertake the project on a cost-plus-a-fixed fee basis. After that conclusion had been reached Hugh L. Cooper resigned from the board of advisory engineers and submitted a proposition to McCall Ferry Power Company.

Whether that proposition was passed upon by the board of advisory engineers or not I don't recall, and if it was I wouldn't know whether that was the final approval or not.

Q. Cooper became manager of construction. That was his title. Is that right? A. Yes, sir, hydraulic construction that is.

Q. And the contract was actually negotiated by Dimock and Coffin, isn't that so?

* * *

THE WITNESS: You are referring to the contract with [7642] Hugh L. Cooper now?

By MR. HALL:

Q. Yes. A. I really don't know whether or not it was. I don't recall Coffin having been involved in it.

Q. Is it your understanding that Mr. Dimock negotiated that contract with Cooper? A. I just don't recall who negotiated with Cooper, but I had never heard of Mr. Coffin being in the negotiation on the Cooper contract. I distinctly don't recall that.

Q. Do I understand that you analyzed the minutes of the executive committee of McCall Ferry? A. I did when I was preparing Exhibit 26 over seven or eight years ago, yes. But I don't recall everything that was in all of them.

Q. Under Cooper's contract, which is Part 28 of Exhibit 27, didn't he have complete charge and responsibility for hydraulic construction as "hydraulic engineer" and "manager of construction"?

• • •

THE WITNESS: Mr. Cooper's responsibility under his contract to McCall Ferry Power Company seems to be defined in general terms in paragraph 10, page 223 of Exhibit 27 and reads as follows:

[7643] "1. The company agrees to employ and hereby does employ Cooper as 'hydraulic engineer' and 'manager of construction,' of the work at McCall Ferry, and Cooper agrees to serve in this capacity under the company and its officers, for the term of this agreement."

Does that answer your question?

By MR. HALL:

Q. Yes. In other words, Mr. Cooper served in his capacity as hydraulic engineer and manager of construction "under the direction of its officers"? A. Yes, under the direction of the company and the company's officers.

Q. Did Mr. Cooper furnish Mr. Value as engineer-in-charge and have the right to select the rest of the construction personnel? A. Yes, sir, I think that is correct.

Q. And Mr. Cooper was paid $130,000 for his services, which included a completion bonus? A. The contract we have been discussing states the basis of Mr. Cooper's compensation on two alternative projects, one I believe at elevation 155 and the other, I believe, at elevation 185.

Neither one of those projects was actually built but rather a project to elevation 165 was constructed, and the original contract with Cooper did not contemplate tailrace [7644] excavation. Another complicating factor was that while Cooper did not completely finish the project as the contract called for at the date McCall Ferry got into financial difficulties, the work had progressed to a point where it was then obvious that he could have if there had been funds in time to earn the contract bonus.

At the termination of Cooper's services there was considerable squabbling, and I believe some threatened litigation, over the final settlement, and a compromise of all of those factors was reached. However, I don't know offhand what the total payment to Cooper was.

Q. Were not all plans and specifications and contracts for labor and material made by Cooper subject to the approval of Mr. Hutchinson whose decision was to be final? A. I believe that is what the contract states, although the events proved Mr. Hutchinson's decision was not always final.

Q. What events do you refer to, Mr. Gunn? A. I refer to the controversy that Cooper and Hutchinson had over the proper location for the dam which was finally arbitrated by the board of advisory engineers, at least, and I don't know who else, perhaps Fisk. Then there was another instance; I believe Cooper and Hutchinson got into a squabble over the quality of the concrete, and that also had to be arbitrated at least by the board of advisory [7645] engineers, I believe. It is my conclusion from a general study of the records of McCall Ferry Power Company that Hutchinson had a great deal of difficulty making any of his prerogatives stick with Mr. Cooper.

Q. Is there any suggestion in Cooper's contract, which is Part 28 of Exhibit 27, that his duties under that contract were in anywise subject to the supervision, approval or control of the Fisk firm or Barnum?

* * *

THE WITNESS: Yes, sir.

By MR. HALL:

Q. What is it? A. The fact that the contract is with McCall Ferry Power Company and Mr. Fisk controlled that enterprise.

Q. Do you know of any reports regarding the construction of the project Mr. Cooper ever submitted to the Fisk firm or to William M. Barnum? A. No, I do not. As a

matter of fact, I do not have, at least I don't recall having seen, very many reports by Cooper himself submitted to anybody.

Q. As a matter of fact, Cooper reported solely to the [7646] McCall Ferry officers and executive committee. Isn't that so? A. I don't know about that. The contract says he is working under their direction.

Q. Wasn't it on the recommendation of the board of advisory engineers that Sanderson and Porter were selected to take active charge of the electrical construction? A. I don't recall who made the final recommendation on the selection of Sanderson and Porter. It is a fact they did serve in the capacity of superintendent of electrical construction, and they also kept the books on a cost-plus basis, if I recall.

Q. The contract with Sanderson and Porter was negotiated by Dimock and Mr. Coffin. Isn't that so? A. I don't know. I never was aware Mr. Coffin was in the negotiations.

Q. Sanderson and Porter served as superintendent of electrical construction under the McCall Ferry Company and its officers, right? A. They served as superintendent of construction and——

Q. Electrical construction. A. —bookkeepers, as I understand it. Yes, I meant electrical construction.

Q. Under the agreement which Sanderson and Porter had which is Part 29 of Exhibit 27, everything that firm was to do and all of its duties assigned to it under the agreement [7647] were subject to the approval of McCall Ferry's chief engineer and were executed under his direction and his decision was to be final. Right? A. Yes, the agreement so states in Article 3 which appears on page 228 of Exhibit 27. However, I would rather doubt whether that was intended to extend to their bookkeeping function.

Q. How much were Sanderson and Porter to receive for their services under their contract? A. $50,000.

Q. Do you know of any reports regarding the construction work Sanderson and Porter ever addressed to

Harvey Fisk and Sons or William M. Barnum? A. No, I don't recall offhand having seen any sort of report from Sanderson and Porter to anybody.

Q. Did Mr. Barnum or Harvey Fisk and Sons pay for the services of any of the McCall Ferry officers or construction managers? A. Not so far as I know.

Q. How did Mr. Barnum exercise his management control? A. I don't know, unless it was through the prestige of the Fisk firm.

Q. How did Mr. Barnum communicate his orders? A. I don't know.

Q. Have you ever seen any orders or communications in [7648] connection with the management or construction of the McCall Ferry project issued by Harvey Fisk and Sons or Mr. Barnum to the McCall Ferry officers or construction managers? A. By that you mean formal instructions in writing, Mr. Hall?

Q. Yes. A. No, I can't say that I ever have. I have seen, as I recall it, we discussed some correspondence by Simpson, Thacher and Bartlett which appeared to be flowing from Fisk's firm. But as to direct orders I don't recall ever having seen any.

Q. Are you now referring to the inquiry of Simpson, Thacher and Bartlett to Mr. Hutchinson regarding the selection of the board of directors of McCall Ferry? A. That was one instance. I believe there was another instance of some instructions about the handling of stock. Those are the two that I recall offhand. I don't know whether there are any more in the files or not, but I don't recall them.

Q. Does your answer include informal orders or recommendations, also? A. No, sir.

Q. You say it does not? A. No, it does not. I don't know whether there were informal orders or recommendations or not, and I wouldn't [7649] expect to find any evidence of them. I take it now we are speaking of Fisk's management function only.

Q. That is right. A. Yes.

Q. Just what did Harvey Fisk and Sons and Mr. Barnum do to supervise the construction of the project as you claim? A. All I know specifically as to what they did is what Mr. Fisk states in his affidavit and such other scraps of evidence as are apparent from the records. I have no comprehensive catalog of what they did.

[7650] Q. What was the primary responsibility of Harvey Fisk and Sons for supervising the construction of the project, the selection of personnel, and the selection of experts, engineers, and contractors.

* * *

THE WITNESS: Primary responsibility, as far as I know, and I would take that to mean the final right to say we will or we will not select this man or that man or some other man.

By MR. HALL:

Q. Wouldn't final right be stated as the ultimate responsibility? A. I think that would be a proper expression of it.

Q. Then what does "primary responsibility" mean? A. Same thing as ultimate responsibility.

Q. What other electric companies had Mr. Barnum managed? A. I don't know all of them. I never attempted to find out. But Fisk's firm, as I understand it, while Barnum was connected with it, I believe were the originators of Electric Bond and Share, Electric Securities Corporation, the Hudson-Manhattan Transfer, which was an Electric Railroad, and a large number of industrial corporations. I think those are the ones with which they were connected as I recall it which were in the electrical field.

Q. Did any of the companies you have mentioned do [7651] electrical construction work while Fisk's firm was connected with them? A. Hudson and Manhattan did, unquestionably. I don't know how long Fisk's connection with Electric Bond and Share lasted, or whether at that time they actually did any construction or not.

Q. Mr. Gunn, isn't it your understanding that Electric Bond and Share Company was created by General Electric? A. Not if I understand your word "created."

Q. What did you understand my word to mean? A. Organize.

Q. That is what I meant. A. It is my understanding that Fisk's firm was one of the primary banking houses, at least, in its organization. I am relying on my recollection for that.

It was also my understanding that Fisk's firm was the primary banking house in the organization of Electric Securities Corporation.

I am aware, of course, that both of them were or became subsidiaries, or were affiliated with General Electric Company.

Q. They were owned by General Electric. Isn't that so? A. I think they may have been. At least they became owned by General Electric. I don't know just what the arrangement was in the beginning, but my recollection is that Mr. Fisk was in the picture in a big way.

[7652] Q. Did the Fisk firm supervise and manage any hydro-electric construction for the three firms which you mentioned? A. Not so far as I know.

Q. What part did Mr. Barnum play in connection with Fisk's relationship to those companies? A. I don't know except it is my understanding Mr. Barnum was a member of the Fisk firm at that time. I don't know just what his part was.

Q. What management problems were settled by Mr. Barnum? A. I suppose all the management problems were during Fisk's control of the McCall Ferry enterprise. I take it we are talking about McCall Ferry now.

Q. Yes. That is just a supposition upon your part, isn't it, Mr. Gunn? A. No, Mr. Fisk says he managed it and he managed it through Barnum.

Q. Do you know of any specific problem which was presented to Mr. Barnum for settlement? A. No, sir,

I was not there and never could find the records of the Fisk firm.

Q. Did Mr. Fisk name any? A. No specific problems other than the ones he enumerated on page 72 of Exhibit 27.

Q. Did Mr. Barnum negotiate any contracts for McCall Ferry? [7653] A. I don't believe I can answer that, Mr. Hall, without knowing just what the scope of your term "negotiate" is.

Q. Did he arrange for the execution of any contracts for McCall Ferry? A. I don't know whether he did or not.

Q. What persons did Mr. Barnum hire for the McCall project? A. I don't know other than Mr. Fisk says it was his responsibility for the selection of personnel, selection of experts, engineers, contractors, and so forth. That is all I know about it.

Q. Was Mr. Barnum an engineer? A. No, sir, Mr. Barnum was a banker and a lawyer as I understand it.

Q. What engineering problems were settled by Mr. Barnum? A. By whom?

Q. By Mr. Barnum? A. I don't know of any specific engineering problems settled by him.

Q. Did Mr. Barnum purchase any materials for the McCall project? A. I rather doubt that he did. I didn't understand him to be the purchasing agent, also.

Q. Did Mr. Barnum prepare any plans and specifications [7654] for the McCall Ferry project? A. I doubt that. I don't think he did.

Q. How much of Mr. Barnum's time was devoted to the management of the McCall Company? A. I don't know, other than what Mr. Fisk states in his affidavit on page 72 of Exhibit 27, which reads as follows:

> "Mr. William M. Barnum, one of my principal partners, as I have pointed out, devoted a very considerable portion of his time to this project and was, in fact, in active charge of and had full responsibility for the entire project."

Q. What did Mr. Fisk mean by "considerable time"? A. Considerable time, I suppose.

Q. Did you ask Mr. Fisk how much time Mr. Barnum spent in connection with the management of the McCall Ferry project? A. No, sir, because when he said "considerable," I assumed he lost his time cards with the rest of the Fisk records.

Q. How much time did Mr. Barnum spend at McCall Ferry? A. I don't know.

Q. Was Mr. Barnum ever there? A. I think he was probably, but I wasn't, so I don't know.

Q. When did Mr. Barnum leave Harvey Fisk and Sons? [7655] A. In July of 1908.

Q. Wasn't Barnum paid by Harvey Fisk and Sons for his services to that firm? A. What do you mean by "that firm"? Harvey Fisk and Sons or McCall Ferry?

Q. Fisk? A. Yes, he was a partner of the firm. Harvey Fisk says he had fifteen per cent interest in the firm.

Q. There were fourteen other directors of the McCall Ferry Power Company besides Barnum? Right? A. Yes, sir, there were fourteen other directors elected on August 8, 1905, at least.

Q. And there were four other members of the executive committee of the McCall Company in addition to Barnum. Isn't that so? A. Yes, sir.

Q. Isn't it a fact, Mr. Gunn, that Barnum had no more responsibility than any other member of the executive committee? A. I don't think that is a fact.

Q. Why not? A. Because Fisk says he managed the enterprise through Barnum.

Q. Did Mr. Barnum have more than one vote? A. I don't think he had more than one vote, but I never [7656] made the assumption Fisk controlled McCall Ferry project through the executive committee. But if he did control it through Barnum then obviously Barnum had more responsibility for the project than did the other members of the executive committee.

Q. Does Mr. Fisk say that the Fisk firm controlled McCall Ferry through Barnum or managed it through Barnum? A. I take that to be one and the same thing. I think he says at one place, I believe, that he controlled the project, and in another point he says he managed it through Barnum. I take that to be one and the same thing.

Q. Through what medium did the Fisk firm exercise their control over the McCall Ferry? A. I don't know, except through their prestige as bankers.

TRIAL EXAMINER: Could Mr. Fisk have in mind financial management rather than general overall management?

THE WITNESS: I don't think he could, Mr. Examiner, because it goes ahead and enumerates under the management the selection of personnel, the selection of experts, and selection of contractors, which would seem to me to be going beyond the mere function of management in connection with the raising of money.

By MR. HALL:

Q. Do you have any reason to believe that all the [7657] members of the executive committee of McCall Ferry or the board of directors did not take part in the discussion and formulation of policies?

* * *

THE WITNESS: No, I have no reason to believe they all did not take part in the discussions and in the management. I merely believe Fisk had control of the management of the McCall Ferry enterprise.

By MR. HALL:

Q. Do you have any reason to believe that the members of the executive committee or the board of directors did not vote their independent judgments with respect to management policies? A. I really don't know what they did. The only thing I know is what Mr. Fisk says, that

he controlled the project. How he controlled it I really do not know.

Q. Isn't it a fact that Mr. Barnum was seldom selected by the executive committee to look into any of the McCall Ferry Power Company's management problems? A. No, I don't know that that is a fact.

Q. Wasn't that indicated by your review of the correspondence and the minutes of the executive committee? A. No, I shouldn't say that it was. I might speculate on it but it didn't indicate that to me. As a matter of fact, [7658] with Mr. Barnum representing the control of the enterprise it wouldn't be expected he would be assigned to detail work. He merely passed judgment on what detail work other people did.

Q. Where is it indicated that Mr. Barnum actually passed judgment? A. In Mr. Fisk's statement that he controlled the enterprise through Mr. Barnum and in Hutchinson's statement that Fisk took control of the enterprise, and in the numerous other indications we have discussed in the past few days.

Q. Does Mr. Hutchinson say Barnum managed the enterprise? A. No, it says Fisk took control of it. Fisk says Barnum managed the enterprise.

Q. Didn't your study establish the fact that Mr. Dimock, the president, and his assistant, Mr. Kirkland, vice president and general manager, and Mr. Hutchinson, the chief engineer, actually managed the McCall Ferry Power Company? A. No, sir, it did not.

Q. Didn't the records indicate they were the ones who carried on the active management and made the decisions and so forth? A. No, sir. The record indicated they made certain decisions, but there was no indication in the record to me they made the decisions of the type Fisk says Barnum was responsible for.

[7659] Q. Isn't it a fact that the engineering problems were referred to Mr. Hutchinson and the board of advisory engineers? A. They considered them but I presume the

important ones went beyond them, the important problems went beyond those two agencies.

Q. Do you know of any important problems which went beyond Mr. Hutchinson or the board of advisory engineers? A. Well, I don't have any proof of the problem going beyond them but I would certainly expect the controversy between Hutchinson and Cooper over the location of the dam probably went beyond them. Certainly the purchase of Harlow-McGaw's property went beyond them direct to Fisk.

Q. How many directors meetings did McCall Ferry have? A. I don't recall.

Q. Was it about twelve? A. I really don't recall.

Q. But you do know that Barnum was hardly ever in attendance at those meetings, isn't that so? A. No, I don't know that. I don't recall that, either. If he did not attend directly it would seem to indicate the board of directors were not the medium of control for the enterprise.

Q. Would you say that about the executive committee meetings, also? A. I think it might be said about those as well.

[7660] Q. In other words, Mr. Barnum's attendance at the meetings of the executive committee is something which should be taken into account? A. Taken into account for what?

Q. In determining the exercise of management and the medium through which it was exercised by the Fisk firm. A. No, I don't think it would have any particular significance as to that whether he did or whether he did not.

Q. Did Barnum exercise his management as a member of the board of directors, executive committee, or what? A. I don't know.

Q. When Mr. Barnum didn't attend the meetings of the executive committee or the board of directors how did he exercise his managerial authority? A. I don't know.

It very well may be that the decision was agreed upon before the meeting. I have heard of such things being done.

Q. Do you know whether it was done in connection with the McCall Ferry project? A. No, sir, I do not.

Q. Can you point to the minutes of any of the executive committee meetings which show the exercise by Barnum of managerial discretion or authority? A. I don't recall the contents of all the minutes and therefore I do not recall whether there would be any showing [7661] of that to be found in the minutes or not. I have not reviewed them in seven or eight years.

Q. When was the Fisk firm paid for management services? A. About June of 1905 when the agreement was reached to give them the stock compensation that they received. I suppose that would be the date you refer to.

Q. Was the management fee supposed to cover the completion of the project? A. That is my understanding. It seems to me to be a proper conclusion.

Q. Is it customary to pay a fee years in advance of rendering the service as you claim was done in this case?

. . . .

[7662] A. I don't know. I am not an expert in that field. It is my understanding it was frequently done in the way it was done in the McCall Ferry project in those days. I don't know what the present custom is.

Q. What cost did Harvey Fisk and Sons incur in allegedly managing the McCall Ferry Power Company? A. I don't know.

Q. What costs did the Fisk firm incur in connection with financing services related to McCall Ferry Power Company? A. I don't know.

Q. As a matter of fact, I take it you have no evidence of any costs? A. I have no evidence of any costs whatever. We never found the Fisk records and therefore I just haven't the slightest idea as to what costs they incurred for either one of those functions.

TRIAL EXAMINER: Do you know the date when these records were destroyed?

THE WITNESS: I believe it was prior to 1924 which, as I recall it, was about the time of Mr. Fisk's retirement from the firm.

TRIAL EXAMINER: Were you given any details as to what occasioned the destruction of the firm records?

THE WITNESS: No, I wasn't. Mr. Fisk did not know. His assumption was that the occasion of it was the liquidation [7663] of his partnership to relieve themselves of any further storage expense. I might add to that that the records we are speaking of now are the detail records. Certain of the records relating to financing, that is such things as prospectae and underwriting agreements and things of that sort, and numerous other financial records, were given by Mr. Fisk to Princeton University and became the foundation data for the Pliny Fisk Library at Princeton.

* * *

[7664] By MR. HALL:

Q. How did Mr. Fisk determine the value of Barnum's management services? A. I don't believe I understand your question, Mr. Hall. Are you asking me how he reached the conclusion they were the amount as stated in Part 9 of Exhibit 27?

Q. Yes. A. I don't know other than to consider the facts he had before him and to consider the amount of Barnum's interest in his firm which he states to have been about 15 per cent and to have averaged $115,000 a year. I suppose he took all of those facts into consideration and arrived at the conclusion they were what he said they are. I certainly don't know what his mental process would have been.

[7665] Q. Do you think the value of Mr. Barnum's services, if he actually had been active manager for McCall Ferry, should be determined by the profits and income of

the Fisk firm from its banking business? A. I don't know. It would seem to me that would be one of the indications of Mr. Barnum's worth. I don't know just how it would be used to assist Mr. Fisk in reaching his conclusion. As I said, I don't know what the man's mental process was.

Q. Was Mr. Barnum's share of the profits of Harvey Fisk and Sons reduced by reason of his alleged management of the McCall Ferry Power Company? A. I don't know.

Q. How much did Mr. Fisk estimate his firm's alleged management services were worth? A. $150,000.

* * *

By Mr. Hall:

Q. How much have you claimed in your original cost determination for these alleged management services? A. The amount claimed for management services was [7666] $199,570.31 which was the result of the selection of $25 per share as the cash value of McCall Ferry Power Company common stock to be used in computing the value of all services. It is stated on page 53 of Exhibit 26.

Q. In other words, you claim approximately $49,000 more than Pliny Fisk estimated his firm's services to be worth, right? A. Yes, in the case of Fisk's services there was more claimed than in the case of others. The use of $25 a share resulted in reducing other claims as to the value of services.

Q. Do you have any evidence to show that Harvey Fisk and Sons actually received 17,537½ shares of common and 1875 shares of preferred stock? A. The only evidence I have is what we have discussed for the last several days.

Q. I am speaking now of management services.

* * *

The Witness: The evidence we have been discussing for the last several days was as to the total amount of

compensation Fisk received. The amounts of stock you mentioned, Mr. Hall, were received by Fisk for both management and [7667] banking services.

To answer more directly I have no evidence that the number of shares you mentioned were given to Fisk for management services alone. I don't believe they were.

By MR. HALL:

Q. And you have no evidence to show the split for the purposes of determining banking services and management services? A. I have the evidence contained in Mr. Fisk's affidavit.

Q. But even Pliny Fisk claims only that his firm received at least as many shares as Bertron, Storrs and Griscom. Isn't that so? A. No, that is not all he claims, as I recall it.

Q. Will you refer to page 79 of Exhibit 27, specifically to paragraph 10? A. Yes, sir. Paragraph 10 reads as follows——

MR. KING: Just a minute. If Your Honor please, I object to that question. I think, as a matter of fact, paragraph 10 has been read into the record verbatim at a prior time in this hearing.

• • •

[7668] MR. KING: I didn't object to reading it into the record. I objected to further questions relating to paragraph 10 on page 79 of Exhibit 27 as being repetitive.

TRIAL EXAMINER: Overruled.

• • •

THE WITNESS: Mr. Examiner, I can not state what Fisk says in paragraph 10 any more precisely than paragraph 10 states it.

TRIAL EXAMINER: Very well. That is your answer.

By MR. HALL:

Q. But on the basis of your information Bertron, Storrs & Griscom received only 7,462½ shares of common stock, right?

MR. KING: If Your Honor please, I object to that. We have been into that before many times.

• • •

[7669] TRIAL EXAMINER: Objection sustained.

By MR. HALL:

Q. Did you find any contract whereby the McCall Ferry Power Company or Susquehanna Contracting Company agreed to pay Harvey Fisk and Sons for banking services?

• • •

THE WITNESS: No, I don't recall having found any contract covering banking services.

[7670] Q. Did you find any evidence in the records that you examined that the payment of a cash commission for banking services was considered by McCall Ferry or Susquehanna Contracting Company? A. No, sir. I think the books of McCall Ferry Power Company, and Susquehanna Contracting Company account for the proceeds of the cash which came into McCall Ferry's hands without there being any available to pay banking services.

Was that an answer to your question?

Q. I think so.

Did you find in the records any valuation of Harvey Fisk and Sons' banking services? A. You mean in McCall Ferry Power Company or Susquehanna Contracting Company?

Q. Or any place. A. No, nothing except Mr. Fisk's statement in his affidavit.

Q. Did you find any evidence of negotiations with Harvey Fisk and Sons for the payment of their services? A.

Speaking now of banking or management or both? The answer will be the same, no, I didn't find any.

May I have that last question and answer read, please?

(Question and answer read.)

THE WITNESS: I think I will have to modify that. There was evidence, as we have already discussed, of the payment of [7671] banking services, in the exchange of correspondence between Bertron and Lee, Higginson.

Q. You are referring now to correspondence related to part 11 of Exhibit 27? A. Yes, sir.

Q. That refers only to compensation of Lee, Higginson and Company? A. That particular correspondence in part 11 refers only to the compensation of Lee, Higginson and Company. However, the records of Bertron, Storrs and Griscom, which are part 22 of Exhibit 27, show common stock which was compensation to Bertron, Storrs and Griscom for banking services.

Q. What functions were performed by those interested in the financing? A. They varied, depending upon the person to whom you refer as those interested in financing.

Q. The bankers who secured bond subscriptions? A. I think you will have to be a little more specific. Are you referring to Lee, Higginson?

Q. I am referring to all the bankers. A. I don't know who you are talking about, then. For example, do you count Lee, Higginson a banker?

Q. Yes. A. Well, services performed by Lee, Higginson, so far [7672] as I know, were those of raising the necessary funds to construct the project.

Q. What did Harvey Fisk and Sons' banking services consist of?

* * *

[7673] THE WITNESS: So far as I know they consisted of raising the necessary funds to construct the McCall Ferry project.

By Mr. Hall:

Q. Do you know anything about the time and money of Harvey Fisk and Sons which went into the banking services of that firm? A. No, sir. As I told you, we never found Harvey Fisk and Sons' records and there is no conceivable way for me to know what expense they incurred either for banking, management, or anything else in connection with McCall Ferry.

Q. Did you ask Fisk for that information? A. Certainly, I asked him for his records and he said they were long since destroyed.

Q. Did you ask Mr. Fisk what costs were incurred by the Fisk firm and what time was expended by that firm in connection with its banking services? A. I don't think I asked him that because I wouldn't expect a man to remember his cost books for that length of time, at least the contents of his cost books.

Q. Don't you think Mr. Fisk would have been able to tell you whether it took them a month or two months? A. Are you referring now to time or cost?

Q. I am referring now to time. A. As to how long —the time for what?

[7674] Q. The banking services. A. You mean by that the length of time that Fisk's firm required to obtain the subscriptions they did?

Q. Yes. A. No, I don't recall having asked him that specific question, but it seems to me that the records indicate, the records contained in Exhibit 27 give you, some indication of that.

Q. What indication did those records give you? A. They indicate to me that Fisk took control of the McCall Ferry enterprise some time between the 15th of March and the 25th, and by the latter part of June the necessary subscriptions had been obtained. So I would say that the banking services, as they related to raising the money, lay within those dates.

* * *

Q. Do you recall when the first 20 per cent call was made from the bond subscribers?

• • •

THE WITNESS: June 1, 1905.

By MR. HALL:

Q. Was that the first call made to the subscribers for [7675] the initial 20 per cent advance?

• • •

THE WITNESS: My answer should have been May 15, 1905.

By MR. HALL:

Q. As of that date or as of a date shortly prior thereto all of the bond subscriptions had been obtained; right? A. Yes, sir, that is correct.

• • •

[7681] MR. HALL: Mr. Examiner, I offer Exhibit Number 173 for identification. This exhibit consists of two pages, was written by Gardiner M. Lane, and appears to be a memorandum or letter addressed to prospective subscribers of Lee, Higginson and Company, and further appears to have been written subsequent to the time that Harvey Fisk and Sons came into the picture. This was taken from the McCall Ferry Power Company file number 112.

• • •

(The document referred to was marked Exhibit Number 173 for Identification.)

By MR. HALL:

Q. Mr. Gunn, are you familiar with this particular document? A. I think I recall having seen it some time in the past.

Q. Was this one of the documents you obtained from the files of Lee, Higginson and Company? A. It appears to have been. I believe that was my only [7682] source of it.

• • •

MR. HALL: * * * May we have marked for identification, Mr. Examiner, as Exhibit 174, a document dated July 19, [10] 1907, taken from the Lee, Higginson and Company file, otherwise identified as McCall Ferry Power Company file number 112?

* * *

(The document referred to was marked Exhibit Number 174 for Identification.)

By MR. HALL:

Q. Is this another one of the documents you obtained from the records of Lee, Higginson and Company, Mr. Gunn? A. Yes, sir, it appears to be. That would have been our only source of this document. It appears to me to be a letter written in an attempt to sell McCall Ferry financing to some of Lee, Higginson's prospective customers.

MR. KING: Respondent counsel acknowledges receipt of Exhibits 173 and 174.

MR. HALL: This Exhibit 174 for identification is not all of the letter but the parts pertinent to what we have been discussing this afternoon. In other words, this is an [7683] excerpt from the Lee, Higginson and Company letter.

MR. KING: May I have staff counsel's statement, please?

(Staff counsel's statement read.)

MR. KING: Mr. Hall, on page 2 of the exhibit for identification number 174, do the asterisks indicate the omissions?

MR. HALL: Yes, where omissions were made.

* * *

[7685] MR. KING: Mr. Examiner, some days ago Mr. Hall asked me to produce the Lee, Higginson and Com-

pany participation. I now hand it to him with the statement that that is the only copy we have and would like to get it back as soon as possible.

• • •

[7686] By MR. HALL:

Q. Mr. Gunn, was the Lee, Higginson and Company participation submitted to Mr. Lee prior to the date of his affidavit contained in part 8 of Exhibit 27? A. Yes, sir. The participation as you have it was submitted to him prior to the date of his statement and, as you notice, a considerable number of parts of the participation came from Lee, Higginson's file. Most, if not all, of the documents contained in the participation had at various times been made available to Mr. Lee before the participation in the form in which you now have it was formally prepared and given to him.

Q. Was this complete participation submitted to Lee [7687] prior to the date of his affidavit? A. Yes, sir.

Q. Is this the final participation? A. Yes, sir.

Q. Did you say there were other drafts submitted to Mr. Lee before this final draft was prepared? A. Yes, I believe that is correct. I believe the first time I saw Mr. Lee I submitted to him a preliminary draft for his comments, and the draft you now have is the final form incorporating his comments.

Q. Do you have the preliminary draft you submitted to Mr. Lee? A. No.

Q. What caused you to change the preliminary draft? A. Some minor suggestions Mr. Lee made. I don't recall what they were. That suggestion that he made plus, I believe, perhaps some of the information we found in his files later, at least which he made available to us from his files.

DONALD GUNN.

CROSS-EXAMINATION (Continued).

[7691] THE WITNESS: To the extent Fisk's services were involved.

By MR. HALL:

Q. What specific banking services did Bertron, Storrs & Griscom furnish to McCall Ferry? A. They made arrangements for the attempt at financing under March 1st underwriting agreement, as a result of which about $4,000,000 subscriptions of bonds were obtained, and they were subsequently joint bankers with Fisk in the March 25th underwriting.

I do not know the details of the banking services they rendered.

[7692] Q. Are you saying that Bertron, Storrs & Griscom were reimbursed under the March 25, 1905 plan for the services that it rendered under the March 1, 1905 plan? A. I don't think I could say with certainty what may have been in the minds of the people who worked out the compensation to Bertron. The facts are that he did render the services that I mentioned in connection with the March 1st underwriting agreement, and that he was compensated in the amount of 7,462½ shares as a result of the March 25th underwriting, having been successful in completing the financing of the project.

Q. Lee's documents indicate consideration being paid under the March 1, 1905, agreement. Isn't that so? A. To what Lee's documents do you refer?

Q. Those included in Part 11 of Exhibit 27, for instance. A. No, sir, I wouldn't say they indicate that because, if you will refer to Part 11 of Exhibit 27, Page 85, which is a letter from Bertron, Storrs & Griscom to Lee, Higginson and Company, Harvey Fisk are there named as bankers, and they were not in the picture as bankers until the March 25 agreement.

If you will look at page 86, which is another letter from Bertron, Storrs & Griscom to Lee, Higginson and Com-

pany, you will find Harvey Fisk again mentioned as having [7693] agreed to the compensation for Lee, Higginson.

Q. Agreed with whom? A. Agreed with Bertron, Storrs & Griscom. As I understand it, Bertron, Storrs & Griscom and Harvey Fisk and Sons were joint bankers under the March 25 agreement.

If you will look at Page 87 of Exhibit 27 there is a letter from S. R. Bertron to Lee, Higginson and Company which again mentions Harvey Fisk and Sons as being agreeable to Lee, Higginson's compensation.

The same reference is made on Page 88 which is another letter from Bertron, Storrs & Griscom to Lee, Higginson and Company. It seems to me it is perfectly clear from those references that the compensation they were receiving was coming as a result of the successful completion of the underwriting by Fisk, and was under the control of Fisk and it was necessary that the compensation be finally approved by Fisk before Lee, Higginson could be given any.

Those letters also indicate to me that there probably never was such a thing as a written agreement amongst the bankers as to what their respective compensation would be.

Q. Did Lee, Higginson and Company forego any compensation for the services rendered under the March 1, 1905 plan? A. I don't know what you are referring to, Mr. Hall. Are you referring to the fact that compensation was based [7694] on $2,000,000 and they got somewhat more subscriptions than $2,000,000?

Q. No. A. What are you referring to?

Q. What I am getting at, Mr. Gunn, is whether the compensation paid to Lee, Higginson and Company referred only to services rendered under the March 1, 1905 plan or the March 25, 1905 plan, or both?

* * *

THE WITNESS: I don't know just how you could assign the compensation to the services, but the facts relating to their compensation are as I stated them. It is true that

they rendered services under the March 1, 1905 plan and that those services were preserved and carried forward, and there probably were additional services under the March 25 plan. They received their compensation as a result of the successful completion of the financing under the March 25 plan.

You can assign that compensation, I suppose, to any one of those depending upon what assumptions you wish to make. However, those are the facts.

By Mr. Hall:

Q. But isn't it a fact that everything Mr. Lee indicates in his affidavit, all the documents he considered, bear out the fact that he was basing his valuation on services [7695] rendered under both underwriting plans? A. I believe that is true of Mr. Lee's affidavit. I don't recall he makes any distinction between the two underwriting plans.

Trial Examiner: In your previous answer, where you said compensation was received through success of the March 25th plan, who were you talking about, Bertron, Storrs & Griscom?

The Witness: No, compensation of Lee, Higginson. That was the subject of the whole line of discussion at that point, or I so understood it, at least.

By Mr. Hall:

Q. Since Mr. Lee's affidavit influenced your valuation of the stock, then you applied a valuation to the services of the bankers which covered both underwriting agreements. Right? A. No, I don't think you would necessarily draw that conclusion because the successful March 25th underwriting agreement utilized the subscriptions that Lee, Higginson had previously obtained, and those subscriptions became subscriptions under the March 25th underwriting, and it seems to me it was therefore appropriate for the compensation to come for them under the March 25th underwriting since the subscriptions were a part of that underwriting.

Q. Are you saying, Mr. Gunn, you can not segregate [7696] the services one from the other? A. No, I am saying that whatever was rendered under the March 1st underwriting was equally valuable and equally valid under the March 25th underwriting.

Q. In other words, the valuations applied to both underwritings? A. Well, it seems to me there was only one successful underwriting, and that was the March 25th underwriting. You can divide it up however you wish. You have all the facts.

Q. Isn't it a fact that your valuation would not be the same if you ignored the March 1, 1905 services? A. I don't know whether it would or not. I don't know what Mr. Lee would say about that. My difficulty would be this: It was necessary at one time or another to get those subscriptions. Now,——

Q. Are you now referring to subscriptions obtained by Lee, Higginson under the March 1, 1905 plan? A. I am referring to all the subscriptions obtained by Lee, Higginson. It was necessary to have the Lee, Higginson subscriptions to complete the underwriting, as I see it. The subscriptions were obtained by Lee, Higginson and were used in the March 25th underwriting. I don't see that it makes any difference at what particular day in the month of February or March the subscriptions were obtained. They were still equally useful under the March 25 plan. It just [7697] doesn't seem to me that the compensation would necessarily change. Indeed, I don't see why it should change at all, that is the compensation to Lee, Higginson should change at all, so long as Lee, Higginson obtained that number of subscriptions and they were used in the successful underwriting.

Q. What you are saying, Mr. Gunn, amounts to this: That you can not say what amount——

Strike that, please.

What you are saying is that you can not ignore the services rendered under the March 1, 1905 plan? A. No,

I am not saying that. I am saying just what I previously said.

* * *

By MR. HALL:

Q. Now, Mr. Gunn, if you had limited yourself to the services rendered under the March 25, 1905 plan, would you [7698] still have arrived at a valuation of $25 per share of the common stock?

* * *

THE WITNESS: Do you include in that question, Mr. Hall, the assumption that Lee, Higginson obtained, under the March 25th plan, the same number of subscriptions that they in fact turned in?

By MR. HALL:

Q. No. A. Then your question relates to the subscriptions, whatever the number may have been, that they finally did obtain directly under the March 25th underwriting?

Q. That is right. A. No, I don't think—stock value?

Q. Yes. A. Yes, stock value on a per-share basis may have been the same, although I don't think Lee, Higginson would have gotten 5,000 shares of stock for that little bit of service.

Q. Did Bertron, Storrs and Griscom undertake to sell a specific amount of bonds and to be liable themselves for [7699] any unsold balance? A. I don't know.

Q. Isn't it a fact that Bertron, Storrs & Griscom merely acted as agents to sell bonds with no liability to take any of the unsold bonds? A. I don't know what the liability of Bertron, Storrs & Griscom was under the March 25th underwriting, except what Fisk said, which was to the effect that Bertron was joint account with him. What the arrangement may have been for the sharing of the responsibility between Bertron, Storrs & Griscom and Lee, Higginson I do not know.

Q. Did you examine the books and records of Bertron, Storrs & Griscom? A. I believe I saw the records of

their purchase and sale of stocks. As I recall it those are the only books they had.

Q. Included in Exhibit 27? A. Those are included in Exhibit 27.

Q. Did the books and records of that firm show the nature and extent of the services performed? A. No, sir. As I recall it, I understand from Mr. Adams, the records which would have shown that previously had been destroyed.

Q. Did the records of Bertron, Storrs & Griscom show any valuation for its banking services? [7700] A. No, not that I ever saw.

Q. Did they reflect the cost of the banking services? A. No, not that I know of.

Q. Did the books and records of McCall Ferry or Susquehanna Contracting Company show the nature and extent of the services performed by Bertron, Storrs and Griscom? A. Not completely. They showed certain services, I believe, directly and indirectly.

• • •

THE WITNESS: Are you speaking of banking services there, Mr. Hall?

By MR. HALL:

Q. Yes. I understood you to say those were the types of services Bertron, Storrs and Griscom rendered. A. I think they rendered some other services other than banking services. What I had in mind when I started the answer to that question was that Bertron, Storrs & Griscom, I believe, assisted Fisk in obtaining, I believe, the Pullen option and, as I recall it, also some of the securities that passed under the Harlow-McGaw transaction along with the land, and, of course, Bertron appears to have been active and interested in the project along with Fisk throughout the development period.

[7701] Q. But if they rendered any of this incidental service you referred to, isn't it a fact that the 7462½ shares were in no way related to anything other than banking services? In other words, you are claiming the 7,000-plus shares

as representing cost of underwriting bonds. A. I think it is primarily compensation for the cost of underwriting bonds. Now, it is a fact they rendered these other incidental services, and I, of course, don't know what was in the minds of Bertron and Fisk when they agreed to that amount of shares. It has been my conclusion that it was primarily for banking but with recognition of the fact there was certain incidental service rendered——

Q. Haven't you in your Exhibit 26 and in your claimed cost treated all of the 7,000-plus shares as compensation for banking services? A. Yes, sir, I have. But in Exhibit 26 I have also stated these incidental services which Bertron rendered. I didn't have any basis for making a division between those because I didn't know the extent of them. So as an alternative I have treated the total compensation to Bertron as banking services.

Q. You don't even know whether Bertron, Storrs and Griscom were to be compensated for those incidental services. Isn't that so? A. That is right. I can't say that their compensation [7702] was in specific recognition of any of those incidental services.

Q. You have never found any valuation of the services of Bertron, Storrs and Griscom. Isn't that right? A. That is correct.

Q. Do you know the costs to Bertron, Storrs and Griscom of the services they may have rendered? A. No, I do not except in purchasing the Pullen option for which they were reimbursed by Harvey Fisk and Sons.

Q. Was there any contract between McCall Ferry and Bertron, Storrs and Griscom making McCall Ferry liable for the payment of services? A. Not so far as I know.

Q. Have you found any evidence that McCall Ferry ever contemplated paying cash for any services to be rendered by Bertron, Storrs and Griscom? A. You mean as compensation to Bertron, Storrs and Griscom?

Q. Yes, for banking services. A. No.

Q. Your answer would have been the same if I had included Susquehanna Contracting Company along with McCall Ferry? A. Yes, sir.

* * *

[7703] By MR. HALL:

Q. Did you attempt to get a valuation of the banking services of Bertron, Storrs and Griscom from that firm or any of the surviving partners? A. Yes, sir.

Q. Whom did you contact? A. I contacted Mr. J. O. Adams, Secretary of the firm, and asked him to in turn contact Mr. Griscom.

Q. Did you contact any one prior to your contact with Mr. Adams? A. No, sir.

Q. When did you contact Mr. Storrs? A. It appears I contacted Mr. Storrs—I don't know what the date of the letter was. Page 188 of Exhibit 27 shows that I first contacted Mr. Storrs on July 18, and that is contained in the first line of Mr. Storrs' reply to the company, which reply is dated July 21, 1938.

Q. Was that prior to your contact with Mr. Adams? A. No, it was subsequent to it. I don't know just when the first contact with Mr. Adams was, but the first letter, I believe, shown in Exhibit 27 on page 184, it being a letter from the company to Messrs. Bertron, Griscom and Company, was dated May 23, 1938, and it is clear from the letter that I had previously written to and talked to Mr. Adams—that is [7704] previous to the date of May 23, 1938.

Q. What was the purpose for your contacting Mr. Adams? A. He was the Secretary and Treasurer of Bertron, Storrs and Griscom.

Q. Was Mr. Adams the go-between between you and Mr. Griscom, so to speak? A. What do you mean by "go-between"?

Q. In other words, you contacted Mr. Adams and he, in turn, contacted Mr. Griscom. A. Yes, sir, that is right. I had a little difficulty seeing Mr. Griscom, and more diffi-

culty getting him to do anything. I think he had previous experience in the Conowingo case.

• • •

By Mr. Hall:

Q. The fact is that you failed to get any statement from either Mr. Storrs or Mr. Griscom covering the early history [7705] of the McCall Ferry project. Right? A. Yes, sir, that is correct. Mr. Storrs' reply to my inquiry in that respect is shown on page 188 of Exhibit 27 and the reply of Mr. Griscom is shown on page 193 of Exhibit 27.

Q. Did you and Mr. Adams prepare this statement for Mr. Griscom's signature as shown on pages 194 and 195 of Exhibit 27? A. Yes, sir.

Q. Why did you deem it necessary to prepare a statement for his signature? A. Because Mr. Adams said if we didn't do it we wouldn't have any chance of getting a statement from him. We prepared the statement and then didn't get any statement from him.

Q. One of the things you asked Mr. Griscom to say in his proposed statement was:

> "My firm commenced as head of the underwriting group but eventually took a position junior to that of Harvey Fisk and Sons who took over leadership of the financing."

• • •

Mr. King: The document speaks for itself. I see no purpose in the question.

Trial Examiner: He has not finished.

Mr. King: I am sorry.

[7706] By Mr. Hall:

Q. Mr. Griscom wouldn't go along with you in that connection, would he, Mr. Gunn? A. I don't think that is a fair conclusion.

Q. He didn't sign the statement; isn't that right? A. That is quite true, but in failing to sign it he said he had

no quarrel with any part of the statement, and any part of the statement includes that. He simply said he didn't have a recollection, and I believe he told Mr. Adams he didn't want to be involved in any more of these things.

Q. Having no recollection, Mr. Griscom was unable to subscribe to any statements—right? A. Well, as I read his reply he said simply that he didn't have enough recollection to justify him in making the statement.

Q. Are there any other letters covering your attempt to get statements from Bertron, Storrs and Griscom not contained in Exhibit 27? A. I don't know whether or not there are, Mr. Hall. I would have to check the file.

Q. Did you submit a participation to Mr. Griscom or Mr. Storrs or Mr. Adams? A. I submitted all of the documents and facts relating to their participation to Adams. I don't recall whether I [7707] submitted a specific participation or not.

When I first went to the Bertron and Griscom Company to attempt to get a statement, as I recall it, it was my hope of getting a statement from Mr. Bertron, who then was alive. When I went there Mr. Bertron had been taken sick a few days earlier. I was instructed by Mr. Adams to come back in a month or six weeks or some such. Before I got a chance to go see him he died. It was Mr. Bertron who was active in, and who had handled, the McCall Ferry transaction from Bertron, Storrs and Griscom's New York office while Mr. Griscom had been handling the end of their business which was located in Philadelphia.

As I understood from Adams, he had a limited knowledge of the Susquehanna River transactions of Bertron, Storrs and Griscom.

I made several attempts to obtain from Mr. Adams first an opportunity to talk to Mr. Griscom, and he wasn't disposed to talk to me.

I asked Mr. Hutchinson, I believe on one occasion, to go to Mr. Griscom and intercede, and Mr. Hutchinson sent me back a cryptic report that Griscom said he wasn't going

to be involved in any more of these original cost determinations.

Then I made an attempt through Mr. Adams to see Mr. Griscom. That was not successful, but Mr. Adams thought Mr. Griscom, if he, that is Adams, would vouch for the [7708] authenticity of the facts submitted to Mr. Griscom, that Mr. Griscom would sign the statement which is shown on page 194. As I recall it Mr. Adams was prepared to present to Mr. Griscom and discuss with him all of the facts, although I don't recall we ever had those made up in participation form.

Q. Did you ask Bertron, Storrs and Griscom for a valuation of their banking services? A. Not directly as such. What I was seeking to obtain from Mr. Griscom was his opinion as to what the stock was worth at the time his firm accepted it.

It very well may be that he would have approached his estimate of the worth of the stock through banking services, but I didn't indicate to him how I wanted him to make the determination, and for the reasons I have indicated, because of his reluctance to do anything at all.

Q. How about Lee, Fisk, and the others? Did you indicate how they were to value their services? A. No, I don't believe I did. I believe they rather, in the case of Lee and Fisk,—well, I can't say, I don't know how the question of valuing their services came in. In the case of Lee I discussed our problem with him and explained to him my understanding of the intentions of the original cost requirements, and I don't know how he came to the conclusion that it was necessary to value it through his [7709] services, except I believe one of the things which influenced him is the fact that the stock ultimately had no value.

As to why Mr. Fisk approached it from that point of view I don't know. That was something which was handled directly with Mr. Fisk by Mr. Cole, and I never knew the details of how the valuation was arrived at.

Q. What valuation did you place on the services of Bertron, Storrs and Griscom? A. I didn't place any.

Q. What valuation do you claim in your original cost statement? A. As a result of having arrived at the conclusion that the common stock is worth $25. a share I valued the shares which were given in compensation at $186,562.50.

Q. In other words, you multiplied $25 times 7,462 and a half shares of common. A. That is correct.

Q. Why did you place a higher value on the services of Bertron, Storrs and Griscom than those of Lee, Higginson and Company? A. Because Bertron, Storrs and Griscom received a higher compensation for their services than did Lee, Higginson.

Q. In other words, that was merely the mathematical [7710] result of the number of shares which you say each received. A. That is correct.

Q. Didn't Lee, Higginson and Company sell several times as many bonds as Bertron, Storrs and Griscom did? A. I think it can appropriately be concluded they sold more than Bertron, Storrs and Griscom did. Whether it was several times or not I don't know because I never have been able to identify who actually sold all of the bonds.

* * *

By Mr. Hall:

Q. Isn't it your position that Lee, Higginson and Company took a greater risk than Bertron, Storrs and Griscom under the bond and stock agreement of March 25, 1905? A. As regards the guaranteeing of subscriptions to bonds that is correct. That is as regards the guaranteeing of them to Knickerbocker Trust Company, the guarantee under the deferred subscriptions, which were pledged with Knickerbocker Trust Company under the loan.

Q. Wouldn't that indicate that Bertron, Storrs and Griscom were entitled to much less than 5 points commission if that amount is supposed to measure the risk of Lee, Higginson and Company in connection with procuring bond subscriptions? [7711] A. Not necessarily.

Q. How do you arrive at that conclusion, Mr. Gunn? A. Because it seems to me that Bertron, Storrs and Griscom might have performed other banking services and might have had other risks and responsibilities, for example, as joint bankers with Fisk which Lee, Higginson and Company didn't have, and it is also my understanding that it is a banking practice, although I am not a banker, that people who originate transactions in the banking sense also are entitled to some compensation for that fact.

Q. What specific banking service did Lee, Higginson and Company furnish to McCall Ferry? A. I don't know in any more detail than is included in Exhibits 26 and 27.

• • •

[7718] By Mr. Hall:

Q. Mr. Gunn, do you have any evidence which would indicate that Lee, Higginson and Company were ever called upon to make good under any guarantee in connection with the financing? A. I have the evidence in that respect which was included on the tabulation which I previously mentioned as having been obtained from Irving Trust Company and which was recently given to the staff and which is also included as a document in the Lee, Higginson participation. As I recall there, for the purpose of the Knickerbocker Loan, they were required to guarantee several subscribers to McCall Ferry bonds, which subscriptions were presumably obtained by Lee, Higginson and Company, and they were also subscribers in the amount, I believe, of $2,300,000 for the purpose of implementing the guarantee, or the security pledged under the Knickerbocker Trust Loan.

Does that answer your question?

Q. Not exactly, Mr. Gunn. My question was did they ever actually make good any guarantee under the transaction of which you have spoken or any other transaction.

[7719] A. You mean was the firm as such ever required to——

Q. Make payments under the so-called guarantee you referred to? A. I don't believe I quite understand. Is your question this: Did any of Lee, Higginson's subscribers default and were they for that reason required to assume the subscribers obligation? Is that your question?

Q. Yes. A. I don't know whether they were or not.

Q. Isn't it your understanding that the subscribers were going to save Lee, Higginson and Company harmless from liability under the subscription agreement? A. May I have it read?

(Question read.)

THE WITNESS: Mr. Hall, you will have to be a little more definite about that, and for this reason: As I understand it, Lee, Higginson became a subscriber as a firm under the Harvey Fisk and Sons underwriting agreement, and then Lee, Higginson in turn made an underwriting agreement of their own under which they obtained subscriptions, which I suppose you might term a subsidiary underwriting agreement now. Which one of those are you referring to in your question?

By MR. HALL:

Q. I show you part 4 of the participation submitted [7720] to Mr. Lee. To what does that document refer? A. This document appears to be a subscription form for bonds and preferred stock of McCall Ferry Power Company, although in the document it is called Susquehanna Power Company, and the Susquehanna Company was an early name for McCall Ferry Power Company. This document is the Lee, Higginson subscription form upon which they obtained subscriptions, as I understand it, after the Lee, Higginson firm had itself subscribed to the Fisk financing presumably on the Fisk underwriting form.

Q. This document bound the subscribers of Lee, Higginson and Company to the extent stated therein, right?

* * *

THE WITNESS: Yes, sir. I understand "the extent stated therein," to cover a relationship between Lee, Higginson and Lee, Higginson subscribers, which arose as a result of Lee, Higginson as a firm having subscribed to bonds in the Fisk underwriting, presumably under the Fisk subscription contract. Therefore, this document that you have shown me describes the relationship between Lee, Higginson and Lee, Higginson customers, but not the relationship between Lee, Higginson and Fisk or the relationship between Lee, Higginson and Knickerbocker Trust Company as respects those subscriptions obtained by Lee, Higginson, payment of which was [7721] deferred and which was pledged under the Knickerbocker loan arrangement.

By MR. HALL:

Q. In other words, you are saying that if Lee, Higginson and Company incurred any liability by reason of its relationship to Harvey Fisk and Sons, that liability could be passed on and assumed by the subscribers of Lee, Higginson and Company? A. Yes, I believe that is the theory. Of course, it is only a theory, and if the subscribers didn't make good Lee, Higginson still would be in trouble with the subscriptions. I take that to be the reason that Knickerbocker Trust Company, in working up their settlement computations, which are also included in the Lee, Higginson participation, required that as a condition precedent to an extension of the Knickerbocker Trust loan, Lee, Higginson, as a firm, guarantee to make good on the subscriptions that had been obtained by Lee, Higginson from Lee, Higginson's own customers.

Q. By that you mean that the customers of Lee, Higginson and Company, as well as Lee, Higginson and Company, were obligated to Knickerbocker Trust Company? Is that what you are saying? A. Not quite. What I am saying is this: That apparently Knickerbocker Trust Company took the position that they [7722] would look directly and solely to the firm of Lee, Higginson for se-

curity under the Knickerbocker Trust loan, thus leaving it up to Lee, Higginson as to what they might do with respect to the relationship between the firm of Lee, Higginson and Lee, Higginson subscribers. Maybe that is the same thing but it seems to me they are just slightly different.

[7723] Q. Did Lee, Higginson and Company, or any representative thereof, show you any valuation of the banking services of that firm? A. No, sir, nothing more than stated in Lee's affidavit.

Q. Did anyone show you the cost to that firm of its banking services? A. No, sir.

Q. Do you know what that cost was? A. No, sir.

Q. Did the books and records of McCall Ferry or Susquehanna Contracting Company show the nature and extent of the services performed by Lee, Higginson and Company? A. Only to the limited extent that is shown in Exhibit 27 and in the company's records which have been available to the Commission Staff.

Q. Did the McCall Ferry or Susquehanna Contracting Company show any valuation of the Lee, Higginson and Company banking services? A. No, sir, except to the extent that Lee, Higginson received the securities and compensation for them.

Q. Was there any contract between McCall Ferry or Susquehanna Contracting Company and Lee, Higginson and Company making McCall Ferry liable for the payment of banking services? A. Not so far as I know.

[7724] Q. Have you found any evidence that McCall Ferry or Susquehanna Contracting Company ever contemplated paying cash for any of the banking services to be rendered by Lee, Higginson and Company? A. No, sir.

* * *

[7742] By Mr Hall:

Q. Mr. Gunn, I believe you have selected July 15, 1905 in your computations as the time of the issuance of the bonds. Right? A. I think it was June 15.

Q. Yes, June 15. A. That is right; yes, sir.

Q. As of what date were the bonds actually issued to the subscribers? A. You are referring there to people beyond the bankers when you speak of "subscribers"?

Q. Yes.

• • •

THE WITNESS: The $250,000 par value of bonds which went to Harlow-McGaw in exchange for their property was issued [7743] in June, 1905. The bonds to the non-deferred subscribers were issued about February, 1908, and the bonds to the deferred subscribers were apparently issued about November, 1908.

MR. KING: By "issued", Mr. Hall, you mean mechanical passage of the certificates?

• • •

MR. HALL: I mean the time at which the bonds were turned over to the subscribers.

• • •

[7744] By MR. HALL:

Q. Mr. Gunn, why did you choose the date of June 15, 1905 to begin the amortization of bond discount expense, when the bonds were not issued until 1908? A. That is the date the bonds were issued by McCall Ferry Power Company I believe to Susquehanna Contracting Company, or at least as I recall it is the date on which interest on the bonds began accumulating.

• • •

By MR. HALL:

Q. When was interest first paid on bonds issued to subscribers? A. As I understand it, according to the underwriting agreement of March 25, they were to be credited, the subscribers I mean were to be credited, with interest from the date of their payments, the first payment of which was shortly after issue in the case of the deferred subscribers.

Q. Isn't it a fact, Mr. Gunn, that the subscribers were to be paid interest only on the advancements made? A.

Yes, I think that is right. That is all they were entitled to, I believe, under the underwriting agreement.

Q. It had nothing to do with bond intrest. [7745] A. It seems to me it did. It seems to me it was at the rate of bond interest.

Q. And that is the only relation it had?

* * *

THE WITNESS: The specific relation in the terms of the underwriting agreement are given on page 82 of Exhibit 27, and reads as follows:

"The price is $900, and accrued interest, if any, for each $1,000 bond, together with preferred stock of the par value of $450, and is payable to the bankers at their office No. 62 Cedar Street, New York City, in installments of not more than 20 per cent each, the first upon five days' notice on or after allotment, and the others upon call of the bankers on 20 days' notice. The subscribers are to be credited with interest at five per cent per annum on all installments from times of payment until delivery of bonds and stock."

If you will refer to the tabulation which was obtained from Irving Trust Company, successors to Knickerbocker Trust Company, you will find that in the settlement at the time of delivery of bonds that credit of interest was treated as bond interest, the latter being further evidence of the fact it was construed as bond interest.

TRIAL EXAMINER: The rate on the bonds was what?

[7746] THE WITNESS: Five per cent.

TRIAL EXAMINER: Same rate of interest, then, on both instances?

THE WITNESS: Yes, sir, and in the instance of the settlement by Knickerbocker Trust Company the interest that had been credited to these advances was offset against the coupons on the bonds, thus bringing the relationship of the two into what seems to me to be complete consonance.

TRIAL EXAMINER: The interest which accumulated on the deposit by the subscribers, payments by the subscribers on call, was not actually paid in cash but later on paid by bond coupons?

THE WITNESS: No, it was later on used to reduce the final payment of the bond subscribers.

I believe another fact, Mr. Examiner, that ties it in closely is the fact that while the people who advanced the money received a five per cent credit the cost to Susquehanna Contracting Company of the money obtained from Knickerbocker Trust Company was nominally six per cent, with a pre-payable bonus to Knickerbocker Trust Company which made the cost of that money about 6.9 per cent.

* * *

By MR. HALL:

Q. Mr. Gunn, isn't it a fact that in making the [7747] settlement Knickerbocker Trust Company calculated only the accrued bond interest from the date next preceding the date of settlement? A. I think that is correct. The exact calculation is shown on the tabulation which was obtained by me from Irving Trust Company, and is included as a part of the Lee, Higginson participation.

* * *

By MR. HALL:

Q. The amount upon which interest was credited was less than the face value of the bonds; right? A. Yes, to be sure. Interest was credited on the payments as they were made. In the case of deferred bond subscribers, the payments were made on 20 per cent calls.

Q. In other words, the subscribers did not receive the full coupon rate prior to the date of issuance of the bonds to the subscribers.

* * *

THE WITNESS: Certainly they did. They received the full five per cent. That is the coupon rate.

[7748] By Mr. Hall:

Q. The full five per cent on the face value of the bonds? A. No, full five per cent on the money they had advanced.

* * *

[7769] By Mr. Hall:

Q. Mr. Gunn, I believe you previously testified that Hillside Water and Power Company and Susquehanna Water and Power Company were paper companies with no funds and no assets; right?

* * *

The Witness: That is substantially correct. I believe probably the qualifying shares were paid for, but aside from that they had no assets that I know of.

By Mr. Hall:

Q. Since these companies were organized by Hutchinson, isn't it reasonable to conclude that Hutchinson supplied the funds required to create them?

* * *

[7770] The Witness: I don't know, but I think it is a reasonable conclusion for whatever that is worth.

By Mr. Hall:

Q. You have also assigned a cash value of $25 per share to the ten incorporators' shares, right? A. Yes, sir, I did that. I believe that is correct. I used $25 a share consistently for all valuation of McCall Ferry Power Company stock which entered into the determination of original cost.

Q. Have you included the $250 cash value for these shares in your original cost determination? A. Yes, sir.

Q. What do you claim the $250 represents?

Mr. King: $250?

Mr. Hall: Yes, ten incorporators' shares at $25. per share.

THE WITNESS: It represents the cash value of the stock.

By MR. HALL:

Q. How have you classified the $250 for the purposes of your claim? A. Included in organization expense.

Q. For what company does the $250 represent organization expense? A. Two companies which were merged to create McCall [7771] Ferry Power Company.

Q. Wasn't Hutchinson reimbursed for the expenditures in organizing those companies by the $750,000 cash? A. I don't know whether he was or not.

[7772] Q. Will you refer to Account 301 of the uniform system of accounts? A. Yes, sir.

Q. Doesn't Note "B" of Account 301 require you to exclude the cost of organizing predecessor companies when the cost of reorganization is included?

* * *

THE WITNESS: You don't mean cost of reorganization, do you, Mr. Hall? In this instance it was a consolidation, and I think that is what you refer to.

By MR. HALL:

Q. Isn't it a fact, Mr. Gunn, that Note "B" of Account 301 requires that the cost of organizing predecessor companies is to be excluded if the cost of reorganization is included in the plant account? A. The account states that and states also that mergers and consolidations must be excluded, but I don't think the words used in that account have any application whatever to the situation in McCall Ferry Power Company respecting the Hillside and the Susquehanna Companies. It seems to me it is wholly inapplicable.

Q. Why? A. Because, as I understand it, it was a legal necessity to create those two companies as a condition precedent [7773] to the creation of the McCall Ferry Power Company, and if that be true it clearly does not fall within the meaning of Note "B" so far as I can tell.

Q. Nevertheless, the $250 we have been discussing represents the cost of organizing predecessor companies? A. No, I don't think it represents that.

Q. What do you think it represents? A. It represents the market value of the qualifying shares in those companies at $25 a share.

Q. What is the basis for the claim for the market value of those shares? A. Because that is, as far as we know, the best measure of organization expense.

Q. Why do you include the cost of organizing those two companies in Penn Water's organization expense? A. Because they were a legal pre-requisite to the creation of both McCall Ferry Power Company and Pennsylvania Water and Power Company. Without the incurring of that expense neither corporation could have existed. That is my understanding of it, at least.

Q. Incurring of what expense? A. Incurring of the expense that I have imputed to the organization of the Hillside and the Susquehanna Company and as measured by the market value of the qualifying shares in those companies. Incidentally, I don't think that represents [7774] more than a small fraction of the cost of organizing the companies but at least that is all we have included in the original cost for it.

Q. In other words, you have included the amount of $250 in lieu of actual cost, right? A. I have included it as a part of the organization expense of subsidiary companies, being Hillside and Susquehanna Companies, which were necessary to be organized before either McCall Ferry Power Company or Pennsylvania Water and Power Company could be created, as I understand it. It was a legal matter and a legal requirement, as I understand it.

Q. Do you know the actual cost of organizing Hillside and Susquehanna? A. No.

TRIAL EXAMINER: Where did you get the figure of $25 a share?

THE WITNESS: It, Mr. Examiner, represents the general conclusion as to the value of McCall Ferry Power Company common stock which we have concluded was $25 a share and the shares we are now discussing are the qualifying shares which, for the want of a better figure, I also valued at $25 a share in the interest of consistency in the valuation of all of McCall Ferry's common stock.

By MR. HALL:

Q. Mr. Gunn, I believe you have indicated that it was [7775] decided to build a dam of 185 foot elevation about August 8, 1905? A. The recommendation for a dam at that elevation by the board of advisory engineers was on the date of August 7, 1905.

Q. And it was decided to build a dam of 165 foot elevation in June of 1906, right? A. Yes, sir, June 19, 1906.

• • •

By MR. HALL:

Q. So, Mr. Gunn, prior to August 8, 1905, the plans called for the construction of a dam of 155 foot elevation, right? A. Yes.

• • •

[7776] Q. Do you want to add something? A. Yes. Various elevations, I believe, had been considered prior to August 8 ——

• • • •

THE WITNESS: What is bothering me, Mr. Examiner, is that I have given a categorical answer that is not correct without qualification.

TRIAL EXAMINER: Very well.

THE WITNESS: The qualification would have to be this: At various times prior to August 8th various elevations had been considered, but at the time the financing was undertaken the elevation then in contemplation was 155.

By Mr. Hall:

Q. And financing was based on elevation 155, a dam with elevation 155? A. Yes, sir.

[7777] Q. Did Mr. Hutchinson, by reason of his option of April 14, 1903, with Harlow-McGaw, secure the right to flood the canal above McCall Ferry, above the McCall Ferry site?

• • •

The Witness: Yes, sir, but there were several obligations attached to the securing of that right.

By Mr. Hall:

Q. As a result of that agreement isn't it then a fact there was then no barrier to Hutchinson's proposed development?

• • •

The Witness: That is correct, if the terms of that agreement were carried out, both as regards Harlow's obligations and Hutchinson's obligations, there would have been no barrier so far as Harlow-McGaw were concerned.

[7778] Q. Hutchinson's option still was in effect when the financing for the 155 foot dam was completed; right? A. Hutchinson's option with Harlow-McGaw?

Q. Yes. A. Yes, sir.

• • •

By Mr. Hall:

Q. Isn't it a fact, Mr. Gunn, that for the purpose of the development contemplated in March of 1905, Hutchinson's option covered all the properties necessary for that development, referring to the option with Harlow-McGaw?

• • •

The Witness: Yes, at least that appears to have been the conclusion of those who were involved in the transaction at that time.

• • •

[7779] I think I had better limit that answer to this extent to say that Hutchinson's option included all of the

property owned by Harlow-McGaw necessary to the project then contemplated.

By Mr. Hall:

Q. Then how can you explain the total purchase of the Harlow-McGaw properties by Fisk for McCall Ferry? A. There are several reasons for it.

Q. Will you indicate those reasons? A. Well, one of the reasons is that by the purchase of that McCall Ferry Power Company came into substantial control of the whole of the potentially valuable section of the Susquehanna River from Columbia to Tidewater, that is potentially valuable for water power developments.

In addition to that they escaped very large, or what may have become very large, costs to them in satisfying their obligations under the agreement with Harlow-McGaw.

Q. What are the large obligations to which you refer, Mr. Gunn? A. The construction, and I believe also the operation of locks through the Holtwood dam, the construction, and, as I recall it, the operation of locks at the head of the reservoir of the Holtwood dam reservoir for re-entrance into a canal, and the provision of alternative route for Harlow- [7780] McGaw's railroad, that is a route alternative to the canal towpath that he was then considering.

Q. Those expenditures would be necessary only if it were decided to make the river navigable and construct the railroad; right? In other words, Mr. Gunn, the expenditure could be deferred until that was decided upon. A. Mr. Hall, I have not read sufficiently recent the agreement, but it is my impression Harlow had the right to insist upon the performance of those conditions at will. If you wish I will read the agreement and ascertain if that is a fact.

Q. No, that is not necessary at this particular time, Mr. Gunn. But the expenditures to which you referred would be necessary only after Harlow-McGaw had indi-

cated the desire to carry out the canal and railroad plan; right?

• • •

THE WITNESS: No, that is not my recollection.

By MR. HALL:

Q. What is your recollection? A. My recollection is that Harlow-McGaw could insist [7781] upon compliance at any time.

As I said, to make certain of that I will have to read this agreement which is part 2 of Exhibit 27.

Q. What amount have you included in your original cost determination for the Harlow-McGaw lands?

• • •

[7782] THE WITNESS: $450,432.

By MR. HALD:

Q. Did you consider that the amount of $13,772.22 which you claim in connection with the Pullen option is a cost of the Harlow-McGaw lands? A. I don't know how I considered it. I considered it just as it is set forth on page 53 of Exhibit 26, namely, that it was a cost of the Pullen options. I had no occasion to connect it up with anything else.

Q. It is a fact that option was purchased in order [7783] to acquire the option of the Harlow-McGaw lands? A. I don't know. You will have to draw your own conclusion.

Q. Are you saying that the amount of $450,432——

Will you withdraw that last question, please?

Didn't you have to determine what the amount of $13,772.22, relating to the Pullen option purchase, represented in order to include it in your claim cost? A. Certainly I determined what it represented. It is fully explained in Exhibit 26.

Q. What does it represent? A. It represents cash of ten thousand dollars, interest of $22.22, and 150 shares

of common stock at $25, that being $3,750, making a total of $13,772.22.

Q. How did you classify the total amount of $13,772.22 in your original cost determination? A. As land cost.

Q. And what lands did you associate that amount with? A. None, I just put it in the lands account. It was not necessary to associate it with any land.

Q. What lands were acquired in return for the $13,772.22? A. The Pullen option.

Q. Is that land cost? A. Land right; cost of land right.

[7784] Q. What land does it cover? A. The option speaks for itself. It is in Exhibit 27. Do you want me to read it?

Q. Don't you know without reading it? A. No. If you want to know what it is I will read it into the record.

Q. Didn't you have to know what land it related to in order to determine your cost? A. Yes, sir, I knew exactly what was in the Pullen option seven or eight years ago but I don't remember now.

Q. Are you saying, Mr. Gunn, that you do not now know whether or not it is proper land cost? A. I certainly am not saying that. I am convinced that it is thoroughly proper land cost.

Q. Then, what land is it a proper cost of? A. It is a proper cost of the land rights which went into the creation of the McCall Ferry development.

Q. Which particular tract of land? A. I didn't associate it with any particular tract of land. But as I remember about a week ago I testified it was associated with an option over the Welsh properties, I believe, and an option over the Harlow-McGaw properties.

Q. In other words, you considered that amount to be part of the cost of the Harlow-McGaw properties? A. You may so construe it if you wish. All I did with [7785] it was to determine what the amount was and put it in McCall Ferry Power Company's land cost account.

Q. You don't have a copy of the option held by Pullen in your Exhibit 27, do you? A. No, I believe I was mistaken in referring to Exhibit 27. There is at least a summary of it in Exhibit 26.

Yes, Mr. Examiner, I find that the agreement itself is included beginning at page 94 of Exhibit 27.

TRIAL EXAMINER: In part 2 of Exhibit 27 is the acquisition by Hutchinson of an option on the Harlow-McGaw property. Is that correct?

THE WITNESS: Yes, sir. That is not exactly right, Mr. Examiner. It is the right to flood any of Harlow-McGaw's properties that would be flooded by Hutchinson's proposed dam at McCall Ferry, whatever that would be.

TRIAL EXAMINER: And that right is the right which is represented by your amount of 450,000-odd dollars on page 3 of Exhibit 26?

THE WITNESS: No, sir. That right is the right that is reflected by the necessity to build locks through the dam to provide Harlow with another railroad right of way and to provide entrance locks to a canal above, at the upper reaches, of the Holtwood reservoir.

TRIAL EXAMINER: What covers the Harlow-McGaw properties and rights?

[7786] THE WITNESS: Of what do they consist?

TRIAL EXAMINER: No, what document embraced in Exhibit 27 covers the acquisition of Harlow-McGaw's properties and rights?

THE WITNESS: Part 15 of Exhibit 27, which is page 125.

TRIAL EXAMINER: And the rights conferred by that agreement between McGaw, Harlow and Houseman on one hand and Harvey Fisk and Sons on the other, is what you have valued at 450,000-odd dollars?

THE WITNESS: Yes, sir, the 450,000-odd dollars being the consideration paid for those rights.

By Mr. Hall:

Q. Does the amount of $450,432 represent the market value of the Harlow-McGaw properties at the time of their acquisition? A. Mr. Hall, by "market value" are you referring back to the definition of market value you gave me several days ago, namely, a willing seller will accept and a willing buyer will pay if both were equally informed?

Q. I referred to that with reference to market value of securities, I believe. A. Does that definition still hold good here?

Q. Yes.

• • •

[7787] The Witness: In the light of your definition I would doubt very much if that represented the market value.

[7788] Q. What investigation did you make of the reasonable cost or market value of those properties? A. None. I think it is obvious under the condition of the sale that the market value as you have defined it would have been greater than what was there paid in that transaction.

Q. In other words, you are saying that the McCall Company acquired the property at less than market value? A. Yes, undoubtedly, under your definition of market value, because it is perfectly obvious that Harlow-McGaw were no longer free agents after Harvey Fisk and Sons succeeded in completing the financing.

Q. What do you mean by that? A. I mean simply this: That there was a limited power market within the reasonable reaches of the Susquehanna River and the McCall Ferry development was the most economical site to develop. When that site had been developed it was known by all who were familiar with the river at that time that it would be many, many years before another development could be justified. Subsequent events proved that it was 15 or 20 years before another development was in fact justified, and Harlow-McGaw were simply stuck with this property and they had either to sell it to Fisk or sit there

and hold it without any prospects for a long, long time of getting their money out of it.

[7789] TRIAL EXAMINER: The McCall Ferry Power Company, however, needed those rights, didn't they?

THE WITNESS: No, they didn't have to have them. The option Hutchinson had was adequate for them.

TRIAL EXAMINER: I thought at least some small part of it was necessary.

THE WITNESS: There may be some doubt about that to this extent, Mr. Examiner——

TRIAL EXAMINER: Those Harlow-McGaw rights covered rights to the Susquehanna and Tidewater Canal and Else Island, is that right?

* * * *

THE WITNESS: By "Those Harlow-McGaw rights" you are speaking now of the ones which came in by actual ownership through Harvey Fisk and Sons?

TRIAL EXAMINER: No, I am referring to the ones that are covered by the valuation of 450,000-some odd dollars.

THE WITNESS: That is the one which came in through Harvey Fisk and Sons?

TRIAL EXAMINER: Yes.

THE WITNESS: McCall Company didn't have any need for Else Island. The project map indicates that Else Island is in the Safe Harbor project.

TRIAL EXAMINER: But the lower part of the Island is beyond [7790] the Safe Harbor project?

THE WITNESS: Yes, but it is also above the backwater of the Holtwood project.

TRIAL EXAMINER: It is?

THE WITNESS: Yes.

TRIAL EXAMINER: What about the Susquehanna and Tidewater Canal?

THE WITNESS: Well, Hutchinson had obtained in his option from Harlow and McGaw the right to flood that canal in that 1903 option. I think it was dated April 14. We referred to it a few minutes ago.

By MR. HALL:

Q. That option never was exercised? A. No, but it was in force at the time Harvey Fisk and Sons bought the water power rights. It could have been exercised.

• • •

[7796] By MR. HALL:

Q. Will you refer to the map in the back of Exhibit No. 26 and point out the properties acquired from Harlow-McGaw? A. The properties acquired from Harlow-McGaw by Harvey Fisk and Sons are shown on that map in green.

They consist of the Susquehanna Tidewater Canal, the Proprietors of Susquehanna Canal, and numerous separate parcels lying along the shore and include islands in the Susquehanna River between Wrightsville and Columbia, Pennsylvania, at upstream limit and Havre de Grace, Maryland, at the downstream limit.

Q. Will you indicate what portions of those properties were required for the McCall Ferry project? A. The property which was required for the McCall Ferry project——

MR. KING: Excuse me, Mr. Gunn.

You mean at the elevation at which it was built or the elevation considered prior to that time?

MR. HALL: At which it was built, Mr. King.

THE WITNESS: May I ask one question? At which it was built and using flashboards the way they are now used?

By Mr. Hall:

Q. Yes. A. With that clarification, the property acquired from Harlow-McGaw by Harvey Fisk and Sons which was required for the [7797] Holtwood development as the Holtwood development was built and is now operated consisted of the section of canal, that is the Susquehanna and Tidewater canal, from a point about a mile below the Holtwood dam extending to a point upstream approximately to the present location of the Safe Harbor dam, as well as a flooding easement over Else Island, to the extent that that island lies downstream of the Safe Harbor dam.

That flooding easement is made necessary because, under certain particular flow conditions which occur at odd intervals of time, a part of the island is flooded.

• • •

Q. You mean flooded by the Holtwood dam backwater? A. Yes, sir.

Q. What portion of the properties acquired from Harlow-McGaw were useful for the Safe Harbor project? A. That part of the Susquehanna and Tidewater canal which extends from the Safe Harbor dam upstream to Wrightsville, or approximately to Wrightsville, together with the portion of Else Island which lies upstream from the downstream side of the Safe Harbor dam foundation.

Q. Aren't there six other small islands included in the Harlow-McGaw land necessary for the Safe Harbor project?

• • •

[7798] The Witness: Yes, sir, there were, and those other small islands were originally a part of Else Island and have since been broken off and acquired names. That is the reason why they are not shown separately on the map which is a part of Exhibit 26.

By Mr. Hall:

Q. In other words, they are included in Else Island on the map? A. That is correct.

Q. Using this map will you generally describe those lands and riparian rights acquired from Harlow-McGaw which lie below the McCall Ferry tailrace?

* * *

THE WITNESS: Yes, sir. In order to make that explanation I will have to make a slight amendment to the property I described as being necessary to the Holtwood project. The downstream extent of the Holtwood project would be marked by a line drawn across the river just upstream from the end of Bear Island.

[7799] If you will notice on the east side of the river there is shown two tracts of land in green just upstream from that line. The first tract was acquired as a tract of land separate from the canal by Harlow and thus acquired by Penn Water from Harlow in the transaction between Harlow-McGaw and Harvey Fisk and Sons.

TRIAL EXAMINER: The west side rather than the east?

MR. KING: That is what we think, Mr. Examiner.

THE WITNESS: Yes, sir, it is the west side of the river, Mr. Examiner. I was mistaken.

Just upstream from the tract I just described is another tract of land which was a part of the canal acquired from Harlow-McGaw and which is also used and useful by Penn Water in its Holtwood project.

Now, proceeding to answer your question directly, downstream——

MR. HALL: Is that the Kilgore tract you had reference to, Mr. Gunn?

THE WITNESS: The first one was the Kilgore tract, that is the tract of land laying nearest to the downstream boundary of the Holtwood project that I just described.

Proceeding now to the description of property in answer directly to your question: On the west side of the river there is the canal and canal rights extending from a point near the upstream end of Bear Island to Havre de

Grace, [7800] Maryland, which was a part of Harlow-McGaw and which was not used and useful in the Holtwood project.

Just opposite Bear Island are two separate parcels of land which were acquired in that transaction and which were not used and useful in the Holtwood project.

Continuing downstream to the point where there is indicated the Conowingo Bridge, just below the Pennsylvania-Maryland line, there is another tract of land which was acquired from Harlow-McGaw and which was not used and useful in the Holtwood project.

Continuing further downstream to a point just north of Roberts Island there are two tracts which were not used and useful in the Holtwood project.

Continuing further to the vicinity of Havre de Grace there is there shown another tract. All of the tracts I have just been explaining lie on the west side of the river and downstream from the Holtwood project.

Proceeding now to the east side of the river and downstream from the Holtwood project there are three tracts of land lying between Fishing Creek and a point opposite Johnson Island which were acquired in the Harlow-McGaw transaction and which were not used and useful in the Holtwood project.

Continuing further downstream there are two separate tracts just south of Peters Creek and just north of the [7801] Pennsylvania-Maryland line which were acquired in that transaction and were not used and useful in the Holtwood project.

Just south of the Pennsylvania-Maryland line, beginning at a point identified as Ark Haven, is the canal and canal rights of Proprietors of Susquehanna Canal which extends from Ark Haven to a point identified as Rock Run, which is the head of Tidewater in the Susquehanna River.

In that same area, aside from and in addition to the canal rights, a large tract of land identified as Bell Farm lying on each side of Conowingo Creek and it was acquired

from Harlow-McGaw. It was not used and useful in the Holtwood project.

Continuing further downstream to a point identified as Octoraro Creek and extending upstream is another tract of land acquired from Harlow-McGaw and not used and useful in the Holtwood project.

The property I have now just described lies on the east side of the river.

In addition there was acquired from Harlow-McGaw several islands lying downstream from the boundaries of the Holtwood project, these being Bear Island opposite Muddy Creek just downstream from the Holtwood project, Johnson Island, lying near the eastern bank of the river and located between Fishing Creek and Peters Creek, an unidentified island [7802] lying about the middle of the river and just downstream from the site of the old Conowingo Bridge, another island identified as Amos Island, lying near the western shore of the river and upstream from the point identified as the present site of the Conowingo Dam.

That, I believe, completes the description of the property acquired from Harlow-McGaw in the Harvey Fisk and Sons transaction and which is now not used and useful in the Holtwood project but located below the boundaries of the Holtwood project.

By Mr. Hall:

Q. Is that all, Mr. Gunn? A. I have just noticed that in describing the islands I missed one unidentified island which is located near the eastern shore of the river opposite a point on the east shore of the river, identified as Fites Eddy.

Q. Mr. Gunn, was the name of the second tract of land acquired from Harlow-McGaw which you mentioned as lying within the Holtwood line boundary the Cunningham tract? A. Yes, sir, that is correct.

Q. From your description I take it that there was much more land and riparian rights acquired below the

project boundary of McCall Ferry from Harlow-McGaw than above the project boundary.

* * *

[7803] THE WITNESS: In making my description of the property acquired from Harlow-McGaw by Fisk, and which is not now used and useful in the Holtwood project, I used the term "Holtwood project boundary" for the want of a better one and described it as being a line drawn across the river approximately at the upstream end of Bear Island.

Now, it is necessary to draw the line of demarkation between the Holtwood project and the downstream project at about that point because the construction of the Holtwood Dam disturbed the river flow, or at least the distribution [7804] of the river flow, down to that point and made it necessary for Holtwood Company to own the water power rights on both sides of the river down to approximately that point at least.

By MR. HALL:

Q. I take it just then, Mr. Gunn, you were answering the Examiner's question or clearing up the question he mentioned.

Now, will you answer the question as to whether or not there is much more land and riparian rights acquired below the McCall Ferry boundary as you have described it from Harlow-McGaw than above that boundary. A. By "much more" what do you mean? Footage, acreage, value, or how do you want that "much more" measured?

* * *

Q. River front footage and acreage. A. It is simply an inquiry as to whether there is more down than upstream?

Q. Yes. A. It appears evident that on a front footage or acreage basis a larger proportion of the property acquired from Harlow-McGaw lies downstream from the downstream boundary of the Holtwood project than lies upstream from that boundary.

[7805] Q. The properties below that boundary were those which Harlow-McGaw had intended using for the lower development. Right? A. What lower development, Mr. Hall?

Q. The lower development Mr. Harlow had in mind. A. He had several lower developments in mind.

Q. For any lower developments? A. Well, Mr. Harlow had contemplated a scheme of developing the river all the way from Wrightsville to Havre de Grace, utilizing primarily his canal which consisted of power house "A", so identified on the map, and lying just upstream from the Conowingo Bridge, another power house identified as power house "B", just upstream from the Maryland-Pennsylvania line, another power house identified as power house "C", adjacent to the downstream end of Bear Island. All of those power houses were at one time or another contemplated by Harlow-McGaw for development of that section of the river which is south of the present boundary of the Holtwood development, although power house identified as Harlow power house "C" at the downstream end of Bear Island would have flooded what is now the Holtwood Dam site.

Q. And those Harlow-McGaw properties below the boundary as you have described it now form the major part of the lands in the Conowingo development. Right?

• • •

[7806] THE WITNESS: No, I don't think that would be at all true, Mr. Hall. I say that for this reason: If you will notice the map there are what offhand looks to me to be 50 or 100 islands in the river which were not acquired from Harlow-McGaw.

In addition to that, the canal rights which Harlow-McGaw had were at a low elevation and extensive land rights at a higher elevation than the canal rights, all along both shores had to be acquired in addition to what came from Harlow-McGaw, because the Conowingo development has a head in excess of 90 feet which flooded much more

land in all directions than were acquired from Harlow-McGaw.

[7807] Q. The lands lying below the Holtwood boundary as you have described it constituted a substantial part of the lands now comprising the Conowingo project? A. No, I wouldn't say that, Mr. Hall. Offhand I wouldn't say it was even a substantial part, though it would take a thorough investigation to determine that. I can say that what was acquired from Harlow-McGaw by Harvey Fisk and Sons, and was used in the Conowingo project, is all of Harlow-McGaw property that I have described which lies upstream of a point at the mouth of Octoraro Creek and downstream from the downstream boundary of the Holtwood project. I think that is about all you can say.

If I had to characterize it I would say it was not a very great proportion of the water power rights which were ultimately required for the Conowingo project.

Q. What lands did Susquehanna Power Company seek to acquire through condemnation in 1906?

* * *

THE WITNESS: As I understand it it was all of the lands lying in Maryland which were then owned by McCall Ferry Power Company and which had been acquired from Harlow-McGaw by Harvey Fisk and Sons.

By MR. HALL:

Q. Did McCall Ferry own any lands in Maryland not [7808] acquired from Harlow-McGaw? A. Not so far as I know. At least they didn't hold any along the river. They held some transmission line rights-of-way but that had nothing to do with the river.

Q. For what purpose did Susquehanna Power Company seek to acquire the land in Maryland? A. Hydro-electric power development as I recall it.

Q. I take it from what you said Susquehanna did not want all of the land below the McCall Ferry boundary but only the land lying within the State of Maryland? A. I

don't know that you could draw that conclusion, but the condemnation proceeding we previously talked about was a Maryland condemnation and obviously they couldn't condemn Pennsylvania property in a Maryland court. I wouldn't say it followed from that that they didn't want the property in Pennsylvania, because I think they did.

Q. Mr. Gunn, isn't it a fact that the proposed Susquehanna Power Company dam was proposed to be erected to elevation 65 and would flood only to the Pennsylvania line?

• • •

[7809-7810] Mr. Gunn, I was speaking of Harlow's plans at the time of condemnation. A. I know you were. I say that Harlow at one time or another considered several alternative ways of developing the river, and I can't recall which one he was contemplating at the time this condemnation was brought.

If you will refer to the map in Exhibit 26 you will see that Harlow's scheme "A" contemplated a powerhouse just above the Conowingo bridge.

Now, it may have been that he was contemplating the development of that site first, in which event he may have intended to flood back about to the Pennsylvania line with that project and then, following that, to develop what is identified as Harlow Powerhouse "B", just north of the Pennsylvania line, and with that development utilize the remainder of the rights which Harlow-McGaw had formerly owned which lay within the State of Pennsylvania. As I said, I cannot remember on what scheme for the development of the river Harlow was working in 1906 when they undertook that condemnation proceeding.

I do know this: That McCall Ferry had intentions of developing the reaches of the river below the McCall Ferry [7811] site, and when they negotiated the railroad relocation agreement you probably recall they had a provision in there relating to the rundown, that is the grade, of the relocated Pennsylvania track below the McCall Ferry dam which provided that an unduly or unacceptably steep grade

be used in that rundown pending the time, and I think there was a time limit on it, when McCall Ferry would develop another project downstream from Holtwood and at which time they would eliminate the undesirable grade left after the completion of the Holtwood project.

• • •

By Mr. Hall:

Q. Why was McCall Ferry unwilling to sell the lands which Susquehanna Power Company sought to condemn? A. I don't know, but I should think there would be several reasons why. I imagine one reason was they wanted to get more money than Harlow-McGaw or Susquehanna Power Company had offered. As I said, they also had plans for developing the lower reaches of the river themselves, and there may have been any number of reasons why they didn't want to sell them. I should think those would be two of the reasons.

Q. Mr. Gunn, did Susquehanna Power Company succeed in condemning the land? [7812] A. That is rather difficult to say. They succeeded in the lower courts, I believe, and then I believe McCall Ferry appealed the case, and while the appeal was pending mutually satisfactory settlement was worked out by all the interests on the river, they being what we referred to as the Welch interest on the lower reaches of the Susquehanna River, above Havre de Grace, and the Susquehanna Electric Power interests lying north of the Welch interest, and the McCall Ferry interests lying, as we have described them, as having been acquired from Harlow-McGaw.

• • •

By Mr. Hall:

Q. As a result of the condemnation suit you know, do you not, that Bertron, Storrs and Griscom began secret negotiations to secure control of Susquehanna Power Company?

• • •

THE WITNESS: Yes, they began negotiations. Now as to the secret part of it, it was secret, I believe, so far as DeVictor, who represented Susquehanna Power Company, was concerned, but it was no secret so far as McCall Ferry Power Company was concerned.

By MR. HALL:

Q. In other words, you are saying—go ahead. [7813] A. The facts concerning that negotiation are set forth in considerable detail beginning at page 107 of Exhibit 26.

Q. In other words, you are saying Bertron, Storrs and Griscom in that transaction were acting in behalf of McCall Ferry Power Company, or acting in the interest of McCall Ferry Power Company? A. I don't know just how to describe it.

* * *

THE WITNESS: Bertron, Storrs and Griscom represented McCall Ferry interests in working out the agreement under which the three downriver interests, that is the Susquehanna Power Company, Susquehanna Electric Power Company, and McCall Ferry Power Company, were consolidated. However, it appears that in the acquisition of control of Susquehanna Electric Power Company, which Bertron, Storrs and Griscom had acquired, Bertron Storrs and Griscom appeared to have been acting in their own behalf because, respecting that transaction, they merely notified McCall Ferry Power Company that they had acquired that control.

All of the facts concerning that are set forth on page 107 of Exhibit 26.

[7814] By MR. HALL:

Q. While Bertron, Storrs and Griscom did not succeed in securing control of Susquehanna Power Company they did succeed in securing control of Susquehanna Electric Power Company, which was a competitor, for a lower river development. Right? A. Yes, sir.

Q. When was that control of Susquehanna Electric Power Company secured by Bertron, Storrs and Griscom? A. April, 1907.

Q. You have previously indicated there was a consolidation of interests insofar as McCall Ferry, Susquehanna Power Company, and Susquehanna Electric Power Company were concerned. Did that consolidation come about under the agreement which is part 67 of Exhibit 27? A. Yes, sir, and it was effected on February 20, 1908.

Q. In other words, the three lower interests agreed to pool their interests from that point on? A. Yes, to pool their holdings of water power and land rights.

Q. You are now referring to the land rights below Culley's Falls. Right? A. Yes, below the lower boundary of the Holtwood project.

Q. How was that pooling accomplished, Mr. Gunn? [7815] A. You mean how were the various interests decided?

Q. Yes. A. On the basis of the head in the Susquehanna River lying downstream from the downstream boundary of the Holtwood project and above Tidewater identified as being approximately at the mouth of Rock Run Creek on the map in Exhibit 26, and just below the island identified as Roberts Island.

[7816] The total amount of that head susceptible of development was 91 feet, and each party to the consolidation agreement was to receive an interest in the consolidation represented by the fraction in which the numerator would be the number of feet of head in the river that interest controlled divided by the total number of feet, which were 91 feet.

Q. You are referring to the number of feet controlled prior to the consolidation? A. Yes, at the time of the consolidation.

* * *

[7817] By Mr. Hall:

Q. Mr. Gunn, when was the consolidation agreement actually carried out? A. It was signed on February 20,

1908. I don't know whether I understand just what you mean by "carried out" any more than that.

Q. That is substantially what I meant. A. All right, sir.

* * *

[7852] Q. After adjusting for the properties transferred to Conowingo development and Safe Harbor, is the amount you are claiming for the Harlow-McGaw lands $285,555.40, which properties were retained by McCall Ferry?

* * *

THE WITNESS: I don't recognize the figure. I don't seem to be able to make it up. Could you give me the derivation of it?

By MR. HALL:

Q. Yes. As I understand it you are claiming $450,432 for the Harlow-McGaw lands? A. That is right.

Q. Plus $13,772.22 for the Pullen option, making a total of $464,204.22. If we subtract from that total of $464,000 a credit of $149,566.62 and the $29,082.80, giving a total deduction of $178,648.82, we get the resulting $285,555.40, right? A. Yes, if you make those mathematical computations you get that figure. However, I am not sure as to the propriety of including the Pullen option in there but I see no objection to it if you wish.

* * *

[7855] By MR. HALL:

Q. Mr. Gunn, was the purchase of the Pullen option necessary to the acquisition of the Harlow-McGaw purchase? A. No, I don't think it was. They were bought separately and as I recall the Harlow-McGaw purchase stood alone. However, it was desirable at the same time to buy the Pullen option in order to avoid an attempt on Pullen's part to exercise it.

Q. Did the Pullen option cover, among other things, the Harlow-McGaw properties? A. Yes, sir.

[7856] Q. In other words, it was necessary to acquire the Pullen option in order to get the Harlow-McGaw properties? A. You may draw that conclusion if you wish. The facts are all in the record.

* * *

[7858] Q. Isn't it a fact that you have included as cost of the McCall project the expenses incurred by the McCall Ferry in connection with the defense of the condemnation suit brought by Susquehanna Power Company? A. That may be correct, although I don't remember any identifiable expense. To the extent there was expense I suppose it is included somewhere.

* * *

[7859] By Mr. Hall:

Q. Were the expenses associated with the condemnation suit at least $20,000?

* * *

The Witness: I don't recall, Mr. Hall.

By Mr. Hall:

Q. Why should the McCall Ferry project be charged with the cost of the condemnation suit? A. Because the costs were incurred in defense of the company's ownership of its property.

Q. Ownership of what property, Mr. Gunn? A. The property sought to be condemned.

Q. Where was it located? A. In Maryland.

Q. It was not part of the project, was it, the Holtwood project? A. That is a little difficult to say, Mr. Hall. I would say that it was, and for this purpose and for this reason: Had McCall Ferry not defended their ownership of their property and defended themselves against the condemnation suits, they might have gotten a much less amount of money in the end to credit against the project cost and thus [7860] reduce the project cost. So it seems to me that that defense which acted to make a greater credit in reduc-

tion of the project cost ought certainly to be recognized as a part of the cost of the project.

* * *

By Mr. Hall:

Q. On the contrary they might have gotten much more. Isn't that so? A. No, I don't believe I can quite see under what circumstances they might have gotten more. At least I can't quite see it.

Q. The cost of the condemnation suit represents cost of protecting lands in Maryland; right? A. Yes, it represents that, but it also represents more than that.

Q. What is this "more" that you refer to? A. It represents the ultimate effect of that defense, brought about by a greater credit to the original cost of the McCall Ferry project, and thus had the effect of reducing the total original cost of the McCall Ferry project.

Q. I still don't understand how you conclude that it brought about a greater credit, that the condemnation proceedings brought about a greater credit. A. Well, I draw that conclusion from this fact, Mr. [7861] Hall: The Susquehanna Power Company was seeking to condemn and take the property of McCall Ferry Power Company in Maryland. McCall Ferry Power Company incurred these expenses in resisting the taking of their property and then ultimately reached an agreement with Susquehanna Power Company and the other lower development interests, out of which they received securities in exchange for their property. The securities were subsequently sold.

Now, it would certainly be my conclusion that if they had not resisted that condemnation suit they might have fared worse in the end than they did by resisting it, and that being a fact it seems to me that the cost of the condemnation suit resulted in there being a greater credit to McCall Ferry in reduction of McCall Ferry's original cost than there would have been otherwise.

Q. In other words, you have assumed that the supposition is a fact.

TRIAL EXAMINER: That is argument. He stated what he did.

By MR. HALL:

Q. Mr. Gunn, did the condemnation suit have any effect on market value? A. Market value of what and when?

Q. Of the properties involved in the credit.

MR. KING: May we have that question read, Mr. Examiner?

TRIAL EXAMINER: Yes.

[7862] (Question read).

THE WITNESS: I don't believe I understand, Mr. Hall. Are you asking me if the award in the condemnation suit was the market value? Is that your question?

By MR. HALL:

Q. No, Mr. Gunn. I have in mind whether the condemnation suit actually had any effect on the market value of the properties involved. A. I don't know whether it did or not.

Q. Mr. Gunn, did you know that at a directors meeting on July 14, 1908 of Susquehanna Power Company, Harlow certified that the value of the properties acquired under the consolidation agreement of February 20, 1908 was not less than 85 per cent of the par value of the $1,845,000 of bonds issued for the property?

THE WITNESS: Will you read that question, please?

(Question read).

MR. KING: I object to that question as being proper rebuttal and improper cross.

MR. HALL: I merely asked if he has knowledge of that fact, Mr. Examiner.

TRIAL EXAMINER: Objection is overruled.

THE WITNESS: Mr. Hall, you are referring in that question to the total amount of property that came into the consolidation and not just to the part that McCall turned in. [7863] Is that correct?

By MR. HALL:

Q. That is right, Mr. Gunn. A. No, sir, I didn't have any knowledge that Mr. Harlow made any such certification. I don't think it would have made any difference to me if I had had any knowledge.

Q. Did you consider Boyd Ehle's valuation of the property, of the lower river properties? A. Referring now to the properties which entered into the consolidation?

Q. Yes.

THE WITNESS: May I have the question?

(Question read).

By MR. HALL:

Q. Which he testified to in the Susquehanna Power Company condemnation suit? A. No, sir, I don't recall having seen his testimony in that case.

* * *

[7905] By MR. HALL:

Q. Mr. Gunn, as shown by Page 53 of Exhibit 26 you show the $1,221,000 to be made up of $750,000 cash and $471,000 claimed for the 18,840 shares of common stock of McCall Ferry.

Is it your position that the amount of $1,221,000 represents the actual reasonable cost of the Hutchinson lands at the time of their acquisition by McCall Ferry?

MR. KING: Did you say actual reasonable cost?

MR. HALL: Strike the word "actual." I meant "reasonable cost."

THE WITNESS: Yes, if we may make the assumption that the Federal Power Commission's requirements for determination of original cost are reasonable.

By Mr. Hall:

Q. Upon what evidence of cost of land to Hutchinson is that determination based? A. None so far as I know. That determination is based upon price that McCall Ferry Power Company paid Hutchinson for the lands, not upon the price that Hutchinson may have paid somebody else.

Q. In other words, the amount of $750,000 does not [7906] represent the cash paid by Hutchinson for the lands which he acquired and transferred to McCall Ferry? A. I can't be too sure of that, Mr. Hall, because all I know about that is what Hutchinson says in his affidavit, which is part 1 of Exhibit 27, and he does not state what was paid for lands separately from what was paid by him for engineering services, legal services, and other costs to him of bringing the development to the stage it was when he sold it to Harvey Fisk and Sons.

Q. In other words, you do not know the cost to Hutchinson of the lands he purchased and transferred to McCall Ferry? A. That is correct. I do know the price he paid for one of the acquisitions, that being the York Furnace acquisition, and the price he paid for that is a little bit hazy but we know it is not less than $201,000.

Q. Would you say the York Furnace lands constituted approximately half of the lands transferred by Hutchinson to McCall Ferry?

* * *

The Witness: I really don't know what the acreage would be but it doesn't seem to be of any significance to me.

The reason is this: When you buy lands for development for such as McCall Ferry, where the lands simply represent [7907] a certain shoreline distance, another part of them represents land standing approximately vertical at the side of a cliff, and some more represent level tablelands at the top of the cliff, it seems to me the acreage has no significance at all.

* * *

[7910] By Mr. Hall:

Q. How much of the $750,000 received by Hutchinson did he turn over to Beyer and Willson in payment for the York [7911] Furnace properties?

* * *

The Witness: As I recall he paid $155,000 to Beyer and Willson as the final payment in purchase of their property. He had, of course, previously paid other substantial amounts.

By Mr. Hall:

Q. What were the other substantial amounts? A. I believe somewhere around $45,500. He previously had paid at least $45,500. He may have paid more.

Q. Was that $45,000 paid for the right to extend the option on the York Furnace property? A. I don't recall all of it was paid for that. As a matter of fact, one of the early options, I believe the option of February 21, 1902, recited a series, or acknowledged a series of payments previously paid. I don't recall it stated specifically what those payments were for.

* * *

[7913] By Mr. Hall:

Q. Didn't McCall Ferry Power Company know, Mr. Gunn, that additional money would be required as soon as plans and activities were directed towards a larger dam than that of 50,000 horsepower with elevation 155 as contemplated in the Parson's report?

* * *

By Mr. Hall:

Q. I am referring, of course, to money in addition to that raised in the March, 1905 financing. A. They ultimately knew that more money would be required, but, as I recall it, they first hoped, based upon the lowest estimate, that Pennsylvania Railroad Company had given them for the railroad relocation, that they might be able to build a

higher development within the financing they had already done. However, when Pennsylvania Railroad revised the cost of relocating their line, and when elevation 165 was fixed as the height of the dam, and when the decision was made to excavate the tailrace, it became evident at some [7914] point along the progress of making those decisions that they would not have enough money.

Q. Are you saying—if they went forward and constructed the dam at 185 elevation with provision for 100,000 horsepower that they would not need more money than was raised in the March, 1905 financing? A. No, I am not saying that, Mr. Hall. I understood the point of your previous question to be what did McCall Ferry think they could do.

* * *

I mean without raising additional funds.

In other words, your most recent question, I understood to be, was what did I think they could have done with respect to building a project to 185 elevation without additional financing.

I am now explaining that I thought the question just previous to that one was what did McCall Ferry think they could do with respect to a higher project and with respect to the need or lack of need of additional financing.

[7915] By MR. HALL:

Q. Wouldn't any increase in capacity and elevation require more funds than were provided for in the March, 1905 financing? A. I don't think that necessarily follows, Mr. Hall. For example, in financing of that sort, and I suppose in the McCall Ferry financing, the estimates were supposed to be a liberal amount. It might very well be that more favorable construction conditions were encountered than which had been the basis for the estimate, and as a consequence it might be possible to build a larger development for the same amount of money which had been raised.

Q. It is also true that less favorable conditions could have been encountered; right? A. Yes, quite so.

Q. Isn't it a fact that less favorable conditions were actually encountered? A. Less favorable in what respect.

Q. Than they had originally contemplated? A. Less favorable in what respect?

Q. With respect to expenditures. A. Well, as a matter of fact they didn't ultimately build the project they contemplated in March of 1905, and the cost was different.

Q. Were not the McCall Ferry plans and activities [7916] directed toward the construction of 185 foot elevation dam with provision for 100,000 horsepower over a period of approximately a year?

THE WITNESS: May I have the question, please?

(Question read).

THE WITNESS: That is substantially correct.

The recommendation of the advisory engineers to build a dam to elevation 185 was dated August 7, 1905, and the decision to fix the crest at elevation 165 was dated June 19, 1906.

By MR. HALL:

Q. Prior to August 7, 1905 they, of course, were engaged in preparing whatever plans and specifications were necessary in order to ask for bids. Right? A. The August 7, 1905 date was the date upon which McCall Ferry Power Company board of advisory engineers recommended to the company that the dam be built to 185. Now, it was August 11, when bids were called for, August 11, 1905, when bids were called for, for the construction of a dam at 185.

As I recall it, the only particulars that had to be known were the estimated quantities, and those could be approximated with sufficient accuracy for taking bids without any particular amount of detailed plans being available.

Q. What was the nature—— [7917] A. There was undoubtedly engineering work done prior to August 7, when the advisory engineers recommended elevation 185, and a

very substantial amount of work to make the comparative estimates necessary to take into consideration in selecting a height. However, the decision actually to build to elevation 185, that is conclusions upon which the recommendation were based, I take it were reached on August 7, 1905.

Q. Do you know the details of the nature and extent of the plans and specifications made upon which the bids were called? A. No, I do not. I don't know what were the details of the plans or specifications, except as those details are set forth in the specifications upon which the bid was taken.

Q. Over what period of time were those specifications extended? A. I don't know.

Q. Didn't McCall Ferry know that additional funds over those already raised would be required for a 185 foot dam?

* * *

THE WITNESS: Yes, I think that is undoubtedly true.

By MR. HALL:

Q. Why didn't McCall Ferry arrange for additional [7918] funds as soon as it was decided to build a project of greater capacity? A. I don't know what may have been McCall Ferry's reason for not doing that other than the possibility that it may have been impossible to go out and raise additional funds after not having employed the funds they already had. It may have been undesirable to do so, and, as events proved, it seems to me it was lucky they didn't because if they had gone out and raised funds to build the project to elevation 185, and then found it necessary to cut it back to 165, they would have had a bunch of extra money on their hands and nothing to do with it.

Q. The fact is that no attempt was made to obtain additional financing in 1905 or 1906. Right?

* * *

THE WITNESS: I don't recall the details of that, Mr. Hall. It seems to me that some consideration was given to

the possibility of selling the roughly two million dollars treasury bonds that McCall still had at some future date. I don't recall that any attempt was made to sell them at the date they were first considering elevation 185 for the dam.

By Mr. Hall:

Q. Mr. Gunn, isn't it a fact that the possibility of selling the treasury bonds was not considered until the [7919] summer of 1907?

* * *

The Witness: No, I don't think that is correct, Mr. Hall, because McCall Ferry knew, when the dam elevation was fixed at 165, and the decision to increase the capacity of the plant by improving the tailrace was made, that additional financing would be needed. They did have the treasury bonds available, and I don't know of any reason for assuming that they did not then consider that as a means by which they would raise the money.

The actual attempt to raise money through the disposal of those bonds, as I recall, was during 1907.

* * *

By Mr. Hall:

Q. And no attempt had been made prior to that time to dispose of those bonds?

* * *

The Witness: I don't know whether there had been or not. I don't have any evidence, as I recall, of a specific attempt being made to sell those bonds, but the mortgage provision, which is set forth on page 44 of Exhibit 26, seems to me to indicate that that was the appropriate manner, that the sale of those treasury bonds was the appropriate manner, [7920] which McCall Ferry Power had open to them to obtain additional financing, and it is largely for that reason that I am unable to say it had not previously been considered for sale as a means of getting the necessary financing.

By Mr. Hall:

Q. Isn't it a fact it was not until June 5, 1907, that the executive committee of McCall Ferry authorized the sale of the bonds remaining in the treasury?

* * *

The Witness: Yes, sir, I think that is a fact, Mr. Hall. I don't know whether or not that represents their first consideration of the subject.

By Mr. Hall:

Q. Do you know of any prior consideration by the executive committee? A. Nothing other than the evidence we have that the McCall Ferry Power Company had knowledge of the fact they didn't have enough money to complete the project.

Q. By May of 1907, the company calculated that its cash would be exhausted in the fall of that year. Isn't that so? A. I think that is correct.

[7921] Q. But, notwithstanding the imminent exhaustion of its cash resources the McCall Ferry Power Company did not provide for additional funds for the project. Right? A. I think it is a fact that they did not provide them, and I think it is also a fact they tried and failed to provide them.

Q. All right. A. It is my understanding that the thing that got McCall Ferry Power in trouble was the financial panic which prevailed in the latter part of 1907, and every attempt they made to get additional money, including attempts, I believe, to get it in France and maybe in England, met with failure.

Q. What evidence do you have to support your statement that the McCall Ferry tried and failed to arrange for additional funds?

* * *

The Witness: I think the evidence is largely in the form of correspondence, some of which was obtained from Lee, Higginson and Company's files and some of which was in McCall Ferry's files, and I believe some more may have

been in Coudert Brothers' files. It related to attempts of various people to raise money, I believe in May and June of 1907. I am sure one of the attempts related to raising money in [7922] France. I believe that attempt was made by either Bertron or Lee, Higginson.

By Mr. Hall:

Q. Was the attempt to raise money in France made in 1908?

* * *

The Witness: There may have been an attempt made in 1908, but it is my recollection that there was certainly an attempt made in 1907.

By Mr. Hall:

Q. Isn't it a fact that discussions took place in the summer of 1907 for additional financing, but that these discussions never were consummated or carried out? A. That is rather difficult to answer. I think there were discussions, and I think they never succeeded in raising the money. But I also think that in addition to discussions they made every effort possible to raise the money and save the company from bankruptcy and failed to do it. I think perhaps all of those things are true.

Q. The subsequent suspension of construction by McCall Ferry was necessary because adequate funds had not been provided for the completion of the project. Isn't that so? A. Yes, up to that time they had not obtained adequate funds, and the reason why they had not was because this [7923] attempt to sell the additional bonds in 1907 had failed.

Q. Mr. Gunn, will you refer to page 72 of Exhibit 26? A. I have it before me.

Q. The last complete paragraph of that page? A. Yes, sir.

Q. What did you mean when you there stated, "Various plans were considered for selling the treasury bonds,

but apparently actual underwriting was to be delayed until available cash was exhausted."?

* * * *

THE WITNESS: I meant just what we have been discussing, that previous to the exhaustion of funds McCall Ferry Power Company had considered the plans I have just mentioned for raising funds, had I believe, tried, had failed, and the available funds became exhausted.

Is it the words "To be", Mr. Hall, that are giving you the trouble?

By MR. HALL:

Q. Yes. A. I would say that is perhaps a peculiarity of speech and that it might have been clearer if the words "to be" had been left out and it just stated "was delayed", because [7924] that is the fact. It is not my understanding that it was delayed by any deliberate plan to throw the company into bankruptcy.

Q. Mr. Gunn, do you know of any actual offerings made to the public of McCall Ferry bonds in the summer of 1907? A. What do you mean by offerings made to the public, Mr. Hall?

As I understand it, that was not the way they did financing in those days.

Q. Were offerings made to the group which McCall Ferry considered as financial agents?

I might rephrase the question: Do you know of any actual offerings by Lee, Higginson and Company, Harvey Fisk and Sons, or Bertron Storrs and Griscom to their customers of McCall Ferry bonds which were rejected by the customers? A. I will have to answer it this way: It is my recollection that some time in June of 1907 an offer was made, at least consideration was given, to previous subscribers to McCall Ferry bonds or to the bankers, that they purchase enough of McCall Ferry bonds to insure that McCall Ferry would have enough money to tide them over the end of 1907 when it was thought that additional bonds

could be sold. That is one of the facts that led me to the conclusion that because of the financial conditions in 1907 it was impossible at that time for McCall to raise money, and these people [7925] interested in the project recognized the impossibility, and were endeavoring to work out that temporary expedient to tide over McCall Ferry.

Q. Mr. Gunn, I believe at page 68 of Exhibit 27, the last sentences in paragraph 7 on that page, Mr. Lee states,

> "In the summer of 1907 it was decided to sell another half million of bonds, and it was suggested that my firm handle $100,000 par value of them. Before they were placed the financial market became unfavorable and it was followed by a panic in the fall of 1907."

A. I have read it.

Q. Do you agree with that statement? A. Yes, I agree that the statement appears on page 68 of Exhibit 27, and Mr. Lee is there referring to the effort on the part of McCall Ferry that I have just been describing.

Q. Mr. Gunn, I show you a letter dated April 20, 1908, which Mr. Hutchinson wrote to H. F. Dimock, Esquire, president of McCall Ferry Power Company.

Are you familiar with that letter? A. Shall I read it?

Q. No, just generally. A. I notice the letter came from the company's files and I undoubtedly was familiar with it at one time. It appears it came from company file No. 3951-3. That being the case [7926] I was undoubtedly familiar with it at one time.

* * *

[7928] (Thereupon, the document referred to was marked Exhibit No. 175 for Identification).

* * *

By Mr. Hall:

Q. Mr. Gunn, I believe Mr. Hutchinson in his affidavit, as shown at the bottom of page 8 of Exhibit 27, states

> "it was decided to increase the capacity from 50,000 h.p. to approximately 100,000 h.p., which required more

financing than had been originally provided and affiant so reported. Due to delays in arranging for additional finances, the money as originally provided became exhausted."

Does that agree with the facts as you found them to be during your original cost study? A. Partially but not completely. If you will add the next sentence other than the one you quoted I think then it would be completely.

The next sentence reads:

"This occurred at a time when the market had become [7929] unfavorable for the raising of money and resulted in a receivership and reorganization of the corporation."

With that addition it seems to me to be a fair statement of the situation.

Q. Did the financial panic of 1907 occur before or after the failure of the Knickerbocker Trust Company? A. I really don't know, but it has always been my understanding that it occurred coincident with. That understanding on my part comes from, I believe, some information I got out of an international monetary commission investigation of the panic of 1907 and out of various economic text books on economic history. I have no firsthand knowledge myself, of course.

Q. In other words, the first evidence of the 1907 panic was the failure of the Knickerbocker Trust Company, right? A. That I can't say. I don't know whether or not it was.

Q. McCall Ferry had no funds, no current funds on deposit with Knickerbocker Trust Company at that time. Isn't that so? A. What do you mean by "current funds"?

Q. Checking account funds.

* * *

[7930] THE WITNESS: I will have to answer that this way: At that time McCall Ferry had on deposit with Knicker-

bocker Trust Company $250,000 as an indemnity fund under the railroad relocation agreement, and there was earned interest of something like—no, that is wrong. There may have been some interest earnings on that amount available to them at the time, and in addition I understand there were $8500 on deposit with Knickerbocker Trust Company as a bond in connection with some lawsuit. I don't recall the details of that latter item.

By Mr. Hall:

Q. In view of the fact that both of those amounts were pledged as indemnities, neither of them were available for use for construction purposes by McCall Ferry.. Is that right? A. I believe that is right.

Q. McCall Ferry had made no request for an additional advance under the loan agreement prior to the closing of the bank under the Knickerbocker Trust Company loan agreement? A. I don't believe I understand what you are referring to there, Mr. Hall. May I have the question, please?

(Question read).

By Mr. Hall:

Q. I mean since the date of their last previous request. [7931] A. I think that question answers itself, Mr. Hall. Obviously they had not made any request since the date of their last previous request.

Q. Do you know when that last previous request was made? A. No, sir, I don't offhand.

Q. Do you know, Mr. Gunn, that subsequent to the request made on June 13, 1907, which was honored in the amount of $637,200, that no other request was made for an advance under the loan agreement with Knickerbocker Trust Company prior to the failure of the company? A. It is my understanding that that is true.

* * *

Trial Examiner: What could the subsequent request have amounted to?

THE WITNESS: I understand it could have amounted to some $300,000, and so far as I know the reason they didn't make a request prior to the failure of Knickerbocker Trust Company is probably because they had not spent all of the $637,000 that they had requested on June 13.

I have no reason for supposing that that is not the reason.

By MR. HALL:

Q. Isn't the balance due on the loan $345,000? [7932]
A. I believe that is precisely it, $345,000.

* * *

[7933] By MR. HALL:

Q. Just before the noon recess, Mr. Gunn, we had referred to the call for a loan from Knickerbocker Trust Company on June 13, 1907. Did you wish to clarify that any further? A. Yes, sir. It is correct that there was a call upon Knickerbocker Trust Company under the loan agreement on June 13, 1907, for $637,200.

It is also true, as I said previously, that on January 8, 1908, there was a balance obtained by McCall Ferry of $345,643.80.

Between those two dates, and on November 1, 1907, Knickerbocker Trust Company, on the account of interest due them on the loan arrangement, charged an amount against the advances due McCall Ferry of $208,752.20. The charging of that amount for interest by Knickerbocker Trust Company reduced the amount finally due McCall Ferry Power Company to [7934] $345,000 instead of $552,000 which it would have been other than for the interest transaction.

Q. No request was made to Knickerbocker Trust Company for an additional advance under the loan agreement for construction purposes until January 8, 1908. Right? A. I don't believe that is correct, Mr. Hall, because as I recall it it was necessary for McCall Ferry Power Com-

pany to request the advance they received on January 8, 1908, and the request had to be referred to the receivers of Knickerbocker Trust Company, and in return there was required some sort of court approval or some sort of court action of some kind. That having been the chain of events it seems to me obvious that the request must have been made some time substantially prior to January 8, 1908.

Q. Do you know when the request was actually made?

• • •

THE WITNESS: Information in our files in the form of correspondence, I believe, indicates the request was first made on October 25, renewed on November 1, and renewed again on November 5, all in 1907.

TRIAL EXAMINER: What was that amount?

THE WITNESS: The request for the remainder, which was $345,000 after it had been reduced by the interest due Knickerbocker Trust Company under the loan arrangement.

[7935] MR. HALL: May we have marked for identification as Exhibit 176 a letter dated December 10, 1907, written by Henry C. Ide, Receiver for Knickerbocker Trust Company, and addressed to H. F. Dimock, president of McCall Ferry Power Company, 60 Wall Street, New York?

This was copied from McCall Ferry Power Company File No. 31.

• • •

(Thereupon, the document referred to was marked Exhibit No. 176 for Identification.)

By MR. HALL:

Q. Was that one of the letters you considered in connection with your original cost study, Mr. Gunn?

• • •

THE WITNESS: I don't recall having specifically considered that letter, Mr. Hall, but it at least was not the

letter to which I had reference when I mentioned, several questions back, the dates on which requests for the final advance from Knickerbocker Trust Company had been made.

* * *

[7936] Q. Didn't McCall Ferry—the McCall Ferry call of October 25, 1907, refer to the $208,756.20 interest which was to be charged to the McCall loan account as of November 1, 1907?

THE WITNESS: May I have that question, please?

(Question read.)

THE WITNESS: That is not my recollection, Mr. Hall. The call may have referred to that amount but it is my recollection that it also referred to this final amount due under the loan arrangement, or at least it is my understanding that it did refer to the final amount due, and I don't know whether it referred to the interest which Knickerbocker Trust Company charged off against McCall Ferry's account or not.

By MR. HALL:

Q. On January 8, 1908, McCall Ferry received the balance of the loan amounting to $345,000. Right? A. Yes, sir.

Q. The available funds at that time were totally inadequate for the completion of the project. Isn't that so? A. They were inadequate.

Q. For the completion? A. Yes, for the completion of the project.

[7937] Q. As a matter of fact, they were not even sufficient to meet the liabilities already contracted for for machinery. Isn't that so? A. I don't have the amount of those contracts before me but I believe that would be the fact.

Q. Regardless of the failure of the Knickerbocker Trust Company, the project would have had to suspend

work due to the lack of funds. Isn't that so? A. I don't think you can quite draw that conclusion, Mr. Hall.

Q. Why not? A. For the reason, as I understand it, the failure of Knickerbocker Trust Company was a part of the general financial panic at that time, prevailing at that time, and a consequence in part of the financial panic. If it had not been for the monetary situation there probably would have been neither a failure of Knickerbocker Trust Company nor McCall Ferry Power Company.

* * *

[7938] By Mr. Hall:

Q. Without additional financing isn't it a fact that McCall Ferry Power Company would have had to suspend work within a few months after November 1, 1907? A. Yes, sir, I think that is correct.

* * *

By Mr. Hall:

Q. At the time the project closed down, even the sale of the entire balance of treasury funds would have been insufficient to complete the project. Isn't that so? A. Yes, I believe that is correct. However, I don't see that McCall Ferry's ability to raise money was at all limited to the million-and-a-half-or-so-dollars that [7939] remained out of the $10,000,000 authorized. It seems to me it would have been necessary only that they authorize some more, sell those, and there would have been enough money.

* * *

[7941] By Mr. Hall:

Q. Mr. Gunn, isn't it true that work on the water-wheels and electrical equipment was stopped a few days prior to November 1, 1907? A. I believe it is correct, Mr. Hall, that at about that date McCall Ferry Power Company notified I. P. Morris to suspend the manufacture of the water-wheels but I don't recall that the company's records contained any evidence that General Electric Com-

pany ever was notified to suspend manufacture of the generators. It is a fact that they did suspend manufacture, and it may very well be that because of Mr. Coffin's connection with the company, that is with McCall Ferry Power Company and with General Electric Company, that there was no need for any notice.

Q. You say it may very well be that General Electric did suspend work. You mean prior to November 1, 1907? A. No, I don't mean prior to November 1, 1907. I mean ultimately they did suspend work and I don't know when because the company's records, as I recall it, do not contain information showing the date on which they were given notice to suspend work.

Q. Mr. Coffin being a member of the executive committee of McCall Ferry would be familiar with the decision taken to suspend construction, right? A. Yes. I think it very well may be that that accounts [7942] for the fact we don't have any formal notice that McCall Ferry Power Company didn't leave any record of formal notice given to General Electric Company.

Q. What construction activities were carried on after November 1, 1907? A. During the month of November concrete to the extent of some 600 yards was poured in the power house superstructure, and probably some in the connecting bulkhead between the dam abutment and the power house. There was approximately 130 cubic yards of concrete placed in the skimmer wall.

Then in April of 1908 and continuing through October of 1908 there was a very extensive amount of tailrace excavation which was necessary in order to gain the additional 20,000 horsepower we have previously spoken of, and during that same period the deflection wall, which is in reality a wing dam extending from the main dam to Piney Island, the function of which is to separate the main channel of the river from the tailrace of the Holtwood plant and thus maintain the maximum net head on the

Holtwood plant, that deflection wall was built from elevation 116 to approximately elevation 128 for the northern part, that is the heavy section near the abutment of the main dam, and the southern end, that is the end abutting on Piney Island, was completed to its full height of elevation 151.

Q. Completed when, Mr. Gunn? [7943] A. During the period of months that we are now describing, which is from April, 1908 to October, 1908.

During that same period the concrete abutment at the end of the forebay ramp was constructed. There was work done on the excavation for the fishways and for the approach tunnel at the power house.

In addition there were substantial shipments of sand from the Charleston sandpit and crushed stone from the Conowingo Quarry during August and September of 1908, and that was for use in making the concrete for construction of the deflection wall.

From November, 1907, through October, 1908, Hugh L. Cooper, Sanderson and Porter, General Electric, and to a lesser extent Trowbridge and Ackerman were engaged on completion of the drawings relating mostly to power house and equipment.

The coordination of this drawing work between the different organizations was handled by J. W. Young who was connected with the McCall Ferry Power Company.

During August and September of 1908 final drawings were being approved for construction. During October, 1908, it was a period during which the final details on the drawings were cleaned up, I believe that work terminated.

* * *

[7944] By Mr. Hall:

Q. During the year 1907, and prior to November 1, 1907, didn't the number of men engaged in construction work range from 1,500 to 2,000? A. It may have, Mr. Hall. As I said, I don't have that. The information I

have is not in terms of number of [7945] personnel but dollars per month of personnel payroll. It is a fact that the information I have with respect to the monthly payrolls would indicate that if the maximum number of men during 1907 was 2,000, then the minimum number of men would have been, I believe, somewhere around 1,500.

Q. As shown by the last sentence in the first complete paragraph on page 73 of Exhibit 26, the construction force was reduced to approximately 100 men on November 1, 1907. Is that right?

* * * *

THE WITNESS: Yes, it is so stated on page 73 of Exhibit 26.

[7946] Q. The suspension of work was in accordance with the resolution of the McCall Ferry executive committee held on October 30, 1907, which ordered the work suspended in accordance with schedule "A" of a report to Dimock, signed by Kirkland and approved by Cooper?

* * * *

THE WITNESS: I believe that is correct.

By MR. HALL:

Q. Didn't the plan of the executive committee provide for a complete cessation of all construction work? A. When.

Q. November 1, 1907? A. It is my recollection that work would be curtailed as fast as it could be consistent with the protection of the company.

MR. HALL: Mr. Examiner, may we have marked for identification as Exhibit No. 177, the report to which I referred a moment ago as having been signed by Kirkland and approved by Mr. Hutchinson, which report is dated October 30, 1907, and was copied from the minutes of the executive committee of McCall Ferry Company?

* * *

[7947] (Thereupon, the document referred to was marked Exhibit No. 177 for Identification.)

• • •

MR. HALL: Before proceeding further, Mr. Examiner, may we also have marked for identification as Exhibit No. 178, a letter written by Mr. H. A. Hand, of I. P. Morris & Company to Mr. Kirkland, vice-president and general manager of McCall Ferry Power Company? The letter is dated January 11, 1908, and was copied from the minutes of the executive committee of McCall Ferry Power Company held on January 17, 1908.

• • •

(Thereupon, the document referred to was marked Exhibit No. 178 for Identification.)

• • •

[7948] By MR. HALL:

Q. Provision was made, Mr. Gunn, for the retention of certain salaried employees and for the costs to clean up and put away the plant at McCall Ferry in order to preserve it from damage during indefinite suspension of the work? A. Yes, I believe that was the plan, or at least one of the plans which was before the executive committee. If you refer to Exhibit No. 177 which you have just introduced you will find that Hutchinson there strongly recommended two plans—one which involved immediate shutdown as quickly as possible, and another which would retain a skeleton organization sufficient to permit McCall Ferry to resume work as quickly as possible, and that it was the latter plan which Hutchinson strongly recommended. I don't recall which one of these plans McCall Ferry executive committee actually adopted, but the facts are that beginning in November the construction [7949] payroll of McCall Ferry Power Company reduced from

$9,000 in the month of November down to a little more than $2,000 in the month of March. Then some time during that period McCall Ferry Power Company had succeeded in raising some more money, and beginning in March the construction payroll increased to a maximum in July and August of about $33,000 a month. So if they did adopt a plan in November to indefinitely shut down the project, there was a change in the plans some time prior to March, because in March they rapidly started resuming work and on an extensive scale.

Q. Mr. Gunn, you referred to $9,000 as representing the payroll for the month of November. Isn't it a fact that that payroll for that month was $60,000? I am speaking now of total payroll of McCall Ferry Power Company.

* * *

* * * Perhaps I am wrong about that, Mr. Gunn. The $60,000 refers to the payroll paid in November for the month of October. A. I don't have that figure before me but it sounds as though that might be the right amount.

Yes, the records I have indicate that the field payroll was 60-some odd thousand dollars for that month.

Q. Some of the supervisory and clerical employees of [7950] McCall Ferry were retained at half pay after November 1, isn't that so? A. I believe that is correct. There were some abnormal pay arrangements made. I don't know whether it was half pay or something else.

* * *

MR. HALL: Mr. Examiner, may we have marked for identification as Exhibit No. 179, a letter dated November 26, 1907, written by J. P. Allen, purchasing agent for McCall Ferry Company, to J. W. Kirkland, vice-president of McCall Ferry Power Company?

The letter was copied from file No. 3951-2, and it is dated November 26, 1907.

In connection with this letter, Mr. Examiner, I might say that paragraph 1 refers to a statement show-

ing the number of men at McCall Ferry employed each day during the month up to the 22d of November, 1907.

The statement which I desire to include with Exhibit 179 was not contained in the same file with the letter, but it was attached to McCall Ferry Voucher No. 195 dated December 1, 1907.

[7951] It definitely appears that this statement referred to in paragraph 1 of the letter is the same statement which I have attached to the letter and which was attached to McCall Ferry voucher No. 195.

TRIAL EXAMINER: The letter dated November 26, 1907, will be marked Exhibit 179 for Identification.

(The document referred to was marked Exhibit No. 179 for Identification.)

TRIAL EXAMINER: The statement of men employed —referred to by counsel—will be marked Exhibit 180 for identification.

(Thereupon, the document referred to was marked Exhibit No. 180 for Identification.)

* * *

[7952] By MR. HALL:

Q. Mr. Gunn, is the 730 yards of concrete referred to in the second paragraph of Exhibit 179 the same 730 yards of concrete to which you referred a few moments ago? A. Yes, sir, it appears to be. That was one source of my information as to the amount of concrete.

Q. What construction work was done during the month of December, 1907, and January, 1908? [7953] A. I don't have before me complete details of what may have been done but from what information I do have it indicates that during the months of December and January forms were stripped from the skimmerwall, and during the month of December the east protection cribs, which are a part of the skimmer wall, were filled, construction locomotives and

cars were repaired, derricks no longer needed where they were then located were taken down, the debris of construction was cleared away on the York County side of the river, and the boilers of some of the construction equipment was painted.

Q. In other words, during those two months the work consisted of cleanup and maintenance work? A. No, I wouldn't say so.

Q. What work would not fall in that category? A. It consisted of cleanup work necessary to any construction operation, and the work to which you have referred as maintenance is normally a continuing part of the work essential to the continuation of a construction project. In other words, every so often construction equipment must be painted. McCall Ferry construction equipment was painted at this particular time.

Q. But they don't shut down the job to paint the equipment? A. Oh, no. For example, at Safe Harbor we didn't shut [7954] down the job to paint the equipment. We waited until the job was finished and then charged it to cost of construction of the project.

• • •

[7955] By MR. HALL:

Q. Mr. Gunn, I show you a letter dated January 18, 1908, written by C. A. Coffin to Cary T. Hutchinson, McCall Ferry Power Company, 60 Wall Street, New York City. Are you familiar with that letter? The letter was copied from Company file number 35.

• • •

TRIAL EXAMINER: The reporter will incorporate the letter into the record as if read.

MR. HALL: The letter reads as follows:

"McCall Ferry Power Co.
"(Copied from Co. File #35)

"New York Office, 44 Broad St.
"January 18th, 1908.

[7956] "Mr. Cary T. Hutchinson,
"McCall Ferry Power Company,
"#60 Wall St., City.

"My Dear Dr. Hutchinson:—

"Will you please send by bearer figures covering expenditures on the McCall Ferry Power Company's property for November and December, and the weekly expenditures since January 1st, with an estimate of what will need to be spent from now on?

"In view of the long time which has elapsed since active work at McCall's Ferry was suspended, it would seem that things had reached a point where only two or three caretakers are necessary. Should not the foreman in charge be instructed to discharge all the laborers except just enough to serve as watchmen?

"Very truly yours,

"(S.) C. A. COFFIN,

B."

By MR. HALL:

Q. Are you familiar with that letter, Mr. Gunn? A. I believe I recall having seen it.

Q. That was one of the letters you considered during your original cost study? A. Yes, sir, I think that is probably correct.

Q. On Page 74 of Exhibit 26, Mr. Gunn, after mentioning [7957] the receipt of funds from Knickerbocker Trust Company you state, "With this money construction proceeded and transmission line rights of way were acquired."

When you say that construction proceeded, just what construction work are you referring to? A. Construction work that I described in an answer to a previous question. That is excavation of a tailrace, construction of the deflection wall, and completion of drawings, the latter by Cooper, Sanderson and Porter, General Electric Company, and Trowbridge and Ackerman during the months of April to October, 1908. There were some minor items of work but those were the major ones. The work on the drawings by the various firms I mentioned continued from November 1, 1907 through October, 1908.

Q. Mr. Gunn, didn't the executive committee of McCall Ferry on January 29, 1908, authorize the discharge of the entire force of McCall Ferry and Conowingo Quarry and the engaging of watchmen to protect the project?

* * * *

[7958] THE WITNESS: I don't recall. They may have.

By MR. HALL:

Q. I show you a letter dated January 27, 1908, written by J. W. Kirkland, vice-president of McCall Ferry Power Company to C. A. Coffin, General Electric Company, 44 Broad Street, New York City. This letter was copied from Company file No. 25.

* * *

MR. HALL: The purpose of this letter is to show the activities being carried on prior to the date of the letter, January 27, 1908, and subsequent to November 1, 1907.

* * *

TRIAL EXAMINER: The reporter will copy the letter into the transcript as though read.

(The letter referred to above is as follows):

McCall Ferry Power Co.,

(Copied from Co. File #35)

"January 27, 1908

[7959] "C. A. Coffin, Esq.,
General Electric Co., 44 Broad St., N. Y. City.

"Dear Mr. Coffin:—

"Answering your letter of January 21st., I enclose herewith a list of the staff and foremen at McCall Ferry and their rates of pay. In addition to these men of the foremen class there are about fifty laborers on full time at an average rate of about $0.22 per hour.

"Of the $1400. estimated weekly expenditure, $1350. is for payrolls and $50. is for expenses.

"These foremen and workmen have been usefully employed in cleaning up and repairing machinery which was worn or defective, and in taking up tracks and timber which were liable to damage and destruction by floods or neglect. The expenses incurred have been those which Cooper estimated as necessary to make the plant safe for an indefinite suspension, and you may recall that he stated this necessary expenditure to be $20,000. Instead of doing all that work by a big force in November and part of December, it has been done by a small force with the idea of conserving for as long a time as possible the working organization, so that the work could be promptly and economically resumed.

"Yours very truly,
Vice-President."

Enc. JWK/G.

* * *

[7960] By Mr. Hall:

Q. Do you know that the executive committee of McCall [7961] Ferry on February 5, 1908 authorized the retention of Cooper's force at McCall Ferry at half pay? A. At about that date some such arrangement was made for the retention of a certain part of Cooper's personnel, but I don't recall whether it was on February 5, 1908 or not.

* * *

Q. Wasn't the work done in the spring and summer of 1908 limited in extent and conditioned on the amount of money available at that time? A. Yes, I believe it was limited to some extent to the amount of money available.

Q. Do you know how much money then was available?

* * *

The Witness: Early in 1908 there became available to McCall Ferry Power Company the balance of the loan from Receivers of Knickerbocker Trust Company, which amounted to $345,000.

Later on in 1908 an arrangement was completed under which McCall Ferry Power Company borrowed $400,000 from several of the people, several of the firms who had been principally interested in the enterprise.

By Mr. Hall:

Q. Isn't it a fact that the $400,000 loan was not made [7962] until October, 1908? A. Yes, sir, I believe that is correct.

Q. At that time the work on the tailrace excavation had been completed. Right?

* * *

The Witness: No, I don't think that is correct, Mr. Hall.

By Mr. Hall:

Q. When was the $400,000 loan obtained? A. According to the information that I have before me it was early in October of 1908.

TRIAL EXAMINER: October 28?

THE WITNESS: That is correct. It was October 28, 1908.

It is also true that by the end of October, the work on the tailrace was very nearly complete because, in the month of September, the field payroll which at that time was substantially devoted to the tailrace excavation had been $27,400; during the month of October it was $19,800; during November, 1908, the payroll was $31,000, and then during December it dropped to $1100, and from there on it ranged just under $1,000.

By MR. HALL:

Q. Isn't it a fact Hutchinson reported to the executive committee of McCall Ferry on October 20, 1908, that work on Culley's cut was completed on October 15, 1908?

[7963] A. I really don't recall whether he did or not.

Q. Wasn't the tailrace work the same work which was supposed to have been completed by H. S. Kerbaugh, Inc., before January 1, 1907? A. Yes, it was the same work for which Kerbaugh had a contract, but due to the abnormal flow in the river during the period of time in which Kerbaugh would normally have done the greater part of this work, the dam was flooded and with it all of his equipment and there were several months when he could do no work at all. Then McCall Ferry became dissatisfied with the progress that Kerbaugh was making and took the contract away from Kerbaugh and arranged for Kerbaugh to turn his equipment over to Cooper, for Cooper to take over the tailrace excavation.

Q. Did McCall Ferry work on that excavation to some extent from April to July of 1907?

* * *

[7964] A. I have referred to Page 67 of Exhibit 26, the last full paragraph on that page, which states the substance of your question.

Q. Before the suspension of work on November 1, 1907, it had been planned to complete the excavation of the tailrace during the fall of 1907 while the rest of the construction was proceeding. Isn't that so? A. Yes, I believe that had been the plan. It was highly desirable that that be done.

* * *

[7965] By Mr. Hall:

Q. Look at Page 301 of Exhibit 27, Mr. Gunn. A. I don't believe you can quite make that broad a statement, Mr. Hall. It is true that in the early fall of 1907 the York County Coffer Dam was closed, and it was therefore necessary to pass the flow of the river through the tailrace.

It appears from Mr. Cary T. Hutchinson's letter of November 26, 1907, to Mr. Henry F. Dimock, President of McCall Ferry Power Company in the second paragraph that they expected to proceed with the work in the tailrace cut during the month of December and perhaps as far into the spring as the flow of the river would permit them.

However, I don't take that to mean that Hutchinson or anybody else expected that during that time and in that limited season they could complete the tailrace work.

* * *

[7966] The Witness: I think perhaps we had better add that the letter of November 26th from Cary T. Hutchinson to Henry F. Dimock appears beginning on Page 301 of Exhibit 27.

By Mr. Hall:

Q. Construction of the powerhouse itself and the main dam was not re-opened in 1908, was it? A. Not to any serious extent. However, during 1908 design work on drawings was continued.

Q. No steps were taken in 1908 to have the machinery contractors start work anew on the fabrication of the project machinery, right? A. Not so far as I know.

Q. The work on the tailrace excavation was authorized on April 20, 1908, by the executive committee of McCall Ferry, was it not? A. It was authorized, I presume, at some date near that. I don't recall the specific date. In any event, shortly after that date it did start.

Q. Some time would be necessary, however, to prepare for re-establishing the plant so actual work in connection with the tailrace would not begin until several weeks thereafter, right?

* * *

THE WITNESS: No, I don't think that necessarily follows [7967] at all.

By MR. HALL:

Q. Hadn't the construction plant been more or less put away at the time of the action of the executive committee? A. No, it had simply been left in the storage area and protected. There had been no construction plant in the tailrace prior to that date, so the operation on resumption of work in the tailrace would obviously have been necessary no matter when they started it, and obviously would be an appropriate part of the cost in the tailrace.

Q. But the preparation for the tailrace re-opening would have gone on while the other construction was in progress. Isn't that so? A. I don't believe I understand that question.

Q. Under normal course of events. A. You mean if there had not been a cessation of work?

Q. Yes. A. That preparation of the equipment and moving of the equipment into the tailrace cut would have gone on coincidental with the other work?

Q. Yes. A. Yes, I think that is true. We discussed the fact that that could have been done in some detail, and we also discussed the consequences expensewise if it had been done, [7968] that is that it would have caused confusion and increased expense of doing the work.

Q. Wouldn't the Coffer Dam have to be re-erected, still further postponing the actual excavation?

* * *

THE WITNESS: What Coffer Dam, Mr. Hall?

By MR. HALL:

Q. Wasn't a Coffer Dam required for the tailrace? A. Several of them were.

Q. Wasn't it necessary to re-erect the Coffer Dams in order to proceed with the work in 1908? A. No. The principal Coffer Dam which had been required for the tailrace excavation was the upstream Coffer Dam. It is my understanding that construction on the powerhouse had progressed to a point which made it unnecessary to ever re-erect that Coffer Dam. As a matter of fact, shortly thereafter, or perhaps during the tailrace excavation, that Coffer Dam was removed, what remained of it.

It may be, Mr. Hall, you are referring to rather small Coffer Dam at the lower end of the cut which prevented water backing up into the cut and which already had been wrecked by the flood which washed Kerbaugh out of the cut.

Q. Wasn't it necessary to re-erect that Coffer Dam? A. That one?

[7969] Q. Yes. A. To be sure, it was necessary to re-erect that after the flood no matter when you did it. But there was nothing especially peculiar about the re-erection at the time it was made.

Q. And work on the tailrace could not proceed until that Coffer Dam had been re-erected? A. Yes, that is the reason for several months' delay of any work at all on the tailrace by Kerbaugh after he was flooded out, and before Cooper took over for McCall Ferry and did what little work Cooper did in 1907.

MR. HALL: May we have marked as Exhibit Number 181 for Identification a letter dated April 13, 1908,

written by Hugh L. Cooper to Cary T. Hutchinson, Chief Engineer, McCall Ferry Power Company? The letter is copied from Company File 3951-3.

• • •

(The document referred to was marked as Exhibit Number 181 for Identification.)

• • •

[7970] By MR. HALL:

Q. Mr. Gunn, according to Exhibit Number 181 for Identification the total amount of money to be spent for the excavation work was relatively small, isn't that so, in comparison with total cost of that plant?

TRIAL EXAMINER: What does counsel mean? What are the amounts to which you refer?

THE WITNESS: I think, Mr. Examiner, he is referring to the amount used for Culley's Cut, and this letter, which is Exhibit 181, seems to be somewhat confusing to me. It states that about $150,000 will be needed for Culley's Cut. Then it recites two other items which will be needed, one of which is $4,000 that Cooper says is appropriately charged to Culley's Cut. Then the second item is $10,000.

However, the total estimate contained in the letter of April 13th is $194,000, and if you subtract $10,000 from that it looks like there would be $184,000 instead of $154,000 to apply to Culley's Cut. In any event that is the order of magnitude of the figures.

I don't recall what the actual cost was, but at least that was Hugh L. Cooper's estimate of what it would be on [7971] April 13, 1908.

• • •

[7974] Q. But the total cost of re-establishing the plant was ten thousand dollars; right? A. Cooper so states. I don't know what he meant by re-establishing the plant even for the other six thousand dollars. It may very well have been of the same character and a necessary expense whether there had been a cessation or not.

Q. On October 21, 1908, the McCall Ferry executive committee authorized the discharge on November 1, 1908, of the entire force at McCall Ferry, Conowingo Quarry, and New York with the exception of a few supervisory employees. Isn't that right? A. I think that very well may be true, in any event shortly after October 21, they were discharged.

Q. No further work was done until the receiver from McCall Ferry reopened the project in 1909. Isn't that so? A. That is correct. No work of any substantial volume was done between those dates.

Q. When did construction work get fully under way under the receiver? A. Well, it was begun in July, 1909.

Q. What work was done in July, Mr. Gunn? A. I don't have the details of it before me.

Q. Isn't it a fact that no work was done in July, 1909?

* * *

[7975] THE WITNESS: I don't know whether it is or not, Mr. Hall. I believe there was some preliminary work. It is a fact no significant volume of work was done in July of 1909, July of 1909 is simply time they were engaging in the preliminaries to get the work started.

By MR. HALL:

Q. Who engaged in the preliminaries? A. The Receiver, as I understand it.

Q. The Receiver's contract with Empire Engineering Corporation was dated August 16, 1909. A. I believe that is correct.

Q. Much work had to be done to get ready to start up construction again on the project. Isn't that so? A. No, I don't think so. No information that I have indicates that to be a fact.

Q. Had all the equipment and so forth been placed in storage? A. No, Mr. Hall. So far as I know the only thing which had been done was that part of the equipment had been placed on the construction area, painted, lubricated and left there, and the construction plant of the sort

they had at McCall Ferry certainly didn't require any sort of time or effort to get it started. It consisted of locomotives, [7976] locomotive cranes, dump cars, drilling equipment, all of which as a matter of practical fact could be started up in a few hours.

Q. Isn't it a fact that little work was done prior to September, 1909? A. I don't have any facts before me, Mr. Hall, which would indicate that.

• • • •

THE WITNESS: It is a fact the volume was not very great, Mr. Hall, because the total cost of it was only about ten thousand dollars prior to that date.

By MR. HALL:

Q. And that ten thousand dollars included the salaries of watchmen, supervisors, and so forth. Right? A. I suppose so. They were paid somehow.

Q. Mr. Gunn, I show you a letter dated September 21, 1909 signed by Wm. Barclay Parsons, and addressed to J. E. Aldred, Receiver, McCall Ferry Power Company. The letter was copied from Company file 3951-4.

Are you familiar with that letter? A. Yes, I am familiar with that letter.

• • • •

[7977] TRIAL EXAMINER: The reporter may incorporate the letter into the transcript as though read.

(The letter referred to above is as follows):

(Copy)

EMPIRE ENGINEERING CORPORATION,
New York,
September 21, 1909.

"Mr. J. E. Aldred, Receiver,
McCall Ferry Power Company,
24 Exchange Place, City.

"Dear Sir:

"The amount of work done by this Corporation at McCall's Ferry during the month of Au-

gust was comparatively so small as not to call for any special payment to us. By the end of September, however, a considerable amount of work will have been accomplished, and I think it would be well to establish between now and the end of the month a system of reports so that the amount expended for labor and materials, and other work, can be fixed, and the moneys due this [7978] corporation for services as engineers of construction be determined and adjusted. I will be very glad to take this matter up with you at your convenience."

"Very truly yours,

(S.) WM. BARCLAY PARSONS,
President."

• • •

[7979] Q. Mr. Gunn, I believe you testified that you have used six per cent as reasonable rate of interest in computing your interest during construction and have used a construction period beginning April 1, 1905, to October 1, 1911. Right? A. Yes, sir, I have so stated.

Q. I take it that in your opinion the six per cent method would be reasonable regardless of what construction period the Commission may use?

• • •

THE WITNESS: If you were to take that you would be making the biggest mistake you ever made.

By MR. HALL:

Q. What do you mean by that statement, Mr. Gunn? A. I mean you would be completely wrong, and without any doubt. The selection of six per cent as a method of interest is connected with and inseparably connected with the selection of the construction period.

Q. Assume that you used the same construction period utilized by the Staff. What effect would that have on the [7980] six per cent rate which you used in your computation

of interest during construction? A. I would think the selection of such a construction period, presumably on the basis it represents a realistic construction period, would necessarily carry with it the use of a realistic rate of interest during construction for the Holtwood project at the time the Holtwood project was constructed, and it most assuredly would not be six per cent but it would be very substantially greater.

Q. Why did you select six per cent for the purposes of your computation? A. Because six per cent, when taken together with the construction period actually incurred, seemed to me to result in a reasonable overall amount of interest during construction of this project.

Q. I believe you testified that you considered the six per cent rate to be a reasonable one in connection with the construction period you have used in making your original cost claim. Right? A. That is right.

Q. Is it your position that the interest rate varies with the varying lengths of construction period? A. No, not at all, but this is my position rather, Mr. Hall: There was an actual construction period at Holtwood. It extended from 1905 to October 1, 1911.

[7981] It is true that had the company not encountered financial difficulties the project might have been built in a shorter period of time.

It is also true that a proper rate of interest for a project entailing the risks of the Holtwood project at that time was obviously substantially greater than six per cent.

Now, you have several alternatives for arriving at a reasonable overall amount of interest during construction. You could take a realistic rate of interest, and, let us say, a construction period which might have been accomplished had there been no difficulties of any sort, and make a calculation, and you get a certain amount of interest during construction.

If you were to take the same high rate of interest and apply it to the construction period actually experienced,

you would get a much greater amount of interest during construction.

Now, it seemed to me that it was appropriate to take the actual construction period as experienced and apply to that such a rate of interest as would result in a reasonable overall amount of interest during construction and a six per cent rate appeared to accomplish that result.

That, of course, results in using the actual period of construction and what we may call a synthetic rate of interest for that project at that time. The other alternative was to [7982] use a synthetic construction period and the actual rate of interest during that time, and since one alternative had to be selected I selected the one I have used.

Q. You referred to actual construction period. By that you meant, I take, it, the construction period which you determined for the purposes of your original cost determination? A. Yes, sir.

• • •

[7984] By Mr. Hall:

Q. Mr. Gunn, at transcript 7962 you referred to the McCall Ferry payroll in November of 1908 as totaling $31,000. Is that the correct figure for the month of November? A. No, sir. That should be $3100.

Q. What was the payroll in April, May and June of 1908? A. In April it was $4700; in May it was $12,400; in June it was $14,800.

These figures of which we are speaking are field construction payrolls.

Q. Do you have the payroll figure for the month of October, 1907? A. No, I do not. The first month I have before me is November of 1907.

The figure, I believe, for the month of October 1907 was slightly over $60,000.

Q. What amount did you determine to be Penn Water's claim for interest during construction to October, 1911? [7985] A. $2,489,026.01.

Q. Is that the reasonable overall amount of interest during construction you considered in determining your interest rate?

• • •

By Mr. Hall:

Q. I am limiting that, Mr. Gunn, to the period up to and including October 1, 1911. A. That is the amount of interest which I concluded was a reasonable overall amount of interest. Of course, I considered various amounts of interest by alternative plans of computing interest for that period, and as a result of the consideration of the various amounts and various methods of calculation, various rates and various construction periods, I concluded that this was a reasonable overall amount of interest.

Q. Are you saying that in connection with your computation of interest during construction you considered different [7986] construction periods and different rates of interest, and that different rates of interest applied to different construction periods? A. Yes.

Q. Did you, however, consider the same total overall interest claimed as being applicable to all periods? A. No, I can't say I went at it just that way, Mr. Hall. What I did was to make a series of calculations at different rates of interest using different construction periods, and I considered all of those, and their characteristics, and came to the conclusion that the actual construction period as incurred, taken together with a six per cent rate of interest, produced a reasonable overall amount of interest, and that figure is the figure I just mentioned, $2,489,026.01.

Q. Did your other calculations produce approximately the same overall amount of $2,489,026.01? A. That or more.

Q. Will you tell us what other construction periods you considered and the rates of interest you deemed applicable for those periods? A. I did not select a single rate of interest for the other construction periods. What I did for the other construction periods was to compute

a series of interest rates ranging from six to ten per cent. Having made a first [7987] calculation to determine the time form of the interest pattern it was simply a matter of computing the remainder of the interest calculations as a simple proportion. As a matter of fact it can very readily be computed and I did compute them graphically.

Q. What other construction periods did you consider? A. Well, I considered what would be the result if the dates December, 1907 to August 1909, were eliminated from the construction period. I considered another construction period which would eliminate the time from active construction December 1907, to April, 1908, inclusive, as well as November, 1908 to August, 1909, inclusive.

* * *

THE WITNESS: Still another construction period that was considered was one derived by eliminating from the period of active construction the time between November 1908 to August, 1909, inclusive.

* * *

THE WITNESS: Another calculation which was made was based upon the actual construction period as it occurred from 1905 to October, 1911, without any elimination at all.

* * *

[7988] Q. What rate of interest did you associate with the elimination of the period from December, 1907 to August 1909? A. I made calculations at rates of interest all the way from six per cent to ten per cent.

Q. Which interest rate did you consider to be more applicable to that period? A. I would say that the interest rate for that period ought to be somewhere between at least nine or ten per cent. The reason why I say that is that if you were to make that total elimination you would be deriving what I suppose you would describe as a realistic construction period, and departing from the construction period, which was actually incurred. In that event

it seems to me that you ought to use a realistic rate of interest which would be applicable to the risks and uncertainties in a project such as Holtwood was during the period of time we are discussing.

Q. Is it your opinion that a realistic rate of interest is something different from the actual interest costs incurred? A. That would go back, Mr. Hall, to what is the concept of interest during construction. I realize there are two of them. However, they are not far apart. I believe some people view the rate as the bare bones cost of money; others view it as income foregone, during the period of construction.

The difference between them would be whatever is appropriately allowed in the rate of return over and above the so-called [7989] bare bones cost of money. I don't know just how much that would be, but theoretically it is something.

[7990] Now, if you are going to view interest during construction as the bare bones cost of money, then it would be the cost of money if and when the cost of money is correctly computed.

Q. Which concept did you deem to be applicable for the purpose of your determination? A. Because of the method I have used it was not necessary to reduce it and identify it as either one.

Q. Did you? A. No. My inclination is to say that proper interest during construction is income that is foregone, rate of income foregone during period of construction.

Q. When you refer to rate of income foregone you are referring to income which would have been realized had the plant been in operation. Is that right? A. Yes, sir.

Q. That concept controlled your thinking in connection with your interest determination of the reasonable amount of interest, amounting to $2,489,026.01, right? A.

Well, it certainly influenced it. I don't know you could say it controlled it.

Q. In other words, your determination was not made on the bare bones cost of money? A. No, although, as I said, the two figures when properly determined would not be very far apart, and because [7991] of the method I have used I don't think you could say that it is inseparably and inflexibly tied to either one of the concepts.

Q. Mr. Gunn, what was the total amount of interest you arrived at by using rates ranging from nine to ten per cent and eliminating the period from December 1907 to August 1909? A. The interest computed for that period at nine per cent was about $2,650,000 and at ten per cent it was about $2,950,000.

Q. What was the least rate of interest you considered in connection with the elimination of the period from December 1907 to August 1909? A. I would say that I didn't give any serious consideration to anything below nine per cent.

Q. Didn't you testify a few minutes ago that you gave consideration to rates ranging from six to ten per cent for the period? A. I don't think I did. I believe at that time I was explaining the range over which I had made calculations. You are now asking me the range which influenced, or which had substantial influence, on my determination of interest during construction.

Q. Was six per cent the least rate at which you made a calculation for that period? [7992] A. Yes, six per cent was the lowest rate at which I made calculations for any period, and I made calculations at six per cent for all periods for the purpose of getting the time pattern of the interest of it.

Time pattern of the amount of interest and from which I interpolated the amount of interest at all other rates.

Q. What total amount did you arrive at for that period using six per cent? A. The total amount I computed for that period?

Q. Yes. A. $1,660,000.

Q. Mr. Gunn, does the nine per cent calculation amounting to $2,650,000 represent what you considered would be the net income from the plant had it been in operation?

* * *

THE WITNESS: By "net income" you are referring to a figure before bond interest, are you?

By MR. HALL:

Q. What did you have in mind as to income when you arrived at the amount of $2,650,000? A. I didn't have anything in mind. I had in mind determining the reasonable amount of interest during construction.

Q. Didn't you testify that that reasonable rate was [7993] based upon the income to be determined from project earnings? A. No, I testified that that was income foregone during construction, a rate of interest foregone, not a number of dollars of income, certainly.

Q. In other words, you figured that the project would be earning, for instance, nine per cent? A. I figured that the project, because of the risks entailed in the project at that time, was entitled to earn nine per cent.

Q. Was it entitled to earn nine per cent for any one of the construction periods that you have mentioned? A. Well, I think the project was entitled to earn nine per cent because of its risk at any time between 1905 and 1911. But in making the computation for interest during construction, which seems to me to lead to a reasonable overall allowance for interest, I thought it was appropriate to give recognition to the fact that because of the financial difficulties into which the project fell that a rate of interest less than that which it ought to have been entitled to earn should be used in the calculation, and I have used a lesser rate of interest purely out of recognition of the prolonged construction period, which construction period was prolonged because of factors wholly beyond the control of the company.

Q. What do you consider the project should be entitled [7994] to earn? A. Speaking now of a rate or total amount?

Q. Rate. A. I don't know. I haven't made any specific determination of it. It seems to me at that time it ought to have been entitled to at least nine per cent or perhaps more.

Q. Is your opinion that the project would earn nine per cent immediately upon completion? A. No. No hydro project can ever do that, but it is expected that the failure to earn the full entitlement in a rate of return immediately will be made up when the period during which the lag in earnings takes place by one of two methods: Either by including in the rate base the amount of the lag of earnings or by giving recognition to that factor in the rate of return allowed in the future after the plant has reached the economic position where it is economically able to earn it.

Q. Are you saying, Mr. Gunn, the project did not earn nine per cent for some years after completion? A. Yes, I think that is generally true of all hydro projects which make available a large block of power and which require a large expenditure of money initially, such as is entailed in low and medium head projects where long dams are required and extensive storage reservoirs do not result.

[7995] Q. But you believe that the rate of interest allowed during the construction period should be based upon the ultimate earnings realized from the project, right? A. No, that is not what I said. It seems to me that the rate of interest allowed for interest during construction ought to be based upon the rate of earnings which is required to attract capital to that enterprise in the face of the risks the enterprise entails.

• • •

[7996] By Mr. Hall:

Q. Mr. Gunn, when you considered elimination of the periods from December 1907 to April 1908 and November

1908 to August 1909 what rates of interest did you consider in connection with that period? A. I made calculations for the construction period resulting from the elimination of those periods of time you just mentioned at rates of interest from six to ten per cent.

Q. Which rate within that range did you consider to be the most applicable to that period? A. I don't think I ever came to any specific conclusions as to what were the most applicable rates. I simply made the calculations to show what the range of interest during construction would be if those eliminations were made from the construction period and at the various rates of interest I have mentioned.

Q. Did those calculations enter into your consideration of the total reasonable amount of $2,489,000? A. Yes, I suppose they had some influence on it, but I don't know just how or how much.

[7997] Q. You don't know to what extent they did influence that? A. No, because my conclusions were based on the totals of all of these calculations. I couldn't break down each period and each total and say what separate parts of them contributed to the conclusion.

Q. If you had eliminated the periods from December 1907 to April of 1908 and November 1908 to August 1909, what interest rate would you have considered applicable? A. I would say an interest rate which, when taken together with the construction period resulting from the elimination you have just mentioned, would have made an interest claim about equal to the $2,489,000 that I have claimed as a reasonable amount of interest.

[7998] Q. What interest rate combined with that period would produce the figure of $2,489,000 approximately? A. Somewhere between six and seven per cent.

Q. If you eliminated the period from November 1908 to August, 1909 from consideration, what interest rate would you associate with that period?

* * *

THE WITNESS: That also would be between six and seven per cent.

By MR. HALL:

Q. Six and seven? A. Six and seven per cent. In other words, the elimination of the short period of time between December 1907 and April 1908 does not have a very material effect on the interest rate.

Q. What total amount of interest did you arrive at by using the six or seven per cent by the elimination of the period from November 1908 to August 1909?

* * *

THE WITNESS: Using six per cent the total amount of interest would be about $2,450,000. Using seven per cent the total amount of interest would be about $2,870,000.

By MR. HALL:

[7999] Q. What total amount of interest would have resulted through the elimination of the period from December, 1907, to April, 1908, and November, 1908, to August, 1909, by applying the rates ranging from six to ten per cent? A. Six to ten per cent?

Q. Six to seven per cent. A. At six per cent the total amount of interest would be $2,320,000, or thereabouts, and using seven percent the total amount of interest would be about $2,690,000.

MR. KING: May we have that answer read?

(Answer read).

By MR. HALL:

Q. What was the smallest amount of interest at which you arrived by your various calculations?

MR. KING: You mean on all the periods considered?

MR. HALL: Yes.

THE WITNESS: All of the periods considered and all the interest rates considered?

By Mr. Hall:

Q. That is right. A. About $1,760,000.

Q. What was the largest amount arrived at? A. Again, considering all of the periods and all of the rates?

Q. Yes. [8000] A. $4,200,000.

Q. Why did you reject the smallest amount of $1,760,000? A. Because I thought it was improper.

Q. Why? A. It just seemed to me to be ridiculous.

Q. Why was it ridiculous? A. Because in arriving at that amount of money it is necessary to create a purely fictitious construction period and then turn around and apply to that a wholly fictitious rate of interest, both of which are lower than actually should have prevailed. The two taken together just makes a ridiculous answer.

Q. You mean that they would have produced an amount lower than the return which would have been made had the project been in operation? A. Subject to all the explanation I previously have given of that term, yes.

Q. Why did you reject the maximum of $4,200,000? A. For exactly the opposite reason to why I rejected the minimum figure. It gave a ridiculously high figure. As a matter of fact, I think I ought to add that in making those calculations, those maximum and minimum figures merely resulted from the convenience of calculating, and it was obvious from the beginning they had no bearing on the problem.

[8001] Q. Mr. Gunn, why did you select the amount of $2,489,000? A. Because after considering all of the facts we have been discussing I came to the conclusion that that was a reasonable overall allowance for interest during construction upon this project at the time it was built and under the circumstances under which it was built.

Q. Mr. Gunn, did you select the figure of $2,480,000 because it represented a mean between $1,760,000 and $4,200,000? A. No, sir.

Q. Did that have any effect at all? A. No, I don't think it did. As I said before, those extremes were merely

the results of the convenience of calculation, and it was perfectly obvious that neither one of them had any appropriate bearing on the determination of interest during construction.

* * * * *

[8003] By Mr. Hall:
